In agricultural States manufacturing is almost entirely the handmaid of agriculture, devoted either to the repair, upkeep, and extension of the domestic facilities of the several States or to the preparation of their foodstuffs for consumption, far and near. The tariff does not concern industries of this sort except where it increases the cost of such manufactured supplies as they purchase, raises the general cost of living, and, consequently, of wages, and increases prices of the products of these industries—sometimes to such an extent as provokes consumers and limits consumption.

Almost without exception the industries in these States are on a keenly competitive basis that prevents undue additions of tariff benefits to prices. They must, however, in the metal and woolen industries, for instance, add whatever tariff benefits they have paid to the steel makers and woolgrowers, and so forth, and add a further charge to cover their own costs and profits on the steel makers' tariff charges, as shown in the statement on farm implements, which are largely manufactured in Iowa and Minnesota, whose implement manufacturers are desperately hurt by the steel tariff.

Slaughtering and meat packing is the principal industry in Iowa, Kansas, Nebraska, and Colorado, as measured by the value of the product. It is the second in Minnesota and third in Utah. Flour mills are first in Minnesota; second in Nebraska, Kansas, and Colorado; fifth in Utah; and sixth in Iowa. The tariff has nothing to do with their profits.

So of cars and general shop construction by steam railways, which is the third greatest industry in Colorado, the fourth in Iowa, Nebraska, Kansas, and Utah, and fifth in Minnesota.

Butter making is second in Iowa, third in Minnesota and Nebraska, fifth in Kansas, sixth in Colorado, and tenth in Utah.

Bread and bakery products are fifth in Nebraska and Colorado, seventh in Kansas, and eighth in Iowa, Minnesota, and Utah.

Confectionery and ice cream is sixth in Utah, ninth in Colorado, tenth in Nebraska, fourteenth in Kansas, and seventeenth in Minnesota.

Printing and publishing of newspapers is sixth in Nebraska, seventh in Iowa and Colorado, eighth in Kansas, ninth in Utah, and tenth in Minnesota.

Automobile repairing, foundry and machine-shop products, brick and tiles and lumber, canning and preserving, coffee roasting and grinding, and the preparation of other food products are among the principal industries in each of these States.

As regards the tariff, these "principal industries" of our agricultural States are in strange and utter contrast with the

principal interests of the leading manufacturing Eastern States for whom the manufacturing schedules of the tariff were written under their own dominating political insistence.

Of the foregoing industries, for instance, only two—foundry and machine-shop products and bread and bakery products—are listed in the 32 principal manufacturing industries of Connecticut, most of which have protective duties of the utmost value to their owners. For instance, brass, bronze, and copper products, closely associated, are given 45 per cent protection, against 20 per cent of wage cost; cotton goods have from 12 to 40 per cent protection, which the manufacturers are now proposing to increase. Their wage cost averages 16¾ per cent. Cotton laces carry 90 per cent protection with only 27 per cent of wage cost. The duty is mostly added to prices. Silk goods have duties running from an average of about 55 per cent on woven fabrics against 15¾ per cent wage cost, and 90 per cent on laces with 27 per cent wage cost; hardware 40 per cent against a wage cost of 31 per cent. American hardware is freely sold throughout free-trade England, and files are exported at 30 per cent below domestic prices. Their duty is 44 per cent and the wage cost only 30 per cent. Electrical machinery and supplies, with an average of 41 per cent protection and a wage cost of 24 per cent, are largely controlled by the two corporations that almost wholly dominate domestic production and make vast profits. Clocks and watches that are exported freely over most of the world add most of their duties of from 37 to 53 per cent against wages of 38 per cent.

Our ability to make high-grade inexpensive clocks and watches and the use made of our tariff by the watchmakers was shown in the years 1903 to 1909, when there were large exports of Elgin and other watches and watch cases at prices that permitted their retail abroad at less than half of our domestic prices.

CONNECTICUT CONTRASTED WITH IOWA

A comparison of the difference between the tariff profit and loss account of Iowa and that of Connecticut and Massachusetts would be most instructive. While Iowa loses, net, $87,786,000 from the tariff, it is not unlikely that Connecticut gains $30,000,000 and Massachusetts $40,000,000 annually. This because Iowa can not add her duties to her prices, while Connecticut and Massachusetts, like Pennsylvania and New Jersey, can add vast amounts. Iowa's duties are counterfeit dollars, while many of Connecticut's are a golden lien upon the pockets of all American consumers. This does not mean, however, that any great number of Connecticut's population of 1,380,631 souls profit by the tariff. Her farmers gain little except on a small output of shaded American Sumatra tobacco; her mechanics get lower wages than in the virtually unprotected Western States or in Ohio, Indiana, and Illinois, where makers of textiles, steel and steel products, chinaware, glucose, aluminum, and others make large use of excessive duties, while their manufacturers of implements, clothing, and other sharply competitive products lose as in the agricultural States.

The Federal census of 1920 shows 4,872 manufacturing establishments in Connecticut, a relatively small State. In some cases a single corporation owns several establishments.

Ten per cent, or 487, of these establishments employ 263,000 wage earners, or 90 per cent of all Connecticut factory workers. They include all factories with upwards of 100 workers each. Among the largest groups are brass, bronze, and copper, with 29,580 workers; hardware, 18,000; firearms and ammunition, 17,000; cotton goods, 15,000; silks and electrical machinery, each 11,000; hats, cutlery, clocks, rubber boots and shoes, rubber tires, and plated ware, 5,000 workers each; needles and pins, 4,000.

These are the kinds of industries, held in few hands, that profit greatly by excessive duties. Some of them need protection. They all use this fact to get often several times higher duties than they need. In the present state of public ignorance regarding rates there are none to say them nay.

The profits of some of them are indicated by the published reports of the American Brass Co., which, by the way, is now owned mostly out of the State, its control being in the Anaconda Copper Mining Co. of Montana and Wall Street.

The earnings on the capital stock of the American Brass Co. were 41 per cent in 1915, 73 per cent in 1916, 47 per cent in 1917, 26.6 per cent in 1918, 19 per cent in 1919, 22.4 per cent in 1920, while New England cotton mills have earned as much as 25 per cent, 50 per cent, 70 per cent, and sometimes more in recent years.

The Cheney Silk Co. increased the value of its capital stock from $7,000,000 in 1905 to $21,000,000 in 1921—a gain of $14,000,000 in 16 years, in addition to dividends, which are understood to have been satisfactory.

Why did Congress further greatly increase the duties of many such manufacturers in the face of such profits? We all admire profits fairly earned. We do not want them given as legislative largess at the expense of the general public.

If we knew the number of large shareholders in these corporations we would see that these tariff profits go to very few people—not over 5,000 in large amounts in Connecticut, out of her total of 1,380,631 residents. The rest pay the bill along with residents of other States.

Connecticut cotton-mill workers got little of it, as American cotton-mill wages are the lowest in the country for the quality of service rendered. Silk and woolen mills pay about the same as cottons. Nor do Connecticut machinists get much benefit. Their wages are lower than in the less-protected Central Western States.

The time will come when residents of Connecticut and Massachusetts will want lower living costs and freer markets and will not sit by while a few of their great families increase their vast fortunes by excessive tariffs by a perversion of the principle of protection.

Nor will western legislators for long let eastern manufacturers divide the tariff income into golden eagles for themselves and counterfeit dollars for the West and the South and for farmers everywhere.

MANUFACTURING IN IOWA

In 1920 Iowa had 80,001 wage earners, of whom 19,000, or one-fourth, were in large unprotected industries—in slaughtering and meat packing, butter making, flour mills, bakeries, confectionery and ice cream, poultry dressing, canning, and other food preparations.

An additional 32,000 wage earners were engaged in repairing and constructing railway equipment, in printing, planing mills, foundry and machine shops, automobile repairing, brick and tile making, gas works, sheet metal, saddlery, coffee roasting, and cement making.

These two general groups include 51,000 out of her total of 80,551 wage earners, with 23,000 others similarly employed in smaller industries, not affected by the tariff.

This leaves only 7,600 of her wage earners, being 1 wage earner in 10 and 1 resident in 300, engaged in general manufacturing for country-wide distribution. Of these all but 2,091 are making steam and gas engines, washing machines, rubber tires and rubber goods, and agricultural implements—all highly competitive industries, mostly hurt rather than helped by the tariff.

The "pearl-button" industry in and about Muscatine, Iowa, and making these buttons from Mississippi clam shells sought to better itself by doubling its duties.

Domestic production is so great, however, that despite the 100 per cent increased protection that they obtained their prices are lower than before the enactment of this tariff. The quality of Japanese importations made from sea shells, superior in quality to clam shells, are considerably reduced; prices on these decreased importations are doubled, and to no one's advantage.

MANUFACTURING IN MINNESOTA

In manufacturing, Minnesota is so like Iowa as to make a full statement unnecessary. Her only effectively protected industry is the crushing of linseed oil from flaxseed, an operation about as simple as brewing tea, employing a total of 483 wage earners in six factories, with a total wage cost of less than 3 cents per dollar of product at the factory selling price. American linseed oil crushers have apparently been in close affiliation in price making for 20 years and have been before the courts more than once for price fixing, the last court conviction being in July, 1923. A recent preliminary statement of the United States Tariff Commission shows that these crushers get about 12 cents per gallon of so-called tariff protection for their simple process, which should have no protection, because the cost of transportation and distribution of foreign linseed oil more than offsets any possible excess in domestic costs. Flax growers need their present protection; but the duty to oil crushers gives them a dishonest $5,000,000 for which the public pays at retail $10,000,000.

MANUFACTURING IN NEBRASKA AND KANSAS

The tariff has nothing to do with manufacturing in Nebraska except as it increases the cost of living and of raw materials, like steel, aluminum, brass, and wool used in her factories.

Of Nebraska's 36,521 factory wage earners in 1919 more than one-fourth, or 10,122, were in slaughtering and meat packing; 6,178 were in the construction and upkeep of her steam railroad equipment; 1,627 were in bakeries; 2,476 were in printing; 1,134 in automobile repairing, and 607 made ice cream and candy. Other groups were smaller and of like sort.

With nature's own protection from foreign competition in great intervening stretches of land and sea, these industries, predominately local in their characteristics, have no relation to protection. Not even near-by Illinois and more remote Massachusetts, with their free access to Nebraska, can hurt them.

In both Kansas and Nebraska slaughtering and meat packing is the principal industry, flour mills second, railway cars and shop construction fourth; butter third in Nebraska, and fifth in Kansas.

Kansas is distinguished for her production of salt, in which 1,072 wage earners are employed in 12 establishments.

Since protection was first corrupted in practice, high tariff rates have been put upon some of the simplest commodities, like salt, lead, and glucose, controlled by great corporations often with price-fixing agreements; commodities so simple that the public could scarcely realize that Congress was giving them millions of dollars in gratuities, picked a nickel or a dollar at a time, by deft fingers from every pocket in America.

We have innumerable salt beds, some of them, including one in Kansas, that are from 300 to 600 miles long, from 50 to 200 miles wide, and from 200 to 500 feet thick, and in a few cases from 1,000 to 2,000 feet thick. One salt bed, for instance, extends from a point north of Detroit nearly to the Hudson River, the whole area dotted with salt wells.

Water, preferably heated, gravitates through pipes to the beds (a case of protecting gravity at the dictation of a trust) where it is saturated with pure salt, is pumped up and evaporated in a vacuum at a summer temperature of about 100 degrees by the use of American coal, which is so cheap that we export it in great quantities. There is no refining cost—only the evaporation of the water.

The total wage cost in our salt works is 19¼ cents on each dollar of salt produced at the factory-selling price, according to the census of 1920. Our salt makers prospered in the free list in the last tariff. The present tariff is 25½ per cent in bags and barrels, and 38¾ per cent in bulk. The average protection is 30½ per cent against total wages of 19¼ per cent. In 1920, under free trade, we exported nearly three times more than we imported, while the International Salt Co. made nearly 14¾ per cent on its capital. In 1921, it made over 15 per cent. Under the tariff of those years the public was protected and the makers prospered. At present the public pays 62 per cent extra for its salt because of the tariff, or as much of that increase as the closely associated manufacturers dare to charge.

The story of the Salt Trust and the tariff has been a sordid one for a generation. The Payne tariff of 1908 gave it 82½ per cent of protection, or four times its total wage cost, while the Dingley tariff of 1897 gave it 50 per cent.

MANUFACTURING IN COLORADO AND UTAH

Manufacturing in Colorado and Utah is like the simpler processes in Kansas and Iowa, except as respects sugar, and the smelting of lead, which is the principal industry in Utah in the value of the product, with sugar second, slaughtering third, railway cars and shop construction fourth, flour mills fifth, and confectionery and ice cream sixth.

Lead: We have an exportable surplus and almost unsurpassed deposits of the four great metals—iron, copper, lead, and zinc. None of them need protection except for the purpose of excessive profits, or so raising prices that the less valuable deposits will be worked profitably.

In January, 1922, under the Underwood tariff, which averaged 15½ per cent on lead ore; 25 per cent on bullion, pigs, and bars; and 20 per cent on manufactures of lead. The price of lead was the same, 4½ cents per hundred in London and in St. Louis, which is the central market for this country. The price in New York City was the London price plus freight. This shows that the protective duties were not used at that time.

Labor in smelting and refining was 3½ cents per dollar of product in 1914 and 3 per cent in 1919. Why is the tariff 69 per cent? Can the big smelters tell?

The wage cost in converting pigs and bars into manufactured products averages 6½ per cent. This wage cost is low because the material is only warmed and exuded by pressure from machines, as pipe, and so forth. Why is the tariff 41 per cent?

These wage figures look low, but have been repeatedly approved.

These duties invite the manufacturers to add $19,000,000 to their prices, and present indications and past experience assure us that they will miss their opportunity unless in times of especial depression.

In conclusion, as regards manufacturing as well as agriculture, the advantages of high tariff rates to agricultural States are negligible. The cost is great.

To everyone in these States, as a consumer, and especially to farmers with their "73-cent dollar," it is of vital consequence that the cost of living is now vastly increased by higher duties than fundamental facts and reasonable protection require. Let us take the dishonesty out of the tariff and learn what honest protection means.

The Fair Tariff League, with the assistance of many of the ablest experts and men of experience in trade and industry, has analyzed general merchandise of a factory value of $14,800,000,000, being the kinds of merchandise that fill our general stores and retail at approximately twice the factory cost, or $30,000,000,000. The league has also analyzed the steel and iron and other metal-working industries whose products were valued in the census of 1920 at $6,785,250,000, and cost consumers approximately twice this in retail prices or in amortization charges upon such items as steel rails and structural iron.

The mere statement that the present tariff adds approximately $2,475,000,000 to the cost of general merchandise over and above the requirements of honest and fair protection seems to a few people, simply from the largeness of the amount, to be incorrect. Likewise the estimate of approximately $750,000,000 on light steel products and $375,000,000 on heavy steel products—a total addition to the cost of our manufacturers of $3,600,000,000.

When, however, it is considered that the total value of our manufactures is upward of $45,000,000,000, and that 3 per cent of this is $1,350,000,000, and that this amount is approximately doubled at retail and become the $2,700,000,000, and that a 5 per cent tariff increase would cost consumers $4,500,000,000, it may well be wondered why the league's figures are not larger. It is because we cover only part of the industries. New studies increase the total.

For instance, the application of the figures used elsewhere in the statement on farm implements, applied to our steam railroads, indicate clearly that just as farm implements, on the basis of a normal year's production, cost our farmers $100,000,000 too much because of unjustifiable tariff rates on steel and steel products, so the tariff adds unnecessarily $500,000,000 to the annual cost of operation of our steam railroads and to our freight and passenger charges, conservatively estimated.

Whether a State will be satisfied to exact excessive prices on one or two of its products, like wool and sugar, and in return permit other States to make offsetting and greater charges on their manufactured products is largely a matter of farsightedness and good morals. That such a course is against the public interest, that it undermines the morals of Congress and the Nation, incites to continuing unrest and radicalism, to political upheavals, and frequent and hurtful tariff revisions, is manifest.

HEAVY STEEL PRODUCTS

Extensive analysis of the seven basic steel industries—pig iron, bar steels, rails, structural iron, cast and wrought iron pipe, tinplate and terneplate, and wire and wire work—see leaflet, Fair Tariff League—shows that Congress in the Fordney law gave these industries the privilege of adding $351,000,000 to their prices, to cost consumers twice this sum at retail and in amortization charges, or $702,000,000.

Since the great steel consolidations these industries have charged all the traffic will bear. It is overconservative to estimate, as in accompanying tables, that only one-half of the above tariff allowance is added by them to their prices, or $175,000,000, to the United States as a whole, to be doubled at retail or by amortization charges in freights and buildings, and so forth, making a total cost to American consumers of $350,000,000, or an average of $3.50 per capita. The steel duty, however, costs farmers half as much again as other citizens, or $158,000,000 all told, for farmers are among our greatest consumers of steel, in machinery, in automobiles, and in the transportation of their crops on the railways.

There is no reason for this tariff except price raising. We are the greatest and cheapest producers of steel on earth. Steel producers say so. We exported in the three years, 1919-1921, of these heavy steel products, $733,787,285, against imports of $34,786,900. Exports were twenty times greater than imports. Exclusive of pig iron, which we are willing to export only in more highly finished products, we exported fifty times more than we imported.

The heavy steel duties are an enslavement of the public to a few of the wealthiest corporations in the world. Their annual profits aggregate hundreds of millions of dollars. The duties on these heavy steel products show clearly the difference in the value of duties to manufacturers and to farmers. Manufacturers when they will, if only by winks and nods, can agree on prices and add all their duties to their prices.

When the steel schedule was before the Senate Senator UNDERWOOD, of Alabama, said:

I am in the business myself. I represent a great iron and steel district. I would not willingly harm a people that I represented, but neither would I willingly betray a people I represented by taxing them unjustly for special interests. I know this iron and steel schedule, and I know that it is a fraud and a shame upon the people of this country. I know that it is not even in the interest of the industry in the end. * * * It can compete anywhere in the world. We are the master iron makers of the world.

Where the fallacy of this argument comes is that under the guise of doing something to help the farmers in some particular item, their support is asked for a bill of which, as a whole, it seems that for every dollar the farmers may derive from the bill they will pay $100 in taxes for the benefit of somebody else.

LIGHT STEEL PRODUCTS

On other metal products, stamped ware, sewing machines, machinery of all sorts, hardware, washing machines, etc., Congress invites the manufacturers to add $790,000,000 to their prices, to cost consumers at retail $1,580,000,000.

Only insanity would let manufacturers go so far. Prices were high, however, under the former tariff, and have, on the whole, advanced rapidly since. It is fair to estimate that an addition of one-half of this vast total, or $375,000,000 at the factories and $750,000,000, at retail may be added above the cost of such merchandise abroad, being $7.50 per capita as estimated in our tables.

GENERAL STORE MERCHANDISE

An analysis of 29 industries making the merchandise that fills our retail stores—cottons, woolens, aluminium wares, gloves, hosiery, glassware, chinaware, etc.—shows a tariff permit for price raising of about $5,000,000,000 above the prices of imported articles.

Only insanity would cause manufacturers to add all this.

Makers of some of these products have, however, already added the entire tariff advance (see Book 1, Fair Tariff League). Assuming that an average of one-half of the total will be added, or $2,475,000,000, to these and other like articles we have a not improbable tariff tax of $30 per capita, or $150 per family of five.

These figures help us to see why, as Irving Fisher says, an income now of $20 a week goes no further than $12 a few years ago.

A SUGGESTION TO MANUFACTURERS

Certain manufacturers fought by every means fair and foul for the duties they got, and with the opposition of many other manufacturers who saw the need of moderation and wanted lower rates on their own and other products.

If the over-protected manufacturers were not going to use these duties why did they fight for them?

We here estimate that these manufacturers will succeed in using only one-half of their full duties.

If over-protected interests dare claim that they will add less than one-half of their duties to their prices, then let them petition the President to lower their duties by the other half, as he is given power to do under certain condition under the flexible provisions of section 315. Then will the public believe that tariff rates fought for and tricked for are really not to be used.

Senator LENROOT (Republican, Wisconsin; CONGRESSIONAL RECORD, July 26, 1922) said:

The Payne-Aldrich bill was crooked, yet if it had not hurt the American people * * * there would have been no such political revolution as followed. * * * There is very little difference between the Payne-Aldrich bill and the duties as reported in this bill.

ALEXANDER HAMILTON AND AMERICA'S FIRST TARIFF

Those who talk about Alexander Hamilton as the father of protection carefully withhold information about his tariff which every citizen should know. Framed by Hamilton, it was sponsored by George Washington and enacted July 4, 1789, as the first act of the American Congress under our present Constitution. It was plainly written. Every Member of Congress knew what he was voting for and the public knew what it was paying for.

Not one-tenth of our Congressmen now know what they are voting for, and the public knows less.

Hamilton's highest protective rate was 10 per cent, except on carriages, which were considered a luxury and taxed 15 per cent. Most of his duties were 7½ per cent, covering the majority of articles now taxed from 30 to 90 per cent.

As Hamilton said, American artisans got higher wages than the English then and previously when we were an English free-trade colony. As he said, the purpose of his protection was not for manufacturers but to develop a home market for our farmers, whose food products were then virtually prohibited by hostile legislation from entering Europe. Here is in full Hamilton's dutiable list:

On all looking-glasses, window and other glass (except black quart bottle); all china, stone, and earthen ware; gunpowder; all paints ground in oil; shoe and knee buckles; gold and silver lace, and gold and silver leaf, 10 per cent ad valorem. On all blank books; all writing, printing, or wrapping paper, paper hangings and pasteboard; all cabinet wares; all buttons; all saddles; all gloves of leather; all hats of beaver, fur, wool, or mixture of either; all millinery ready made; all castings of iron and upon split and rolled iron; all leather tanned or tawed, and all manufactures of leather except such as shall be otherwise rated; canes, walking sticks, and whips; clothing, ready made; all brushes; gold, silver, and plated ware, and on jewelry and paste work; anchors, and on all wrought, tin, and pewter ware, 7½ per cent ad valorem; playing cards, per pack, 10 cents; carriages, 15 per cent.

This quotation covers one-fifth of Hamilton's entire tariff, the remainder being given to methods of enforcement, and so forth.

Contrast the clearness and brevity of this tariff with our present tariff, which fills 147 pages of a book 9 inches by 6, with a double-column index of 51 additional pages.

The dutiable list covers 71 pages, from one-half to two-thirds of which might be eliminated, thereby eliminating also two-thirds of the present dishonesty, for neither Congress nor the public could face the present duties if simply and plainly stated.

For instance: Hamilton said all glassware, except black quart bottle, 10 per cent, leaving the cheap quart bottle 5 per cent. In those days glass bottles were blown by mouth. Glassware is made of silica sand—not unlike beach sand—and limestone, fused by burning coal, with lead added only in luster glassware of the highest quality. Who would protect sand and limestone and coal, which we export freely? Now a single machine makes 50,400 pint bottles in a 24-hour day, with no labor except in keeping it oiled. It makes the little 1-dram bottles used by the homeopaths at the rate of 165 per minute. Congress gives this machine an average duty of 51 per cent. "If holding more than 1 pint, 1 cent per pound; if holding not more than 1 pint and not less than one-fourth of a pint, 1½ cents per pound; if holding less than one-fourth of a pint, 50 cents per gross." These distinctions confuse the uninformed and increase the manufacturers' graft. This quotation is one-fourth in length of the pressed-glass schedule—all as confusing as this. The entire present glass schedule covers three pages. Our glass tariffs have made the common Window Glass Trust a conspiracy, with wheels within wheels, which was under court indictment for price-rigging when Congress passed the present tariff. One of its divisions had made $19,382,168 net after interest and taxes, under the low Underwood tariff in the 10 years, 1912–1921. Another, the American Window Glass Machine Co., made $14,197,805 in the six years ending with 1916. One company exported $2,300,000 in one year. All this under the former duties averaging 9.6 per cent. Did Congress raise the duty to 28 per cent in the face of these facts in the public interest?

Under the previous lower duty, averaging 15 per cent, the Plate Glass Trust made net profits for its stock above taxes of $43,320,313 in the 10-year period 1912–1921. For a generation this trust has wickedly abused its tariff opportunities. Did Congress increase its duty to an average of 23 per cent in the public interest? The trust adds all of the tariff to its prices and more. The plate-glass schedule is three times as long as Hamilton's dutiable list for all commodities. Not even an expert of the trust could have written it originally with all its devilments. The common window-glass tariff covers 20 lines.

The entire glassware situation is illustrated by the statement of the leading maker of pressed glassware to the effect that he and others recommended to Chairman McKinley that pressed glassware be put upon the free list, partly because, said this manufacturer, "I was selling freely all over Europe at my American prices plus the cost of my European sales' organization of $10,000 a year." McKinley intended to follow this advice, but greedier manufacturers intervened, and consequently the McKinley rates were made 50 per cent and so cunningly written that the manufacturers themselves could not understand them at first.

Another illustration: We need fairly high rates on the finest kind of cutlery which Germany makes more successfully than any other country, with England excelling in a few types.

But the present tariff on cutlery runs from 150 to 235 per cent. The cutlery schedule fills 83 lines and is five times longer than Hamilton's entire dutiable list.

Here are three of these lines covering common kitchen knives with wooden handles:

If less than 4 inches in length, exclusive of handle, 2 cents each; if 4 inches in length or over, exclusive of handle, 8 cents each; and in addition thereto on all the foregoing, 45 per cent ad valorem.

Why 6 cents more for the table knife with a 5-inch blade than the paring knife with a 3-inch blade when the paring knife was sold by American manufacturers at the time the tariff was passed for 3½ cents? The new duty is 100 per cent of that selling price, and the table knife was sold for 4½ cents, the duty being about 10 cents. Why was the duty made 10 cents on the ordinary fluted-edge bread knife, used in every household and sold by American factories at that time for 6½ cents? The answer is that this cheap cutlery has been made and sold largely under price agreements for many years, and these makers dictated the tariff. For three years under the previous lower tariff they had exported an average of 48 per cent of their product. Should those who export in great quantities be given 100 per cent "protection"?

We have heard much about cheap foreign safety razors. A good safety razor of simple pattern is made in this country and sold at a profit of less than 5 cents, including one blade.

Wire rods, fencing, and wire cloth fill 64 lines of the present tariff, with very little devilment included that 40 years of study has devised, with duties averaging 32 per cent against an average wage cost of 17¾ per cent. Under the previous lower duties that averaged 17 per cent we exported, in 1919, over $61,000,000 of wire and wirework, and as much in 1920, against imports of $602,000 in 1919 and $1,610,000 in 1920. Some of these imports, if not all, were because American prices were exorbitant and not to lower costs of production abroad.

In the seven basic steel products in the three years 1919–1921 we exported twenty times more than we imported. We exported $734,000,000 and imported $35,000,000. Pig iron excepted, which we do not want to export, our exports were fifty times greater than imports. And yet Congress gave these, the greatest and strongest industries in the world, big duties so that they might make astounding profits at the public expense.

The examples here cited are fairly typical of our whole tariff and our method of tariff making.

THE TARIFF AND COMMON HONESTY

We think that we are an honest people. Manufacturers are honest, but there has developed in the field of tariff making a special code of morals like the code for poker that disregards ordinary rules. Every informed man knows this. Manufacturers hate this. Only a few of them appear before congressional committees, being mostly those with axes to grind and using every form of indirection and disingenuousness.

Said a great woolen manufacturer, a member of a group pleading for high woolen duties before the tariff committee of the House of Representatives in 1908:

If I had to listen for two weeks to the sort of stuff we gave this committee to-day I would be a rank free trader myself.

Said Chairman Payne, of that committee, in humiliation and regret:

I could change the woolen schedule just as easily if only they would let me.

Said Col. George Tichenor, later made chief of the Board of General Appraisers by McKinley when the former was drafting the McKinley tariff for the committee:

The public won't stand for more than 40 per cent duties, so I am making them apparently 40 per cent, but, by jokers, phrases, and figures that the public won't understand, I am raising them, the Lord knows how high.

Said Speaker Cannon, when told some of these things:

Why do you tell me? Don't you think I know? Take Jones, of Nevada. D—— him, we gave him a tariff on borax that he was no more entitled to than I your watch. Know it! We had to have his vote.

Said the London Lancet shortly after:

For every dollar of borax that the American trust sells at home it can give away or throw away two pounds and still have its English price on all three.

The domestic price was the English price of 2½ cents per pound, plus our tariff of 5 cents, total 7½ cents.

Said a New England maker of wood screws in 1908:

We charge American consumers twice our export price. It isn't right, but Congress invites us to, and how can we help it?

It is commonly said that ex-Senator Lippitt, the Rhode Island cotton manufacturer, wrote substantially every line of the present cotton-goods schedule. In New England it is called the Lippitt schedule.

New England woolen-goods manufacturers are credibly reported to have raised $50,000 for influencing the woolen-goods schedule. A workingman's wool shirt retails for $4.50 in New York and in Denver carries 97 per cent duty. It is 85 per cent shoddy and 15 per cent cotton, with no virgin wool in it.

The Amoskeag Manufacturing Co. so prospered under a duty of 15 per cent on its Amoskeag apron gingham and other products that its profits were $27,298,881 during the last eight years of the low Underwood tariff. Published figures show that this company increased its capital out of profits from $4,000,000 to $44,500,000. And yet Congress more than doubled the previout tariff rate, making it now 31½ per cent on these ginghams, which are the cheapest cloth that poor women can wear in their dresses, children in their clothes, and workmen in their shirts.

When H. H. Rogers, of the Standard Oil Co., was asked how he got a duty of more than 50 per cent in the Dingley bill on petroleum and its products, although they were listed in the free list, he gave a perfect answer, a horse laugh, adding, "I have been wondering when somebody would ask me that."

These stories are legion and the worst of them are true. They show how American life, especially American public life, has been weakened and corrupted by the tariff. Legislation can not be of this sort in the tariff and honest in other matters. Congressmen from manufacturing districts are virtually obliged to enact these tariff rates prerequisite to their selection. Teapot Dome and other scandals are only the wee children of 50 years of corrupt tariff practices.

The American public is mostly responsible in the final analysis. It has rested on the principle of protection without reasoning—without knowledge or care whether the principle is honestly applied or not.

Many protectionists would let a Congressman pick the gold fillings from the protectionists' teeth and smile withal if they were told that protection required it.

We are near the end of this procedure. The tariff is crucifying our farmers and our women who now cast one-half the votes. Everything a woman wears is held to be a luxury, and therefore doubly taxed. There are approximately 2,000,000 American women described in the census as the heads of families. That is, they are contributing materially by their earnings to the support of dependents, parents, or other relatives.

Women are studying the tariff as never before.

America is called to world leadership. There are only four great manufacturing nations in the world—England, France, Germany, and the United States. Outside these nations are 1,500,000,000 people looking principally to these nations for their manufactured supplies. In former years America refused to play the game, while the other nations grew rich from their overseas trade. The war desperately crippled them. America is unparalleled in strength and vigor. Owing to her inventive genius her labor is, in the field of standardized quantity production, the cheapest in the world in many industries. There is only six seconds of labor in the spark plug of a cheap automobile. An American woman for $14 weaves 4,500 yards of ordinary cotton cloth in a week. The wage cost per yard is the lowest in the world. A woman knits 1,800 pairs of cheap cotton socks in a day, running 25 or 30 automatic machines. The total labor in these socks is 28 cents per dozen pairs. The tariff is 50 cents. The retail price has been doubled under the present tariff, although if we had free trade it is doubtful if we would import any. We are exporting freely. In knit goods we lead the world.

The average American factory operative produces $2.50 of merchandise to the Englishman's $1 and uses 2½ horsepower to the Englishman's 1.

We talk of our high wage per day when we should think of our low wage per unit of product. The hosiery manufacturer gets his 50-cent tariff by telling of the $3 per day that the hosiery girl gets. He conceals the fact that her contract is not $3 per day, but one-sixth of 1 cent per pair.

The manufacturer talks discouragingly of the 70 cents per hour that his machinists get and conceals the fact that there is only six seconds of labor in the spark plug.

In short, our marvelous high-speed automatic and semi-automatic machinery requires that our wage earners be as fit as a horse for a race. That means high wages and all that such wages imply in efficiency, good food and housing, courage, determination, and good will. Many a mechanic is producing from fifty to one hundred times more merchandise than his predecessor did 50 years ago, and sometimes two hundred and

five hundred times more. In many cases the wage cost per unit of product is far less at 70 cents per hour than 50 years ago at a fraction of that wage. America has little to fear from ill-conditioned foreign labor.

This statement is not answered by a reference to certain relatively small groups of American wage earners who are exploiting their opportunities, even as some manufacturers are exploiting theirs.

An honest correction of our tariff abuses will result in new standards of legislative and commercial honesty, in a fairer equalization of opportunities among us all. It will lead to our world-wide service and leadership, immeasurably heightening the intellectual and spiritual worth of our people, their estimation throughout the world, and their material well-being.

The following calculations are based upon Government statistics and approved by competent and dependable authorities:

WHAT THE TARIFF DOES TO WASHINGTON

| | |
|---|---|
| Population | 1,356,621 |
| Farmers | 283,382 |
| Wool growers | 4,244 |

[Census, 1920]

*Agricultural schedule*

| Crops | Gain to a few grazers on wild lands | Tariff gain to a few farmers | Cost to farmers as consumers | Cost to nonfarming population | Cost to State | Cost to United States |
|---|---|---|---|---|---|---|
| Wool | $375,132 | $93,783 | $779,300 | $2,952,000 | $3,731,000 | $300,000,000 |
| Sugar beets | | 122,459 | 566,700 | 2,146,500 | 2,713,200 | 216,000,000 |
| Flaxseed | | | 85,000 | 322,000 | 407,000 | 30,000,000 |
| Lemons | | | 28,400 | 107,100 | 135,700 | 10,000,000 |
| Tobacco | | | 48,200 | 182,400 | 230,600 | 53,000,000 |
| Total | 375,132 | 216,242 | 1,507,600 | 5,710,000 | 7,217,500 | 609,000,000 |

| | |
|---|---|
| Farmers as consumers lose on agricultural schedules | $1,507,600 |

| Total | 7,811,000 | 19,883,800 | 27,644,800 | 3,600,000,000 |

| | |
|---|---|
| Loss to farmers, manufacturers' schedule | $7,811,000 |
| Loss to State, manufacturers' schedule | 27,644,800 |

**Farmers lose, on all schedules, net $8,648,000. They lose $30 to $1 of gain.**

**The State loses, on all schedules, net $30,304,000. It loses $21 to $1 of gain.**

**With a population of 783,389, including 214,021 farmers, the State's only substantial tariff gain, $1,508,000, goes to 9,047 woolgrowers, or 1 resident in 87, including about 2,000 farmers, being 1 farmer in 107.**

The following calculations are based upon Government statistics and approved by competent and dependable authorities:

WHAT THE TARIFF DOES TO IDAHO

[Census 1919]

| | |
|---|---|
| Population | 431,866 |
| Farmers | 200,902 |
| Sugar-beet growers | 2,760 |
| Wool growers | 8,037 |

*Agricultural schedule*

| Crops | Tariff gain to a few grazers on wild lands | Tariff gain to a few farmers | Cost to farmers as consumers | Cost to nonfarming population | Cost to State | Cost to United States |
|---|---|---|---|---|---|---|
| Wool | $1,419,091 | $354,785 | $552,000 | $635,100 | $1,187,000 | $300,000,000 |
| Sugar beets | | 687,215 | 462,000 | 400,700 | 863,700 | 216,000,000 |
| Flaxseed | | | 60,000 | 69,600 | 129,600 | 30,000,000 |
| Lemons | | | 20,000 | 23,200 | 43,200 | 10,000,000 |
| Tobacco | | | 34,000 | 39,400 | 73,400 | 53,000,000 |
| Total | 1,419,091 | 1,042,000 | 1,128,000 | 1,169,000 | 2,298,500 | 609,000,000 |

| | |
|---|---|
| A few farmers gain (wool and sugar only) | $1,042,000 |
| Farmers as consumers lose on agricultural schedule | 1,128,500 |
| Loss to farmers on agricultural schedule, net | 86,500 |
| The State, as a whole, gains on agricultural schedule, net | 163,500 |

Farmers lose on their schedule, $1.10 to $1 of gain.

The State gains on agricultural schedule, $1.10 to $1 of loss.

*Manufacturers' schedule*

[On the basis of one-half duties added to prices in certain industries]

| | Cost to farmers as consumers | Cost to nonfarming population | Cost to State | Cost to United States |
|---|---|---|---|---|
| Heavy steel products | $1,004,500 | $769,800 | $1,774,300 | $375,000,000 |
| Light steel products | 1,506,700 | 1,732,300 | 3,239,000 | 750,000,000 |
| General store merchandise | 4,821,600 | 8,543,184 | 10,364,784 | 2,475,000,000 |
| Total | 7,332,800 | 8,045,284 | 15,378,084 | 3,600,000,000 |

| | |
|---|---|
| Loss to farmers, manufacturers' schedule | $7,332,800 |
| Loss to State, manufacturers' schedule | 15,378,084 |

**Farmers lose, on all schedules, net, $7,419,000. They lose $8 to $1 of gain.**

**The State loses, on all schedules, net, $15,214,000. It loses $7 to $1 of gain.**

**With a population of 431,866, including 200,902 farmers, the State's only tariff gain, $2,461,000, goes to 8,037 woolgrowers, being 1 resident in 54, including 1,600 farmers, being 1 farmer in 125; and to 2,760 sugar-beet growers, being 1 farmer in 73 and 1 resident in 156.**

WASHINGTON, OREGON, AND IDAHO—A COMPARISON AND CONTRAST

**Washington, Oregon, and Idaho present tariff contrasts amazing and instructive.**

**Washington, with a population nearly twice Oregon's and three times Idaho's, gets an income from the tariff of only a**

little more than a third of Oregon's income and a fifth of Idaho's. Washington gets only $591,000 from the wool and sugar duties, because she raises comparatively little of these products. Her net loss from the tariff is $54,353,000.

| | Population | | Tariff income | | Net tariff loss | |
|---|---|---|---|---|---|---|
| | State | Farm | To the State | To the farm | State | Farm |
| Washington | 1,357,000 | 283,000 | $591,000 | $216,000 | $54,353,000 | $11,634,000 |
| Oregon | 783,000 | 214,000 | 1,508,000 | 302,000 | 30,304,000 | 8,648,000 |
| Idaho | 432,000 | 201,000 | 2,461,000 | 1,042,000 | 15,214,000 | 7,419,000 |
| Total | 2,572,000 | 698,000 | 4,560,000 | 1,560,000 | 99,871,000 | 27,701,000 |

Oregon, with about half of Washington's population and nearly twice Idaho's, has a tariff income of $1,508,000, or nearly twice Washington's, because she raises so much more wool than Washington. Her net loss from the tariff, however, is $30,304,000.

Idaho, lost in the mountains with only 432,000 people or a little more than half of Oregon's and a third of Washington's, because she raises much wool and sugar, has a tariff income of $2,461,000, or nearly twice Oregon's, and nearly three times Washington's. And yet, with this big tariff income and small population, Idaho loses on the tariff, net, is $15,214,000.

Washington loses $94 to $1 of gain.

Oregon loses $21 to $1 of gain.

Idaho loses $7 to $1 of gain.

The tariff for these States was said to be written with their farmers in mind, and yet Washington farmers lose from their agricultural duties $7 to $1 of gain, and lose on the tariff as a whole $11,634,000, or $41 per capita, man, woman, and child.

Oregon farmers lose on their products $3 to $1 of gain, and lose on the tariff as a whole, $8,648,000, or $28 per capita, man, woman, and child.

Idaho farmers lose from their own schedule $1.10 to $1 of gain, and they lose on the tariff as a whole, net, $7,419,000, or $36 per capita.

All these agricultural gains are on wool and sugar; and yet four-fifths of the wool duty goes to grazers of wild lands and not to farmers at all, and half the sugar duty goes to sugar factories, mostly owned outside the State, instead of all going to farmers as the innocent public has supposed.

Here is the secret of the agricultural schedule. It was written by the big wool grazers and domestic sugar factories for the wool and sugar interests which have dominated tariff legislation for 50 years, bargaining with certain big Eastern manufacturing interests that knew what they wanted and got it. The days of Havemeyer are recalled, king of sugar, with his heirs still dominant in certain Western sugar factories. Havemeyer told of his widely distributed political contributions and called the tariff "the wet nurse of the trusts." We recall also the wool tariff, known as "Schedule K," called indefensible by President Taft, with its beneficiaries forcing Chairman Payne, in shame and anxiety, to renew their dishonest Dingley rates in the Payne law.

The wool and sugar interests have been fortified in almost every Congress in 50 years. Even so, the trades that they have made with Eastern profiteering manufacturers have, in effect, sold out the farmers of their own Western States, in the interest of a few big flockmasters and of sugar factories owned mostly in the East.

When a few flockmasters unite with Western sugar factories to dicker with Eastern manufacturing interests of vast experience and political pull, they do well to come out with net annual losses of only $99,871,000 for these three relatively small States, Washington, Oregon, and Idaho. The loss to big agricultural States is immeasurably more. The loss to American farmers as a whole is not less than $2,000,000,000. The loss to Texas is $175,000,000; to Kansas $66,000,000; to Iowa approximately $90,000,000.

Ten Western States, with Ohio and Texas, raise three-fifths of the domestic wool clip. These States with their large populations lose much more from the wool tariff as consumers of wool than they gain as producers of wool.

Of the other 10 States, the combined population of two, Arizona and Nevada, is less than that of any of the 17 largest cities in the country. Yet these two States have four Members in the United States Senate, and "The Senate makes the tariff."

Seven of these States—Idaho, Montana, New Mexico, Wyoming, Utah, Arizona, and Nevada—have a combined population of 2,396,000, being less than half of New York City, less than Chicago, and a little more than Brooklyn.

These seven States have 14 Senators, several of them among the greatest flockmasters in America, shouting for wool and voting for wool, and probably putting more of the wool duty into their own pockets and those of their partners and friends than goes to all the farmers of their States. There are three or four Western Senators who see and declare the hurt of it all, to their credit. Republican Senators BORAH of Idaho, LA FOLLETTE of Wisconsin, and NORRIS of Nebraska, voted against the law, and all Western Democrats.

If the 16,000,000 wool users in our 17 largest cities had equal representation in the Senate with these Western States, New York City would have 33 Senators, Chicago 17, and 11 other cities from three to ten Senators each. Our 12 largest cities would have 96 Senators, being exactly the number now sitting in that body. Then our 110,000,000 wool users would have some influence. They would give reasonable protection to wool and no more.

The story of the sugar tariff is told elsewhere and virtually duplicates the wool situation.

Here is the substance and the conclusion of the American tariff: Written by wool for wool, by sugar factories for sugar factories, by a few big manufacturers for themselves—all in collusion, like the Three Musketeers, "all for each and each for all," among themselves.

The foregoing statement is without malice or ill will. If not pleasant the more need of changing, not the picture but the facts disclosed, being our way of making tariffs, well and generally known and all too commonly approved openly or tacitly by good people, even as saloons and houses of ill fame were only 20 years ago.

Politics is compromise. Here is the compromise. And 90 per cent of all farmers, 55 per cent of all manufacturers, including almost all small manufacturers, and all consumers are the victims. Honestly and informed protectionists above all others should require a remedy.

REFORM OF TAXATION "THE PARAMOUNT ISSUE"—THE TARIFF IS THE ONE BIG TAX

President Coolidge says:

To reduce war taxes is to give every home a better chance. Of all services which the Congress can render to the country I have no hesitation in declaring this one to be paramount.

The Department of Commerce announces that the cost of government for the State of Nebraska for the fiscal year ending June 30, 1922, was $12,667,948. The net cost of the tariff to Nebraska is $81,610,000, or six and one-half times the cost of her government. Oregon's cost of government, $28,563,652; its tariff tax is $30,304,000. Idaho's cost, $5,301,926; its tariff tax is $15,214,000.

Washington's was $12,667,948; its tariff tax is $54,353,000. Colorado's, $16,269,251, against a tariff tax of about $45,000,000. Iowa's, $32,392,946, against a tariff tax of approximately $95,000,000. From these figures can be estimated the situation in other States. Agricultural States are bled white by the tariff. States raising much wool and sugar get a partial relief or offset because of their tariff incomes on these products. Many great manufacturing States get enormous tariff benefits, but little of these benefits seep through from the manufacturers to the farmers. Everywhere corrections are required.

The tariff is a tax. It differs from most taxes in being indirect. Three-fourths of tariff taxes go not to the Government but to private tax gatherers in their price advances, severely felt, but not seen. The present tariff tax increases the cost of living to the American people some $5,000,000,000 and accounts for the staggering profits recently declared by its principal beneficiaries, who have drained the pockets of consumers with small incomes.

An honest tariff revision is the paramount issue in tax reform. It is "the greatest service which the Congress can render the country." Our entire war debt of more than $20,000,000,000 could thus be paid with relative ease and comfort in a few years, with reasonable protection continuing, adequate for the maintenance of good wages and high standards of living.

WHAT THE TARIFF DOES TO TEXAS—BEING TYPICAL OF WHAT IT DOES TO THE SOUTH

In wealth, in size, in growth, and service Texas is one of the greatest of the American States.

Within her vast area are 167,934,720 acres, of which 114,020,621 acres are in farms and 31,227,503 are improved.

The value of her farm property is $4,447,420,321.

The value of her farm lands, not including improvements, in 1920, was $3,203,296,630, being exceeded only by Iowa, Illinois, and Nebraska, in the order named.

Her population, in 1850, was 212,592; in 1880, 1,591,749; in 1910, 3,896,542; and in 1920, 4,663,228, giving her fifth rank, exceeded only by New York, Pennsylvania, Illinois, and Ohio, in the order named. She is growing in population and in wealth by leaps and bounds.

The census of 1920 shows 2,277,773 Texans living on farms, being about half of all. There are twice as many farmers in Texas as in any Northern State, and 600,000 more than in any other Southern State.

What the tariff does to Texas is a vital question. When the Texas farmer hears that the present tariff adds $300,000,000 to the income of American farmers as a whole he is likely to say, "That's where I come in." He may be tempted to spend an extra dollar.

The purpose of this study is not to ascertain "where the farmer comes in," but where he comes out on the tariff.

These calculations are from Government sources, compiled by experienced and reliable authorities.

The following calculations are based upon Government statistics and approved by competent and dependable authorities:

WHAT THE TARIFF DOES TO TEXAS

| | |
|---|---|
| Population | 4,663,228 |
| Farmers | 2,277,773 |
| Woolgrowers | 9,883 |

[Census 1920]

*Agricultural schedule*

| Crops | Gain to a few grazers on wild lands | Tariff gain to a few farmers | Cost of tariff to Texas farmers as consumers | Cost of tariff to nonfarmer population of Texas | Cost to population of Texas as a whole | Cost to population of United States |
|---|---|---|---|---|---|---|
| Wool [1] | $2,391,592 | $597,897 | $3,986,102 | $4,174,547 | $8,160,649 | $300,000,000 |
| Sugar | | | 4,555,546 | 4,770,910 | 9,326,456 | 216,000,000 |
| Flaxseed | | | 683,332 | 715,636 | 1,398,968 | 30,000,000 |
| Lemons | | | 227,777 | 238,545 | 466,322 | 10,000,000 |
| Tobacco | | | 384,000 | 403,000 | 787,000 | 53,000,000 |
| Total | 2,391,592 | 597,897 | 9,836,757 | 10,302,638 | 20,139,395 | 609,000,000 |

[1] Including wool 14,900,743 pounds and mohair 5,084,290 pounds.

| | |
|---|---|
| Farmers as consumers lose on agricultural schedule | $9,836,757 |
| A few farmers gain (wool and sugar only) | 597,897 |
| Loss to farmers on agricultural schedule, net | 9,238,860 |

The State as a whole loses on agricultural schedule, net, $17,149,906.
Farmers lose on their schedule, $16 to $1 of gain.
The State loses on agricultural schedule $7 to $1 of gain.

*Manufacturers' schedule*

[On the basis of one-half of duties added to prices in certain industries]

| | Cost to farmers as consumers | Cost to nonfarming population | Cost to State | Cost to United States |
|---|---|---|---|---|
| Heavy steel products | $12,812,473 | $8,945,456 | $21,757,929 | $375,000,000 |
| Light steel products | 17,083,298 | 17,890,913 | 34,974,211 | 780,000,000 |
| General store merchandise | 51,249,803 | 53,672,738 | 104,922,631 | 2,475,000,000 |
| Total | 81,145,664 | 80,509,107 | 161,654,771 | 3,600,000,000 |

Farmers lose, on all schedules, net, $90,384,524, or $160 to $1 of gain.

The State loses, on all schedules, net, $178,804,677, or nearly $60 to $1 of gain.

With a population of 4,663,228, including 2,277,773 farmers, the State's only substantial gain, $2,989,489, goes to 9,883 woolgrowers, or 1 resident in 470, including about 2,000 farmers, or 1 farmer in 1,138.

Aside from her oil fields and timberlands, which are not affected by the tariff—oil is on the free list, while the low duties on lumber aimed at Canada, which is too remote from Texas to affect her—Texas is primarily an agricultural State. Her advantages, if any, from a protective tariff must come through her agriculture.

The three principal crops in Texas are cotton, which represents 55.7 per cent of the value of all her crops; corn, 13.7 per cent; and wheat, 7 per cent. These three crops—census, 1920—return 76.4 per cent of the value of all Texas crops and use 74.6 per cent of her total crop acreage.

Cotton: Texas produced in 1919, 2,971,757 bales, on 46 per cent of her total crop acreage, yielding $596,437,009. Cotton is and always will be on the free list. As respects cotton and its 55.7 per cent of her crop income, Texas's only interest in the tariff is that it be so considerate of foreign nations, without sacrificing domestic interests, as to make international trade convenient and foreign consumption of cotton as large as may be, with steady demand and good prices. An excessive tariff, like the present Fordney law, is a hindrance to foreign trade. It compels all foreigners to buy the least possible of their imports from the United States and the most possible from other countries.

Corn: The corn produced in Texas is used within the State as an animal feedstuff. The United States produces about 3,000,000,000 bushels of corn annually, or three times more than all the rest of the world. An average of 40,000,000 bushels was exported annually from 1911 to 1920 as corn and corn meal. In 1921 our corn exports amounted to about 180,000,000 bushels. In addition to this about 200,000,000 bushels of corn were exported as pork and lard, a total of about 380,000,000 bushels.

Imports of corn in this period averaged about 5,300,000 bushels per year, or 1 bushel imported to 50 bushels exported and 600 bushels produced.

The price of corn in the Argentine, where only we could feel competition, is well above the price in New York. This has been so in all recent years except for a few months during the World War, when ships were unobtainable for the carriage of corn in quantity to Europe. In those few months the Argentine price fell to about 10 cents per bushel below New York. Two or three cargoes were then sent to New York, but with no appreciable effect on our prices, as all farm and other economists agree. Argentina could not, under free trade, send corn to the United States without loss. Her exports must meet our exports in Europe, thus giving her, in her price, the benefit of the cost of ocean carriage to us on our exports.

Corn should be on the free list for the same reason that Republicans and Democrats alike put shoes and agricultural machinery on the free list; it is produced here cheaper than elsewhere. Its present "protection" of 15 cents per bushel deceives only a few farmers.

Because Texas needs all her corn for her own animals, her farmers get about one-third more price per bushel than in Iowa, Indiana, and Illinois, for instance. For the 10-year period, 1913–22, Texas farmers got $1 per bushel for their corn against an average of 76 cents in these other States. In 1922 Texas farmers got 83 cents as against 56 cents in Iowa and Indiana and 60 cents in Illinois.

Wheat: The Texas wheat crop in most years is insufficient for the consumption within her own borders.

It is everywhere agreed that the price of American wheat is fixed in Liverpool, the central market, where the exports of all countries meet. An exception, however, is to be made respecting the premium grades of hard spring wheat raised almost exclusively in the Dakotas, Minnesota, and Montana.

This extra quality hard spring wheat is needed for admixture with the softer wheat, which we grow in abundance. When these Northwestern States have bumper crops they get no advantage from the tariff. When they are short, enough must be brought in from Canada to make up the deficit, in which case these Northwestern States add from half to all of the tariff, now 42 cents per bushel, to their prices. Senator McCumber, of North Dakota, chairman of the Senate Finance Committee, made this clear in his plea for the tariff on wheat, claiming that on the average of the years these Northwestern States added about one-half of the tariff to their prices.

In 1921 Texas raised 20,810,000 bushels of winter wheat, or 10 bushels per acre, for which she received $1 per bushel at the farm, while North Dakota, for instance, with her higher quality and her tariff protection, received only 85 cents per bushel. This because Texas raised less wheat than she consumed while North Dakota depended upon Liverpool as her necessary market. In 1922, for their production of 9,902,000 bushels, Texas farmers got $1.10 per bushel against North Dakota's 92 cents. What good was the 30-cent duty then in force to either State?

Flaxseed: This is grown in the United States only for the linseed oil that is extracted from the seed. The duty is 40 cents per bushel. Oil cake, the residue after the extraction of the oil, is on the free list. Oil crushers, however, are given a rebate on their oil cake when exported and made from imported seed. This reduces the 40 cents apparent duty on flaxseed to an effective duty of 32 cents only. This effective duty gave the few Nebraska farmers who raised a total of 24,000 bushels of flaxseed in 1921, for which they received $36,000, a gross tariff gain of $7,680, provided they got from the emergency tariff of May 27, 1921, the equivalent of this 32 cents of protection.

As substantially all domestic flaxseed is raised in the Dakotas, Minnesota, and Montana, their total production being 10,774,000 bushels in 1920 and 8,112,000 bushels in 1921, the flaxseed duty is of almost no consequence to farmers in other States, except as consumers.

As consumers, farmers pay nearly twice their effective duty of 32 cents, or 62.7 cents per gallon on the clear linseed oil consumed, this 62.7 cents being the effective duty of the oil crushers, because of their rebate before mentioned on their exported oil cake made from imported seed.

Only 10 per cent of linseed oil is consumed as such. The remaining 90 per cent is used in the manufacture of linoleum, paints and varnishes, and like products.

To consumers of these products the 62.7 cents duty on oil becomes upward of $1.25, the increase from 62.7 cents to $1.25 being the addition for cost and profit, conservatively figured, taken by the manufacturers, wholesalers, and retailers of these highly finished products. This means a cost of not less than $30,000,000 to the American consumers for the duty on flaxseed or 30 cents per capita. A cost to Texas farmers as a whole of $683,000 and to Texas as a State of $1,400,000.

That the oil crushers add their duty to their prices is indicated by the recent conviction of the five principal linseed-oil crushers in the Federal courts for illegal price fixing.

Rice: The present duty of 2 cents per pound on milled rice—rough rice, 1 cent—is one of the little jokes in which some politicians delight. It pleases the farmer; it costs the consumer nothing; it sweetens high rates on certain manufactured products that enormously enrich a few.

Before the Great War the United States was nominally a net importer of rice. Great changes have taken place since 1913. Our production has been enormously increased. In the last three years our imports have gradually dwindled to almost nothing, while our exports have increased enormously, being for the three years, 1919–1921, inclusive, in excess of 20,000,000 bushels per annum, or about one-half of our total production.

Our average annual production for the five years before the war, 1909–1913, was about 24,000,000. The average annual production for the five years 1918–1922, inclusive, was about 42,500,000 bushels.

The story of the effectiveness of American highly paid labor, when earnestly engaged, well directed and supported, on the farm or in the factory is illustrated in the following statement on rice by Mr. Gray Silver, of the American Farm Bureau Federation, at its annual convention at Chicago, December 13, 1922. Said he:

> I asked a great manufacturer what his pay roll meant, using his mechanical facilities in comparison with unaided man power. I wanted to estimate the productivity of the American farmer and his machinery in comparison with the hoe in Europe and the coolie in Asia, with whom the American farmer competes in the export markets of the world. After nearly a year's time the manufacturer replies:
>
> "Our 10,200 men, with their applied mechanics and power machinery, do the work of almost 500,000 man working without machinery. Our wage earners are two hundred times cheaper than unaided man power."
>
> The competitive value of applied mechanics on the American farm was shown last year. Our production of rice has increased from year to year, until last year we had a large exportable surplus. Our good friend, Secretary Hoover, said to the representatives of his department in different parts of the world:
>
> "Find the buyer for this surplus rice; we have 180,000 tons."
>
> And where do you suppose the market was found? In rice land—in Japan and China. They sold it at our domestic price plus the cost of taking it there. They proved that American farmers, with our standards and our ideals and our applied mechanics, can compete with the coolies of Japan and China. That was the difference between the American farmer, with his skill, ability, and ingenuity, and the fellow who worked with the hoe.

American farmers are substantially manufacturers. They produce mostly by machinery. American energy, skill, and machinery, whether on the farm or in the factory, need less protection than some would have us believe who tell of the low wages of ill-conditioned foreign labor.

Other cereals: As in the case with corn and wheat, the minor cereals—oats, kafir and milo, barley, rye, and so forth—are produced for consumption within the State.

Soya beans: These are grown in Texas only as feed for cattle on about 1,000 acres out of her 31,227,503 acres of improved lands. The present duty of one-half of 1 cent per pound is of no consequence.

Peanuts: On 33,357 farms and 165,407 acres in 1919 Texas raised 2,731,632 bushels of peanuts of a farm value of $6,419,340.

In 1921 the peanut acreage was 195,000 and in 1922, 172,000. In these years and with a duty of 2 cents per pound in the Fordney tariff of 1922 the price was only half as high as in 1919.

The peanut tariff of 3 cents per pound unshelled and 4 cents per pound shelled, like the rice, corn, and wheat duties, may tickle the imagination and raise the hope of some farmer, but they have no relation to his selling prices.

Peanuts, desirable as they are, are little used for human food among the white races, except in America.

Under the low Underwood tariff of three-eighths of 1 cent per pound shelled, and three-fourths of 1 cent per pound unshelled, shelled peanuts averaged in the years 1913–1916, 4½ cents per pound at the farm. In 1922 they averaged 4.2 cents per pound. By how much was this 4.2 cents price helped by a 4-cent duty? Month by month in 1921 and 1922, under high duties, the prices were lower than in the corresponding months of pre-war years 1910–1913, and lower than for the 10-year period, 1913–1922. In fact, prices in the domestic market have shown little change up or down in peanuts except in the height of the war period, and in the postwar months of readjustment in 1920 from January to September, when, without regard to the slight duty then prevailing, peanuts were two and three times higher than in 1921 and 1922, and twice as high as pre-war.

Sugar: As in the case of wool, we import—from Cuba almost exclusively—much more than we produce. The domestic price is, therefore, necessarily the foreign price plus the duty. The duty on Cuban sugar of 96 per cent Dutch standard is 1.7648 cents per pound, which equals 2 cents per pound refined. Advances from 6 cents per pound for refined sugar in New York in September, 1922, when the present law was enacted, to 9 cents in March, 1923, show that the entire duty was added to the price. Further great price increases in later months were due to manipulation or to fear of another shortage such as raised prices almost beyond endurance in war times.

The sugar duty costs the American people as a whole $216,000,000, or a little more than $2 per capita. It cost the 2,277,773 Texas farmers $4,555,546, and the 4,663,228 people of Texas $9,326,456.

The sugar tariff means nothing to Texas except from the consumer's standpoint. Texas is not a sugar-raising State, as indicated in the statistics of the Federal Department of Agriculture. An average, however, of about 19,000 farmers each year on about 18,000 acres, or less than 1 acre to each of these farmers, raise sugar cane for sirup only. The yield in sirup runs from 2,500,000 to 3,000,000 gallons per year. In addition, she grows considerable sorghum for sirup.

The sugar tariff is by no means all a loss. Of its total cost of $216,519,626, the United States Treasury collects for the support of the Government $124,481,848, leaving $92,037,778 as the cost of protection. Less than half of this $92,037,778 goes to the sugar raisers and refiners in the United States and the balance to our island dependencies—Hawaii, Porto Rico, and the Philippines and their refiners. The sugar tariff is not all profit to United States growers, because the cost of raising sugar beets, which are the source of the greater part of the sugar produced by American farmers, is great.

All are agreed that there must be a tariff on sugar. It is a question of how much, and where sugar raising shall be encouraged. It costs about 1 cent more per pound to grow sugar beets in the Central States, Ohio, Michigan, and Wisconsin, than in the Mountain States, and from one-half to 1 cent more (sometimes 2 cents more) in Louisiana than in the Central States; although Louisiana costs are sometimes as low as in the Central States.

If an extra one-half cent is added to the tariff for the sake of Louisiana, the cost to the American public is $54,000,000, of which Louisiana gets only $2,500,000—an expensive way of getting $2,500,000 to Louisiana, whose crop averages only $25,000,000 per year. Of the remainder of the $54,000,000, more than half goes to Porto Rico, Hawaii, and the Philippines, utterly without need so far as they are concerned. The remainder goes to western beet-sugar States that likewise have no need of it.

Louisiana, because of her early frosts, cuts much of her sugar cane before maturity. This cane makes molasses but not sugar. Louisiana can make molasses and some sugar in favored regions with no tariff.

Likewise, the Central States that require about 1 cent per pound more sugar duty than the Mountain and Pacific Coast

States, can as well raise other crops, and should not be humored beyond the public need with sugar duties.

The Mountain and Pacific States charge 1 cent per pound more for their product than the Atlantic States, except for occasional surplus shipments into eastern territory. This difference in price is because of the "natural protection" of distance and transportation charges from the Eastern States into western territory. When as now the tariff is 2 cents on refined sugar, the effective protection in the Mountain and Pacific States is 3 cents, while these States grow sugar beets cheaper than other States.

Will the United States at vast expense promote the growing of sugar in States little adapted thereto, or will it by a duty of about 1 per cent, or one-half the present rate, save the consuming public $18,000,000 annually and grow sugar only where conditions are favorable?

Sugar is called "pure energy." The American people are the greatest consumers of sugar in the world. It is a necessary food. It does not impoverish the land. It is entirely elaborated from the carbon in the air and the water in the soil through the action of the sun. For the later processes of growth sugar beets need dry, clear, sunny weather, not too hot. Irrigation, therefore, is especially desirable, as in California, Colorado, and other dry mountain regions. The uncertain weather in Wisconsin, Michigan, and Ohio, sometimes with much rainfall at the wrong time, makes their beets run to large size with little sugar content. A grower in these States does not know at the beginning of the season whether, under any fair duty, his beets will pay as well as his other crops.

Wool: It is agreed everywhere that every cent of the tariff on wool goes to the farmer, except as possible the wool buyer in his bargaining may secure an inconsiderable part of it.

It is also agreed by the Research Bureau of the American Farm Bureau Federation, an organization of 1,000,000 or more farmers, the United States Tariff Commission, and other authorities that the present tariff on wool of 31 cents per scoured pound is equivalent to about 12.7 cents per grease pound, and nets American woolgrowers about $37,500,000. Also that this sum increases by fair and proper additions for the cost of doing business and profits of wool buyers, spinners, weavers, clothing manufacturers, wholesalers and retailers, to $91,000,000, or 86.6 per cent per capita, being the cost of the wool tariff to American consumers.

The shrinkage on Texas wool is 65 per cent, however, and makes the effective protection to woolgrowers 10.85 cents per grease pound, or $1,616,731, on the basis of the 1919 yield of 14,900,748 pounds.

In addition, Texas receives from the wool tariff, on the basis of 1919 production of mohair (5,084,920 pounds), $1,051,022. The shrinkage on Texas mohair averages about one-third, resulting in an effective protection per grease pound of 20.67 cents. This gives Texas a gross profit from the present wool tariff of $2,667,753. Offsetting this gain is the loss to 2,277,773 farmers as consumers of 86.6 cents each, or $1,972,638. The loss to her nonfarming population, 2,385,455 persons, at 83.6 cents each, is $2,168,581. The loss to the State as a whole is $4,142,264, against a gross gain of $2,667,753.

That the present wool tariff of about 80 per cent is very profitable to such Texas farmers as raise wool in large quantities is clear. How profitable is it to Texas as a whole? Sheep are raised by only 7 per cent of the farmers of the United States, and less than 1 per cent of the farmers raise sheep in commercial quantities.

Is this profit to Texas woolgrowers well distributed, or does it go to a few big flockmasters only, who use poor grazing lands, good for little else?

This question is not asked in the spirit of free trade. Americans are committed to protection. The only question is one of fair protection as against exploitation. It is widely held that the wool tariff might well be reduced by one-half. Certainly many manufacturing schedules should be so reduced. Can Texas afford to get an unreasonable wool duty and in return give excessive duties to manufacturers? Or should the consumer everywhere, and the substantial equities, prevail? Further analysis will show.

Cattle: With 6,156,715 head, Texas has a third more cattle than Iowa, and twice as many as any other State.

Our tariff on cattle was a direct affront to Canada, that exports some 200,000 head of range cattle annually.

Our Northwestern farmers need these Canadian feeder-cattle. The United States as a whole requires 4,500,000 feeders annually. Canadian feeder-cattle should carry to Europe the corn and other feed of our Northwest. By the sudden imposition of our Fordney duties Canada was left without a market. Last winter a traveler in the Canadian cattle country counted 300 cattle and horses standing up, frozen to death, in a distance of 150 miles on one side of his train. How many more were lying down or were on the other side of the train and in the far reaches beyond sight? This when beef was high in our cities and corn in our Northwest was selling at from 26 to 31 cents per bushel.

The just wrath of Canadians will not be overcome in many years. Their purchases from us were reduced by $400,000,000 in one year, not from anger only but mostly because we would not accept, on fair terms, of such of their commodities as we could well use in payment for our goods.

We make a mockery of our boast that our unguarded Canadian boundary line is imaginary only. We fortified it with worse than guns, with a tariff of distress and ill will that gave us never a benefit.

Canada errs in attributing this action to the American people. She apparently thinks that our public rules in tariff matters. She does not realize that the Fordney law was enacted by a few overpowerful manufacturers, who betrayed the principle of protection, fooled the people, and disregarded the better judgment of many manufacturers who wanted lower duties on their own and other manufactures.

Leading American farm organizations are now urging a repeal of our duty on cattle.

Dairy products: Representatives of the dairy interests are reported to have made a bad blunder. In the spirit of horse traders they asked for twice the duties they wanted, if certain of their own number are to be believed. They expected opposition and an agreement that would lower their own tariff demands one-half and many other duties likewise; but the representatives of the manufacturers granted the dairymen's request in full so quickly that the latter could not retract or explain. The manufacturers know that duties on butter and milk mean nothing, except near the Canadian border, while duties on manufactures mean billions of dollars. Canadian dairymen, especially in Toronto, were almost mortally hurt. A few poor babies and other people in New England and New York State have less milk, cream, and butter. Others must pay a bit more. And Canada finds the richest nation on earth and its 105,000,000 people, unintentionally but apparently with willful premeditation, mean to its next best customer in the world.

Pork and lard: As we are the world's largest exporter the tariff does not affect their prices.

Lemons: Next to wheat, sugar, wool, and tobacco, lemons yield the largest single tariff profit to agriculture. They are taxed 2 cents per pound. Texas raises none. She needs them as food because of her climate. A thousand times more are lemons needed by the 350,000 dwellers in the "dark rooms" of New York City tenements, each with from two to five occupants, with no natural light, and only such ventilation as one room can get from another through an opening 3 by 4 feet. Half the tax now in force might be justified. The present tax raises the prices and the incomes from certain lands in California and Florida, and keeps the poor from this disease-fending comfort. The lemon tariff costs Texas farmers $227,777, and the State as a whole $466,322. Agricultural authorities say that lemons can compete under a decidedly low tariff because our product is so superior in appearance, size, packing, and extract per lemon that only the poor will use the imported article at anywhere near the same price. Also the efficiency of our methods of cultivation, with improved farm machinery, makes our cost little more per dozen produced than the product of the poorer paid, inefficient Mediterranean peasant with his hoe.

Oranges: These and other citrus fruits are not affected by the tariff. We probably produce them, with the help of our machines, as cheaply as any nation per dozen and weight. Oranges are freely exported. Importations are negligible and of inferior quality.

Tobacco: The following statement of the research department of the American Farm Bureau Federation in its Weekly News Letter of January 11, 1923, is conservative:

The export and manufacturing types of tobacco, constituting the bulk of the crop, are not subject to tariff influences. Cigar leaf can be but slightly affected because the import cigar tobaccos are of a different quality and not truly competitive. Connecticut wrappers are probably increased substantially in price by the $2.10 duty on Sumatra leaf with which they come in competition. How much the increase may be there is no way of determining. As what is believed to be a reasonable guess, based on general considerations of rates of duty, production, and price quotations, the probable benefit to producers is placed at $10,000,000. As the duty on some 85,000,000 pounds of Cuban Sumatra and Turkish tobaccos imported annually is undoubtedly added to the selling

price of cigars and cigarettes, the cost of the tobacco duty is much higher than the gain to producers amounting, on the basis of the duties assessed, to $53,000,000. Of this, 10 per cent is assigned to farmers as consumers of cigars and cigarettes.

On the basis of the above calculations, the cost of the tobacco duty to Texas farmers is $384,000, and to her nonfarmers $403,000, a total cost to the State of $787,000.

Other crops: Independent studies by competent authorities show so little of consequence in other agricultural tariffs than those here named, that they are not considered in detail here. The totals of profit and loss on the agricultural duties to Texas are shown in the table at the beginning of this article.

MANUFACTURING IN TEXAS

In Texas manufacturing is devoted to the general upkeep and extension of her present facilities and to the preparation of her foodstuffs for consumption, far and near. The tariff has no direct relation to Texas industries except as it increases the prices of the steel and other semimanufactured materials used by Texas manufacturers in their products and thereby increases their own selling prices.

Of the 4,663,228 inhabitants of Texas only 130,911, or 1 in 35, are engaged in manufacturing, including proprietors and salaried employees; and 107,522 wage earners, being 1 wage earner in 43 of the population.

The principal manufacturing industries, ranked by value of products (census 1919) are, in the order named, petroleum refining, slaughtering and meat packing, cottonseed oil and cake, flour and grist mill products, and lumber.

Of these, petroleum products are on the free list and the others are exported freely, the export price determining the home price.

The other manufacturing industries, in the order named, are, the production and repair of cars and other railway equipment, foundry and machine shop products for local consumption, bread and other bakery products, printing and publishing of newspapers and periodicals, shipbuilding, rice cleaning, food preparations not elsewhere specified, cotton goods, confectionery and ice cream, and so forth.

Substantially all these things are manufactured on the spot for immediate use. The distance of Texas from any possible foreign consumption gives her a "natural protection" that is all sufficient.

The manufacture of cheap cotton goods in Texas employs only 2,633 persons. The raw cotton is immediately at hand. As the United States Tariff Board declared, upon exhaustive investigation, in 1912, cheap and coarse cottons are produced in the United States at less cost than elsewhere. We export them in great quantities. Labor is especially cheap in southern cotton mills. A few southern mills have produced only for export, so favorably are they circumstanced.

Cottonseed oil and vegetable oils: Texas as the greatest producer of cottonseed oil gains nothing from the present duties on foreign oils and fats. Accurate records of world prices reveal that during the first year of this tariff the price of cottonseed in the "protected" market at Dallas, Tex., has sold at a considerably lower average price than in the "unprotected" markets of Great Britain.

The United States produces more oils and fats than any other nation and must sell a tremendous surplus of interchangeable oils and fats in Europe, and hence the European market establishes the price in the American market.

Likewise the tremendous American surplus of cottonseed cake and meal is exported to Europe and sold at international prices.

The present tariff has almost destroyed Texas's European market for cottonseed oil, has depressed the European price for cottonseed cake and meal, and largely reduced the quantity sold abroad.

The duties on foreign vegetable oils were included merely to "oil" the excessive protection machine and catch the farmers' votes for penalizing duties on thousands of manufactured articles which Texas citizens must purchase.

The department of research of the American Farm Bureau Federation has investigated and found that the present tariff has no effect "in protecting the producer of cottonseed or lard, though growers of flaxseed will be benefited * * *. On account of our peculiar position in the world's trade little can be accomplished by a protective tariff as a measure of relief."

Brick and tile, terra-cotta, and fire-clay products employ 1,663 wage earners. Some of these products are overprotected. The makers thereof were recently convicted for making "arbitrary and excessive prices" and price fixing.

Knowing this, also knowing that our exports in recent years have averaged 140 times more than our imports, Congress raised the duty from 12 per cent to 65 per cent, which was nearly twice the total domestic wage cost of the product.

These products, tiles for the farmers' drains, sewer pipe, and hollow building tile, are so bulky and the cost of packing and shipment is so great that they must be used within 150 to 200 miles from the point of production.

Other Texas manufactures are so small and so local in character that they need not be considered. It is in the production of the vast quantity of articles universally used the world over, and therefore the subject of domestic and an international distribution, that the tariff is of consequence.

Heavy steel products: Extensive analysis of the seven basic steel industries—pig iron, bar steel, rails, structural iron, cast and wrought iron pipe, tinplate and terneplate, and wire, and wire work (see leaflet, Fair Tariff League)—shows that Congress in the Fordney law gave these industries the privilege of adding $351,000,000 to their prices, to cost consumers twice this sum at retail and in amortization charges, or $702,000,000.

Since the great steel consolidations these industries have charged all the traffic will bear. It is fair to estimate that two-thirds of the above tariff allowance is added to prices, or $500,000,000 to the United States as a whole, an average of $5 per capita. Recently the manufacturers were offered bonuses above their present very high prices for new business and reasonably prompt shipment. On this basis it costs the 2,277,473 farmers of Texas $12,812,473. The steel duty, however, costs farmers half as much again as other citizens, for farmers are among our greatest consumers of steel, in machinery, in automobiles, and in the transportation of their crops on the railways. Consequently the loss to Texas farmers was far above the estimate given here.

The tariff, therefore, on heavy steel products costs the farmers of Texas $7.50 per capita, being a total of $17,083,297. Add the loss to residents in towns and cities at $5 each, and the State loses from the tariff on the seven basic steel products $29,010,572.

There is no reason for this tariff except price raising. We are the greatest and cheapest producers of steel on earth. Steel producers say so. We exported in the three years 1919–1921, of these heavy steel products $733,787,285, against imports of $34,786,900. Exports were twenty times greater than imports. Exclusive of pig iron, which we are willing to export only in more highly finished products, we exported fifty times more than we imported.

The heavy steel duties are an enslavement of the public to a few of the wealthiest corporations in the world. Their annual profits aggregate hundreds of millions of dollars. The duties on these heavy steel products show clearly the difference in the value of duties to manufacturers and to farmers. Manufacturers, when they will, if only by winks and nods, can agree on prices and add all their duties to their prices.

When the steel schedule was before the Senate Senator UNDERWOOD, of Alabama, said:

> I am in the business myself. I represent a great iron and steel district. I would not willingly harm a people that I represented, but neither would I willingly betray a people I represented by taxing them unjustly for special interests. I know this iron and steel schedule and I know that it is a fraud and a shame upon the people of this country. I know that it is not even in the interest of the industry in the end. * * * It can compete anywhere in the world. We are the master iron makers of the world.
>
> Where the fallacy of this argument comes is that under the guise of doing something to help the farmers in some particular item, their support is asked for a bill of which, as a whole, it seems that for every dollar the farmers may derive from the bill they will pay $100 in taxes for the benefit of somebody else.

COMPETITION THE "PROTECTOR" OF THE CONSUMER

Industries that are on a strictly competitive basis, like clothing, shoes, and implements, have to sell close and sometimes without profit. Only the best-managed ones make good profits. Competition controls their selling prices as it does in agriculture.

Competition is the "protector" of the consumer. By eliminating foreign competition by duties beyond the fair requirements of domestic production, the tariff becomes in fact "the mother of trusts." It offers temptations for lawbreaking and price fixing beyond the resistance of many men.

It is strange for Congress to make price fixing criminal and also in the present tariff to make price fixing profitable beyond the dreams of our forefathers.

Shortly before their consolidations the makers of heavy steel products sold bar steel as low as 80 cents per hundred pounds. After the consolidations they held bar steel steady for years at

$1.60 per hundred pounds. The United States price was the European price plus the United States duty, and sometimes plus also the freight from Europe to New York.

At the same time our makers were exporting largely in open competition with Europe.

The farmer pays the steel duty in his agricultural implements, although the latter are on the free list.

Likewise in his automobiles and other steel products that do not add their own duties to prices.

Competitive manufacturers of implements, automobiles, soap, shoes, furniture, and so forth, are "intermediate consumers." They pay big tariff costs on their purchases and pass these costs on to their customers without adding their own duties. They suffer from the restriction of their sales because of their high selling prices due to their high costs, and from the general distrust and dislike of high prices.

Farmers can plan and hope, but they can not add a dollar except on wool, sugar, flaxseed, and spring wheat, and on minor and relatively inconsequential commodities like lemons and odds and ends.

LIGHT STEEL PRODUCTS

On other metal products, stamped ware, sewing machines, machinery of all sorts, hardware, washing machines, etc., Congress invites the manufacturers to add $790,000,000 to their prices, to cost consumers at retail $1,580,000,000.

Only insanity would let manufacturers go so far. Prices were high, however, under the former tariff and have, on the whole, advanced rapidly since. It is fair to estimate that an addition of one-half of this vast total, or $750,000,000, may be added above the cost of such merchandise abroad, being $17,083,298 to the farmers of Texas and $34,974,211 to Texas as a whole.

GENERAL STORE MERCHANDISE

An analysis of 29 industries making the merchandise that fills our retail stores—cottons, woolens, aluminum wares, gloves, hosiery, glassware, chinaware, and so forth—shows a tariff permit for price raising of over $5,000,000,000 above the prices of imported articles.

Makers of some of these have already added the entire tariff advance—see Book 1, Fair Tariff League. Assuming that one-half of the total will be added, or $2,475,000,000, to these and other like articles, we have a not improbable tariff tax of $30 per capita or $150 per family of five. This is a loss on general store merchandise to the farmers of Texas of $51,249,893 and to the State as a whole of $104,922,631.

A fair balance sheet of Texas and Texas farmers' gain and loss from the Fordney tariff is shown in the table at the beginning of this article.

Certain manufacturers fought by every means fair and foul for the duties they got and with the opposition of many other manufacturers who saw the need of moderation and wanted lower rates on their own and other products.

If the over-protected manufacturers were not going to use these duties, why did they fight for them?

THE PRESIDENT AND THE TARIFF

If they dare claim that they will add less than one-half of their duties to their prices, then let them petition the President to lower their duties by the other half as he is given power to do under certain conditions under the flexible provisions of section 315. Then will the public believe that tariff rates fought for and tricked are really not to be used.

ROBBERY UNDER FORMS OF LAW

To lay with one hand the power of the Government on the property of the citizen and with the other to bestow it upon favored individuals to aid private enterprise and build up private fortunes is none the less robbery, because it is done under the forms of law and is called taxation. (Supreme Court of the United States; Marshall case.)

THE SOUTH AND THE TARIFF

The South is overwhelmingly agricultural and must continue to be far into the future, because the world must have her cottons and tobacco at the South's own prices so long as these articles are used and her early vegetables, fruits, and other crops.

Following Texas in size of farm population, the Southern States—Georgia, North Carolina, Alabama, Kentucky, and Tennessee—have a total farm population of 7,100,000 persons, an average of 1,420,000 each.

The two border States, Missouri and Oklahoma, have each upward of 1,000,000 farmers.

Of the Northern States only Ohio (1,139,329) and Illinois (1,098,262) have upward of a million farmers.

Only four Southern States—Louisiana, West Virginia, Florida, and Maryland—have less than a million farmers each.

A few manufacturers in the Southern States—Maryland excepted—gain scarcely a dollars directly from the protective tariff except Texas and some others on wool, Louisiana on sugar, Florida on lemons, and the Birmingham district on steel and iron, owned mostly in the North.

With these exceptions the South is to-day on a strictly free-trade basis as respects production and sales. It sells in the lowest market in the world, the export market, and buys its manufactured supplies in the highest-priced market in the world, the Northern States.

It favors reasonable protection—which it usually calls "tariff for revenue, with incidental protection"—justified by the underlying facts of production here and abroad. Such protection maintains American standards of living and the high consumption standards of our manufacturing States.

The total tariff losses of the five Southern States—Alabama, Georgia, Kentucky, and North Carolina—are approximately four times those of Texas, huge as that of Texas is.

No Southern States gets half of the direct gain from the tariff that Texas does, because Texas's gain is virtually all on her 18,000,000 pounds of wool annually, which is more than three times the total wool clip—4,900,000 pounds—of these other five next largest States.

Some Southern States, notably North Carolina, manufacture large amounts of cotton goods, but these are the cheaper and coarser grades, made upon automatic looms, at less cost of production than anywhere else in the world per yard produced. These cottons are exported freely at the same prices charged domestic consumers—clear evidence that they are not affected by the tariff.

In all this the interest of the South is one with an even greater number of agricultural States in the North, in the Mississippi Basin, the mountain regions, and even of Maine, New Hampshire, and Vermont for the most part.

Agriculture generally is now the victim of the tariff from any fair standpoint.

The above tables are startling. No reasonable alterations therein will materially change the underlying facts. The cost of exploitary and excessive tariff rates are a great burden upon American life and prosperity. The South bears a disproportionate part of this burden. Agricultural States elsewhere are unduly burdened.

Great numbers of manufacturers are burdened, being substantially all southern manufacturers and more than half of the northern manufacturers, being those "intermediate consumers" who purchased their semimanufactured materials from a relatively few overpowerful producers who can and do add their excessive duties, all or in great part, to their prices.

This situation is coming to be generally understood and should be corrected immediately.

THE TROUBLE WITH AGRICULTURE

[Statement of the Secretary of Agriculture, Mr. Wallace, in New York Times, August 21, 1923]

The ruinously low price of wheat is not a new agricultural disease. It is just one more acute symptom of the general trouble from which agriculture is suffering. The disease itself is the distorted relationship between prices of farm products and prices of other commodities. This is not a new diagnosis. It has been pointed out from time to time for the last two and one-half years.

The farmer could get along fairly well with present prices of what he has to sell if prices of what he must buy were down accordingly. But prices on other things remain high. That is what hurts.

When all is said and done the fundamental fact remains to be dealt with. Agriculture and industry and commerce must be brought into more nearly normal relationship, and until this is done these acute agricultural troubles will develop one after another.

The present tariff lowers farm prices by injuring export trade. It raises all other prices and living costs by preventing competition on a reasonable basis from abroad.

THE FARMERS' 68-CENT DOLLAR

After more than two years of so-called readjustment the only man in the country to-day who is compelled to produce at a pre-war return and buy at prices near the war-time peak is the farmer. While the farmer to-day is compelled to take less than the cost of production for his wheat and for other of his products, his dollar still is the 68-cent dollar. That is all it will buy of other men's goods. It is a terrible disadvantage. (Capper's Weekly.)

Senator CAPPER, of Kansas, is chairman of the Senate farm bloc.

AMERICAN AGRICULTURE AND THE TARIFF

(Ten States: A comparison and contrast. All tariff schedules included)

The Fair Tariff League is absolutely protectionist. Its entire creed, constitution, by-laws, and effort is covered by these 26 words:

Purpose: A just tariff adequately but not excessively protecting American industry and labor, lowering the cost of living, considerate of our changed position in world affairs.

The purpose of a democracy is the upbuilding of the mass of the citizenship. This means, among other things, high wages, with all that that implies in comfort, education, and character. If an article costs 80 cents to produce abroad and $1 here, and the difference in cost is due to the sweating and degradation of foreign labor, we will tax that article upon its entry into this country, not the difference in cost of 20 cents, but 25 cents for good measure. Otherwise we would have to stop its production here or debase our labor, which we absolutely will not do. The sin is in giving 60 cents at public expense, where 20 cents is enough, or 50 cents, as on steel and glass, where none is needed.

Certain American industries need for all their products, and others for part of their products, relatively high duties. Others need low duties or none. Witness shoes and agricultural implements, which are put on the free list by both parties.

Some commodities are produced here as cheaply as anywhere in the world, in enormous volume, by low-cost methods that are the marvel of the world. Some of these are helped by low duties even though they can not add a penny of those duties to their prices. Such duties stabilize our markets by preventing occasional imports from countries temporarily depressed or overstocked.

For these and other reasons, substantially all Americans favor tariff duties. The only organized free-trade group in this country has less than 400 members out of 27,000,000 voters. As concerns the tariff, the supreme fact is that both political parties support it. They levy their import duties on identically the same products, and both profess to cover the difference in costs of production here and abroad. It is immaterial that one party says this is done for purposes of "revenue with incidental protection" "ample to cover any increased cost of production which may exist in consequence of the higher rate of wages prevailing in this country," and the other party says its tariff is "for the protection of American labor and industry."

If any informed man says that any party in this country is free trade, it seems impossible not to believe that he deliberately falsifies for ulterior purposes. A free-trade tariff would tax only tea, coffee, hemp, rubber, and things not made here; things that both parties invariably put on the free list.

America so completely believes in protection that the very strength of that belief has worked incalculable injury to the Nation. The public has rested on the belief without realizing that the value of protection, like the moral code, is in the honesty and wisdom of its application. Principles are rules of conduct. It is the conduct that counts. Dishonest protection picks too many pockets.

Our farmers were told that high duties would better their fortunes comparably with those of our great manufacturers whose excessive tariff profits amaze the world, like one steel corporation that recently reported three months' profits of $50,000,000.

Farmers were given duties on pork, lard, cattle, barley, eggs, tobacco, and fresh vegetables—duties about as valuable as counterfeit dollars.

The following table shows how they benefited from their own duties in 10 typical States.

A farmer in any other State can see how he and his State are affected by studying the States that are most like his:

*Farmers on their own schedules*

| | Gain | Lose | Net loss | Net gain |
|---|---|---|---|---|
| Iowa | $621,000 | $5,239,000 | $4,618,000 | |
| Minnesota | 6,313,000 | 5,133,000 | | $1,180,000 |
| Kansas | 240,000 | 3,770,000 | 3,530,000 | |
| Nebraska | 2,396,000 | 3,107,000 | 711,000 | |
| Colorado | 3,967,000 | 1,669,000 | | 2,298,000 |
| Utah | 2,457,000 | 879,000 | | 1,578,000 |
| Idaho | 1,042,000 | 1,128,000 | 86,000 | |
| Washington | 216,000 | 1,507,000 | 1,291,000 | |
| Oregon | 302,000 | 1,138,000 | 836,000 | |
| Texas | 598,000 | 9,837,000 | 9,239,000 | |
| Total | 18,152,000 | 33,407,000 | 20,311,000 | 5,056,000 |

Wool, sugar, flaxseed, and hard spring wheat are the only farm products upon which the tariff has a sufficient price-raising effect to be measured in money in a considerable and direct way. Consequently a surprisingly large part of the tariff benefits to these 10 States go to the sugar and wool growers of the 3 less populous States—Colorado, Utah, and Idaho. With a total of 1,921,000 these States get $7,466,000 from the tariff, or nearly half the tariff gain of all 10 States.

Against this $7,466,000 of gain their farmers lose as consumers of wool and food products $3,676,000, while on the tariff as a whole, as shown in the second table, they lose $25,488,000, and the States as a whole lose $75,533,000. In effect the farmers were baited with $7,466,000, so that they might lose $25,488,000 and their States lose $75,533,000.

The following table shows how our farmers and farm States were deceived. In return for farm duties mostly ineffective on the things that farmers sell, they were induced to acquiesce in rates on manufactures that excessively increase the prices of most things that farmers buy, the latter rates bearing no relation to honest protection and often none to Government revenue, for many of them—like steel, glass, aluminum, and silks of the kind we make—the duties practically prohibit imports, and therefore revenue to the Government.

*Ten States: A comparison and contrast—All schedules included*

| | Population | Farm population | Farmers | | The State losses, net |
|---|---|---|---|---|---|
| | | | Gain | Loss, net | |
| Iowa | 2,404,021 | 984,800 | $621,000 | $40,581,000 | $87,786,000 |
| Minnesota | 2,387,125 | 897,181 | 6,313,000 | 31,567,000 | 92,237,000 |
| Kansas | 1,769,257 | 691,690 | 240,000 | 28,776,000 | 71,572,000 |
| Nebraska | 1,296,372 | 584,172 | 2,396,000 | 37,503,000 | 79,730,000 |
| Colorado | 939,629 | 266,072 | 3,967,000 | 12,950,000 | 44,380,000 |
| Utah | 449,396 | 140,249 | 2,457,000 | 5,119,000 | 15,939,000 |
| Idaho | 432,000 | 201,000 | 1,042,000 | 7,419,000 | 15,214,000 |
| Washington | 1,357,000 | 283,000 | 216,242 | 11,634,000 | 54,353,000 |
| Oregon | 783,000 | 214,000 | 301,725 | 8,648,000 | 30,304,000 |
| Texas | 4,663,228 | 2,277,773 | 597,000 | 86,301,000 | 175,107,000 |
| Total | 16,481,000 | 6,540,000 | 18,152,000 | 270,498,000 | 666,622,000 |

These 10 States have a population of 16,481,000, or one-seventh of the population of the United States. They include 6,540,000 farmers, or one-fifth of our total farm population.

The farmers in these States as producers gain from the tariff $18,152,000. They lose, net, as consumers, of products of all sorts, including manufactures, $270,498,000. They lose, net, $15 to $1 of gain—$41 for each man, woman, and child, or $200 per family.

The people of these States, as a whole, lose $666,622,000. They lose, net, $31 to $1 of gain—$44 for each man, woman, and child, or $220 for every family.

The losses differ greatly in different States, as shown by the following table:

*Proportion of tariff loss to gain*

| State | Farmers lose | The State loses |
|---|---|---|
| Iowa | $67 to $1 of gain | $140 to $1 of gain. |
| Minnesota | $5 to $1 of gain | $14 to $1 of gain. |
| Kansas | $118 to $1 of gain | $300 to $1 of gain. |
| Nebraska | $17 to $1 of gain | $35 to $1 of gain. |
| Colorado | $2.50 to $1 of gain | $12 to $1 of gain. |
| Utah | $2.50 to $1 of gain | $5.50 to $1 of gain |
| Washington | $54 to $1 of gain | $94 to $1 of gain |
| Oregon | $30 to $1 of gain | $21 to $1 of gain. |
| Idaho | $8 to $1 of gain | $7 to $1 of gain. |
| Texas | $267 to $1 of gain | $65 to $1 of gain |

Minnesota farmers because of their large production of hard northern wheat and their considerable production of flaxseed gain $6,313,000, against which as consumers of wool and food products they lose $5,133,000. On the tariff as a whole they lose $31,567,000. The State as a whole loses $13,650,000 on the agricultural schedule, and on the tariff as a whole, $92,250,000. Minnesota, Colorado, Utah, and Idaho, with a population, all told, of only 4,308,000 persons, get $13,779,000 of tariff benefits, while the other six States, with 12,173,000 population, get only $4,373,000.

These four States get $3.25 per capital from their agricultural duties. The six more populous States get 36 cents per capita. Is it not clear that the agricultural duties were written by wool and sugar interests for wool and sugar interests and for the northern wheat States in their distress?

The tariff was said to be written with all American farmers in mind. We here see that the agricultural schedule was in

fact written by the wool and sugar interests for the wool and sugar interests; with the present wheat duty made by special proclamation of the President in March, 1924, in amelioration of a calamitous situation in the Central Northwest, where alone it is considerably effective.

The politically dominant wool interests are not farmers at all, but live in the towns and cities and grow their wool in remote mountain and desert lands good for nothing else, while the dominant sugar interest is the domestic sugar factories, which unfairly pocket half the sugar duties, and have little or no political support from sugar-beet growers.

These wool and sugar interests have dominated tariff legislation for 50 years, bargaining with certain big eastern manufacturing interests that knew what they wanted and got it. The days of Havemeyer are recalled, king of sugar, with his heirs still dominant in certain western sugar factories. Havemeyer told of his widely distributed political contributions and called the tariff "the wet nurse of the trusts." We recall also the wool tariff known as "Schedule K," called indefensible by President Taft, with its beneficiaries forcing Chairman Payne, in shame and anxiety, to renew their dishonest Dingley rates in the Payne law.

The wool and sugar interests have been fortified in almost every Congress in 50 years. Even so, the trades that they have made with eastern profiteering manufacturers have, in effect, sold out the farmers of their own Western States, in the interest of a few big flockmasters and of sugar factories owned mostly in the East.

When a few flockmasters unite with western sugar factories to dicker with eastern manufacturing interests of vast experience and political pull, they do well to come out with net annual losses of only $99,871,000 for these three relatively small States: Washington, Oregon, and Idaho; a loss to Utah farmers of $3,541,000, and to the State of Utah of $15,272,000; to Colorado farmers of $9,934,000; and to the State of Colorado, $44,380,000.

These States make the greatest per capita gain from the tariff of any farm States, but in the end they are large losers after all.

With the States like Iowa, Kansas, Washington, and even Nebraska, with her considerable sugar crop, the tariff situation is past describing. The tariff bleeds them white with almost no offsetting advantage. Iowa loses net each year $87,786,000; Kansas, $92,237,000; Washington, $54,353,000; and Nebraska, $79,730,000.

Iowa farmers lose $67 to $1 of gain, and the State loses $140 to $1 of gain. Kansas farmers lose $118 to $1 of gain, and the State loses $300 to $1 of gain. Nebraska farmers, despite their sugar beets, lose $17 to $1 of gain, while the State loses $35 to $1 of gain. Oregon is like Nebraska; Washington is worse.

Texas is typical of the Southern States. We have credited her farmers with $598,000 of benefit from the wool tariff not because there are any sheep of consequence upon Texas farms but because we wish to give her the largest credit possible, and some of her farmers in remote sections raise alfalfa, as they do in some other sheep States, and other feed used by sheep raisers in time of drought or of winter storms. They even get an incidental advantage from the wool duty. Even with this credit Texas, partly because she is the fifth most populous State in America, and therefore a large consumer, loses $175,107,000 net on the tariff.

Ten Western States, with Ohio and Texas, raise three-fifths of the domestic wool clip. These States with their large populations lose much more from the wool tariff as consumers of wool than they gain as producers of wool.

Of the other 10 States, the combined population of two, Arizona and Nevada, is less than that of any of the 17 largest cities in the country. Yet these two States have four Members in the United States Senate, and "the Senate makes the tariff."

Seven of these States—Idaho, Montana, New Mexico, Wyoming, Utah, Arizona, and Nevada—have a combined population of 2,396,000, being less than half of New York City, less than Chicago, and a little more than Brooklyn.

These 7 States have 14 Senators, several of them among the greatest flockmasters in America, shouting for wool and voting for wool, and probably putting more of the wool duty into their own pockets and those of their partners and friends than goes to all the farmers of their States. There are three or four western Senators who see and declare the hurt of it all, to their credit. Republican Senators BORAH, of Idaho; LA FOLLETTE, of Wisconsin; and NORRIS, of Nebraska, voted against the law, and all western Democrats.

If the 16,000,000 wool users in our 17 largest cities had equal representation in the Senate with these Western States, New York City would have 33 Senators, Chicago 17, and 11 other cities from 3 to 10 Senators each. Our 12 largest cities would have 96 Senators, being exactly the number now sitting in that body. Then our 110,000,000 wool users would have some influence. They would give reasonable protection to wool and no more.

The story of the sugar tariff is told elsewhere and virtually duplicates the wool situation.

Here is the substance and the conclusion of the American tariff. Written by wool for wool, by sugar factories for sugar factories, by a few big manufacturers for themselves—all in collusion, like the three musketeers, "all for each and each for all," among themselves.

The foregoing statement is without malice or ill will. If not pleasant, the more need of changing not the picture but the facts disclosed, being our way of making tariffs, well and generally known, and all too commonly approved openly or tacitly by good people, even as saloons and houses of ill fame were only 20 years ago.

Politics is compromise. Here is the compromise. And 90 per cent of all farmers, 55 per cent of all manufacturers, including almost all small manufacturers, and all consumers, are the victims. Honest and informed protectionists, above all others, should require a remedy.

GENERAL COMMITTEE OF THE FAIR TARIFF LEAGUE

J. F. Reed, president Minnesota Farm Bureau Federation.
Jesse Isidor Straus, R. H. Macy & Co. (Inc.).
Gray Silver, American Farm Bureau Federation.
W. L. Saunders, Ingersoll-Rand Co.
E. G. Holloway, president Jas. S. Kirk & Co.
A. B. Farquhar, vice president Chamber of Commerce of the United States of America.
Charles A. Lyman, Washington, D. C.
William H. Johnston, president International Association of Machinists.
John F. McNamee, Brotherhood of Locomotive Firemen and Engineers.
William Goldman, Cohen, Goldman & Co.
John A. Simpson, president Oklahoma Farmers' Union.
John Morris, master Colorado State Grange.
J. A. Freeman, president Illinois Farmers' Union.
Mary Archer, Reading, P...
Mrs. Julian Heath, president National Housewives League.
Mrs. Franklin D. Roosevelt.
Mrs. Eleanore B. Johnson, Zanesville, Ohio.
Mrs. Fred J. Sisson, district leader New York State League of Women Voters.
Ralph Snyder, president Kansas Farmers' Union.
George McKerrow, president Wisconsin Farm Bureau Federation.
E. B. Cornwall, president Vermont Farm Bureau Federation.
Basil M. Manly, director People's Legislative Service.
Milo Reno, president Iowa Farmers' Union.
J. C. Webb, president Texas Farmers' Union.
C. J. Osborne, president Farmers' Union of Nebraska.
H. W. Ackhoff, Chicago.
W. S. Hill, president South Dakota Farm Bureau Federation.
J. J. Hollister, California Farm Bureau Federation.

Walter R. Kirk, Chicago, Ill.
Alfred G. Kahn, president Interstate Cottonseed Crushers' Association.
C. Rogers Brown, Bureau of Raw Materials.
A. E. Burkhardt, former president National Association of Retail Clothiers.
J. M. Anderson, president Equity Cooperative Exchange.
John R. Howard, former president American Farm Bureau Federation.
Mrs. H. W. Cheney, Chicago, Ill.
Fred Brenckman, secretary Pennsylvania State Grange.
Dr. George L. Sands, president Arkansas Farmers' Union.
W. W. Kincaid, president Spirella Co.
John R. Commons, economist.
W. Jett Lauck, economist.
A. D. Cross, secretary Washington Farmers' Union.
H. E. Miles, former chairman National Tariff Commission Association.

PROTECTION AND THE MIRACLE OF AMERICAN PRODUCTION—THE BURDEN OF EXCESSIVE PROTECTION ($3,000,000,000)—HIGH DUTIES AND NO REVENUE—FARMER AND WAGE EARNER DEFRAUDED

AN ARGUMENT PRESENTED BY THE FAIR TARIFF LEAGUE
(2 Rector Street, New York City)

Purpose: A just tariff, adequately but not excessively protecting American industry and labor, lowering the cost of living, considerate of our changed position in world affairs.

The league consists of representatives of 2,500,000 farmers and wage earners, manufacturers, leading women, merchants, and others.

It opposes the misuse of protection at the behest of great and selfish interests. It desires the cooperation of all who are so minded.

TARIFF PROTECTION—HONEST OR DISHONEST

The analyses of 42 industries in this leaflet and of 30 others elsewhere presented were made in 1921-22 during the Fordney tariff legislation, in the belief that national prosperity and public morals require that American voters and lawmakers inform themselves regarding customs tariffs and the theory of protection to American industries.

These analyses are based upon the findings of many experts, including some of the best in the Government service. The tabulations of production and wages were made by the Bureau of the Census, some of them for the first time and upon request of the Fair Tariff League.

The more essential facts were printed in heavy type, to be gleaned in a moment by the overbusy reader.

During the long controversy over the present Fordney tariff law these findings were widely used and seldom disputed. They disclose the motives, methods, and results of tariff making in the United States now and for a generation past.

These analyses are here prefaced by general consideration for those who have not studied the tariff.

FREE TRADE NOT AN ISSUE

There is no organized group of practical consequence promoting free trade in the United States.

The principal or only organized free-trade group in the United States in 1921, when the tariff issue was at fever heat, consisted of 391 persons, of whom 354 paid dues of $1 each and 37 paid $5 each. These in a population of 110,000,000, casting 27,000,000 votes in 1920. Until these 391 persons win over a considerable part of the 27,000,000 voters we can leave free trade to philosophers. Until then we should challenge the judgment or the integrity of politicians who use free trade as a bugaboo for vote getting.

The United States is committed to the elevation of the average citizen through good wages, good living, and whatever else conduces to this end, including protection. It will take no chance on overturning a policy approved from the beginning of our Government's existence when, on July 4, 1789, as its first legislative act, it adopted a protective tariff.

Both political parties shun free trade utterly. Both assess duties upon identically the same articles and make these duties equal to or greater than "the difference in the cost of production here and abroad," which is the definition of protection in the Republican platform of 1908, and the only definition anywhere accepted.

That the Democrats say that theirs is a tariff for revenue only is immaterial. In fact, the only competitive articles upon which a tariff for revenue can be levied are those that cost less abroad than here, for only those articles can pay a tax and enter our markets. A tariff for revenue will bring its best return when its rates equal "the difference in costs of production here and abroad," this being the definition of protection.

The rates in the table on page 12 show how the Democratic Party applies its principles. Its rates there shown average one and one-half times the wages in the industries. They exceed the difference in costs here and abroad, sometimes manyfold. The Fordney rates average two and one-half times the wages. They add to protection, graft and exploitation. In truth, the Fordney rates are neither fairly protective nor Republican. Dictated by profiteers, they are repudiated by millions of Republicans.

The tariffs of both parties protect labor and both raise prices. Alexander Hamilton, the father of protection, in the discussion preceding the adoption of the protective policy, made this clear. Said he of protection:

> "Duties of this nature evidently amount to a virtual bounty on the domestic fabrics, since, by enhancing the charges on foreign articles, they enable the national manufacturers to undersell all their foreign competitors. * * * Indeed, all the duties imposed on imported articles, though with an exclusive view to revenue, have the effect in contemplation, and, except where they fall on raw materials, wear a beneficent aspect toward the manufacturers of the country."

As between the political parties, it is only a question of the adequacy of the respective rates.

A free-trade tariff would tax only tea, coffee, and other articles not produced here or so different in design or quality as to be virtually noncompetitive. This method only would give us free trade in competing products and bring us to the price level of other countries. And these products, Democrats and Republicans alike, put on the free list.

If the United States ever seriously considers free trade, it will be after a thorough trial of honest and moderate protection and after a further strengthening of our international position. Those who oppose excessive rates believe that in moderate, fair protection is the solution of our tariff problems for generations.

When voters realize that the issue is not protection versus free trade but protection, honest or dishonest, protection will be quietly and scientifically applied and the public mind will then be free for other problems. Legislation will be cleaner.

THE PRINCIPLE OF PROTECTION

The principle of protection is simple. It requires that upon such merchandise as should be produced in the United States and is now produced abroad at lower cost than here there shall be levied a customs tax or duty upon competing imports to bring the foreign cost of production plus the duty up to our cost.

If an article costs 80 cents to produce abroad, and $1 here (the benefit of the doubt to be given our producers), the duty should be 20 cents. Otherwise low-priced importations will put our manufacturers out of business, and if this is extensively done our industries, wages, and standards of living will be demoralized.

This 20-cent tax increases by this amount the cost to the wholesaler of every article of the kind, whether made here or abroad, above the price that would prevail under free trade. The 20 cents goes to the domestic manufacturer on everything he produces, and to the Government on imports only.

As the tax is a part of the cost, the wholesaler and retailer add to this their usual percentages for expenses and profits. This doubles the 20 cents, making it 40 cents to the consumer at retail. It is trebled and quadrupled on many novelties such as adorn our homes and as women buy freely.

Disinterested, competent public servants in the Government tariff service say that these greater increases are reasonable on articles bearing high duties and subject to changing fancies. These apparently excessive increases give the importer only one-third and the retailer one-half of his selling price as gross margin, which they say is necessary, as the cost and risk of handling this merchandise are great.

Whether we agree with them or not Congress must not promote such high retail prices by excessive duties.

EXCESSIVE DUTIES A BURDEN UPON AMERICAN LIFE

When this 20 cents is put upon an article that costs no more to produce abroad than here, or duties more than cover the difference in cost, none can be imported unless the American manufacturer raises his price above the foreign price by the total amount of the duty. When as in hundreds of cases in the Fordney law and many in the Underwood the tax is from 30 per cent to 50 per cent on things costing the same, and often in the Fordney law from 60 per cent to 80 per cent with no such difference in costs, and these amounts are doubled, trebled, and quadrupled at retail, the tariff makes living costs as respects such articles, sometimes common necessities, twice as high as honest protection justifies.

This is a burden upon living and upon production. It artifically raises all costs, including wages. It limits international trade and the profits therefrom by making our costs unreasonable. It demoralizes legislation and weakens the foundations of society, because such rates are not honest. They breed radicalism—a purblind protest against misgovernment. Our radicals are brought into office by our aggressive McLEANS and Fordneys and our complacent LODGES.

DO MANUFACTURERS ADD THE DUTY TO THEIR PRICES?

The question whether domestic manufacturers add the duty to their prices is answered by the other question. Can they? If they are operating under severe competition, they can not and do not. When, however, Congress provides that nothing competitive shall enter this country until domestic prices are greater than foreign prices by the amount of the duty, almost inevitably, being in business for profit, manufacturers join in price agreements, or by winks and nods beyond the cognizance of the law restrict or eliminate competition. As shown in the accompanying analyses they add from three-fourths to nine-tenths of the duty, but not enough to make importations generally profitable. They thus get enormous tariff profits for their own use and disbursements and leave the Government with almost no revenue because little is imported, and that little is mostly novelties in design or quality, differing enough from domestic products to bring higher prices.

A comparative list of 75 chemicals, 10 weeks after the enactment of the Fordney law, showed that all but one had added all or most of the Fordney rate increases to their prices.

Indian Head cotton sheeting had advanced 22½ per cent, and Fruit of the Loom muslin 12½ per cent, both famous brands in common use. Cheap sateens for women's wear and for men's sleeve linings had advanced nearly one-half. Cottons generally have advanced from 20 per cent to 25 per cent. Advances in raw cotton accounted for about one-fifth of these advances, the rest was mostly tariff.

We have seen that Hamilton and his associates knew that duties would raise prices. Said Henry Clay in 1833, "In general it may be taken as a rule that the duty upon an article forms a portion of its price." Said John Sherman, in 1869, a great protectionist Secretary of the Treasury, "As a general rule the duties upon imports operate as a tax upon the consumer." And now Chairman Fordney says, "Whatever duty you put on is for the purpose of bringing the foreign value [price] up to our value." Said Chairman McCumber, in pleading for a duty on wheat for his State, "We want higher prices. When our crop of hard northern wheat is short we add all the duty to our prices. When the crop is abundant we add half the duty." He made no claim that the duty on wheat helps other than the farmers in the Northwest who raise hard wheat. In fact, growers of soft wheat pay all or part of the duty, for they must mix hard wheat with theirs for flour.

Said the Tariff Commission: "Whenever any article that is manufactured here is continuously imported in any considerable quantity, the tendency of the tariff is to make the price of the domestic product, as well as the imported article, equal to the foreign price plus the duty."

An analysis of 29 industries including textiles of all sorts, wearing apparel, glassware, chinaware, gloves, carpets and rugs, and such other merchandise as fills retail stores, shows that under the relatively low Underwood tariff only 2.7 per cent of this merchandise was imported, and that mostly because different in design or quality, as stated, and therefore especially attractive to our buyers.

An analysis of 29 industries (pp. 78–83), including textiles of all sorts, wearing apparel, glassware, chinaware, gloves, carpets and rugs, and such other merchandise as fills retail stores, shows that The Government got the tariff on this $2.70 of each $100 of consumption, while the manufacturers got it on the remaining $97.30, so far as they were able to charge it. Prices and these analyses show how able they were.

These 29 products were sold by their producers for $14,889,000,000 in 1919. Consumers paid at retail approximately twice this, or $30,000,000,000. In 1920 the Government collected in revenue on the 2.7 per cent of imports $176,000,000, and in 1921, $154,000,000, equaling one-half of 1 per cent on the total domestic consumption. This under the Democratic Underwood tariff.

It seems impossible that under the new Fordney rates the consumers will pay less than 20 per cent more for these goods than if they were not protected, and 10 per cent, or $3,000,000,000 more than if this protection were scientific and honest. Indeed, many prices advanced from 10 per cent to 20 per cent in the two months immediately following the passage of the Fordney law, and all prices are rising.

What our closely affiliated makers of heavy steel products will do with the $351,000,000 of "protection" in the Fordney tariff is indicated elsewhere. After their consolidations, in 1890–1892, these steel makers added all of the Dingley and Payne tariffs to their prices, and still there was no profit in importing, so the Government got relatively nothing. During those years and subsequently they produced below European costs, and exported freely in competition with the world.

The public has questioned how a tariff that brings the Government a total of only $350,000,000 can cost consumers $3,000,000,000 or more. These pages should make it clear.

Domestic competition used to keep prices down. In competition was the consumer's protection. With competition weakened or gone, he has no protection, except in the scientific and honest application of tariff rates at the lowest point consistent with adequate protection.

The Fair Tariff League is not associated with parties. It is directed by Republicans and Democrats, by representatives of millions of farmers and wage earners, by manufacturers, merchants, representative women, and others. It strives for moderate protection, honest and free from profiteering.

A COMPARISON: WAGES, VALUE OF PRODUCT, AND HORSEPOWER USED PER OPERATIVE

Machinery and buildings, fuel, and the incidental expenses of production, though costly, cover such great quantities of product during the period of their use that when they cost more here than abroad, the difference is so little when applied to the yard or pound of output, that it is often almost impossible to estimate it.

Our raw materials are more abundant, more easily worked, and conveniently located than those of any other country. Wages, therefore, constitute the essential difference in costs here and abroad. Their relation to the tariff must be understood.

A comparison of English and American governmental statistics shows that the average American wage earner produces from two to three times more output in money value than the English wage earner, and uses from two to three times more horsepower. In the manufacture of boots and shoes, five times more horsepower and three times more output in money value; in cotton goods, one-half more horsepower and one-half more value; in cutlery and edge tools, five times more horsepower and twice the value; in gloves, hosiery, paints and varnishes, firearms and ammunition, and soap, twice the horsepower and from two or three times the value. In silks, one and one-third times more horsepower and two and one-half times more in value.

At double the daily wage, American labor would therefore be cheaper than the English in these industries and other of like character. They are now about 60 per cent higher.

American labor, supported and directed by American genius for invention and organization, is the cheapest labor in the world in the production of many of the common requirements of mankind.

This is not a new situation. William M. Evarts, Secretary of State and a protectionist, in his report of May 17, 1878, on the state of labor in Europe, said, "The average American workman performs from one and one-half to twice as much work in a given time as the average European workman." In proof he quoted at length from consular reports.

In 1883 Charles S. Hill, protectionist, statistician of the Department of State, reported to the Tariff Commission of that time that our manufactures amounted to $8,000,000,000, made by 5,250,000 workmen, while England's was $4,000,000,000, made by 5,140,000 workmen. Said he: "Here is the positive proof that American mechanics in the aggregate accomplish exactly double the result of the same number of British mechanics. They are, therefore, very justly paid double in wages."

Judge Kelly, in 1899, said that an English nail maker got 37 cents per day and an American $4.50 per day, but the cost of labor per pound of nails was 3 cents in England and one-half cent in the United States. This was favorably quoted by the high-protectionist American Economist.

These protectionists, however, did not advertise the other fact that for many years our nail makers supplied a large part of England's demands, and at so much less than their home prices that their nails were bought in England and shipped back here at a saving of a third under domestic prices.

When we were free-trade colonies under England's control our wages were as much higher than English wages as they are to-day. Adam Smith gave wage rates in 1773 so showing.

Hamilton and Clay from the birth of our country until 1842 never advocated protection for the sake of high wages. That our wages were higher than foreign wages before we adopted protection was considered by Hamilton as one of the difficulties of that day. This difficulty, however, said he, "is diminished in proportion to the use which can be made of machinery; and so far as the dearness of labor may be a consequence of the greatness of profits in any branch of business it is no obstacle to success. The undertaker [manufacturer] can afford to pay the price." How apt is this statement to-day?

Good wages accord with good religion. Like honesty, they pay. We need protection, moderate, but not excessive, merely to keep American wages where they have always been—far above the European scale.

Our manufacturers of shoes and of agricultural implements pay the highest wages in the world in their industries. Their labor is the cheapest in the world, because it produces more for each dollar of wages received than any other labor. For this reason these things are put on the free list by both Republican and Democrats, without violation of the principles of protection.

If either party ever gives them, say, 25 per cent duty, it will count for nothing unless the manufacturers, now selling at closely competitive prices, add the duty by price agreements or consolidations. That would increase their profits by tens of millions of dollars annually, and the Government would begin to get revenue from importations. This would duplicate experiences in heavy steel products, glucose, files, wood screws, window glass, cast-iron pipe, and most trust products.

THE MIRACLE OF AMERICAN PRODUCTION

About two-thirds of the 6,000,000,000 yards of cotton goods made in the United States, being print cloths and coarser fabrics, should be on the free list with shoes, because our costs are minimum. They now carry from 12 per cent to 45 per cent duties.

A woman or young girl runs from 25 to 80 looms, weaving 4,500 yards of these cheap cottons per week, for $14 in the North and $12 in the South. She gets these wages not because she is in the United States but because she weaves more yards for this money than any other worker in the world.

India has well-equipped cotton mills, with cotton growing at their doors. She pays cotton-mill workers an average of $1.25 per week. She sends to the United States for denims and drills because our $14 worker makes them cheaper per yard than her $1.25 worker. Our spinners often run twice as many looms as the English.

These cotton mills could have paid higher wages. They have always paid the lowest possible, and to-day pay less than is paid in any other industry in the United States of like character, says the National Industrial Conference Board, a representative body of cotton and other manufacturers.

These cotton mills forced upon Congress great increases in tariff rates; 18 per cent to 30 per cent on goods costing less here than abroad, and averaging 40 per cent on all woven fabrics, with 86 per cent on laces and embroideries. This, when scarcely a piece of cotton cloth retailing under 40 cents per yard was imported under the lower Underwood tariff, and $78,574,000 of cotton goods were exported in 1921 at international prices.

An American operative runs from 25 to 30 automatic knitting machines, making 1,800 pairs of cotton socks daily, for 2 cents per dozen pairs. She gets $3 per day because she knits more for $3 than the foreign worker. The knit-goods men cry out against the $3 without telling of the 2 cents. According to census of 1919 they give 17½ cents to their wage earners out of each dollar of product. They exported $61,373,000 in 1920, against imports of $5,677,000, these imports, mostly novelties, like English golf hose and silk stockings with lace fronts running up to $100 a pair. They forced Congress to replace the Underwood duty of 37 per cent, with rates averaging 66⅔ per cent, being nearly three times the percentage of their product that they give to labor. The Fordney duty is from 40 cents to 50 cents per dozen pairs of cheap socks costing a total of 26 cents to make from the raw cotton.

Did they need this additional profit? One mill was making at the rate of 100 per cent per annum during the last six months of the Underwood law. The Phenix Hosiery Co., beginning in 1800 with $75,000, has increased its capital wholly from earnings, and made $1,407,972 in 1920. In the last nine months of the Underwood law it made $1,500,555. Its net profit in 1922 was $1,925,400 above interest charges, depreciation, and taxes. All knitting companies were prosperous under the lower duties.

An operative feeds an endless coil of wire into a bolt machine that ejects the finished bolt, cut to length, threaded, and headed so fast as to blur the vision. In 1921 we exported $4,885,000 against imports of $54,500. On this basis, if the manufacturers add the duty—and who can doubt that they will—they will get out of the tariff $500,000, and the Government will collect $5,500 in revenue on imports. Consumers will pay at retail twice this tariff allowance, or $1,000,000, without justification. Was Congress thinking of their constituents in levying this tax?

Forty-eight per cent of all the table cutlery made in the United States in the three years, 1919–1921, was exported because no country could make it cheaper. The common bread knife, with fluted edge and 9-inch blade, is exported the world over for 6½ cents. There is about 3 cents of labor in it. Congress makes the duty 11½ cents, or four times the total American wage cost, and twice the factory selling price. So of ordinary shears.

A single machine makes 50,400 glass pint bottles in a day of 24 hours, with no labor except to keep it oiled. Of 1-dram bottles it makes 165 per minute. Congress makes the duty 50 per cent. A hundred years ago, when they were blown by mouth, the duty was 10 per cent.

A machinist running three machines makes a spark plug for an automobile every 6 seconds, 600 per hour, with two diameters inside and many shapes outside. He gets 50 cents an hour in the East and up to 80 cents in the West. What is the wage cost per plug? Duty 40 per cent—on the material, the overhead, the wage, and the foreigner's profit; to be doubled, possibly quadrupled, at retail. Is it right?

These are typical examples, paralleled on every hand. Machines are more than human. With exhaustless energy they neither think nor tire and therefore are free from error. They make the 8-hour day possible, as against the 14-hour day of long ago. Automatic and other machines make labor to-day so small a part of production costs as to require only about half the duties of 40 to 60 years ago. The public, not the profiteer, should get the benefit.

A tariff putting these necessaries where they should be will lower the costs of living and of production and satisfy the public with fair rates on articles costing more abroad than here. Our farmers will be enriched, for they now produce too expensively in an artificial market, burdened with false costs and false prices, and sell in the low, unprotected, competing markets of the world. They are in distress for want of a fairer chance.

### CONGRESS AND THE COURTS

The United States courts recently condemned to jail for criminally enforcing "arbitrary and excessive prices" the makers of the terra-cotta tiles for farmers' drains, for city sewers, and hollow walls in fireproof buildings. The makers of cast-iron pipe are under court indictment for similar practices, and the makers of sanitary ware and of window glass.

These trusts produce at the lowest costs in the world. They export freely. Imports were negligible under the lower Underwood tariff. The United States Tariff Commission shows, and some of them confess, that they have nothing to fear from foreign competition. They should be on the free list with shoes and farm machinery, and the people get the benefit. Protection so requires.

Congress disregarded the findings of the courts and the commission. It invited the tile and terra-cotta manufacturers to increase prices $14,000,000; sanitary ware, $2,000,000; cast-iron pipe, $8,000,000; and window glass, $7,000,000. These tariff grants are not protection but bounties, such as despots gave their favorites, with the beneficiaries collecting them if and as they can.

The duty on terra cotta was raised from 12 per cent to 65 per cent, on sanitary ware from 20 per cent to 40 per cent, on cast-iron pipe from 10 per cent to 20 per cent, and on window glass from 9½ per cent to 28 per cent. The fact that these industries added their Underwood rates to their prices shows what they will do with their Fordney rates. If they add the new duties, consumers will pay, all told, upward of $60,000,000. If the quantity of imports continues on the average of the years 1919–1921, the Government will collect on imports about $930,000. Is this protection? These industries are separately analyzed elsewhere in this leaflet.

Congress treated other industries, commonly called trusts, in like fashion. It gave the Glucose Trust 50 per cent protection against a wage cost of only 6 per cent in converting its raw material, Indian corn, the cheapest food material in the world, into syrup. Glucose has exploited the tariff for 30 years. Its exports averaged $10,000,000 for the last three years against $4,000 average imports. It is now invited by Congress to add all it dares of 50 per cent tariff bounty to its competing domestic prices above its export prices. On the basis of the last three years it will get all it dares add of tens of millions of dollars of privately collected bounty and the Government will collect on imports $2,000 per year. Last year it collected 75 cents on total imports of $5.

### LABOR DEFRAUDED BY EXCESSIVE RATES

The analyses previously mentioned of 29 industries (p. 78–83, and described in another pamphlet), producing the general merchandise that fills our stores and sold in 1919 at factory prices for $15,000,000,000 and retailing for about $30,000,000,000, shows that these products cost consumers at the rate of $40 per capita in 1914 and two and one-half times more, or $104 per capita, in 1919. Money wages were higher in the latter year, yet in 1914 labor got 18.4 cents in these industries out of each dollar produced and only 16 cents out of each dollar produced in 1919.

In cotton, silk, and woolen mills labor gets 16 cents out of each dollar of the product. If the factory raises wages 20 per cent, labor gets an additional 3 cents, or 20 per cent on its 16 cents of each dollar produced. If the factory raises its prices 20 per cent at the same time, the factory gets 20 cents more on each dollar of product, or nearly seven times more than it increases to labor. The laboring man is poorer after paying for his supplies in those industries than he was before the raise. Such increases cause general prices to advance. Anyone, on salary or people living on interest from investments, who does not get any increase in income is altogether a loser. This has happened in recent years, and will now happen again.

Our wage earners acquiesce in and sometimes actively support high tariff rates to their employers because they have not the facts and are afraid to run the risk of lower rates. They are fed up on scare stories.

Although machinery, by replacing labor, has lowered the percentage going to wages our tariff rates have risen instead of dropped. In 1860 the average tariff on all manufactures was 24 per cent, and the wage was 25 per cent, or equal to the duty. In 1870 duties on manufactures average 34 per cent, or one-third more than the average wage, which was 23 per cent. In 1880 the duty was 46 per cent, or double the average wage, which was 22 per cent. Now, in the Fordney law, as shown below, they are often several times the total wage in the industry.

This is contrary to the advice and prediction of Henry Clay, the apostle of protection from 1810 to 1842, who, in 1833, expressed the opinion of his day, saying:

> "The theory of protection supposes, too, that after a certain time the protected arts will have acquired such strength and perfection as will enable them subsequently unaided to stand up against foreign competition."

Said Clay in 1840:

> "If the protective policy were entirely to cease in 1842, it would have existed 26 years from 1816, or 18 from 1824—quite as long as, at either of these periods, its friends supposed might be necessary."

The following table illustrates the relation of wages to tariff rates in important industries in the recent Democratic Underwood law, and in the Republican Fordney law:

WAGES AND THE TARIFF

*What labor gets from each dollar of product and the corresponding tariff rates*

| Product | Wage per dollar of product | Underwood tariff on each dollar imported | Fordney tariff on each dollar imported |
|---|---|---|---|
| | *Cents* | *Cents* | *Cents* |
| Cotton manufactures | 16⅔ | 34 | 42 |
| Silk manufactures | 15½ | 42½ | 57 |
| Woolen manufactures | 15½ | 32 | 68 |
| Hosiery | 17½ | 37 | 67 |
| Glassware | 30½ | 35 | 38½ |
| Glucose | 6 | 15 | 50 |
| Aluminum | 17¼ | 20½ | 45 |
| Cutlery | 39 | 39½ | $1.82 |
| Stamped ware | 23½ | 20 | 40 |
| Gloves, leather | 17½ | 13⅔ | 50 |
| Buttons | 33 | 36 | 99 |
| Chinaware | 41 | 55 | 69 |
| Paints and varnishes | 7 | 11½ | 28 |
| Shoes | 27 | Free. | Free. |
| Agricultural implements | | Free. | Free. |
| Sewing machines | 44 | Free. | 15 |
| Cast-iron pipe | 14.8 | 10 | 20 |
| Wire | 18½ | 15 | 28 |
| Glass bottles | 30 | 39 | 60 |
| Oilcloth and linoleum | 11½ | 32½ | 35 |
| Carpets and rugs | 19½ | 48 | 49 |

Eighty-two years have passed since Clay's predictions. Labor has gotten less and less of the product. The Government, which 10 years ago got a third of its revenues from the tariff, now gets only a tenth, while manufacturers get in money half as much again as five years ago, because the same rate as five years ago gives 50 per cent more money return, the prices upon which the duties are levied being 50 per cent to 70 per cent higher. They get many times more than in Clay's day from rates which they have learned how to use to the limit.

It behooves wage earners and the public to require that the tariff is better related to wages and that manufacturers earn their profits with the least help from special taxation that can reasonably be given them; also that the tariff shall measure not the total American wage rates but the difference in the wage cost and other costs here and abroad.

LABOR USUALLY LESS THAN ONE-HALF THE TOTAL COST OF THE PRODUCT

A century ago, when things were made by hand without machinery and steam power, there was reason in the old phrase, "Everything is 98 per cent labor." To-day the experience of many authorities indicates that manufactured articles generally are not more than half labor. Usually in each industry by itself the proportion of labor runs from one-tenth to one-fifth of the factory selling price. To this wage is to be added the labor in preparing elsewhere the materials that constitute the raw material of the factory in question. These cruder materials, however, are usually produced as cheaply or more cheaply here than elsewhere.

For instance, wages in shoe factories are about 27 per cent of the factory selling price. To this is to be added 10 per cent for tanning the leather and other small additions for the wages in the fuel and other accessories, making the total from the hide on the steer's back to the finished shoe less than 50 per cent of the factory selling price. A few silks and cottons are 80 per cent material as it comes to the mill, 10 per cent wages, and 10 per cent overhead.

FARMERS AND THE FORDNEY LAW

The depression of our agriculture in colonial days and the difficulty of exporting its products because of the high tariffs on them in foreign countries was a principal reason for the adoption of our first protective tariff. To-day our farm prices are depressed by our own excessive tariffs that keep out foreign imports that would pay for our farm exports.

Said Hamilton in 1791: "The restrictive regulations which, in foreign markets, abridge the vent of the increasing surplus of our agricultural produce serve to beget an earnest desire that a more extensive demand for that surplus may be created at home."

In those days and down to about 1842 England, our principal market, either refused to receive or assessed almost prohibitive duties on imports of breadstuffs. Thousands upon thousands of natives in Jamaica, one of her colonies in the West Indies, starved to death with our near-by wheat forbidden to them. The people of England were underfed. Not till after the population of Ireland was decimated by starvation from the successive failures of its potato crop did England admit foodstuffs upon payment of nominal duties, and that in 1849. Other countries were as inhospitable as England.

Said Henry Clay, in 1810, of our breadstuffs: "For the latter we have scarcely any foreign demand."

To-day the world wants all that we can spare from our farms. To-day—December, 1922—France is again eating war bread, with its admixture of potato flour and its diminished nutriment, because we have so restricted her importations that she can not pay for our foodstuffs.

Meantime our farmers must sell abroad their wheat and other products at prices below costs of production, and on such a basis of price compromise with the hungry foreigners as compels their unwilling purchase and their payment by means not easily foreseen. Every purchase makes more impossible their payment of already existing governmental and private debts to us, aggregating some $18,000,000,000.

Our farmers sell one-third of their wheat crop abroad, getting from 85 cents to $1 per bushel for it at the farm. If they could buy their necessaries in Europe, where they sell their products, they would get the present domestic equivalent of $1.25 per bushel, if our Government did not tax the returning purchases an average of 45 cents on each dollar's worth.

As it is, the farmer brings his measly dollar home and finds it worth 80 cents or less at his nearest store. All because his representatives, the recent congressional farm bloc, without resistance, let a few manufacturers put their duties as high as they wanted.

The farm bloc simply required that farm duties be as high as the manufacturers' rates. Consequently farmers have, for the most part, high duties as worthless to them as counterfeit dollars, while manufacturers are converting their rates into millions of golden eagles.

Only wool, sugar, flaxseed, nuts, citrous fruits, and possibly a few other minor products that we do not export but import in volume, do our farmers profit by their duties, and those when imported, like sugar and wool, seriously hurt farmers as a whole, because these duties benefit only the small number of farmers who raise wool and sugar, and injure the other nine-tenths of them.

If, as is estimated, our farmers consume four-tenths of our total production of manufactures, they lose $1,200,000,000 from tariff exploitation above fair protection. A few of them gain from excessive rates on farm products not more than a fifteenth of this loss on manufactures.

America's future depends greatly upon the hard common sense of her agricultural population. Farmers should use protection as did those of Hamilton's day and Clay's to make foreign trade helpful to agriculture. All of our duties should make international trade as convenient and happy as moderate protection admits, without taint of profiteering.

The Fordney law compels every foreign nation to trade the least that it can with us, and the most that it can with our competitors.

COMPETING IMPORTS OF SMALL VOLUME UNDER THE LOW UNDERWOOD LAW

A study of the tables on pages 11594–11597 is informative in this and other respects.

They show that of highly finished products such as fill our retail stores only $2.70 were imported out of each $100 consumed in this country. These imports, moreover, were mostly different in design or quality, and not strictly competitive.

So far as our manufacturers use their competitive rates on these articles, they collect for themselves on $97.30 of domestic products consumed while the Government collects on only the $2.70 imported. This shows how the public pays not only the relatively small amounts that the Government collects on imports, doubled at retail, but other vastly greater amounts to private interests on domestic products.

It is interesting to note that although excessive duties often add greatly to the profits of retailers, they vigorously opposed the Fordney bill as extreme and injurious even to themselves.

THE REASONS FOR OUR LOW COSTS

The United States produces ordinary things at marvelously low costs because it has the largest, most conveniently located and easily worked deposits of raw material in the world; its population is homogeneous in its requirements and is twice as numerous as that of any similar country. Devoted to standardized quantity production, its skill, inventive genius, and energy have made its people the greatest earners and the greatest consumers on earth.

It leaves other more densely populated countries, with their scant raw materials and abundant labor, to make the smaller quantities of luxuries and other things used by relatively few consumers. These products require more of individual labor, patience, and artisanship than we like to give. Even here, however, we share in products of excellence.

THE COSTS OF PROTECTION AND GOVERNMENT REVENUE DERIVED

The disparity between the millions of dollars which Congress invites manufacturers to add to their prices and the pittances collected by the Government in revenue is indicated in the tables.

The "tariff allowance to manufacturers" is the sum which Congress invites them to add to their prices above the prices of foreign competitors. They do not always add this. Where competition is keen, as in automobiles, they add little or nothing, because they can not. What they can not do to-day they may do to-morrow. Sometimes they add more than the total duties. The point is that Congress puts consumers at the mercy of manufacturers to this extent.

Protectionists are willing to pay enough above foreign prices to maintain high domestic standards of wages and living. But they must not, under this excuse, be made liable to excessive prices, unjustified either by the theory of revenue or of protection.

The Underwood law, supposedly for the purposes of revenue, so limited importations that the revenue on many articles, essential to life, was astonishingly little and prices were excessive. The Fordney law lifts those duties and prices to the skies, when they should have been lowered.

Column 2 shows that the pre-war situation, in 1914, was much the same.

Federal and State Governments will struggle for a generation under the burden of war taxes, for pensions, soldier rehabilitation, interest, and amortization on some twenty billions of dollars of public debts and current expenditures. The public meantime must pay annually some $2,000,000,000 of superprotective taxes to private interests by compulsion of the Fordney tariff law. How much better, by a fair tariff, for the Government to pay its obligations as it goes along and incidentally to reduce its long-time obligations by using one or two of the billions of dollars annually now going wrongfully to these private interests through this superprotection.

As the table shows, the Underwood Democratic tariff allowed the manufacturers of these 29 commodities only to add if they could, by price agreements or otherwise, $3,445,000,000, with only $175,900,000 coming to the Government in revenue on these articles in 1920, and $154,200,000 in 1921.

The Fordney law, by increasing the average duties on these commodities to 32.3 per cent from the Underwood 24.3 per cent, raises the allowance to manufacturers one-third, to $5,139,000,000. It will so reduce imports in hard times that it is doubtful if the Government will get more revenue than at the lower Underwood rates. If, however, as much is imported as in 1921, the revenue will be one-third greater, or $205,600,000, thereby giving the Government $1 for each $23 that it makes consumers liable for to private interests. And in times of great prosperity like 1923 the Government will get still greater revenue, but at correspondingly greater cost to consumers!

| Per cent of protection to domestic production | | 35.8 | | 24.5 | | | | 26.4 |

[1] The Payne law was operative only July 1–Oct. 3 of this fiscal year ending June 30, 1914. Its rates are applied to the entire year, being the only census year showing production since 1909.

[2] This represents the amount the domestic manufacturer is permitted to add to his selling price by reason of the duty added to foreign competitive products. Whatever he adds of this is doubled to the consumer at retail.

[3] Not including carpets, handkerchiefs, and wearing apparel, but including laces, fabrics, and other manufactures.

[4] Not separately stated.

Nor does it answer to say that the $5,139,000,000 is an impossible sum, never realizable. It is, indeed, impossible. It is, however, the act of Congress, to be made effective to the fullest extent that opportunity offers.

Note the disparity between the millions given each industry and revenue coming to the Government in each case, usually only a fraction of a single million. And whatever the several industries add to prices is doubled against consumers at retail because of additions made in turn by each of the factors, wholesalers and retailers, through whose hands the merchandise passes from factory to consumer.

ENGLISH COTTON SPINNERS WANT UNITED STATES TARIFF RATES AS HIGH AS POSSIBLE

A representative of the great English cotton spinners of Lancashire says that many, if not most, of the English spinners want the American tariff on cotton goods to be as high as possible.

Strange as this may seem, his reasons are convincing.

England exports about $500,000,000 of cotton goods annually, of which total only $25,000,000 to $40,000,000, or 7 per cent, come to the United States. Excessive American rates, like the Fordney, lessen England's exports to the United States. Their total, however, is so small that England would not suffer if she lost half or all of it.

These Englishmen know that our high, profiteering tariffs really protect England in her $500,000,000 world-wide cotton-goods trade. They know, as the Taft Tariff Board showed, that America now makes ordinary cottons cheaper than any other country and that her low costs on finer goods are already making her a considerable international competitor. They know that the high Fordney tariff keeps up America's high cost of living and of production. They fear such lower costs as honest protection would develop. If they could, they would write our tariff just as the Fordneyites did.

The foregoing accords with the statement made by a distinguished Englishman at an international trade conference in London in 1909 in reply to the present chairman of the Fair Tariff League, then the executive officer of the National Tariff Commission Association, who expressed the desire of most Americans for as low an American tariff as will protect American industry and labor and for the elimination of tariff exploitation and profiteering.

Said this Englishman with great seriousness, "I can not wish success to the American movement for a moderate tariff. That means the end of European supremacy."

Thus do American tariff profiteers in exploiting their own people play into the hands of European competitors.

AT IT AGAIN—CONGRESS FIXES ANOTHER TRUST—THE PRESENT TARIFF ON BRICK AND TILE, TERRA-COTTA AND FIRE-CLAY PRODUCTS

Congress gives this industry, part of it indicted for conspiracy and price fixing, $123,000,000, costing consumers about $246,000,000. According to the United States Tariff Commission no protection is necessary.

POSSIBLE REVENUE $160,000

Underwood duty, 11.8 per cent; Fordney duty, 65.5 per cent; wages, 37.5 per cent.

These products are a universal necessity—for the farmer's drains, for conveying water and subsurface electric cables, for fireproofing, as substitutes for brick or concrete in walls, and floors.

It is made of mud—just mud, burned clay, forced through dies at the discharge end of an automatic mixing or pug mill.

Congress says it should have 65.5 per cent protection. The Tariff Commission clearly indicates that it should have none. It says: "The cost of these articles per unit of weight is small, and the careful packing necessary when long-distance shipments are to be made restricts the market of the domestic plants and practically prohibits international shipments." They must be used within 100 or 200 miles, usually, of their place of manufacture. The following table confirms the commission's statement:

*Brick and tile, terra-cotta and fire-clay products exports and imports, by years*

| Year | Exports | Imports | Exports to 1919 (census) production, per cent | Imports to 1919 production, per cent | Exports exceed imports by indicated number of times |
|---|---|---|---|---|---|
| 1914 | $2,378,773 | $282,687 | 1.7 | 0.2 | 84 |
| 1919 | 3,625,038 | 195,640 | 1.7 | .09 | 186 |
| 1920 | 5,608,163 | 419,964 | 2.7 | .2 | 134 |
| 1921 | 3,544,769 | 301,059 | 1.7 | .1 | 118 |

Production in 1914 was $136,915,644; in 1919, $210,085,972.

As above shown, postwar exports are 118 to 186 times more than imports, and yet, says the grand jury, the manufacturers of tiles and terra cotta, since 1911, "have in pursuance of an understanding and agreement among themselves" carried on their trade "without any competition between any of said defendants" and sold "at arbitrary, noncompetitive, and excessive prices fixed by agreement."

If imports were possible under any conditions under a tariff like the Underwood of 11.8 per cent, they would have been made so as to share in these excessive domestic prices. Yet the present Congress, with this information on file in the Federal court since September 21, 1921, and the above information, and more, given it by the Tariff Commission, puts a duty of 65.5 per cent on these products.

METHODS OF PRODUCTION

The report of the Tariff Commission says: "The domestic industry manufactures practically the entire domestic supply of these products. All machinery and equipment are produced and manufactured in the United States, and the domestic processes are at least as efficient as those in any foreign country." The product is made by semiautomatic or automatic processes, the shape being given the product by forcing the clay through dies.

WAGES 37.5 PER CENT

As the material is almost worthless, wages are relatively high, being 37.5 per cent of the mill selling price. With importations virtually prohibited because of freight costs and our unrivaled methods, it is evident to whom the increase in duty will go.

COST OF PROTECTION AND REVENUE DERIVED

The Underwood duty of 11.8 per cent helped these manufacturers to form the present trade conspiracy with which they are charged and to add $22,000,000 to their prices at a cost to consumers at retail of twice this sum, or $44,000,000. It seems that they could not resist the temptation. What right had Congress thus to tempt them? What right to endanger the public interest?

The Fordney duty invites them to add $123,000,000 to their prices at a cost to consumers at retail of $246,000,000.

Congress is offering as great temptation to every industry.

Is not this kind of a Congress "the mother of the trusts"?

PRICES

The grand jury says prices are "arbitrary and excessive." Let us see. The committee of experts assisting the Senate Finance Committee gave the Senators data from Government records as follows:

The freight on firebrick from England, costing there $28.92 per thousand, is $27, or nearly 100 per cent of the foreign price. Some protection!

Firebrick costing $39.55 in Canada paid $15 in freight—nearly 40 per cent of "natural" protection. The English brick sold in the United States for $65 against $67.50 for domestic brick. The Canadian brick sold for $72.50 against $65 for domestic brick.

The importer of English brick got only 8.8 per cent gross margin on his landed cost for selling expense and profit. The Canadian got 14 per cent gross margin.

Tiles and other earthen wares show similar conditions.

Tile manufacturers were sent to jail recently for price fixing.

Why do Americans pay from $65 to $72.50 for firebrick costing Canadians (whose production costs are no lower) $39.55 and Englishmen $28.92?

The Congress last month voted 25 per cent on firebrick and duties rising to 60 per cent on tiles for drainage, buildings, and other purposes.

Why this extortion on baked mud? The answer has no relation to protection, nor to revenue, of which there is none.

HOSIERY AND KNIT GOODS

The Fordney tariff invites price increases up to the preposterous total of $964,000,000. Possible revenue, $5,500,000.

In the production of hosiery and knit goods the United States is the master of the world.

In this is realized the hopes of those who first made protection an American policy.

Our hosiery wages, though on a piece-rate basis, are, per day, the highest in the world; our costs per unit produced are the lowest. In this production righteousness and profits go hand in hand, as they ought. In the tariff righteousness yields to greed and deception.

PRODUCTION—EXPORTS AND IMPORTS

Production of hosiery and knit goods in 1919 was $713,139,689, of which we exported $45,784,576 against imports of $1,191,236. Exports were 6.4 per cent of production. Imports were two-tenths of 1 per cent. Exports were thirty-eight times imports.

In 1920 we exported $61,373,475 of hosiery and knit goods against imports of $5,677,426. Exports were ten times greater than imports. Imports were only eight-tenths of 1 per cent of 1919 (census) production.

Export in 1921 would have been $19,596,220 if 1920 prices had held. Owing to heavy declines in prices they amounted in dollars only to $13,243,821, against imports of $8,360,660, which would have figured $10,762,594 at 1920 prices.

Exports were more than 50 per cent in excess of imports in 1921, when all countries were rushing merchandise into the United States in anticipation of tariff increases.

Imports are mostly noncompetitive, novelties in quality or design, lace-front French hose for women, English golf stockings, etc.

Our silk hose is freely sold in Europe. Our cotton hose is sold everywhere. American hose is sold in Chemnitz, the headquarters of German hosiery.

With the prospect of saving 31 per cent in duties (equal 5 years' interest) by getting goods in before the passage of the new tariff, importers brought in only $500,000 more cotton hosiery in the 11 months ending May 30, 1922, than in the same period in 1921.

Our big exports are sold in competition with the world. On these exports we pay the duties of other countries and meet their prices, quality considered. Why can't we meet foreign prices here, with a duty of 25 per cent at most?

PRE-WAR CONDITIONS

Production of hosiery and knit goods back in 1914 was $258,912,903. Exports in 1914 were only $2,546,822, or only a fifth of last year's (1921) exports, which were $8,360,660. We are stronger now than pre-war.

In that pre-war year (1914) imports were $6,135,428, or 2.3 per cent of production, while in 1921 imports were only 1.2 per cent of our last census (1919) production. Would anyone have less than 1.2 per cer cent of our production imported, including novelties and fancy goods—any but a grafting manufacturer?

The tariff: Underwood rate, 36.9 per cent; Fordney rate, 66.6 per cent; wages, 17.6 per cent.

With this stranglehold upon our domestic markets and this great exportation at competing foreign prices, Congress now gives the hosiery people an increase from the former average rate of 36.9 per cent to 66.6 per cent.

COST OF PRESENT TARIFF RATES

By the Underwood duty our hosiery and knit-goods people were invited by Congress to add $192,000,000 to the prices of their foreign competitors, whose prices they meet in foreign markets.

Under the Fordney rates they are invited to add to their prices $347,000,000, which sum would be doubled to consumers at retail, making $694,000,000.

PROFITS

Our hosiery people are rather closely, although informally, associated. They have made great fortunes. A maker of good, cheap men's cotton hose, worn by people of small incomes, which he sells at 80 cents per dozen pairs, says that his excess-profits tax in recent years would have been big profits if he could have kept them. The present duty is 50 per cent on these cheap socks. Since the law was passed the price of the socks has been doubled at retail, but the factory wage is unchanged!

All-wool women's heather hose now sell at American factories for $18 per dozen pairs. At English factories for $19.35. Why 57 per cent duty? England is our chief competitor.

AMERICAN EFFICIENCY

The climax of cheap production seems to be reached in our full automatic machines. They take 60,000 stitches per minute. A single operative, managing 25 machines, knits 150 dozen pairs of men's socks per day. She gets 2 cents per dozen pairs, netting her $3 per day.

The total wage cost of these socks is 2 cents per pair from the raw cotton to the finished sock. These sold pre-war at the factory for 45 cents per dozen pairs; 80 cents in July, 1922; and $1 per dozen in September, 1922. About half the total costs—36 cents—is in the yarn. Women's hose and all superior qualities cost more, but are correspondingly low in wage costs.

WAGES AND PROTECTION

In 1914 pre-war wages were 23 per cent of the factory selling prices. Wages plus salaries were 27.4 per cent. The Payne tariff averaged 72 per cent, or more than three times the total wage cost of production. By declaration of our Federal Supreme Court, this is "robbery," to the extent of two-thirds of the duty.

"To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprise and build up private fortunes is none the less robbery because it is done under the forms of law and is called taxation." (The Supreme Court of the United States—the Marshall case.)

In 1919 wages were 17.6 per cent of domestic prices. Wages had greatly advanced over pre-war, but prices had advanced out of all proportion.

WHO PAYS THE DUTY

Under what pressure is it that Congress now further increases these duties to an average of 66.6 per cent?

Will the duty fall on the consumer? Take the judgment of leading Republican Senators.

Said Senator LENROOT, June 20 last, in limiting the duty on cotton gloves:

"Upon an article like this, used in every home in the land, we ought not to tax the American people more than 75 per cent."

Seventy-five per cent "on every home in the land"!

Said Senator McCUMBER in demanding a duty on wheat to the advantage of his State:

"We want higher prices. When our crops are short we add all the duty to the price. When crops are more abundant we get half the duty."

They know who pays the duty—the consumer.

REVENUE COLLECTED ON IMPORTS

The revenue collected is ridiculous as compared with the burden imposed upon consumers. This revenue was $600,000 in 1919, $2,300,000 in 1920, and $3,600,000 in 1921. This against the possible cost to consumers of $694,000,000.

To whom does this country belong—the hosiery manufacturers?

A DIFFERENCE OF OPINION

"Senator LENROOT. The Payne-Aldrich bill was crooked, yet if it had not hurt the American people * * * there would have been no such political revolution as followed. * * *

"There is very little difference between the Payne-Aldrich bill and the duties as reported in this bill.

"Senator McCUMBER. We died for principle. That is the real thing that was back of the defeat of the Republican Party in 1912."—(CONGRESSIONAL RECORD, July 26, 1922.)

THE WOOL TARIFF AND THE FARMER

[Extracts from Senate debate July 26, 1922]

Mr. LENROOT. Unfortunately the Senator from Idaho [Mr. GOODING] can not convince the American people of the correctness of the position that he takes, that no tariff is too high to suit him. The Senator wants an embargo upon everything that we produce, and, if that policy could be carried into effect, he would strike a blow at every wheat grower in America, at every farmer in America who must have a foreign market for his surplus.

Mr. President, let us see where the logic of the Senator from Idaho leads us. He is willing, he says, that we put up a tariff wall so high that Europe can not establish any credits here; that Europe can not pay us for any of our surplus products. He is willing to drive Europe to Australia and to South America to purchase all of its wheat. He is willing that the 100,000,000 or 200,000,000 bushels of surplus wheat that is produced in this country shall not find any outlet abroad and thus reduce the domestic price of wheat to 50 or 60 or 75 cents a bushel.

That is the kind of a friend of the farmer that the Senator from Idaho is in the policy that he advocates, and what is true of wheat is true of other agricultural products.

Mr. President, let us see from another standpoint the friendship for the farmer in the policy advocated by the Senator from Idaho.

The farmer of the United States is entitled to two kinds of protection. He is entitled, first, to a reasonable protection upon the things that he produces in order that he may fairly compete with those who are producing like commodities abroad. He is also entitled—and this the Senator from Idaho forgets—to purchase at a reasonable price the things that he must have to live and exist.

HIGH WOOL DUTIES AND ADULTERATED FABRICS

"One of the consequences of our legislation greatly enhancing the cost of wool has been the increased use of cotton by manufacturers of so-called woolen goods. Speaking for the knit-goods industry I am forced to believe from experience and observation that there is more cotton than wool used nowadays. In the clothing industry I have been informed by manufacturers that the deterioration of wool cloths has been carried to such an extent that now there are cloths in the market of which but 10 per cent is wool.—Max Lowenthal, Rochester Knitting Works, Rochester, N. Y., January 3, 1907 (New York Evening Post).

"The Senators who will vote on this matter—the duty on wool—have their minds made up, enough of them. They will come in at the ring of the bell."—Senator McCumber, July 26, 1922.

COTTON THREAD AND THE TARIFF—ANOTHER TRUST BUTTRESSED BY CONGRESS

Every woman who uses a spool of cotton thread and every living person, so far as he depends upon cotton thread, is enslaved to a world trust on this thread, whose American manufacturing interests Congress now proposes to buttress with a tariff of from 20 to 35 per cent.

The trust is English, the J. & P. Coats Co. England is thoroughly aroused over its excessive prices and profits.

It defies tariffs by getting behind them, as in its factories in the United States. "The reel of cotton encircles the globe." The profits of the English company have been averaging upward of $15,000,000 per year.

The control of the American Thread Co., the United States associate of the trust, is owned by the English Sewing Cotton Co. It operates several large factories in the United States.

While its stock is not owned by the J. & P. Coats Co., it sells at identically the same prices with the same amount of cotton to the spool. Thus there are different names and trade-marks, but identical prices and service.

In 1914 the United States Tariff Commission found that a spool of 200 yards of cotton sewing thread wholesaled for 3.92 cents and retailed for 5 cents. In 1922 there are only 150 yards to the spool, wholesaleing at 4.29 cents—a third less thread and a third of a cent higher price per spool. Seventy years ago a spool retailed for 1 cent.

The profits of the American company for recent years is here shown:

*American Thread Co. income account, years ended March 31*

| Year | Net profits | Depreciation | Common dividends | Reserves | Surplus for year | Per cent earned on common stock |
|---|---|---|---|---|---|---|
| 1916 | $2,311,503 | $517,105 | $972,000 | $25,000 | $312,964 | 24.30 |
| 1917 [1] | 2,272,423 | 501,721 | 918,000 | 363,218 | 5,646 | 23.80 |
| 1918 [2] | 5,205,959 | 630,342 | 1,242,000 | 2,123,032 | 621,957 | 73.83 |
| 1919 | 3,354,541 | 591,469 | 1,200,000 | 261,737 | 655,256 | 35.28 |
| 1920 [3] | 3,616,756 | | 1,350,000 | 2,100,000 | [4] 77,768 | 40.13 |
| 1921 | 2,237,103 | 656,727 | 1,320,000 | 376,470 | [4] 720,619 | 10.83 |

[1] 11 months ended Feb. 28, 1917.
[2] 13 months ended Mar. 31, 1918.
[3] After deducting bond interest, depreciation, and income and excess-profits taxes.
[4] Deficit.

At the close of its fiscal year, March 1, 1921, the company's reserve fund was $2,815,678; its profits' account was $3,301,179; and its depreciation fund, $6,428,629—a total of $12,545,476, nicely tucked away.

Its profits for the year ending March 31, 1922, were $11,520 after reducing inventories of $13,000,000 to current values.

Its profits in normal pre-war years upon its invested capital of $6,000,000 were: In 1912, $1,366,775; in 1913, $1,683,463; in 1914, $2,086,115; in 1915, $1,531,377.

IMPORTS

For the seven months ending January 1922, the total imports of manufactures of thread and yarn on beams, in skeins, spool thread, crochet, darning, and embroidery cotton amounted to $3,650,065, as against $13,220,201 for the same period for 1921. Imports for 1922 fell off enormously from 1921.

These imports may look considerable, but all these except the thread itself are used in manufactures of cotton, of which we produced nearly $2,200,000,000 in (census) 1919. Imports are as a drop of water in an ocean.

It is questionable if the Government will collect 5 cents of revenue for each $5 that American women must pay this trust.

The trust bought and closed down some plants, indicating a remaining capacity equal to all domestic demands, and no chance for imports except at the pleasure of the trust.

COURTS OPPOSE—CONGRESS FAVORS

The United States court has endeavored to weaken the trust's control, but without substantial effect.

Any tariff protection is protection for a foreign-owned trust. It invites and almost requires the trust to further increase its prices.

UNDERWOOD DUTY 15 PER CENT, FORDNEY DUTY 20 PER CENT TO 35 PER CENT

The Underwood duty was 15 per cent, which the Fordney law increases to one-half of 1 per cent per hundred yards, with the proviso that this rate should be figured at not less than 20 per cent nor more than 35 per cent ad valorem.

A manufacturer declares that this protection "amounts in almost every instance to more than the entire manufacturing cost."

This increase in the duty is a guarantee by act of Congress that the Thread Trust shall continue to make its big profits.

Theoretically, Congress holds that its powers should not be exercised in support of trusts at the expense of American citizens. Why doesn't Congress act in accordance with this principle? The Thread Trust will make big profit, anyhow.

CATCHING THE FARMER

"I come from an agricultural State. * * *

"It seems to me that the Senator from North Dakota [Mr. McCumber], in his zeal to put such an immense tariff on these agricultural products—higher than we have ever had before, higher than there was any necessity for—has done so simply to oil the protection machine for the woolen schedule and some other schedules in the bill." (Senator Knute Nelson, Republican, Minnesota, CONGRESSIONAL RECORD, August 11, 1922.)

ALUMINUM AND THE FORDNEY TARIFF LAW

Present rates: Crude, 5 cents per pound; sheets, coils, bars, etc., 9 cents per pound or 40 per cent; table utensils, etc., 11 cents per pound and 55 per cent, equals 71.2 per cent.

The Aluminum Co. of America makes every ounce of aluminum produced in the United States. Through its great subsidiaries it produces over 90 per cent of all our aluminum tableware and other utensils. Every automobile except the Ford uses a great amount of aluminum.

"The health of the community will be subserved by treating the whole question primarily from the standpoint of the business interests of the entire country, rather than from the standpoint of the fancied interests of any group of politicians." (Theodore Roosevelt.)

PRODUCTION EXPORTS AND IMPORTS

The production of aluminum and its wares in 1914 was $19,597,465, of which $1,101,920 was exported, being 5.6 per cent of production, against imports of $1,414,274, or 7.2 per cent of production.

In 1919, production was $75,277,948 of which $3,890,326, or 5.2 per cent was exported, with imports $277,846, or four-tenths of 1 per cent of production.

In 1920, exports increased to $5,630,781, or 7.5 per cent of 1919 (census) production against imports of $2,288,608, or 3 per cent of production.

In the poor year, 1921, exports were $3,108,857, or 4.1 per cent of production, with imports $2,057,173, or 2.7 per cent. Much was said about the flooding of our market with cheap imports, and yet they were less in 1921 than in 1920, and 50 per cent less than exports.

WAGES 17.7 PER CENT

Under the Payne tariff of 45 per cent, the wage cost was only 13.3 per cent, and wages, plus superintendence, 15.8 per cent. The tariff was three times the percentage of the factory selling price that went to wages.

The wages in the crude product and in wares can not be separately stated by the Census Bureau, because the Aluminum Trust controls over 90 per cent of wares production, and 100 per cent of crude, and this wage differentiation by the Census Bureau would disclose the secrets of a particular company. Thus the trust is shielded by a law generally necessary.

Under the Underwood tariff of 21.6 per cent, wages average (census 1919) 21 per cent, making the tariff equal the total percentage going to wages.

The Fordney law now gives from 22 to 71 per cent—averaging 45 per cent—"protection" to this trust, which has marvelously prospered under the tariff of 21.6 per cent.

Why not let it earn its own living, even if its profits become more nearly those of competitive undertakings?

"If the friends of protection do not themselves correct admitted excrescences in the tariff and modernize it to meet changed conditions, the enemies of protection will. The situation is in many ways similar to that in regard to great public-service corporations. The choice on that question is between regulation and revolution. The choice on the tariff question is between rational revision and ruin. In neither case can we stand still. The country that does not go forward goes backward." (Curtis Guild, jr., Governor of Massachusetts, 1908.)

PROFITS

The Aluminum Co. started in 1888 with a paid-in capital variously estimated as from $100,000 to $200,000. Besides paying dividends, it had accumulated up to July 31, 1921, a capital stock of $18,729,600 and a surplus of $92,153,861.04, giving a net worth of $110,883,461.

The president of the company, Mr. Davis, says:

"For the 10 years ending December 31, 1920, the net earnings of the company, after interest, taxes, depletion, depreciation, etc., have averaged in excess of $10,000,000 per annum. The lowest of such earnings occurred in the year ended December 31, 1912, and were $4,462,956."

PRICES

English producers, whose costs are as high as in America, charge 15 cents per pound for ingots. Add to this freight to New York, 2 cents, and tariff, 5 cents, gives 22 cents per pound duty paid. The price of the American products formerly 24 cents, was, upon last advice, 21 cents, or 1 cent per pound less than the English price delivered. This is the easy method practiced by many trusts in making domestic prices. Add the freight and the duty and then make an inconsequential reduction.

FORDNEY DUTY, CRUDE 22 PER CENT, WARES 71.2 PER CENT

Not content with its present addition of the entire duty and one-half the freight from abroad to its present prices and its $100,000,000 per year of Government promoted profits, this industry gets Congress to increase the duty on ingots from 2 to 5 cents, to make the duty 9 cents on sheets and circles, which are simply ingots rolled out thin, and to increase the duty on aluminum wares from the present rate of about 20 per cent, under which importations are virtually prohibited, to 71.2 per cent. Such rates have the same relation to protection, honestly figured, as the holdup man's blackjack has to the public peace.

RAW MATERIAL

The earth, called bauxite, is as common as clay. From our richest deposits at Bauxite, near Little Rock, Ark., the Aluminum Co. digs it from open mines like sand or gravel. It goes thence about 300 miles to East St. Louis, Ill., where it is concentrated to a substance called alumina by the cheapest coal in the world, from the mines close by. Will the public consent to "protection" on this dirt or this coal?

From East St. Louis the concentrate goes to the many plants of the Aluminum Co., where it is reduced to aluminum ingots by hydroelectric power. Who votes for "protection" for water power?

ACCESSORY MATERIALS

For the reduction of each ton (2,000 pounds) of aluminum is required from 1,200 to 1,600 pounds of petroleum coke, which is produced so cheaply in this country that Europe sends here for her supplies, which suffer considerable deterioration from the long ocean haul. Who would "protect" petroleum coke? There are also required 300 pounds of tar, 300 pounds of soft coal, for drying, and 200 pounds of cryolyte, which is only found in nature, in Newfoundland, which sells it to all comers at the same price.

FREIGHTS

As the alumina used by competing British and French companies is hauled from France, Scotland, and Norway, the American trust is at no considerable disadvantage on freight.

The labor used in rolling ingots into sheets and circles is mostly unskilled, and is the kind used in rolling steel bars and other metals.

WARES

On aluminum wares, kitchen utensils, etc., the Fordney law offers a duty of 11 cents per pound (or 73 per cent of the English selling price of the metal) plus 55 per cent, which averages a total of 71.2 per cent. This means that the foreign producer, after paying 15 cents per pound for his metal, must pay 73 per cent of this price again at our customhouse, plus 55 per cent of his selling price of the wares, including his profit. On cast ware only, like forks, upon which she specializes, does Germany excel us.

SKILL

Ordinary workers acquire sufficient skill for the manufacture of most of these wares in a few days. A prominent firm making canteens during the war employed high-school pupils for welding. The turning and stamping is done by automatic machinery. In one of its great subsidiaries the trust makes some 17,000 to 20,000 coffeepots per day by astonishingly scientific processes, requiring scarcely the touch of human hands. A materially lower wage cost per unit of production is impossible anywhere. The value of the product of two of its subsidiaries is understood to be upward of $20,000,000 each.

"There is only one reason for continuous tariff agitation. Every tariff made in the old way has been bad in important respects, bad the day it was made and every day thereafter until succeeded by another, also bad. We are compelled to agitate as against error and misuse. Make a tariff right and agitation will be impossible as well as unnecessary and unjustifiable." (National Association of Manufacturers, 1908.)

For a time following the war there was a hue and cry about German imports, which, however, have been inconsiderable up to date and usually so thin and poor in quality that many stores refused to sell them.

GERMAN COMPETITION

The Senate Finance Committee's group of 71 special experts required to study these and similar conditions displayed 11 aluminum utensils from Germany, together with the nearest obtainable duplicates made in the United States. In each case the differences in quality were so great that the experts changed the American prices sometimes by 30 per cent or more to offset differences in quality. In every case but one the American article was decidedly superior. Then, to complete the comparison, the experts showed 11 German importations with no comparable American products to be found.

Usually the German metal is so little purified that it turns blackish from chemical change upon the application of heat. Although interested persons may excite alarm, there is nothing to fear from importations.

COST OF PROTECTION

The Fordney rate is a gift to this trust of as much of $28,000,000 as it cares to add to its prices. Whatever the trust uses of this $28,000,000 will be doubled to consumers at retail.

In 1921, with trade depressed, the American manufacturer made low prices and demonstrated his ability to do with small concessions by way of protection. In the first 10 weeks following the enactment of the Fordney law, by two advances in price, 3 cents and then 2 cents, he added the entire tariff increase on sheets. (March, 1923. The domestic price is now the foreign price plus freight to the United States on the foreign competitive product.)

How fortunate if the Secretary of the Treasury, sworn to serve the public interest, himself the principal stockholder in this trust, and one of the richest men on earth, would be as fair as the soap manufacturers, who say, "Take away our duty. We don't need it." He now stands to get millions of dollars annually to which he is no more entitled than to the money which he is guarding in his country's Treasury.

NEW ENGLAND AND THE TARIFF

"As the center of population and industry moves westward, Massachusetts' position becomes more isolated, both for her supplies and for our home markets. She must, if confined to this country, get her coal, lumber, wool, hides, leather, iron and steel, copper, etc., from more distant points and she must send her manufactured goods farther to market, paying the increased freight both ways." (Wm. L. Douglas, shoe manufacturer, ex-Governor of Massachusetts.)

New England can not afford excessive tariff rates. They advance her costs unreasonably.

THE FORDNEY TARIFF ON ASBESTOS

UNDERWOOD DUTY, 17.3 PER CENT—FORDNEY DUTY, 27.7 PER CENT—WAGES 15.6 PER CENT OF SELLING PRICE

It is not pleasant to inquire into other people's private affairs, but when an industry says it must have a special tax put on every citizen in this country in order that the industry may be kept alive and reasonably prosperous it is necessary that those who are trustees, like Senators, of the public interest shall inquire intimately into the facts.

The dominating power in the production of asbestos in this country is Johns-Manville (Inc). This corporation has seven plants well distributed over the country and, says our financial authority, "branches throughout the United States, Canada, Cuba, Porto Rico, and Manila; also agencies throughout the world." It has recently purchased 255 acres of land north of Chicago, where it will duplicate its New Jersey plant at a cost of $3,000,000. It has no funded debt. Its preferred stock, 7 per cent cumulative, is $1,895,000. Its common stock is $2,500,000.

AN EXTRA 15 PER CENT TACKED ON THE DINGLEY LAW, 1897

"The Dingley rates were made high for trading purposes in making treaties of reciprocity. I know, because I was on the committee that made them." (Senator Dolliver, of Iowa, 1909).

The Dingley rates on manufactures averaged 15 per cent above the McKinley. The Senate, under pressure, withheld approval of the reciprocity treaties which President McKinley earnestly favored, and so the interests were another 15 per cent ahead. They still have it, as the Fordney rates of 1922 average equal to the Dingley of 1898.

Its financial progress is indicated by the following figures:

| | Net working capital | Plus other assets equals amounts applicable to stocks |
|---|---|---|
| 1910 | $835,421 | $4,108,210 |
| 1914 | 1,667,068 | 7,210,962 |
| 1920 | 10,385,475 | 21,157,635 |

| | Sales | Net profits | Dividends | Total surplus |
|---|---|---|---|---|
| 1920 | $45,138,181 | $3,703,314 | $384,085 | $14,319,743 |
| 1919 | 34,338,966 | 2,582,944 | 384,310 | 11,634,627 |
| 1918 | 36,873,228 | 2,869,946 | 293,601 | 9,651,792 |
| 1917 | 29,881,979 | 2,189,637 | 299,964 | 7,072,052 |
| 1916 | 22,284,711 | 2,639,221 | 157,937 | 5,182,379 |
| 1915 | 15,671,151 | 662,498 | 166,538 | 2,698,293 |
| 1914 | 15,238,136 | [1] 275,134 | 271,988 | [2] 2,303,662 |
| 1913 | 16,635,200 | [1] 936,471 | 278,333 | 2,307,889 |
| 1912 | 13,747,749 | 915,193 | 185,000 | 1,829,751 |
| 1911 | 11,122,643 | 730,178 | 185,000 | 1,599,558 |
| 1910 | 9,850,387 | 624,119 | 135,000 | 1,108,210 |

[1] After providing special reserve of $150,000 for depreciation of Milwaukee plant in 1913, and $80,596 depreciation reserves in 1914.

[2] After deducting $7,373 adjustments and $100,000 appropriation for retirement of preferred stock.

As here shown, the corporation increased its capital applicable to stock in 1910, being $4,108,210, to $21,157,635 in the 10-year period ending with 1920. It paid meantime excellent dividends.

In 1920, after paying its preferred-stock dividend of 7 per cent and 10 per cent upon its common stock, it carried to surplus account $3,319,229, or 115 per cent of its total common stock.

Competing companies are understood to be similarly prosperous.

CRUDE MATERIAL

The crude material, asbestos, costs the same the world over, 75 per cent of it coming from mines in Canada, in which it is understood that American manufacturers are largely interested. The crude material is 50 per cent of the cost of the product. No tariff consideration then should be given to this 50 per cent, and any tariff on the finished product is equivalent to twice the amount of this tariff on the differentials of labor, overhead, and profit. The Fordney protection of 27.7 per cent is therefore 50 per cent on the foreign producer's total labor, overhead, and profit.

A 10 per cent duty would protect consumers as well as manufacturers. Higher rates will increase dividends of companies that in ordinary times are prospering greatly.

The ability of the industry to prosper with little or no protection is indicated by exports of 24.4 per cent in the normal pre-war year 1914.

PRODUCTION EXPORTS AND IMPORTS

In 1919 production was $23,977,557, of which $3,531,978, or 14.7 per cent, was exported, with imports only $257,381, or 1.1 per cent of domestic production.

In 1921 exports of asbestos manufactures were $2,600,428, with imports only $222,652, exclusive of yarn, $132,737. In other words, exports were 11.7 times imports, showing the perfect ability of our manufacturers under present conditions to meet world prices at their option, and the inability of outsiders to enter our markets under the Underwood duty, 17.3 per cent.

WAGE COST, 15.6 PER CENT—FORDNEY DUTY, 27.7 PER CENT

In the face of these facts the Congress enacts a duty of 27.7 per cent against a total wage cost averaging 15.6 per cent from the crude material to the finished product. The new duty is 166 per cent of the amount of the factory selling price going to wages.

FOREIGN COSTS

The English labor in converting asbestos into cloth is about 11.5 per cent, and into sheeting 14.2 per cent, and tape 21.5 per cent. This wage per cent is low, partly because a single operator controls several of the automatic looms on which the work is done. The difference in wage cost is less than 20 per cent between the United States and England, our only considerable competitor, partly because the industry is highly unionized in England. English labor on asbestos works 48 hours per week and American 54 hours.

While our manufacturers sold abroad at prices competing with the world, their domestic prices were greater than export prices by substantially the amount of the duty, 17.5 per cent, plus the profits that importers added on the 2.5 per cent that they brought in.

COST OF FORDNEY DUTIES

The protection given the manufacturers in 1919 was $4,000,000, costing consumers at retail not less than $8,000,000, which they actually paid for the most part. Against this $8,000,000 the Government collected in revenue only $50,000 in 1919, and $100,000 in 1920, being $1.25 for each $100 that the consumers were made liable for by act of Congress. The Fordney law substantially eliminates these petty Government receipts by shutting out imports and increases the tax upon the consumer from this $8,000,000 to $11,000,000. What will the manufacturers' profits be then?

THE PRESSURE OF SELFISH INTERESTS

The American people and the Republican Party have been committed since 1908 to the principle of the "difference in the cost of production here and abroad," with a fair addition for contingencies, as the measure of a protective duty. Congress pledges itself to this and then utterly defaults under pressure of the overprotected in-

terests—some believe because these interests pay the $10,000,000 party campaign expenses; rather, however, because these interests are all-powerful in politics and in the choice of candidates.

TARIFF MAKING NOT A PARTY MATTER—"TAKE POLITICS OUT OF THE TARIFF"

The trouble with the tariff has not been in the party but in the determination of Congress not to require proof as the basis of a rate, and instead, to give tariff beneficiaries whatever they want.

The Democratic Wilson tariff was as bad as the Republican McKinley tariff. It reduced McKinley rates only 3 per cent. It gave Standard Oil its first protection—45 per cent. Wilson was ashamed of it. Cleveland refused to sign it. "Bought, bought, bought in every schedule," said he, "a tariff of perfidy and dishonor."

Mr. Dingley, in 1897, said of the Wilson law: "The metal and cotton schedules of the present (Wilson) law were really made by the manufacturers, except as to a few items." Later he could have said the same of his own Republican law, and of the Payne law, the names of the manufacturers "who really made" the Payne law being well known.

THE DINGLEY REPUBLICAN TARIFF

"I have read with the utmost care the hearings before the Committee on Ways and Means of the House of Representatives. These hearings are utterly unsatisfactory. There is not cross-examination, but the statements are mainly the statements of interested parties." (Hon. John C. Spooner, Republican, United States Senate, when the Senate was framing the Dingley law.)

ONE RECENT TARIFF FREE FROM CORRUPTION

The late Underwood-Simmons tariff law was the only tariff in this generation to which no taint of corruption or undue political influence has ever attached. Republican protectionists have rejoiced in this fact from the day the bill was written, although they would have had it different in some respects.

It was up to Congress in 1922 to improve upon the Underwood-Simmons law, to better its provisions, while maintaining its character for impartiality and political cleanliness. An improvement of this sort would have advanced our Nation in self-respect, in international regard, and in financial well-being. It would have greatly lessened the distress of our farmers.

THE PAYNE AND FORDNEY REPUBLICAN TARIFFS

"The Payne-Aldrich bill was crooked, yet if it had not hurt the American people * * * there would have been no such political revolution as followed. * * *

"There is very little difference between the Payne-Aldrich bill and the duties as reported in this (Fordney) bill." (Hon. I. L. LENROOT, Republican, United States Senate, July 26, 1922.)

"In 1816 Henry Clay said: 'Give us protection for three years and the protected industries will be able to stand upon their feet.'

"In 1880 Mr. Morrill said that 15 years would be sufficient to put us abreast of England and that we would then be able to compete with England without defensive duties. And yet during the nearly twice 15 years since then Mr. Morrill has expended all of his energies in increasing that protection. In the discussion of the report of the Tariff Commission John Sherman said: 'Give us a steady protection policy for 20 years and we will give free trade to England and all the world." (William L. Wilson.)

THE FORDNEY TARIFF LAW AND MANUFACTURES OF COPPER AND BRASS

The United States has the richest deposits of copper in the world and the most easily worked. These mines set the price of copper for the whole world.

Some of them are in mountains from which the ore gravitates to railway cars and concentration plants.

"Gentlemen, Congress is becoming a bargain counter." (Senator Dolliver, 1909.)

We have likewise the greatest and most easily mined zinc deposits, whose products, added to copper, make brass. Also coal for smelting. Tin, the alloy for bronze, is an international commodity, refined here as cheaply as anywhere.

The wage cost in smelting and refining copper was 3.5 per cent in (census) 1914, and 4 per cent in 1919. After a fight of many years and much profiteering, crude copper, once "protected," is on the free list, with no thought of change.

MANUFACTURES OF COPPER—WAGES 15.1 PER CENT TO 20.4 PER CENT

Manufactures of copper and exports and imports thereof consist mostly of bars, plates, etc., but also include wire and highly manufactured articles, as classified in the census of 1919. Production was $78,338,948; wage cost 15.1 per cent. The wage cost of bars, plates, etc., would be somewhat less than this average. On highly finished products wages would not be more than in manufacture of brass and bronze, which were 20.4 per cent in 1919 and 15.5 per cent in 1914.

FORDNEY DUTY 48 PER CENT

Congress now raises the Underwood duty of 18.8 per cent, which virtually equals the entire wage cost, to 48 per cent, or about two and one-half times the wage cost, which is the considerable factor of difference.

Our wage costs being only one-seventh of the factory selling price, there is no reason to believe that the relatively underfed, disheartened, slow labor of Europe, whatever its daily wage, can produce below the American wage cost.

EFFICIENCY, WAGES, AND TARIFF RATES

An English report shows that in America from three to four times more horsepower is used per operative than in England. This means vastly more output per man. If our labor gets twice as much per day, with the wage cost only one-seventh of the selling price, a tariff of less than 10 per cent would offset the difference per unit produced, even if labor were not more productive here. The Fordney rate is 48 per cent.

Other elements of difference in cost would be offset mostly by our higher speed and mechanical genius.

BRASS AND BRONZE MANUFACTURES

These are made mostly, possibly 90 per cent, upon semiautomatic and automatic machines. Often a single operative learns in a few days to feed long rods into the rear end of from 3 to 15 machines, and pieces of metal drop out of the other end, with a half dozen or more difficult operations performed outside and inside. A man getting 40 to 70 cents per hour thus produces, per minute, two very difficult pieces, 2½ inches in diameter and 4 inches in length. Of small pieces, an inch or so in length, he produces two per second. Figure the wage per piece and estimate the protection required. The Senate bill would require the foreign manufacturer to pay 45 per cent on the copper that is in it, which the foreign manufacturer bought in the United States, on his overhead, and his profit. The Underwood duty was 20.7 per cent, which equals our total wage percentage.

UNDERWOOD DUTY, 20.7 PER CENT—FORDNEY DUTY, 48 PER CENT—WAGES, 20.4 PER CENT

The wage cost in the United States was 15.5 per cent of the factory selling price in 1914. Wages plus superintendence were 19.8 per cent. The Payne duty was 48.2 per cent, or two and one-half times the American percentage of wages plus superintendence. The Fordney duty, 45 per cent, is two and one-fourth times the total American wage percentage.

When Congress, at the request of an industry, considers raising prices on the ground that the industry needs financial assistance from the public through taxes, it is necessary to investigate profits.

The American Brass Co., says a financial authority, largely controls the output of brass in this country and is the largest consumer of copper in the United States. It has no funded debt, its capital stock (par $100) outstanding is $15,000,000, increased from $12,500,000 in 1917 by a stock dividend of 20 per cent.

Its profits for the 10 years ending December 31, 1921, are reported as follows:

| | Net earnings | Dividends | Surplus for year | Previous surplus | Total surplus |
|---|---|---|---|---|---|
| 1912 | $2,274,738 | $1,050,000 | $1,224,738 | $5,956,861 | $7,181,599 |
| 1913 | 1,917,605 | 1,050,000 | 867,605 | 7,181,599 | 8,049,204 |
| 1914 | 1,450,347 | 900,000 | 550,347 | 8,049,204 | 8,599,551 |
| 1915 | 6,128,454 | 1,950,000 | 4,178,454 | 8,599,351 | 12,778,005 |
| 1916 | 10,991,670 | 3,750,000 | 7,241,670 | 12,778,005 | 20,019,675 |
| 1917 | 7,109,177 | 6,675,000 | 434,177 | 20,019,675 | 20,453,852 |
| 1918 | 3,992,220 | 3,000,000 | 992,220 | 20,458,852 | 21,440,072 |
| 1919 | 2,856,140 | 1,800,000 | 1,056,140 | 21,446,072 | 22,502,212 |
| 1920 | 3,364,564 | 1,800,000 | 1,554,564 | 22,502,213 | 24,056,777 |
| 1921 | 1,581,855 | [1] 2,500,000 | [1] 3,081,855 | 24,056,777 | 20,974,776 |

| | Net working capital | Plus other assets | Net tangible assets applicable to stock |
|---|---|---|---|
| 1912 | $10,117,089 | $13,114,510 | $23,231,599 |
| 1914 | 9,957,293 | 14,642,258 | 24,599,551 |
| 1920 | 18,167,150 | 21,400,838 | 39,567,988 |

[1] Deficit.

This shows dividends of $24,475,000 in 10 years, including the deficit in 1921 covering postwar deflations. In addition, surplus account increased $13,793,177. Total profits for this period, $38,268,177, on a capital and surplus in 1912 of $19,181,599, being 20 per cent per annum. Does this company need special public contributions by order of Congress? Should "bonus" be voted it, as Congress has done, before the soldiers' bonus bill?

The expected earning capacity of the company is indicated by its purchase in February, 1922, by the Anaconda Copper Mining Co., an enormously great and profitable organization, for $150 in cash, plus $150 in Anaconda stock, now at a premium, for each share of American Brass.

A competitor of the American Brass had a capital and surplus in 1910 of $7,494,835, which it increased to $23,808,267 in 1920, paying meantime dividends of $20,350,920—a profit of $44,156,187 in 10

years, mostly, to be sure, in war years, but good profits in poor years. In 1921, evidently a "clean-up" year, it reported a deficit of $937,763 after taxes and charges. This left a profit, including the clean-up year, of $43,218,424 for 11 years on a capital of $7,494,835.

PRODUCTION, FOREIGN COMPETITION

The ability of our industry to meet foreign competition and its monopoly of the domestic market under the present tariff of 20.7 per cent is shown by the following table:

*Brass and bronze manufactures*

| Year | Production | Exports | Imports | Per cent of imports to domestic production (census 1919) | Exports, excess imports, by number of times[1] |
|---|---|---|---|---|---|
| 1914 | $128,580,000 | $4,758,556 | $1,126,556 | 1.0 | 4.2 |
| 1919 | 389,550,094 | 14,841,037 | 491,598 | .1 | 30.2 |
| 1920 | | 15,866,275 | 984,005 | .2 | 16.8 |
| 1921 | | 8,658,508 | 963,938 | .2 | 9 |

[1] Basis 1919 production.

Before the war, exports were far less than now, and imports greater. Since the war, imports have been only from one to two hundredths of 1 per cent of domestic production. Virtually nothing can come in. Exports have been from 9 to 30.2 times more than imports.

Nothing would be more truly profiteering on the part of Congress and the industry than to increase the present rate. Industries like these must earn their own living so far as reasonable.

Said Chairman McCumber (CONGRESSIONAL RECORD, July 1) concerning wheat, "Under ordinary conditions our tariff has given a benefit to the farmer of a little less than one-half the tariff." "When our crops were short these benefits measured up to the full amount of the tariff." "We want better prices." Can anyone doubt the purpose of this rate increase for brass manufacturers?

COST OF FORDNEY DUTY

The cost of "protection" as thus falsely figured in the Fordney law gives manufacturers of brass and copper goods $177,000,000 to add to their prices if they can. The cost to the consumer will be twice this at retail, and sometimes much more than twice, say $354,000,000, two-thirds of it absolutely unwarranted under the principle of protection.

This taxes every inhabitant, for—at first or second hand—its adds to the cost of every manufactured product, of plumbing, waterworks, machinery generally, and most of the conveniences of life.

CORSETS AND THE TARIFF

A former excessive tax of $23,000,000 is raised to $29,000,000, costing American women up to $58,000,000, if they will endure it. Possible revenue, $10,000.

PRODUCTION, IMPORTS, AND EXPORTS

Imports of corsets, pre-war, 1914, were $52,711, only one-tenth of 1 per cent of domestic production, which was $40,550,702.

Exports in 1914 were $2,220,739, or 5.5 per cent of production. Exports were forty-two times greater than imports.

In 1919, with a production of $75,541,959, we imported $37,422, or five one-hundredths of 1 per cent. We exported $2,880,858, or 3.8 per cent of production. Exports were seventy-seven times greater than imports.

In 1920 exports were $3,583,767, or 4.7 per cent of 1919 production. Imports were $9,408, or one one-hundredth of 1 per cent. Exports were three hundred and eighty times imports.

In 1921 exports, $1,695,555, were sixty-two times imports, which were $27,511, or one four-hundredths of 1 per cent of (census) 1919 production. Had the higher prices of 1920 held, these 1921 exports would have been charged out at $2,508,828.

IMPORTS IMPOSSIBLE

Women dress humanely now. Corsets are fitted to the person. She is no longer encased in a form-made steel compress. Distance alone is sufficient protection, as says an American corset manufacturer, unless his European competitors send fitters here. He has 5,000 saleswomen in Europe.

This corset tax is because women haven't known and haven't voted.

WAGES AND TARIFF

Underwood duty, 30 per cent to 60 per cent. Fordney duty, average 77 per cent. Wages, 17.3 per cent.

The total wages in the corset industry in pre-war 1914 were only 19.7 per cent of factory selling prices and in 1919 still less, 17.3 per cent. Our production methods are the best in the world.

The Payne duty, 1908–1914, was 50 per cent, or over two and one-half times the wage cost. Was this for the girl wage earners, as honest protection requires, or was all above 19.7 per cent for the manufacturers?

The former duty was 30 per cent on plain cotton corsets, or nearly twice the present wage cost of 17.3 per cent. If there is 5 cents or more of lace on the imported corset the duty is doubled—60 per cent. No luxuries allowed, women! Not 5 cents' worth of lace.

The Fordney duty is 77 per cent on all qualities, or four and one-half times the wage cost.

It shuts out imports. It compels women to buy from domestic manufacturers at any prices they dare charge. "It's an outrage," says a domestic manufacturer.

COST OF FORDNEY DUTY

The former duty invited manufacturers to combine and to add $25,000,000 to the prices at which they met foreign competition on their exports.

The new Fordney duty is a possible tax of $39,000,000 for the manufacturers, to cost women at retail twice this, or $77,000,000.

REVENUE COLLECTED

This tax is for manufacturers, not for revenue. Congress knows that the Government collected in customs duties on corsets in 1919 only $10,000; in 1920, $4,000; in 1921, $10,000. It can't collect more.

Why this $77,000,000 possible increases in corset prices? Does Congress think women stupid?

Some corset factories are hard up; so are some women.

Women are rebelling against old-fashioned calsson clamps. Up-to-date corset makers are prospering. They are getting whatever trade our women have to offer.

THE FORDNEY RATES ON SILKS—THE CHENEYS AND THE TARIFF

The silk tariff has virtually been written for a generation under pressure of the Cheney family, who operate what is said to be the biggest silk mills on earth at South Manchester, near Hartford, Conn. Just so Lippett, of Rhode Island, has dominated the cotton schedule, and other manufacturers their several schedules. In New England the present cotton schedule is called "the Lippett schedule."

There has always been a handy man from Connecticut on the Ways and Means Committee of the House and in the Senate, as subservient as office boys to the silk and other exploiting manufacturers of Connecticut.

TARIFF RIGGING

Some day a profit and loss account may be worked out showing how these handy men have taken from every pocketbook in America nickels, dollars, and hundreds of millions of dollars through the sale of Connecticut products, to the end that half or less of these moneys might reach the pockets of her manufacturers, among the richest in America.

Millions of ordinary consumers in Connecticut have lost more from this exploitation than their few wealthy manufacturers have profited. But what care these handy men for the uninfluential millions, even in their own State?

> "To lay with one hand the power of the Government on the property of the citizen and with the other to bestow it upon favored individuals to aid private enterprise and build up private fortunes is none the less robbery because it is done under the forms of law and is called taxation." (Supreme Court of the United States, Marshall case.)

It is reported that when, shortly after the passage of the Payne bill, the leader of the silk manufacturers heard the bill denounced he exclaimed:

"The Payne tariff bad! Why, it's the best I ever wrote."

Literally this statement may be untrue. It carries, however, the fundamental truth of a New Testament parable.

Now, under the pressure and leadership of a Cheney and with the vigorous opposition of some silk manufacturers in Connecticut and elsewhere, the Payne paragraph is practically restored in the pending bill, with a slight increase in rates.

SILK RATES

The Underwood rates averaged 42.6 per cent on woven fabrics, laces, embroideries, and other manufactures. The rates in the Fordney law average 57.2 per cent.

Under the former rate the silk mills were permitted to add to their prices, if they could, $206,000,000 above the prices of their foreign competitors.

COST OF PRESENT RATES

Under the Fordney law they are invited to add $276,000,000, mostly to be picked from the pockets of the women of the United States. The unfortunate women will have to give up under the Fordney law an additional $140,000,000 above present costs, one-half of this going to the manufacturers and the other half going to jobbers, wholesalers, and retailers, who are everywhere protesting against it.

This statement of the unrighteousness of the proposed silk rates is based upon the following facts:

THE "DIFFERENCE IN COST HERE AND ABROAD"

Prominent and successful silk manufacturers, upon thorough investigation, declare that the difference in the cost of production (the rule of protection) between this country and Switzerland is 15 per cent. This, therefore, 15 per cent, would be a definite and extremely close protective rate; one which, however, no protectionist would ap-

prove, because the rates should be so liberally figured as to cover all contingencies, and give domestic confidence and satisfaction.

A silk manufacturer and expert, representing many domestic silk manufacturers, says it is well known that the industry in this country is far ahead in quantity production and labor-saving devices. Also that American labor, per unit produced, is undoubtedly the cheapest in the world. One manufacturer says he could sell in any country in the world at a profit if he cared to go after its trade. In China and Japan a weaver operates one loom, usually a primitive hand-loom. Here she operates from two to five high speed machine looms.

Says he, The ratio of raw material to finished marketable product in domestic silk ranges between 50 and 70 per cent.

"Based on a careful survey and investigation of the costs of production here and in Switzerland, for instance, we (these manufacturers) came to the conclusion that a rate of duty of approximately 25 per cent to 30 per cent ad valorem would amply protect domestic manufacturers against any possible competition of Switzerland." Switzerland has the lowest production costs of any country making competitive silks.

Thirty per cent would be twice this difference in cost of production, and decidedly liberal. The Underwood rate was 42.6 per cent. The present rate is 55 per cent on woven fabrics.

MONOPOLY OF MARKET ON COMPARABLE GOODS

Under the former rate, silk manufacturers had a virtual monopoly of the domestic market. Search through a great department store shows that not a single yard of foreign-made silk is commonly sold in this country, except novelties in design or quality, and an extra cheap silk from Japan, known as habutai, used mostly for linings, and made of second quality silk too weak for our looms, as we choose to run them. Shall our women of small means be estopped from the use of this silk? It is not a question of protection, because we do not make it.

From China come the Shantung light-brown silks, worn in summer by people of moderate means.

In 1919 we imported less than 1 per cent of the silk ribbons consumed, 3 per cent of our velvets and plushes, and 7.2 per cent of our broad silks, including the habutais and Shantungs, and 5.9 per cent of our total production of silks of all kinds, including knit goods.

A consolidation has just been effected of domestic silk ribbon manufacturers making more than 2,000,000 yards annully and including the greatest producer in the world.

Imports from France have been steadily declining. They are now mostly very sheer fabrics, which are not profitable for our looms, novelties and art fabrics, which are needed for the stimulation of our industry as well as for the satisfaction of those who can afford them.

Importations from Switzerland have almost ceased. Silks formerly imported, such as taffetas, satins, umbrella silks, and tie silks, have for a long time been successfully produced here.

WAGES

We get some idea of the patriotism and altruism of these manufacturers from the further fact that when under the Payne law they had the highest protection then conceivable, 50.5 per cent, the industry paid in Rhode Island (and presumably elsewhere) only $7 to $8 wages per week of long hours, with 92.8 per cent of its operatives foreign-born, and doubtless many of the remaining 7.2 per cent children of the foreign-born operatives. Labor then got 18.5 per cent of the factory selling price of the product. Labor, plus superintendence, got 22.7 per cent. The tariff, 50.5 per cent, was over two and one-half times wages plus superintendence.

MATERIAL ONE-HALF OF COST

While percentages vary, generally speaking, the cost of the silk itself is more than half of the cost of the final product. Certain crepes are 80 per cent silk, 10 per cent overhead, and 10 per cent labor.

As the raw silk coming from the Orient is the same price the world over, no protection is required on raw material. The duty, therefore, is measurable only by differences in labor, overhead, and profit, which average only 50 per cent of the total cost. The present duty of 42.6 per cent is 85.2 per cent of all cost elements subject to difference.

The present duty, averaging 57.2 per cent, is 114 per cent of the foreigner's total labor, overhead, and profit; a 57 per cent tariff against an actual difference in cost of about 15 per cent.

JAPAN

Much is said about the low wages of Japanese silk workers. Japanese processes are essentially different from ours. Not a yard of the silk we commonly use is made in Japan except the inferior habutai before mentioned. For 50 years those who would frighten us picture Japan as adopting our methods some day. If in another 50 years she does adopt our methods, action can be taken then.

PRODUCTION, EXPORTS, AND IMPORTS

The domestic industry's control of our market is evidenced by the fact that out of a total production in 1919 of $716,084,858 we imported only $48,286,344, of which $31,000,000 were the noncomparable, noncompeting habutais from Japan, with much of the remainder Shantungs from China. Exports were $16,467,168. Such is the present throttle hold of our silk industry.

In 1920 exports were $15,595,915; imports, $54,763,689, mostly the noncomparable fabrics of China and Japan. We are now exporting good quality silks to free-trade England at satisfactory profits.

PROFITS

When the necessities of poverty are pleaded by manufacturers demanding financial relief through Congress from the women of America it is fair to investigate the claim.

During the war and shortly thereafter the silk market was extremely speculative, raw material rising to $15 or more per pound from $4.50 to $6 per pound, pre-war. Some bankruptcies resulted and heavy losses. This is aside from tariff considerations, however.

The Cheney Co., as shown in financial statements, increased its net worth from $7,000,000 in 1905 to $14,075,489 in 1916, exclusive of dividends, if any.

Mr. Horace B. Cheney, in pleading his cause before the Ways and Means Committee, February 3, 1922, gave the then net capital as three times the par value ($7,000,000) of the stock, or $21,000,000. "That is just the value." "Absolutely." This indicates a profit of $6,924,511 from 1914 to 1921, exclusive of dividends, if any—a total of $14,000,000 plus dividends, 1905–1921. Should they require more liberal public assistance?

NOT A LUXURY

Silk is not a luxury. If it were, the American people are for whatever luxuries and convenience they can enjoy properly and modestly and against congressional interference.

PUBLIC MISCONCEIVES COSTS

The public has misconceived the cost of manufacturing silk. Although silk shines and delights, the wage cost of manufacture being the substantial factor, as shown by the census of 1919, is substantially the same, 15.7 per cent, as in woolens, 15.6 per cent, and less than in cottons, 16.3 per cent.

The Underwood duties should have been reduced. Let the silk manufacturers with their cost books show how much. Plenty of them say this. Then let them reasonably earn their own living.

The Underwood protection, 42.6 per cent, gave the silk manufacturers congressional permission to add $214,000,000 to their prices above those of foreign competitors.

COST OF PROTECTION

The Fordney duty, averaging 57.2 per cent, lifts this $206,000,000 to $276,000,000, which would be doubled at retail, making $552,000,000 to consumers, half of it lost in gratuities to manufacturers and percentage to retailers who strenuously protest against the entire scheme.

TIN SILKS AND A SENATOR'S MORALS

"IT'S 'LOADED'—A PURE IMPOSITION"

Senator McLEAN, of Connecticut, exhibiting imported silks from China:

> "Here is a pongee. It is 'loaded.' * * * It is a pure imposition. It is weighted with china clay and rice glue, and when you boil it and wash it it is worthless. I do not think the American people would suffer greatly if they were not permitted to buy this stuff at all."

American manufacturers take 19 ounces of tin (chloride of) and 13 ounces of silk and with these make 32 ounces of taffeta silk cloth.

An American mill is spending approximately $300,000 to change from yard to piece weighting. "Everything is to be weighted hereafter."

Said Cheney Bros. to the Ways and Means Committee, January 6, 1909: "Silk is capable of being weighted to almost any extent up to, say, 300 to 400 per cent."

Our present tariff, averaging 57.2 per cent, shuts out these European silks, except novelties bought regardless of price.

A great New York store is having trouble with its manufacturers. It wants to sell less tin at its silk counter. It wants its silks to wear better. The chloride of tin is an acid solution. It rots the silk.

Madam finds her dress in a closet cut as with a knife—too much tin. Her pongee remains as good as new. Pongees, we are told, are usually not much loaded, and only with china clay or rice starch.

Is loading with tin "a pure imposition," as some domestic manufacturers say, or only loading with china clay?

Neither cleans well. Madam should less often blame the cleaner. Often it's the tin chloride. No silks should be boiled.

*Percentage of chloride of tin weighting in certain silks*

| Silk cloth | United States | Europe |
|---|---|---|
| Yarn-dyed taffetas weighted in the skein. | 10 to 50 and 100 per cent. | 10 to 45 and 100 per cent. |
| Piece-dyed, broad-loom silks and fine chiffons. | 10 to 25 per cent. | 10 to 25 and 45 per cent. |
| Crêpe de chine, georgettes, canton crêpes, and crêpe satins (crêpe difficult to weight). | ------do------ | |
| Fancy good-quality crêpe meteors and crépons. | 25 per cent maximum | |

Charmeuse, taffetas, plain, brocaded, and satin-faced crêpes and satins are successfully weighted only in Europe so far.

Eighty-five per cent of all European silks are now weighted. "All American silks will be weighted hereafter," says an authority.

SILK INEXPENSIVE—NOT A LUXURY

CONGRESS SHOULD NOT INTERFERE WITH ITS REASONABLE PURCHASE

Women, weigh your silk dresses. It's amusing. An ample, modest office dress weighed 3¾ ounces. A lady of scant means is wearing her grandmother's silk dress, remade several times, and 65 years ago. The original cost equaled about 40 cents per year.

Congress proposes to tax silk cloth 55 per cent. Many domestic manufacturers insist that 25 per cent is ample and that 15 per cent is a close measure of the difference in cost here and in Europe, where is our only competition on the silks commonly used in American dresses.

This 55 per cent is for a few silk manufacturers who want to maintain profits. "This is a luxury," says McLean, as he does what he can to make it so.

The following table gives the weights of the silk per square yard in various piece goods, and in a dress of 3 yards, which suffices in many cases, and of 4½ yards with full panels.

*Value of raw material in certain broad silks*

| Samples | Name | Weight per square yard, ounces | Value per square yard silk content at 65 cents per ounce | Value silk in dress of 3 yards | Value silk in dress of 4½ yards |
|---|---|---|---|---|---|
| No. 1 | Taffeta | 1.75 ounces gross, net 0.9 ounce. | $0.58 | $1.75 | $2.62 |
| No. 2 | Printed crêpe de chine | 1.08 ounces | .702 | 2.11 | 3.16 |
| No. 3 | Foulard | 0.96 ounce | .623 | 1.87 | 2.80 |
| No. 4 | Satin charmeuse | 2.1 ounces | 1.37 | 4.11 | 6.15 |
| No. 5 | Crêpe de chine | 1.48 ounces | .92 | 2.75 | 4.12 |
| No. 6 | Radium | 1.1 ounces | .68 | 2.04 | 3.06 |
| No. 7 | Canton crêpe | 2.32 ounces | 1.51 | 4.53 | 6.80 |
| No. 8 | Heavy black duchess satin. | 2.5 ounces gross, 1.2 ounces net. | .80 | 2.40 | 3.60 |

Sample No. 1 weighs 1¾ ounces, of which $\frac{1}{10}$ ounce is silk, the balance tin. No. 8 weighs 2.5 ounces of which 1.2 ounces is silk. The other samples are unweighted.

Raw silk averages $7.50 per pound. There is 20 per cent loss in boiling out the natural gum, and 5 per cent waste in spinning and weaving, making the cost about 62 cents per ounce in the cloth, or $1.90 to $4 in ordinary summer dresses. The silk above is figured at 65 cents per ounce.

A woman's winter suit of rough tweed takes 3 yards of 12-ounce cloth, 54 inches wide. The wool is worth about 85 cents per pound in the cloth, or $1.91 for the suit. The raw material costs more than in most silk dresses. The silk dress costs less to make. Store prices run substantially the same for silk and wool dresses.

Silks have become as necessary for summer as woolens for winter. Congress makes it difficult for women to buy silks.

MORE MORALS

The Fair Tariff League said in its statement of July 8, 1922, on silks:

> "[Search through a great department store shows that not a single yard of foreign-made silk is commonly sold in this country] *except novelties in design or quality, and an extra cheap silk from Japan, known as habutai.* * * *
>
> *"From China come the Shantung light-brown silks, worn in summer by people of moderate means."*

Mr. McLEAN in the Senate, August 1, read only the lines in plain type above, and then told how Japanese habutai is imported.

He made his opportunity to criticize my omitting the lines in italics, that covered the point he raised. It's his way.

"The league's statement," said McLEAN, "is so full of misstatements that it is hardly worth considering." And then he falsified it.

Is it strange or not to find this sort of morals and of intelligence in the Senate of the United States—and from Connecticut?

SALT AND THE FORDNEY TARIFF LAW

Since protection was first corrupted in practice, high tariff rates have been put upon very simple commodities, like salt and lead, commodities so simple that the public would not suspect that Congress was giving millions of dollars in gratuities picked by deft fingers from every pocket in America.

We have innumerable salt beds, some of them from 300 to 600 miles long, 50 to 200 miles wide, 200 to 500 feet thick, and in some cases 1,000 to 2,000 feet thick. One bed, for instance, runs from a point north of Detroit, nearly to the Hudson River, with a few breaks, the whole area dotted with salt wells.

Water, preferably heated, gravitates through pipes to the salt beds. (This is a case where gravity has to be "protected" at the dictation of a trust.) This water saturated with pure salt is pumped up and evaporated in a vacuum at a summer temperature of about 100° by the use of American coal, which is so cheap that we export it in vast quantities to Europe and elsewhere. There is no refining cost—only evaporation of the water.

In 1914, pre-war, the entire wage cost in the manufacture of salt was 21.6 per cent of the factory selling price of the product. Wages plus superintendence were 28.5 per cent, and yet the Payne tariff was 82.5 per cent, or virtually four times the total wage cost of production. It would seem that there might have been, if not moral, then a fear of being found out, that would have kept both Congress and the Salt Trust from working the American people to such an extent. Wages are now 19.6 per cent of the selling price.

Under free trade in 1896, the price was 29.2 cents per barrel. Under the Dingley duties, averaging 50 per cent, the price was, in 1900, 75 cents. Prices in many Middle and Western States were nearly double those of 1896. The New York City price, for the same grade of salt, from western New York, was $1.40, as against $1 to $1.10 in 1896 to 1897.

In 1921 we exported $1,415,471 of salt, and imported, still under free trade, $531,031, or about one-third of our exports. Says a big producer, Germany sent in considerable quantities, but of so poor quality that she got no second orders.

PROFITS

The claim that salt manufacturers need the especial assistance of the Congress of the United States in their business requires the consideration of the profit and loss account of the trust, the International Salt Co. (N. J.). Its outstanding capital stock (for $100) is $6,077,130. It is a holding company only. If it is like all other similar companies of which we are advised, its capital was originally mostly water. It made no dividends in 1907-1914; 3 per cent in 1915; 3 per cent in 1916; 12½ per cent in 1917; 6 per cent in 1918–1920, and 8 per cent in 1921.

Its capital stock has now been made good, and a profit and loss surplus accumulated of $2,569,156. Its profits, in 1920, were 14.69 per cent, and in 1921, 15.53 per cent.

The Payne law of 1909 gave salt manufacturers $5,000,000, costing consumers $10,000,000, or as much of that as the manufacturers can add to their prices.

COST OF NEW FORDNEY DUTIES

The manufacturers have profited greatly under the free list of the Underwood law.

The Fordney law offers them $11,000,000, to cost consumers $23,000,000—a tidy gift.

> "This method of taxation, this graft masquerading as protection, has the effect of extorting from every man and woman a sum which belongs by rights to the purchaser. Nothing but the fact of its skillful indiscretion has kept the people from rising in protest and sweeping from power the representatives who have made this possible. * * * The duties are mysteriously incorporated in the price. The added price adds not a cent to the value, not a mill to the Government, but forever swells the total of the profits of the manufacturers." (H. E. Miles (1909), chairman tariff committee National Association of Manufacturers.)

The Federal Trade Commission has recently ordered an association of salt producers to cease discriminating by concerted action in favor of certain jobbers and dealers and refusing, by mutual agreement, to sell to certain others.

PRODUCTION, DUTY, EXPORTS, AND IMPORTS

Underwood, free list: Fordney duty averages: 25.3 per cent in bags, barrels, etc., and 38.7 per cent in bulk. General average, 30.3 per cent. Wages, 19.6 per cent.

In 1919 production was $37,513,821. In that year and since salt has been on the free list. Under this free list we exported in 1920 $1,901,593, or 3.7 per cent of production. Imports were $676,499, or 1.8 per cent of production. That is, with salt on the free list, we exported at world prices 2.8 times more than was imported. Our consumers were protected, while the trust, the International Salt Co., made 14.69 per cent on its capital.

In 1921, when an impoverished world was trying to buy the least it could from us and to sell the most it could, we exported $1,415,471 of salt and imported only a third of that sum at $531,031. And that year, 1921, the Salt Trust made 15.53 per cent, or 1 per cent more than in 1920.

FORDNEY DUTY 30.3 PER CENT

Congress has now taken this trust off the free list, where it had to earn its own living and did so with 15 per cent profit per annum, and gives it 30.3 per cent protection, being 11 cents per 100 pounds in bags, etc., or 25.3 per cent and 7 cents per 100 pounds in bulk, or 38.7 per cent. Relief from abroad is to be shut off by act of Congress until the trust increases its price 30 per cent, or likely 30 per cent plus ocean freights, for the importer must recover his duty and his freight plus a profit for doing business.

WAGES

Wages in 1919 were 19.6 per cent of the factory selling price, or less than one-third of the tariff now proposed. The laboring man in the salt works will "enjoy" this protection only as he pays as much of a 62 per cent addition to the present cost of his salt as the trust dares charge.

TRUST PRICES

The salt manufacturers have always had an affinity for selling agencies and price agreements. In 1866 the Michigan manufacturers were united. Ever since there has been one trust or another. The price is what the trust makes it, with no "protection" for consumers except in imports, and no harm to manufacturers or labor from free trade.

Before salt was put on the free list in the Wilson bill, which was operated from 1894 to 1897, the manufacturers told the Senate Committee on Finance that "When salt shall be admitted free * * * our even now struggling industry shall be paralyzed or destroyed in an unequal competition with the cheaper product of foreign cheaper labor. We will then soon be made to pay to the English Salt Union the price which it exacts elsewhere."

Contrary to this prediction, we both produced and consumed more salt from 1895 to 1897 than ever before.

LEATHER GLOVES AND THE PRESENT TARIFF LAW

The leather-glove tariff has been written for many years under the pressure of an ex-Congressman, the sincerity of whose general devotion to high-tariff rates may be indicated by his conviction for smuggling merchandise variously valued at from $14,000 to $40,000, for which offense he was sentenced to six months in jail and fined $1,000.

It is distasteful to note this, even as it must have been distasteful to President Taft, in 1909, to denounce, as reported, "the consideration shown" this man as "a scandal and a disgrace," and to declare that he, the President, "would not become a party to the payment of political debts by placing exorbitant duties on gloves."

Incidents of this sort, everywhere evident, make the tariff a moral issue, even more than economic, for morals are greater than money.

The Payne duties averaged 45.4 per cent. Wages were then 21 per cent of factory selling prices. Underwood duties 13.7 per cent. Fordney duties 50 per cent to 70 per cent. Wages in 1919, 17.4 per cent. However much postwar wages increased, they did not keep pace with manufacturers' prices.

"Gentlemen, Congress is becoming a bargain counter." (Senator Dolliver, 1909.)

The Payne duties gave the industry $6,000,000 to add to its prices, costing consumers twice this at retail, or $12,000,000.

Under the Payne law (census, 1914) there were 11,354 wage earners in the leather-glove industry, with total pay rolls of $4,558,360, or only three-fourths of the protection given. It is clear who got the benefit.

Under the pressure of this ex-Congressman the Fordney law makes the duties "not less than 50 nor more than 70 per cent." They offer the industry as much as $18,000,000 as it can add to its prices, to cost consumers $36,000,000 at retail. These huge sums to protect a total pay roll of only $8,150,740.

The Underwood duties equaled 8½ to 46 cents per pair.

The highest duties in any law since 1890 were $1.75 to $5.50 per dozen pairs, or 14½ to 46 cents per pair.

The Fordney duties of $4.40 to $22.50 per dozen pairs run from 36½ cents to $1.87 per pair. They raise retail prices 44 cents per pair on the cheapest gloves and $2 per pair on the most expensive.

Domestic production in (census) 1919 was $46,440,511. Imports were $6,162,848, or 13.1 per cent of domestic production. Substantially all imports were of kinds not made here.

The Fordney duties are more than three times the total wage cost. And wages constitute the only considerable difference between foreign and domestic costs of production.

AMERICA'S GENIUS FOR PRODUCTION

America can make anything. There are, however, some things that America will not make. Its genius is for quantity production. American industrial democracy insists on serving democracy at large. It will not make fussy and elegant things for the few. It will not make the type of fine gloves now imported, although women require considerable quantities.

The foreign glove industry is a "home" or village industry. The brushing on of the dye by hand on the outside of the skin only, leaving the inside white, the dowling or shaving down of the delicate skins to an even thickness and elasticity, the manipulation of the skins "to the exact size that will stretch to the desired width when drawn on the hand," the patient retrieving and making of perfect-fitting gloves from defective skins require the sort of mental and physical application that Americans dislike. In certain European towns and villages, notably in France, from the seventeenth century the inhabitants have done nothing else. They will continue, despite the vote of our women's money to Littauer. He'll buy diamonds but he won't make these kinds of gloves.

Meantime America makes another kind of gloves with special tanning and dyeing typical of her character, strong, durable, handsome enough, but so heavy, so different from the types imported as to be utterly unfit, in the estimation of all women, for the finer use of afternoon and evening wear as contrasted with street wear, sports, and automobile use. These are made also in Europe but not at much less cost.

These heavier gloves are made from the hair-growing "Mocha" sheep of Arabia and the "Cape" tough-skinned sheep of South Africa.

The raw skins are on the free list and cost the same the world over.

For dyeing they are thrown into drums not unlike modern revolving washing machines, with about the difference in cost of dyeing here and abroad as in laundering without ironing here and abroad.

"Protection ceases to be protection when it is carried to the extent of pampering an industry into slothfulness and beyond the whip and spur of competition." (Col. George E. Tichenor, 1882, later president board of General Appraisers.)

The cost of tanning Mocha skins here to-day is $4.50, and dyeing, $2.50 per dozen skins, all sizes, making 30 pairs of short gloves selling at the factory for $3.50 per pair. This is 23½ cents per pair for tanning and dyeing, including tanner's profit. It is 6¾ per cent of the selling price of the gloves.

If costs abroad, including profits, are one-half of domestic costs, there should be 3 per cent tariff protection for tanning and dyeing.

The Underwood duty on colored skins was 10 per cent; Fordney, 20 per cent.

The present domestic charge, $4.50, for tanning, is double pre-war. With diminished foreign competition, our tanners are now adding the present 10 per cent protection. Why give them an additional 10 per cent?

That these figures are correct is indicated by the present free admission of tanned [illegible]ve leather of all sorts ready for coloring. Many "Capes" are thus imported; Mochas not, because our own tanning is preferred.

*American labor cost, "Mocha" and "Cape" leather gloves, union wage scale of July, 1920, with later reductions, one of 10 per cent and another, recent, averaging 8 per cent*

| | Sample No. 100, women's Mocha | Sample No. 200, women's Capes | Sample No. 300, men's Mocha | Sample No. 400, men's Capes |
|---|---|---|---|---|
| Dowling or shaving | | $1.25 | | $1.75 |
| Dowling or cutting | $2.45 | 2.25 | $2.55 | 2.35 |
| Trimming and punching | .25 | .25 | .25 | .25 |
| Trimming and embroidery | .75 | .75 | .75 | .75 |
| Trimming and sewing | 2.25 | 2.25 | 2.25 | 2.25 |
| Trimming and finishing | .25 | .25 | .45 | .45 |
| Trimming and laying off | .25 | .25 | .45 | .45 |
| Less reductions about 18 per cent | 1.12 | 1.31 | 1.21 | 1.49 |
| Manufacturer's price per dozen | 27.00 | 21.00 | 42.00 | 22.50 |
| Per cent labor to factory prices | 18.51 | 28.20 | 13.07 | 30.04 |
| Total | 6.20 | 7.25 | 6.70 | 8.25 |
| Less reductions, about 18 per cent | 1.12 | 1.31 | 1.21 | 1.49 |
| Total labor cost per dozen | 5.08 | 5.94 | 5.49 | 6.76 |
| Manufacturer's price per dozen | 27.00 | 21.00 | 42.00 | 22.50 |
| Per cent labor to factory prices | 18.51 | 28.20 | 13.07 | 30.04 |

COMPARISON, DOMESTIC AND FOREIGN LABOR COSTS

The Associated Glove Manufacturers say in their brief that American wages "have always been from two to two and one-half times the wages paid abroad for the same work, and to-day the difference is even greater than in pre-war times." Let us see.

*Men's cape and mocha leather gloves—Labor costs in Germany and the United States, 1913*

| | Marks at 23.80 | Equivalent dollars | United States dollars |
|---|---|---|---|
| Cutting Mocha | 3.72 | .89 | 1.00 |
| Cutting Cape | 3.60 | .86 | 1.25 |
| Sewing pique | 2.80 | .67 | 1.30 |
| Sewing prixseam | 2.80 | .67 | 1.08 |
| Sewing on binding | .30 | .07 | .12 |
| Hemming | .30 | .07 | .12 |
| Putting on fasteners complete | .50 | .12 | .10 |
| Laying off | .35 | .08 | .16 |
| Total | | 3.43 | .13 |
| Difference | | 1.70 | |

Add for embroidery according to style from 25 cents to $2.75. The cost of producing women's gloves is essentially the same as men's.

The above table shows American labor 50 per cent higher than foreign, instead of 200 per cent to 250 per cent. Labor is little in any country. The difference in labor per pair is slight.

PRODUCTION AND IMPORTS

The production of leather gloves in the United States in (census) 1899 was 2,895,661 dozen pairs. In 1919, 3,666,045, an increase of 27 per cent. Population increased in this period 39 per cent. The industry has failed to advance with population under the extreme protection of the Dingley and Payne laws and later the war embargo.

Approximately 73 per cent of production is men's gloves; 18 per cent women's and children's, and 9 per cent boys'. The domestic industry serves, substantially, men only.

That neither Germany nor any other country is importing to the injury of the American glove industry in the kind of gloves it makes is shown below.

*Imports of men's gloves of all kinds*

| Calendar Year | Total imports | From Germany |
|---|---|---|
| | *Dozens* | *Dozens* |
| 1919 | 5,185 | None. |
| 1920 | 29,151 | 1,940 |
| 1921 | 18,262 | 2,749 |

These imports against domestic production of over 2,000,000 dozen pairs per annum of men's gloves.

The manufacturers' brief attributes to these inconsequential imports the unemployment of "the thousands of operatives who are now out of work or working part time."

Mr. Littauer gave a better reason when pleading for rates on cotton sueded gloves running up to 143 per cent, later amended on the floor of the Senate to 75 per cent. Said he: "Cotton gloves are driving out the leather gloves. The consumption of leather gloves is no more than one-half to three-fourths of what it used to be."

THE CRIME AGAINST MEN—BARE HANDS AND DIRTY

The Wilson, Dingley, and Payne tariffs virtually embargoed men's gloves with duties averaging, as said Mr. Littauer, "66⅔ per cent in the past." Importations of men's suede gloves, comparable to domestic Mochas, from 1908 to 1914, averaged only 1,239 dozen per annum.

Without healthy competition from abroad, men's Mochas sell now for $4.50 to $5.50, which retailed pre-war for $2 per pair. With the same cost for skins the Englishman is buying his to-day for 6 to 8 shillings or $1.20 to $1.60 per pair.

IMPORTS OF COMPETING GLOVES NEGLIGIBLE

The Reynolds report of experts shows a shipment of Czechoslovakia men's gloves at $8.10 per dozen foreign value, selling in the United States for $16.50 against the American glove at $24.

Only 2,376 dozen pairs came from Czechoslovakia in 1920. The average foreign price was $18.39. Only 466 dozen pairs came in 1921, at an average price of $12.37. Czechoslovakia is not hurting us.

The report shows English lambskins, foreign price $17.05, selling here, plus $2.75 duty and $1.20 landing charges, for $27.75 against domestics at $30.

There were imported of men's gloves from England in 1920 only 18,981 dozen pairs, at average price of $26.16; and in 1921 only 9,451 dozen pairs, at an average price of $21.75. The English margin of profit is moderate. Her importations of men's gloves are negligible as against our domestic production of over 2,000,000 dozen pairs annually.

WAGES 1.74 PER CENT OF FACTORY SELLING PRICES

The essential difference in cost here and abroad, as shown, is in labor.

We have seen that foreign wages are 70 per cent of wages in this country.

The difference in wage cost here and abroad is, therefore, about 6.3 per cent of the factory selling price, or one-tenth of the Payne, Dingley, and Wilson tariffs.

Wages in 1919 were 17.4 per cent of factory selling prices. This makes the difference in wage cost here and abroad less than 6 per cent, and less than one-tenth of the Fordney duty.

Let American men wear gloves. Let them have clean and warm hands for comfort and health. Instead of this, Congress proposes duties higher than ever for men, and to exploit women likewise—to exploit them all.

These duties have nothing to do with protection, as real kid gloves of goat origin are not made in the United States in commercial quantities. Only 5,694 skins for these real kid gloves were imported in 1914—enough for 1,000 dozen pairs, against an annual consumption of about 300,000 dozen pairs, mostly from France, and a total of 1,000,000 pairs of gloves of all kinds.

Although failing for 30 years and under high tariffs to develop this fine-glove industry, our manufacturers produce an average of 3,276,572 dozen pairs of their sort, being the heavier Mochas and Capes.

Domestic production is now 76.53 per cent of total consumption, including the kinds we do not make. Domestic manufacturers now want to shut out the 23.47 per cent of imports, including the kinds we do not make. During the war and later, with a shortage of 500,000 dozen pairs annually, our manufacturers did not even try, as above shown, to make real kid gloves. The war embargo produced desperately high prices. What will a tariff embargo produce?

HOW CAN WE MAKE THEM

There are about 1,200 cutters of dress Mocha and Cape gloves in the United States, of whom 900 learned their trades abroad.

This again shows the distaste of American labor for the difficult hand processes in the fine-glove industry.

The proposed duties would shut out some 700,000 dozen pairs of the extra fine types, now made abroad, that we have never made. (The manufacturers' brief said: "40 to 50 per cent of importations" embargoed, or about 450,000 pairs.) It is estimated that not over 300 cutters in this country could successfully cut these skins.

Our present laws restrict immigration to 3 per cent. Will our women go barehanded or pay 1919 prices, $5 for short gloves, such as men still pay, until Providence drops additional cutters from the skies or changes the disposition of our wage earners?

A JOKER FOR THE FUTURE

Foreign prices of gloves should drop some 20 per cent before long, leaving them still 50 per cent above pre-war.

At present prices the Fordney duties are about the same as the Payne. For instance, real kids averaged under the Payne law 42.5 per cent. The proposed rate is "not less than 50 per cent." It can be more, up to 70 per cent.

This 50 per cent lifts real kids 15 per cent. If, however, these gloves drop 20 per cent in price (leaving them still one-third above pre-war, the duties will average 62 per cent, as against the Payne rate of 42.5 per cent.

Thus the Fordney excessive duties promise to get worse as time advances and to offset price reductions that are due.

COST OF FORDNEY DUTIES

The Fordney duties are an irresistible temptation to the manufacturers to add millions of dollars to their prices. The proposed increase in prices on domestic production and on imports is $18,000,000, to "protect" pay roll of $8,150,784. This $18,000,000 to be doubled to consumers at retail, costing the men and women of the United States $36,000,000.

COTTON GLOVES AND THE TARIFF

The Senate Finance Committee gave Mr. Littauer and his friends 25 per cent on the heavy cotton cloth gloves used in rough work; 50 per cent on the cheap, unshrunk, knit, "funeral gloves" worn by pallbearers and by elevator boys and girls, and from 90 per cent to 119 per cent on the handsome sueded knit cotton gloves now replacing kid gloves. By later amendment, these sueded duties were made "not to exceed 75 per cent."

WHO PAYS THE DUTY

Senator LENROOT, June 20, last:

> "Upon an article like this (cotton gloves), used in every home in the land, we ought not to tax the American people more than 75 per cent."

He knows who pays the duty—the consumer—"only 75 per cent."

Said Senator McCumber regarding wheat:

> "We want higher prices. 'When the crop is short we add all the duty. When crops are heavy, we get half the duty.'"

He knows who pays—the consumer.

We lead the world in knit goods. Knitting is the cheapest known method of making cloth. Sueding is merely roughing up the surface of the piece goods on revolving cylinders with needlelike teeth that tear up enough of the yarn to give the sueded, leatherlike appearance. This is a simple mechanical process, done here essentially as cheaply as anywhere.

The gloves are cut out of the yardage by stamping machines. They are then sewn, inside out, on machines and then reversed. The only hand labor involved is the sewing on of the buttons. Why 75 per cent?

PRESSED AND BLOWN GLASSWARE—NEW TARIFF 54.9 PER CENT

Said a great manufacturer of pressed glass, "When Mr. McKinley was framing the McKinley bill he said to me, 'I know nothing about pressed glass; you make the rates and be fair about it.' I had a distributing house in London costing me $10,000 a year. I added this cost to my European prices and sold my glass freely in Europe. I conferred with two or three competitors. We agreed that pressed glass might fairly be on the free list. Mr. McKinley originally put it there, but it came out in the bill at 60 per cent duty." Greed had intervened.

Before the war American pressed glass was retailed across the street from Belgian factories. We produce in such quantities as to offset differences in wage cost, if any.

Pressed glass is a universal necessity. It furnishes the humblest table and, as cut glass, is an object of art.

METHODS AND MATERIALS

Our methods of production are extremely efficient. The materials used are cheap and nowhere more abundant than in the United States,

being sand, lime, and soda ash, which is a product of salt and ammonia. Lead is used for the highest quality of crystal and cut glass, constituting one-third of its weight. Our lead deposits are great and easily worked.

Domestic users have a great advantage from natural gas, which is especially serviceable in this industry. Foreigners must use coal, which, however, is as cheap here as anywhere.

PRODUCTION EXPORTS AND IMPORTS

Production in 1914, $30,279,290, against which $999,961 was imported, being 3.3 per cent of domestic production. This was an increase in production of 37.9 per cent over 1904. It was 24.6 per cent of the total production of glass of all kinds in 1914. Exports not given.

Production in 1919, $79,093,084, against which imports were $411,351, or one-half of 1 per cent. Exports in 1919, $200,969, or three-tenths of 1 per cent of production.

Exports in 1920, $262,391, or three-tenths of 1 per cent. Imports, $1,197,859, or 1.5 per cent of 1919 production.

Exports in 1921, $231,735, or three-tenths of 1 per cent. Imports, $1,489,688, or 1.9 per cent of 1919 production.

Domestic prices are held so high as to invite small importations. Only by such importations does the industry know that it is getting the highest prices possible. A study of the relation of prices to imports is interesting.

PRICES, FOREIGN AND DOMESTIC

The 71 experts employed by the Senate Finance Committee made many comparisons between foreign and domestic prices, under the present average rate of 44.9 per cent.

A blown-glass purple candlestick, sold by an Italian manufacturer for $1.53, is made and wholesaled from an American factory for $6.25. Another, at an Italian factory for $1.25, finds its duplicate from an American factory wholesaling for $6.75. A plain blown pitcher, 3 pints, costs at the factory in Holland $18.75 per 100. The American product wholesales at $93.33.

A Czechoslovakia 6½-inch blown glass goblet costs at the factory there $1.74 per dozen. Why does our domestic product cost wholesale $4.94 and twice that at retail?

An English 12 inch tube gauge costs 40 cents per dozen at the English factory. Why should our domestic product wholesale for $1.44 and retail for $3 or more?

Czechoslovakia factories charge 23½ cents per gross for 2¼-inch electric shades. Why does our domestic product wholesale for $2.49 and retail for two or three times that? Czechoslovakia's currency is par, and her prices generally now are high.

In most highly protected industries the cost of living is higher here than abroad by the great difference in prices as above indicated. Unjust tariffs sometimes double and quadruple domestic prices.

Importers are not chargeable with these high prices. On the above glassware they add only from 32 to 48 per cent to their delivered costs, duty paid.

If Americans want fair domestic prices, the tariff must be made upon proof of the need of the industry and not, as in the glass business and elsewhere, only upon the insistence of beneficiaries.

From above comparisons we can conjecture what will happen to prices with the Fordney rate of 54.9 per cent substituted for the present average of 44.9 per cent.

WAGES 30.2 PER CENT

The census of 1914 published only the average wages for the glass industry as a whole, being 35.7 per cent of the factory selling prices. Wages, plus superintendence, were 42.2 per cent. The Payne tariff was 60 per cent, or about twice the total percentage going to labor.

In 1919 in the pressed and blown glass industry 37.9 per cent of factory selling prices went to labor. The Underwood tariff, being 44.9 per cent, is about one-fifth more than the total American wage percentage.

This industry began with a tariff of 10 per cent in 1789, increasing to 221 per cent in 1804. The new Fordney duty is the highest in its history, 54.9 per cent.

PROFITS

The Tariff Commission says that the highest percentage of profit on capital invested in the eight blown tableware establishments was 30.43 per cent, and the average profit was 10.34 per cent. In the 20 blown and pressed tableware establishments the highest profit was 29.26 per cent, with the average only one-tenth of 1 per cent. In the 18 lighting-goods establishments the highest profit was 40.1 per cent and the average 10.25 per cent. In lamp-chimney establishments the highest profit was 27.51 per cent and the average 4.86 per cent.

Apparently efficient factories can profit under lower duties than now, while increased duties will make their profits extreme, and make the least competent profitable.

As said Col. George Tichenor, in 1882, later president Board of General Appraisers, "Protection ceases to be protection when it is carried to the extent of pampering an industry into slothfulness and beyond the whip and spur of competition."

COST OF FORDNEY DUTY

The Underwood tariff permitted the manufacturers to add $25,000,000, if they could make consumers pay it, to the prices of their foreign competitors. The Fordney duty, 54.9 per cent, invites them to add $30,000,000, which would cost consumers twice this at retail, or $60,000,000. There are many indications that they would add substantially all of it, especially in good times.

PROTECTION AND COMMON HONESTY—HOW ATHENS "PROTECTED" PURITY IN LEGISLATION

One who believes in the beneficence of the principle of protection honestly applied may well wonder how many Members of Congress, and manufacturers who testified before the congressional committees in loose and exaggerated terms, would have fared in the Republic of ancient Athens, where, says Lord Bryce in his Modern Democracies, "any citizen could indict another for an alleged offense against the State for having led the assembly into a breach of the laws or given it bad advice, which it had followed." "Whoever brought forward and carried in the assembly any decree or proposition which transgressed any law in form or in substance," if convicted, "was fined, or possibly put to death."

[From Weekly News, League of Women Voters of New York State]

PROTECTION OR EXPLOITATION

[By H. E. Miles, chairman Fair Tariff League]

Hamilton's tariff, passed on our natal day, July 4, 1789, was clear and simple. It could be written on three of the 358 pages used by the present Fordney law to hide its innumerable robberies from the public understanding. Each Congressman knew what he was voting for in Hamilton's time, and every voter knew what he was voting for. Not one-tenth of the present Members of Congress can know either, nor the public. Hamilton's tariff gave 7 per cent protection on many manufactured articles, with 10 per cent on some, and more on only one, being carriages, 15 per cent. Congress now gives from four to ten times higher rates than Hamilton—not to infant industries but to the greatest industries on earth.

If an article costs 80 cents abroad and $1 here, there must be a duty of 25 per cent on the 80 cents, or our manufacturer must quit business, for we will not let him debase his wages. This is all there is to protection—absolutely simple, as most honest things are. For 40 years the principle of protection has been confused in the public mind and debased so as to yield trusts and price-fixing manufacturers enormous wealth at the cost of the consumer. Roosevelt and Taft tried to mend this, and the Republican platform of 1908 secured Mr. Taft's election by declaring for a righteous tariff revision that would represent, as Hamilton's did, "the difference in the cost of production here and abroad." But the "Old Guard" learns nothing. Taft was defeated for reelection because the party broke this platform promise in the Payne tariff of 1909.

Now Chairman McCumber, of the Senate Finance Committee, says the duty should measure the difference between the landing cost of the foreign article in the American market and the selling price of the manufactured article by the manufacturer in the American market, selling price—mind you—without reference to costs of production. Every item of the Fordney law is on this basis. Its purpose is to maintain the price of American manufacturers, whether honest or dishonest, fair or extortionate. When Chairman McCumber said this, June 10 in the Senate, he showed a pearl necklace, costing $12.50 in Europe (this necklace was, in fact, made in Brooklyn; the factory price was $75; most of the McCumber statements of cost to retailers were later proven to be grossly in error), that his committee paid $150 for at retail, a cuckoo clock for which they paid the retailer 2,200 per cent above its foreign cost, and other like articles.

This is retail profiteering. As Mr. McCumber said, "it is not a matter of the tariff," and yet, as above declared, he makes the whole tariff support manufacturers' prices whatever they are. He even invites extreme increases in prices. He makes the duty on women's fashionable "heather" hose, sold by our manufacturers at lower prices than Europe's, 57 per cent. We export silks to free-trade England at a profit, duty 55 per cent. The whole tariff is this way. Ordinary gingham—for aprons and cheap dresses, 31 per cent, although none has been imported in 20 years. It is freely exported and its principal manufacturer has increased his capital stock from $4,000,000 in 1898 to $44,500,000, besides declaring $30,000,000 of cash dividends.

Men have become used to this exploitation. Senators hate it, but do it. How about women? Will they restore protection to honest use, or submit to increases in living costs of $2,000,000,000 per year in this Senate bill above any requirement of true protection? The question is nonpartisan—just common honesty.

(Senator McCumber has just been defeated for renomination in the Republican primaries of North Dakota by LYNN J. FRAZIER, Progressive Republican and Non-Partisan Leaguer.—Editor.)

THE FORDNEY (PRESENT) LAW MORE EXTREME THAN THE PAYNE

"This bill in its entirety is a more radical and more extreme measure, so far as protection is concerned, than even the Payne-Aldrich law. I had hoped, Mr. President, that protection would

not run mad, as it had done. * * * I never in all my life saw such a swarm of men as were around the Finance Committee while they had this bill before them, and most of them got their work in well." (Senator Knute Nelson, Republican, Minnesota, CONGRESSIONAL RECORD, August 11, 1922.)

PLATE GLASS AND THE TARIFF—THE SENATE PROFITEERING ON SUNLIGHT

UNDERWOOD DUTY 14.9 PER CENT

Plate glass is a necessity. The storekeeper without it in his windows would lose his profit. It is the only glass used for mirrors. It is used for windows, tables, desks, and other furniture, for automobiles, ship lights, and other purposes. In our Northern States its density and thickness make it an economy, paid for by savings in coal.

FORDNEY DUTY 23 PER CENT—WAGES 31.5 PER CENT

The materials used are among the cheapest in the world, and nowhere more plentiful or cheaper than in the United States. Silica sand, which is not unlike beach sand, limestone, and soda ash, which is made in plants owned by the glass manufacturers, common salt, of which we have limitless quantities, and ammonia, and arsenic, which is a waste product of smelters.

MATERIALS

These materials are liquefied in pots holding a ton each, then poured on an iron table some 15 feet wide by 25 feet long, where a heavy roller quickly passes over it, flattening it into sheets of uniform thickness. After tempering, the rough edges are cut off, it is cut to desired size, and ground on a revolving iron table with sand and water. It is then polished with rouge, water, and felt-covered oscillating blocks or disks.

The use of natural gas gives our industry a decided advantage. Foreign competitors must use coal, which is decidedly less desirable for glass making. Coal is, however, as cheap here as elsewhere.

PRODUCTION

Production in 1914 amounted to $14,799,646, of which $35,757, or two-tenths of 1 per cent, was exported, against imports of $693,846, or 4.7 per cent of domestic production. This 1914 production was an increase of 12.2 per cent in quantity and 85.2 per cent in value over 1904.

Production in 1919 was valued at $34,582,862, of which $4,221,360 was exported, or 12.2 per cent. Only $3,055 was imported, or 4.7 per cent of domestic production.

EXPORTS AND IMPORTS

In 1920 exports were $2,853,666, or 8.3 per cent of 1919 production, against imports of $2,228,672 or 6.4 per cent.

Exports in 1921 were $1,834,517, or 3.8 per cent of 1919 production, with imports $2,025,823 or 5.9 per cent. We produced in 1921, in round figures, 70,000,000 square feet of plate glass, and imported only 3,000,000 square feet. We meet world competition better now than before the war.

Import demand has been due to the superior quality of French and Belgian glass for mirrors, etc., not to prices. Our manufacturers have made our people pay as nearly as possible the price of the superior importation, duty paid.

WAGES AND PRICES

Of the factory selling price, in 1919, 31.5 per cent went to wages. Wages are not separately shown in the 1914 census. Said an authority in 1890, "prices of pressed glass have steadily fallen in foreign markets from 1835 until now, except during the Franco-Prussian War. American manufacturers, however, have kept domestic prices up to the importing point," and "consumers have been obliged to pay enormous profits on watered stocks, while wages are lower than those paid to laborers anywhere in the United States for work equally difficult and exhaustive, and requiring equal skill. Labor then got from $1.25 to $2.60, with master teasers and boss layers $3, for a day's work of from 10 to 12 hours, in the plants of the Pittsburgh Plate Glass Co. at Tarentum and Creighton, Pa. At Ford City some wages were 40 per cent less. The company then paid 31 per cent dividends, and other companies made 25 per cent and over.

In the Dingley days, the manufacturers got rates running from 50 to 100 per cent, whereupon they doubled many of their prices against domestic consumers, and warned customers not to buy abroad even those sizes which could be brought in to advantage because of our price increases. About a third of this increase went to labor, and the balance to the stockholders.

TRUST PRACTICES

Said a merchant, who was thus ordered not to buy abroad, "It took me several days to comply. I saw I would lose my business otherwise, so I promised not to import." He said the trust later advised customers to order ahead liberally, as prices were going up. They so ordered, and then prices were reduced 35 per cent.

These practices were not new. About 1889 a combination was formed at Pittsburgh between the manufacturers and jobbers and shortly after prices advanced 33 per cent.

Says the National Furniture Co. (July 17, 1922):

"The plate-glass people have advanced their prices to the extent of 10 to 15 cents on the foot. This is an unreasonable advance, and they will not sell a piece of glass to-day or take an order for it except subject to prices prevailing at date of shipment. They claim that the demand and scarcity of glass and the cost forces the price up. Still there are several glass plants closed down now.

"The freight has been reduced, and nothing they use in manufacturing glass has advanced. Their labor has been cut. Still they have advanced their prices.

"Glass is getting to such a price that it is almost impossible for furniture dealers to use it, but they are forced to."

TARIFF RATES AND WAGES

The tariff averaged 63.2 per cent in the Payne year—1913. Wages in the glass industry, as a whole, were 35.7 per cent of factory selling prices. The Payne rates were, therefore, about twice the total wage costs, with all other elements of cost as low here as abroad. Prices were substantially equal to foreign prices, plus the tariff.

The Underwood tariff was 14.9 per cent, with wages 31.5 per cent, and the industry very profitable, as later indicated. The new Fordney rate is 23.1 per cent.

Profits in the business are indicated by the following statement:

*Pittsburgh Plate Glass Co.*

[Incorporated under the laws of Pennsylvania, August 24, 1883]

| | |
|---|---|
| Original capital | $800,000 |
| Present capitalization: | |
| Funded debt | None. |
| Capital stock (par $100) | $36,927,840 |

| | Net profits for stock after taxes | Dividends paid | | Surplus after dividends |
|---|---|---|---|---|
| | | Preferred | Common | |
| 1921 | $6,742,876 | Stock retired. | $2,948,490 | $3,794,386 |
| 1920 | 8,595,916 | $18,000 | 3,337,964 | 5,239,952 |
| 1919 | 7,013,719 | 18,000 | 1,792,559 | 5,203,260 |
| 1918 | 2,968,509 | 18,000 | 1,730,078 | 1,220,451 |
| 1917 | 5,276,579 | 18,000 | 2,022,716 | 3,235,863 |
| 1916 | 5,970,232 | 18,000 | 1,571,000 | 4,381,232 |
| 1915 | 1,659,238 | 18,000 | 1,570,137 | 71,101 |
| 1914 | 1,738,705 | 18,000 | 1,569,456 | 151,249 |
| 1913 | 1,685,217 | 18,000 | 1,569,456 | 97,761 |
| 1912 | 1,669,322 | 18,000 | 1,569,445 | 81,877 |
| Total | 43,320,313 | 162,000 | 19,681,301 | 23,477,132 |

| | Net working capital | Plus other assets equals | Net tangible assets applicable to stock | Profit and loss surplus |
|---|---|---|---|---|
| 1921 | $26,139,832 | $61,467,874 | $61,467,874 | $20,159,587 |
| 1914 | 8,079,093 | 28,480,793 | 28,480,793 | 5,550,080 |
| 1912 | 7,176,441 | 28,224,105 | 28,224,105 | 5,307,072 |

Profits for the 10 years, 1912–21, were $43,320,313, of which $19,843,301 went to dividends, and the remainder, $23,477,132, to surplus.

Profits averaged $4,332,031 annually. The company has never profited so much as since the war, and under the present relatively low duties. Should these duties be increased as in the Fordney law, at public expense, or lowered?

The control of prices and deliveries have been so severe that importers have hesitated to give information. Prices were so high in 1920 that the authorities of a great city considered the advisability of using paper temporarily in the inside partitions of a big new school building, hoping for lower prices later.

COST OF FORDNEY DUTIES

The protection given the industry, under the Payne law, was $5,000,000, costing consumers $10,000,000. Under the Underwood law, $4,000,000, costing consumers $8,000,000. The Fordney law offers the industry $7,000,000, to cost consumers $14,000,000.

Note—March 1923. Certain sizes of plate glass have advanced 10 per cent and others 22 per cent since enactment of Fordney law.

"Instead of such rates as this being something to the credit of the Republican Party, they will tend to damn the Republican Party if they are put into the bill." (Hon. IRVINE L. LENROOT, United States Senate, July 13, 1922.)

Why not let common folk enjoy plate glass which, fairly bought, is an economy? Only through plate glass can the household see the outside world straight.

Obscured, wire, and other building glass is plate glass rough finished. It is a simple necessity in skylights, sidewalks, for fire protection, etc. Cheaper materials are used and less labor. Production in 1914, $4,528,467. Production in 1919, $8,673,392. Exports are not separately shown in the census. Imports in 1920, $370,271, or 4.3 per cent of 1919 production. Imports in 1921, $351,083, or 4 per cent of production. Wages in 1919, 22.3 per cent. The Payne rate averaged

29.7 per cent. The Underwood rate was 16.6 per cent, which the Fordney law increases to 22 per cent, thereby giving the industry $1,600,000, to cost consumers $3,200,000.

AMERICAN FARM BUREAU FEDERATION

Upon extensive analysis shows in its weekly news letter of January 11, 1923, that the farmers lose ten dollars to one of gain from the Fordney tariff.

It estimates:

| | |
|---|---|
| Gross cost to farmers | $426,000,000 |
| Gain to farmers as producers | 125,000,000 |
| Net cost to agriculture of Fordney tariff | 301,000,000 |
| Gain to farmers as producers | 124,800,000 |
| Loss to farmers as consumers of farm products | 94,900,000 |
| Net gain to farmers from agricultural duties | 29,900,000 |
| Total cost to all consumers from farm duties | 391,700,000 |
| Total cost to all consumers on all schedules | 1,715,000,000 |

THE M'KINLEY BILL—1890

"Was the McKinley bill protective? It bore the title, 'To reduce the revenue and equalize duties on imports, and for other purposes.' Mr. McKinley knew, what Fordney seems not to know, that the way 'to reduce the revenue' is to make rates high, and the way to stop revenue is to make rates prohibitive, like so many of them in the Fordney bill.

"Said George E. Tichenor in a letter to Vice President-elect Hobart in 1896: 'President-elect McKinley is well aware that the controlling idea in the preparation of the McKinley bill was to dispose of and prevent the accumulation of surplus revenue. It was in that view that duties upon certain articles were made prohibitive, upon others higher than they would otherwise have been, and that numerous other articles (proper subjects of revenue) were put upon the free list." (Mr. Tichenor framed the McKinley and Dingley bills and was later president Board of General Appraisers.)

WINDOW GLASS AND THE FORDNEY TARIFF LAW

A tax on sunlight. Price rigging by help of Congress.

In the glass industry for from 40 to 60 years the Congress of the United States has been almost as definite and powerful a factor in the restriction of production, in price rigging, and the high cost of living as the 58 manufacturers and 3 labor unions now under indictment in the Federal court of southern New York charged with criminal practices. This prosecution is a repetition in substance of like prosecutions running back to 1866.

The grand jury finds that these manufacturers and labor unions "did arbitrarily fix, exact, and maintain uniform arbitrary and excessive prices; curtail, control, and reduce production, and suppress competition, by common agreement and understanding, extended, renewed, and carried out throughout the last three years."

CONGRESS AND THE TRUSTS

The report on the glass industry by the United States Tariff Commission in 1921 informed Congress and the public that a single American producer of window glass, the largest in the world, was so efficiently organized and equipped that it exported 80 per cent of all exports of window glass in 1916, the total amounting to over $3,000,000.

It curtails production, says the commission, and with other machine factories divides the domestic market with the 55 small hand-blowing glass factories who produce 40 per cent of the window glass.

Prior to the war, says the commission, and notwithstanding the great advantages of machine production, there were practically no domestic sales of machine glass in foreign countries, because of domestic price understandings limiting the trade to our domestic market, the factories meantime remaining idle for two-thirds of each year.

PRICE RIGGING

Said this principal machine glass company in 1916 in its annual report:

"So long as the company was securing what we considered a satisfactory portion of the going business it would be far more profitable to curtail its operations to the extent we did rather than attempt to operate the capacity and possibly precipitate a price war in the midst of the greatest export business we have ever had."

LIMITING OUTPUT

Said the Tariff Commission:

"The effectiveness of [cheap] machine production in the domestic and foreign markets is practically nullified by the policy of restricting output to suit the requirements of hand production. Machine production is marketed under conditions that encourage the continuation of antiquated methods. Profits of machine production are based on the costs of production of handmade glass, selling prices being practically the same."

Thus does this trust deprive consumers here and abroad of the fruits of American genius and of low costs and take unto itself for the cheapest production on earth, profits based upon the most antiquated and expensive methods of an unimportant few.

EFFICIENCY AND COSTS

The hand blower makes a cylinder of single-strength glass about 5 feet in length and from 12 to 15 inches in diameter. The best machine draws, hoists, and blows cylinders of glass nearly 39 feet in length and about 22 inches in diameter, yielding more than eight times as much glass as the cylinder made by hand. The machine cylinder is made in less than the small hand-blown cylinder. The machine blower operates from three to five machines at a time. Allowing for speed and number of machines, the machine blower produces about forty times more than the hand blower. The method of flattening out, cutting, and delivering these cylinders to the consumer is the same in each case.

WINDOW GASS, UNDERWOOD DUTY 9.6 PER CENT; FORDNEY DUTY 28 PER CENT

Sixty per cent of the total production in 1916–17, of 9,000,000 boxes, was made in 27 factories by machines. Forty per cent was made in 55 factories by the hand method. The 57 hand-blowing factories determine costs and prices. The handblowers needn't modernize their equipment, because an indulgent Congress helps them to profits anyhow. Machine producers run a third of the year and get profits on the full year, on forty times their own cost for blowing. Congress, however, now trebles the former rate of 9.6 per cent, making it 28 per cent, or 80 per cent of the total wages.

WAGES 37 PER CENT

Wages (census) 1919 are 37 per cent of factory selling prices. We may well question whether wages will be more than 15 or 20 per cent when the Federal court puts these manufacturers upon the basis of legitimate production and public service.

RELATION OF BUSINESS AND TARIFFS TO PUBLIC SERVICE

Said President Wilson: "As I take it, private business is public service for private profit." These manufacturers and others have yet to learn the relation of private business, and the tariff also, to public service. Congress might also learn.

MATERIALS

Materials used in the production of glass are among the cheapest in the world, being silica sand, which looks like beach sand, and is handled in the same way; soda ash, which has been made here for years cheaper than elsewhere; and crushed limestone. These materials were formerly fused in clay pots now in continuous automatic tanks not unlike pig iron.

Soda ash is a product of salt, of which we have limitless deposits, and ammonia, which is a by-product of our coke ovens.

These ingredients are used in the proportion of about 73 per cent silica, 13 per cent soda ash, and 13 per cent lime.

So long as our natural gas holds out our glassmakers have a great advantage over foreign competitors. Our coal is the cheapest in the world.

Who would protect sand, salt, limestone, and coal, limitations of production, idleness, high costs, and prices? Answer: Congress.

It would seem that an industry running under criminal agreements only six months in the year, with proportionate excessive overhead and other charges (and even then shutting out importations), can stand against foreign competition and even increase its exports, which now are many times more than imports.

PRODUCTION, EXPORTS, AND IMPORTS

The production of window glass in 1914 was $17,495,956, presumably under present practices; for charges, in court and out, of bad practices, run back to 1866.

We exported in the fiscal year 1914, under the Payne tariff of 39.6 per cent, $311,339, or 1.8 per cent of production, against imports of $134,584.

These imports indicate, as might be expected, that the tariff was added to domestic prices, thereby permitting on these slight importations a profit above freight and duty.

In 1919 production was $42,789,634, of which we exported $6,492,608, being 5.2 per cent of production, and imported $134,584, being three-tenths of 1 per cent of production.

In 1920 we exported $4,097,133, or 9.6 per cent of 1919 production, and imported $567,471, or 1.3 per cent of domestic production.

In 1921 we exported $455,086, or two-tenths of 1 per cent, against imports of $2,612,146, or 6.1 per cent.

Says the Tariff Commission of foreign competition:

"The European glass industry has suffered considerably as a result of the war. The French and Belgian window and plate-glass industry was located along the border between the two countries and suffered greatly during the German occupation. One plant is now operating in France, and the Belgian producers are bending every effort toward a resumption of productive activity. It will be some time before either nation will be in a position to supply its pre-war surplus for export, because, aside from the decreased production capacity, the home market is stripped of the finished product, and the demand is increased by the large quantities necessary for reconstruction purposes."

PRICES AND IMPORTS

The report of the 71 experts employed by the Senate Finance Committee shows that domestic prices are kept "excessively" high. Importers, however, sell at slightly higher than domestic prices, in order to get the small gross margin of 13 to 17 per cent for handling and selling charges and profit. On this basis window glass wholesales in the American market at 50 per cent more than the foreign manufacturer's prices or our own export prices. The Fordney rate would make window glass wholesale here, under present practices, 70 per cent above European factory prices, though costing no more.

A Congress that didn't mind the price-rigging evidence of the commission or the indictment of the court didn't mind this 70 per cent increase in prices. Will the people mind?

COST OF FORDNEY DUTY

The Fordney duty offers the industry $11,000,000, a premium for the continuance of its present practices. This would be doubled against consumers, making $22,000,000.

In 1888, on the very day that the industry was complaining of low foreign costs, and demanding higher duties, the president of one of the associations said in his annual report, "The selling prices of American glass were advanced beyond the cost of importing, resulting in increase of imports." Domestic makers had added the tariff and enough more to make importations profitable. This is general trust practice, but Congress raises duties up and up as fast as these trusts induce imports by domestic price increases. Chairman McCumber says (CONGRESSIONAL RECORD, July 10), "The duty should measure the difference between the importing price and the selling price of the comparable American article by the American manufacturer—prices, mind you, not cost of production, prices honest or dishonest, fair or unfair. Handy men these Congressmen. The trusts set their prices higher and higher, and Congress maintains them.

The representative of the File Trust, taking an order from Spain this month, was asked, "How can you sell abroad?" Answer, "We can undersell the world." Why do you want "protection"? "To keep up domestic prices." Congress is raising its duty from 25 to 44 per cent.

PROFITS IN WINDOW-GLASS MANUFACTURE

WHEELS WITHIN WHEELS

About 85 per cent of the window-glass factories of the United States were acquired in 1899, upon its incorporation, by the American Window Glass Co., strictly a holding company, and itself in turn, owned by the American Window Glass Machine Co., which has no property of consequence except exclusive rights in the United States to patents on machines for window-glass making, and the common stock of this American Window Glass Co.

The American Window Glass Co.'s financial record is here given:

AMERICAN WINDOW GLASS CO.

Incorporated under the laws of Pennsylvania August 2, 1899, acquiring 20 glass companies comprising about 85 per cent of the window-glass production of the United States.

Company is controlled by American Window Glass Machine Co.

Present capitalization:

| | |
|---|---|
| Funded debt | $245,000 |
| Preferred stock 7 per cent cumulative (par $100) | 4,000,000 |
| Common stock (par $100) | 13,000,000 |

Of the common stock, $12,999,993 is owned by the American Window Glass Machine Co.

| Year ended Aug. 31 | Net after interest and taxes [1] | Dividends preferred | Surplus after dividends | Royalties paid |
|---|---|---|---|---|
| 1921 | $776,977 | $279,650 | $497,327 | |
| 1920 | 4,537,963 | 279,650 | 2,828,384 | $2,453,877 |
| 1919 | 3,010,980 | 279,650 | 2,731,330 | 2,071,581 |
| 1918 | 3,812,421 | 279,650 | 3,532,771 | 1,784,312 |
| 1917 | 3,166,430 | 279,650 | 2,886,890 | 1,541,180 |
| 1916 | 1,956,334 | 739,075 | 1,217,259 | 1,380,861 |
| 1915 | 1,111,321 | 1,957,550 | [2] 846,229 | 862,295 |
| 1914 | 734,752 | 1,080,000 | [2] 345,248 | 987,325 |
| 1913 | 830,429 | | 830,429 | 975,674 |
| 1912 | [2] 555,459 | | [2] 555,459 | 814,856 |
| Total, net | 19,382,168 | 5,174,875 | 12,777,364 | 12,871,901 |

[1] Deducted from other assets. [2] Deficit.

In lieu of dividends upon common stock the company pays royalties to its owner, the American Window Machine Glass Co. It paid, however, in 1920, a common-stock dividend of $1,429,923, in addition to royalties of $2,071,581.

| | Net working capital | Plus other assets equals | Less bonded liabilities | Net tangible assets applicable to stocks | Profit and loss surplus |
|---|---|---|---|---|---|
| 1921 | $26,076,602 | $28,026,000 | $345,000 | $27,780,000 | $7,326,047 |
| 1914 | 2,667,952 | 20,794,176 | 247,000 | 20,539,176 | [1] 6,402,298 |
| 1912 | 1,805,577 | 21,484,088 | 2,791,400 | 17,394,088 | 3,074,708 |

[1] Deducted from other assets.

Under date of March 21, 1922, it is reported that the company was indicted for keeping its factories closed two-thirds of the year, thereby limiting production and keeping prices five and six times higher than pre-war levels.

Under these conditions the company earned in the 10 years, 1912-1921, $19,382,168. It paid in dividends ($1,429,923) and royalties, ($12,871,901) to its owner-company, $14,301,824.

AMERICAN WINDOW GLASS MACHINE CO.

Incorporated March 6, 1903, in New Jersey.

Owns exclusive rights in the United States to patents on machines for window glass making, and leases these rights to the American Window Glass Co. on a royalty basis. Also owns $12,999,200 of the $13,000,000 common stock of the American Window Glass Co.

Present capitalization:

| | |
|---|---|
| Funded debt | None. |
| 7 per cent cumulative preferred stock (par $100) | $6,999,600 |
| Common stock (par $100) | 12,998,600 |

| | Net earnings after all charges | Dividends paid | | Surplus after dividends |
|---|---|---|---|---|
| | | Preferred | Common | |
| 11 months ended Mar. 31, 1921; years ended Apr. 30 | $1,508,729 | $489,972 | $1,364,814 | [1] $268,057 |
| 1920 | 2,292,433 | 489,972 | 1,802,461 | [1] 147,253 |
| 1919 | 2,972,741 | 489,972 | [2] 1,960,549 | 532,220 |
| 1918 | 1,777,908 | [3] 594,906 | [2] 1,259,682 | [1] 76,740 |
| 1917 | 3,479,400 | [4] 3,394,907 | | 84,553 |
| 1916 | 2,106,434 | [4] 2,099,896 | | 7,638 |
| Total 5 years | 14,197,805 | 7,549,685 | 6,387,506 | 132,361 |

[1] Deficit.
[2] Paid in liberty bonds.
[3] Also 5 per cent in liberty bonds.
[4] Also on account of accrued dividends.
Earlier income accounts and balance sheets not available.

The company's only assets are its patent rights in the United States and American Window Glass Co. common stock as above, which in 1921 were carried on the books at $6,999,000 and $12,999,200 (par), respectively. As of that date it also had cash, $9,734, and Liberty bonds, $105,300, and its profit-and-loss surplus amounted to $115,034.

COST OF PROTECTION

The protection given window-glass makers by the Payne law, 39.6 per cent, amounted in 1913 to $5,000,000, costing consumers $10,000,000. In 1919, 9.6 per cent, it amounted to $3,800,000, mostly thrown away by the manufacturers, according to above statement of the grand jury and the Tariff Commission. This cost consumers $7,600,000. The Fordney law offers the manufacturers 28 per cent of $9,000,000, to cost consumers some $18,000,000. Against this great burden the Government collected in revenue at the customhouse relatively nothing.

NOTE.—March, 1923, prices of window glass have advanced since the enactment of the Fordney law from 6 to 10 per cent.

"No one single interest should be protected at the expense or to the detriment of other and greater interests. Protection ceases to be protection when it is carried to the extent of pampering an industry into slothfulness and beyond the whip and spur of competition." (Col. George E. Tichenor, 1882, later president Board of General Appraisers.)

GLASS BOTTLES, JARS, AND OTHER HOLLOW WARE

Underwood duty, 39.5 per cent; Fordney duty, 51.2 per cent; wages, 30.2 per cent.

Alexander Hamilton, in America's first protective tariff, gave 10 per cent duty to manufacturers of all glassware. This rate was steadily increased in the five following tariffs up to 20 per cent in 1794. It reached 49.8 per cent in the Payne law, then dropped to 39.5 per cent in the Underwood law, and now the Fordney rates average 51.2 per cent.

When the duties were from 10 to 30 per cent, bottles, jars, carboys, etc., were blown by human lungs, and the industry prospered.

AMERICAN EFFICIENCY—FOREIGN COMPETITION

Now, an American-made machine produces 1-dram bottles at the rate of 165 per minute, or 50,400 pint bottles in 24 hours, displacing in this latter production about 54 skilled workmen. The labor cost is negligible. No operator is needed, only a man to oil the machine. Why does the Congress give 60 per cent duty?

"The makers of bottles by automatic machines have no fear of foreign competition," says the Tariff Commission. They will hold the domestic market against foreign competition by superior quality, better service, and improved methods, independently of tariff duties.

"Our hand-blowers," says the commission, "are able to meet any competition that has arisen or may arise from foreign sources. * * * In adjusting themselves to the domestic competition of machine blowing, hand blowers have met severer competition than can possibly come from abroad." To continue hand production is like going back to old fashioned hand weaving looms.

The use of natural gas gives American manufacturers a great advantage over foreign producers who must use coal, much less desirable in glass production. Coal is as cheap here, however, as anywhere. Fuel is about one-third of the cost of production.

Freights alone would embargo imports except to Atlantic ports and near-by markets. This geographic protection within the country has caused the plants to be widely distributed over some 20 States.

PRODUCTION, EXPORTS, AND IMPORTS

The bottle industry used to be small—$5,670,433 in 1880. It became great upon the extension of the canning industry and the use of soft drinks. Production in 1914, $51,958,728, of which 1.4 per cent was exported, with imports 4.6 per cent of production. Imports of unfilled bottles have seldom exceeded $300,000 per year. They were $84,578 in 1915, and less than $20,000 annually since 1917 to 1919.

Production, in 1919, $94,007,682, of which $5,283,655 was exported, being 5.9 per cent of production, with imports $565,163, or six-tenths of 1 per cent.

In 1920, exports were $9,998,407, or 10.6 per cent of 1919 production. Imports were $1,413,754, or 1.5 per cent.

In 1921, exports were $4,726,332, or 5 per cent of 1919 (Census) production, against imports of $1,721,569, or 1.8 per cent of production.

*Summary table United States Tariff Commission*

| Year | Imports for consumption [1] | Domestic exports | Value imports: For consumption | Amount of duty | Actual or ad valorem rate per cent |
|---|---|---|---|---|---|
| 1913 | $211,729 | $808,327 | $211,729 | $92,013 | 43.46 |
| 1914 | 217,995 | 711,353 | 217,995 | 71,227 | 32.67 |
| 1915 | 84,578 | 772,427 | 84,578 | 25,373 | 30.00 |
| 1916 | 24,347 | 2,168,244 | 24,347 | 7,297 | 30.00 |
| 1917 | 19,235 | 2,435,610 | 19,235 | 5,770 | 30.00 |
| 1918 | 5,844 | 2,671,892 | 5,844 | 1,753 | 30.00 |
| 1918 [2] | 6,656 | 2,781,076 | 6,656 | 1,997 | 30.00 |
| 1919 [2] | 14,180 | 5,283,655 | 14,180 | 4,253 | 30.00 |

[1] The figures below include only empty bottles, vials, jars, etc.
[2] Calendar year.

Our ability to meet the competition of the world in the neutral markets of the world is apparent from our export figures, and our greater ability since the war than before.

COST OF FORDNEY DUTY

The protection given the bottle and hollow-ware industry in the Payne law was $17,000,000 in the fiscal year, 1914, costing consumers $34,000,000. Under the Underwood duty of 39.5 per cent, it was, in 1919, $27,000,000, costing consumers $54,000,000.

Congress now levies a duty of 51.2 per cent, or almost double the total per cent—30.2—of the factory selling price that goes to labor and five times what Hamilton gave the industry in 1789. This will amount to $35,000,000 to the industry, if used, as it appears to be used now.

It will cost the consumer $70,000,000 if so used.

THE FARMER HAS MUCH TO LOSE

"So far as a high or low schedule may be concerned, the farmer probably has much more to lose by high tariffs on the things which he buys than he could ever hope to gain by any tariff on his own commodities. Our economists have all reported convincingly on that point. There may possibly be some exceptions to it."—(President J. R. Howard, American Farm Bureau Federation, 1922.)

"Mr. CLARK (Ways and Means Committee). 'The truth about the whole business is that the way you will make your money is by getting a little here and a little there from a great many people, so that there is not enough for one of them to come here and testify against you about it, and the general total of the rake-off amounts to a fortune.'

"WITNESS. 'Yes; every little helps.' (Tariff hearing, November 24, 1908.)"

FILES

For some 25 years the File Trust has used the Congress of the United States and the tariff for profit making as definitely as it has used its machinery and its pay rolls.

When the Payne committee was taking testimony on files, an invoice was presented showing export prices 40 per cent below domestic prices. This was common practice for years. Notwithstanding this, the Payne Congress, in 1909, definitely and knowingly continued the practice with a duty of 56.1 per cent.

The export price, 60 per cent of the American price, plus the Payne duty, equaled 96.6 per cent against the American price $1. This shows that the trust's superiority in production enabled it to add to its foreign prices 3.4 per cent plus the duty for American prices.

"We New Englanders know that the Dingley tariff was made by New England for New England, and that when it goes we will never get another as good." (Hon. Charles Littlefield, M. C., Maine, 1909.)

A representative of the so-called File Trust in taking an order from Europe recently, was asked, "How can you sell abroad against German competition?" Answer: "We can undersell the world." "Then why do you want protection?" "To keep up domestic prices."

UNDERWOOD DUTY 25 PER CENT—FORDNEY 44 PER CENT

The Underwood duty was 25 per cent. Recent export quotations are 20 per cent below domestic prices. That is, an Englishman, Frenchman, or Chinaman procures from a New England factory for 80 cents what the domestic user, by order of Congress, is required to pay $1 or, the addition being precisely the amount of the present tariff. Congress has now authorized file manufacturers to add 44 per cent, the new rate, against domestic users, instead of their former addition of 25 per cent, and the manufacturers at once add another 15 per cent to their domestic prices.

PRODUCTION, EXPORTS, IMPORTS

Production in 1919 was $17,616,563, of which 29.4 per cent was exported, being $5,181,792 against imports of three-tenths of 1 per cent, or $49,855.

In 1920 exports were $5,550,619, or 31.5 per cent of 1919 production, with imports $100,471, or six-tenths of 1 per cent of domestic production. For these two years exports were 78 times greater than imports.

In 1921, a bad year generally, exports were 14.4 per cent of production and imports six one-hundredths of 1 per cent.

There had to be a special reason for the importation of files at 25 per cent higher prices than our trust floods foreign markets with. Imports are of extra fine qualities and odds and ends which our makers do not make, for dentists, jewelers, etc. There is no competition, for imports are not comparable.

Congress might as well write a check on the Federal Treasury to the File Trust as to increase its duties. The handy men from New England on the Ways and Means and Finance Committees must see this.

Investigation indicates a single ownership of substantially all file factories, many of which, however, operate under separate names; also price agreements or at least closely related prices.

WAGES 30.2 PER CENT

Ordinary files are made with marvelous speed, accuracy, and low cost by semiautomatic machinery. America should feel proud of this industry, as typical of her genius and efficiency. Here, as in many industries, America demonstrates that high wages are cheap wages. In 1914 wages were 38 per cent of the factory selling price, or about two-thirds of the Payne duty, of 56.1 per cent. In 1919 wages were 30.2 per cent, or slightly more than the former duty of 25 per cent. Congress now makes the duty 44 per cent, or 147 per cent of the total wage cost. Other cost factors are substantially the same here and abroad.

THE TRUST

The Nicholson File Co., which controls file production, is as secretive as to its profits as its tariff practices. It has plants in Providence, Philadelphia, Paterson, Anderson, Ind., and Port Hope, Ontario, and elsewhere, under other names.

It has no funded debt. Its capital stock (par $100) is $10,000,000. It declared annual dividends from 1888 to 1901 averaging 6 per cent; in 1902, 10 per cent; 1903–5, 8 per cent; 1905, 12 per cent; 1907, 14 per cent; 1908, 10 per cent; 1909–14, 16 per cent; 1915–16, 20 per cent; 1917, 16 per cent, and 24 per cent extra; 1918, 16 per cent, and 10 per cent extra; 1919, 16 per cent and extras; 1920, 8 per cent and extras.

An extra cash dividend of 50 per cent was paid out of surplus on October 11, 1904; also a stock dividend of 100 per cent in May, 1920. No balance sheets or income accounts are available.

COST OF FORDNEY DUTIES

The Underwood duty gave the file people $4,000,000, to be doubled to consumers at retail. The Fordney duty offers them $6,000,000, at a cost to consumers at retail of approximately $12,000,000, or as much of this as file manufacturers dare add to their prices.

NOTE.—October 10, 1922, a few days after the enactment of the Fordney law the File Trust increased its domestic prices 15 per cent, or three-fourths of the Fordney increase in its duties.

THE "FLEXIBLE PROVISIONS" OF THE FORDNEY (PRESENT) LAW

THE PRESIDENT'S POWER TO RAISE OR TO LOWER RATES 50 PER CENT

The Federal Constitution requires that all revenue laws shall originate in the House of Representatives. This was provided after much consideration in the Constitutional Convention, in accordance with the experience of centuries in which the struggle for popular government was largely an endeavor to wrest the power of taxation from a sovereign executive and to vest it in a popular assembly chosen by the people.

"I should be the last to advocate a commission with any power to fix rates, if that were constitutional, as it would not be." President Taft (January 18, 1909), now Chief Justice U. S. Supreme Court.

If this power of taxation can not under the Constitution be delegated to a commission, it can not be delegated to anyone; but must be exercised directly by Congress, as commonly held heretofore.

Now, however, by a few lines in the Fordney law, without public consideration at the polls or elsewhere and with little discussion in Congress, the power of taxation through the tariff, covering both the visible taxes, aggregating some $350,000,000, at the ports of entry, for the use of the Government and invisible taxes of some $3,000,000,000, to be collected by our manufacturers for their use and disbursement, is transferred to whichever is elected President of the two men nominated in the presidential party conventions. Methods in these conventions, now none too well regarded, will hereafter be tainted with tariff manipulations. The Fordney type of mind will be at a premium. Campaign contributions will depend upon the tariff promises of candidates and the party money raisers.

Congress no longer counts. It can make rates like the Underwood, averaging 30 per cent on dutiable merchandise and the lowest in a generation, and the President can raise them to 45 per cent.

Or Congress can make rates, the highest in a generation, averaging 40 per cent, like the Payne and the Fordney, and the President can lower them to 20 per cent or raise them to 60 per cent.

Get the President and you get the tariff. Get the Tariff Commissioners and you are likely to get him.

All the machinations by which the Fordney Ways and Means Committee was misled will be brought to bear on party conventions and on the President's selection of the personnel of his Tariff Commission.

The President can give little time to tariffs and none continuously. There is only one President with a third of the Government on his shoulders. There are over 400 Members of the House of Representatives from whom a small committee, assisted, like the President, by the Tariff Commission, may well give all its time, if need be, to the tariff. If all its time, there would be left 400 Members for other tasks. Such a committee by complete devotion could marvelously advance America's economic and social welfare. It would enhance respect for the Constitution and the Congress. The Senate might well have such a committee. The President would do his share, as heretofore, in passing on tariff bills as they came to him.

It is doubtful if even Congress realizes how inexperienced in tariff making are the members of the Ways and Means Committee to whom this task is committed. The average Congressman knows almost nothing either of manufacturing or of tariffs.

Mr. McKinley was the only one with any previous experience of the majority members who framed the McKinley bill. Of the majority members who framed the Wilson bill, only Mr. Wilson and two others had had previous experience and then only as minority members, little considered, of the McKinley committee.

Only Mr. Dingley and three attorneys of the Dingley committee had had previous experience. Of the Payne committee, only Messrs. Payne and Dalzell, two attorneys, had previous experience. The Fordney majority members consisted of 8 lawyers, 1 banker, 3 farmers, and 3 commercial men. All were inexperienced except Mr. Fordney, a lumberman, and Mr. Longworth, a lawyer. Six of them had never before sat in a tariff-making Congress.

Special committees (subcommittees of the present Ways and Means and Finance Committees) might be carefully chosen with special reference to their industrial experience and long service.

The Fordney law requires that rates made by the President shall, in his judgment, equal the difference in costs of production here and abroad. This is the essential restriction, if any, upon the President.

Costs vary greatly between different factories in the United States, as well as between domestic and foreign factories. The President can name almost any rate an advisor suggests and find some costs to support that rate.

With full respect for the high honor of our successive Presidents, it is impossible for any President, without lifelong and special industrial experience, with some 4,000 rates involved, to do other than follow in the main, and with little of exact knowledge the recommendations of the majority of the six Tariff Commission advisors appointed by himself or his predecessor.

Their appointment, too, must be largely upon faith. The two recent appointees were from the group responsible for the original Fordney bill, repudiated upon exhaustive investigation by the Republican Senate and the country.

The constitutionality of this provision will probably be determined soon by the courts.

Its enactment is a confession by the legislators who voted for it that Congress, in their judgment, can not perform this function as required by the Constitution. Its character and resistance is not equal to the pressure of privateering interests.

Congress passes the buck. Will a Congress that won't or can't make a fair tariff, legislate properly in other matters?

To what extent, and how seriously, the present and succeeding Presidents will exercise this new power is a matter of conjecture. One President will be indisposed, upon his personal authority, to vitally change an act of Congress. Another may delight in changing it utterly.

Is it not pitiful to find America, almost without public discussion, and by an unexpected congressional enactment, involved as respects her entire prosperity, prices, profits, and living costs, and dependent therefore, upon each succeeding President or any Vice President advanced to the presidential chair, and the members of a commission appointed by him? Does this work comport with the presidential office, which until now only executes laws and directs international relations in the broadest way, and through great secretaries of departments?

OUR SCIENTIFIC TARIFF COMMISSION AND THE FRELINGHUYSEN BILL, S. 3199

A bill to transfer the functions of the United States Tariff Commission to the Department of Commerce, to increase the personnel of the commission from 6 to 10, appointed for life, and for other purposes. Bill defeated.

The following statement of July 1, 1922, is here reprinted as indicating the character of the Tariff Commission and the need of its public support and safeguarding:

Why does the tariff plunderbund want to change the character of the United States Tariff Commission?

(1) The Tariff Commission (see p. 77) has all the powers possible under our Constitution except to "recommend rates," which power is unimportant.

Its statements of facts are, within narrow limits and often precisely, equivalent to recommendations.

(2) It is a semijudicial body. Its character and its reports are virtually unquestioned.

There is no contra authority. The findings of no court have been so little questioned.

This is history.

(3) All leading business and farm organizations, including the foremost in each large city national associations of manufacturers, chambers of commerce, protectionists all, joined in the National Tariff Commission Association, with the assistance of Presidents Roosevelt and Taft, and labored for six years for the creation of this "scientific, nonpartisan, permanent Tariff Commission."

"Those who don't want a commission to find out the facts don't want the facts found out." (Senator Albert J. Beveridge, 1909.)

Only the tariff plunderbund opposed—with all its might.

First was secured, in 1909, the Tariff Board, whose work is still an authority. The board was too good to live—killed by the withdrawal of its appropriation.

Renewed public insistence secured the present "independent, scientific, nonpartisan Tariff Commission," whose life has frequently, and up to the beginning of the present revision, been likewise threatened by the withdrawal of its appropriations. Its work has been so dependable and illuminating that it can't be killed. So its enemies would weaken and control it.

Apparently for fear of its life the commission has lacked courage at times. It needs the overwhelming support of intelligent public opinion.

Now, the plunderbund uses the good old reasons for a "scientific commission" for campaign and other purposes when, in fact, we have had for many years what they say they now want to give us! As well advocate drinking water for our great cities. They have it.

The commission corresponds to those in all other great competing nations. It is a saving wall of truth against predatory tariff interests.

For instance, the commission shows that importations are "practically impossible" of the products of the Tile and Terra Cotta Trust, now under indictment for conspiracy and for "arbitrary and exorbitant prices."

The Senate, with this information, votes to this industry $32,600,000, to cost consumers at retail $70,000,000.

Likewise of a dozen other trusts.

The commission, and the tariff board before it, with proof, shows that ordinary cotton cloths are made cheaper here than elsewhere. The Senate votes cotton manufacturers $500,000,000, to cost consumers a billion.

The Senate raises the duties on Amoskeag apron ginghams from 15 per cent to 31½ per cent, contrary to the commission's findings. This is to help, among others, a cotton mill that has raised its capital stock since 1896 from $4,000,000 to $44,500,000, besides declaring $30,000,000 of cash dividends.

The Senate raises the duty to 11½ cents on the ordinary fluted bread knife that American factories sell the world over for 6½ cents.

The Senate accepts the findings of the commission on the cost of manufacturing wool blankets here and abroad and then votes tariff rates that "equal the entire American conversion cost in a great many cases," says Senator LENROOT.

The commission shows the basic steel industries in need of no protection. Congress gives them $445,000,000, to cost consumers $900,000,000.

Both can't live. The bund must "get" the commission, or the commission's facts will kill the bund.

Do you want the independent truth-finding commission, or will you let the bund "re-form" it after the bund's ideas, naming four additional members of its own sort?

The decision of this issue means billions to the bund.

It means to the public the same billions. Also the elimination of dishonesty in Government, perverting elections, and weakening the foundations of society.

It means government by money and greed or government by intelligence.

WHAT THE BILL DOES

(a) It destroys the commission, as in itself a power and authority; transfers its personnel and staff to the Department of Commerce; and vests its present "powers, privileges, and duties" upon the Secretary of Commerce, a shifting political appointment.

Thereafter the plunderbund would concentrate on the naming of the Secretary of Commerce and on the then powerless, still-called commission. Everyone could then "pass the buck."

Why risk it? Is there any reason? Why put unnecessary additional care upon the Secretary?

(b) It authorizes the Secretary of Commerce to appoint "advisors" to the commission from each interest affected. There is no suggestion of advisors from the supreme interest, the public. Whose "commission" is this to be?

The present commission gets any advice it wants when it wants it, and none by official order. In this it is like every other similar agency, National and State. Its speciality is facts, not advice.

(c) Four new members "for life"—total, 10. Why? Experts do the essential work. Four in all have been thought enough, and 6 a maximum. No court has 10 members. Only the Federal Supreme Court has as many as 9. State supreme courts usually 5.

DOES THE BUND WANT TO PERPETUATE ITSELF FOR A GENERATION?

Why "for life"? Two members were recently appointed from the worst and most extreme tariff-exploiting organizations on earth, where for long years they did their utmost to promote the kind of tariffs now universally condemned.

The tariff activities of one of them is understood to have been publicly "discredited" by a board of general appraisers.

Why risk four other such appointments? Is there any reason?

Who will be Secretary of Commerce two years hence, and six?—with power to make and unmake prices of all commodities, wages, domestic and international trade?

The talk of a scientific tariff is old. Was Frelinghuysen asleep? The scientific Tariff Commission came in 1916 under the leadership of Roosevelt and Taft. The accomplishment of its purpose, a scientific tariff, is defeated solely by this plunderbund that relentlessly uses its constitutional power to defeat the commission's findings.

All other great nations except free-trade England have had these commissions for a generation with utmost satisfaction. Their Frelinghuysens are different. That's all. Theirs use facts honestly without twisting or intervening friendships.

All we need is Congressmen who will use our scientific commission's scientific and indisputable findings and modify only such as may not be scientific and correct.

If an agent is dishonest, his employer doesn't send his work out to be done by others. He changes agents.

Whichever party wins next election its elected personnel will not be predominantly plunderbund.

This is an old prophecy. Sometime it will come true. Only then is a "scientific tariff" possible.. "It takes two" to make a scientific tariff, (1) the scientific commission that we have, and (2) a Congress of like mind which we have yet to get. Let not pretty words from uncertain lips deceive anyone.

"ACT CREATING A TARIFF COMMISSION

"Approved, September 8, 1916, * * *

"TITLE VII.—TARIFF COMMISSION

"SEC. 700. * * * of six members * * * appointed by the President (for terms of 12 years) * * * with the advice and consent of the Senate * * * members of different political parties shall alternate as nearly as may be practicable. * * * The President shall designate annually the chairman and vice chairman. * * * No member shall engage actively in any other business, function, or employment. Any member may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

"SEC. 701. * * * each commissioner shall receive a salary of $7,500 * * * secretary $5,000 * * * shall have authority to employ and fix the compensations of such special experts, examiners, clerks, and other employees as necessary. * * *

"SEC. 702. That it shall be the duty of said commission to investigate the administration and fiscal and industrial effects of the customs laws of this country * * * the relations between the rates of duty on raw materials and finished or partly finished products * * * effects of duties * * * wages * * * revenues.

"SEC. 703. That the commission shall put at the disposal of the President of the United States, the Committee on Ways and Means of the House of Representatives, and the Committee on Finance of the Senate, whenever requested, all information at its command * * * shall make such investigations and reports as may be requested by the President or by either of said commitees or by either branch of the Congress, and shall report to Congress on the first Monday of December of each year. * * *

"SEC. 706. * * * shall have access to any document, books, or papers relating to any matter pertaining to such investigation, * * * may administer oaths and affirmations, examine witnesses, take testimony, and receive evidence. * * * and any failure to obey such order of the court may be punished by such court as a contempt thereof. * * *

"The commission may order testimony to be taken by deposition * * * reduced to writing * * * and * * * subscribed by the deponent. * * *

"SEC. 707. * * * any other departments * * * of the Government * * * shall cooperate fully with the commission * * * and shall furnish to the commission information in their possession and shall detail, from time to time, such officials and employees to said commission.

"SEC. 708. It shall be unlawful * * * to divulge, or to make known in any manner whatever not provided for by law, to any person, the trade secrets or processes of any person, firm, copartnership, corporation, or association embraced in any examination or investigation conducted by said commission * * * punished by a fine not exceeding $1,000, or by imprisonment not exceeding one year, or both. * * *

"SEC. 709. That there is hereby appropriated, for the purpose of defraying the expense * * * and maintenance of the commission * * * $300,000 for the fiscal year ending June * * *."

*Relation of customs tariff rates to production, wages, trade extension, and cost of living—A study in 1922 of recent tariffs and the new Fordney law*

[1] The Payne law was operative only July 1–Oct. 3 of this fiscal year 1914. As there is no other census of production since 1909, we use the Payne rates to the 1914 census as indicative of pre-war Payne conditions.

[2] On the basis of 1919 production, the latest census available.

[4] There are mostly finished products, like braids, pillowcases, thread, and belting.

[5] The shrinkage in exports and imports in 1921 were much less in quantity than indicated in the money values used in these tables. These totals below in parentheses for each industry for 1921 show what the exports and imports would have amounted to in dollars if the 1919 prices had held through 1921.

*Relation of customs tariff rates to production, wages, trade extension, and cost of living—A study in 1922 of recent tariffs and the new Fordney law*—Continued

[1] The Payne law was operative only July 1–Oct. 3 of this fiscal year 1914. As there is no other census of production since 1909, we use the Payne rates to the 1914 census as indicative of pre-war Payne conditions.

[2] On the basis of 1919 production, the latest census available.

[3] These are mostly finished products like braids, pillowcases, thread, and belting.

FOREIGN TRADE

The United States is an expanding nation. From a handful of settlers on the Atlantic seaboard it first peopled a continent. Then it acquired the Philippines. Then by its special affiliations it developed in Cuba a trade of $500,000,000 annually. With the war and since, it has entered all the markets of the world. It must continue to expand. Its increase in population and, even more, its genius in devising automatic and semiautomatic machinery is immeasurably increasing its industrial production. Its annual increase in manufacturing capacity is twice as great as its increase in population. It is not unusual for a single operative to-day to produce as much as 500 men produced 100 years ago or 50 men 10 years ago.

There are only four great manufacturing nations in the world: England, France, Germany, and the United States. Outside of these four

nations are 1,500,000,000 human souls looking to these four for the bulk of their manufactured supplies. The other three acquired vast wealth and world-wide power and influence through international trade, while we held aloof.

The great war killed and maimed some 20,000,000 Europeans and left their countries broken for years to come. We are in unexampled strength and vigor. The world needs our goods, and we need to grow in understanding and wealth in the service of all mankind through our industries.

Says Doctor Eaton: "In the Middle Ages the church was the agency of civilization. Now industry is the agency of civilization." Our service should be world wide. We need protection of a moderate sort, and there is no considerable endeavor in any quarter to do away with it. To misuse it, however, is to make it an impediment to happy foreign relations and to the more equal division of wealth among ourselves. It is to make America dishonest and unreasonable, disliked by nations that wish to honor her.

WAGE EARNERS PROFIT IN FOREIGN TRADE

American wage earners have a great stake in foreign trade. In the two years next preceding the World War we exported $1,051,500,000 more than we imported. American labor made a net gain of $331,000,000 in the wages carried by this excess of exports over imports.

In the two years next after the war we exported $4,672,000,000 more than we imported, with a gain of $1,210,000,000 to American labor in this excess of exports.

Labor needs these favorable trade balances. Labor must not be made an excuse for rates that are several times higher than the total going to labor in the industry, such as are common in the Fordney law.

Labor should advise itself on the tariff. It now lets its purchasing power be reduced 15 per cent by excessive rates. The employer should not do all the figuring and all the talking. Labor will draw in increasing sums upon the wealth of all the world when it helps to make its protection genuine.

"It is facts that are wanted; facts, facts, facts"—Lord Bryce.

STEEL AND IRON INDUSTRY

"A protective tariff is essential to the interests of our wage earners. Hence the difference in the cost of production here and abroad is the fundamental consideration.

"But I do not believe in making this policy a cover for exorbitant rates or for obtaining special privileges from the Government which are not based upon consideration of the general welfare."—Charles E. Hughes, 1908, now Secretary of State.

28 STEEL AND IRON INDUSTRIES GIVEN IN THE FORDNEY TARIFF LAW $800,000,000 ABOVE HONEST PROTECTION, COSTING CONSUMERS $1,600,000,000, POSSIBLE REVENUE $6,890,950

"Mr. Carnegie, in 1909, quoted the Steel Corporation's latest report, showing an average profit of $15.50 per ton.

"'No judge,' said Mr. Carnegie, 'is ever permitted to sit upon a case in which he is interested, and you will make the greatest mistake in the world if you give too much weight to their testimony. * * * I don't judge by figures, but by results. * * * There are more ways of figuring cost than there are of killing a cat. It is simply a matter of bookkeeping.' * * * 'The cost of producing rails at Gary won't be half as much as in England, notwithstanding the cheaper cost of labor abroad.'"

THE STEEL AND IRON INDUSTRY AND THE PRESENT TARIFF LAW

The United States has the largest, richest, and most conveniently located deposits of iron ore, copper, lead, and zinc in the world, and coal for their reduction, being the five principal minerals.

In the Alabama district, iron ore and coal are in close proximity, virtually eliminating transportation costs in their assemblage.

In the North the world's greatest iron ore deposits are on the shores of Lake Superior, whence they are carried by water at marvelously little expense to meet coal in the reduction furnaces near Chicago (the freight cost per ton is 17 cents from Superior to Chicago), and in Pittsburgh and elsewhere.

MARVELOUS EFFICIENCY

Said Henry W. Oliver in a letter to Mr. Frick, July 27, 1897, when they were acquiring some 50 per cent of the known deposits of the Lake Superior region: "We are mining it at present for less than 5 cents per ton for labor." Eight men in 10 hours with one steam shovel mined and loaded into cars 5,800 tons of ore in 10 hours and 164,000 tons in one month. Three steam shovels mined "from its natural bed 915,000 tons of ore during the season of 1900, working day shift only. Five tons of ore are lifted by the steam shovel (like sand or gravel) at each stroke, and five full-weight lifts will fill a car. A 25-ton car can be filled in two and one-half minutes, which is at the rate of 600 tons an hour."

The most efficient and cheapest rail transportation on earth is that of the Pittsburgh, Bessemer & Lake Erie, owned by the United States Steel Co., whose vice president, Mr. J. T. Odell, said of it in 1897, "The lowest rate per ton-mile, the highest average length of revenue haul in proportion to its track mileage, the greatest density of tonnage in proportion to its freight train mileage, the greatest average paying load, and the lowest 'ton-mile cost' of any road on the American continent reporting to the Interstate Commerce Commission." Nine ships can be docked at the same time. Twenty-five thousand tons of all classes of freight can be handled every 10 hours. * * * A 6,000-ton ship can be cleared in 14 hours and in the same time from the moment the hatches are opened the ore can be at the furnaces at Pittsburgh. A new steam shovel was completed last winter by which a train of 35 to 40 cars will be loaded with ore in two hours. A 40-ton car of coal can be unloaded and partly trimmed in the ship in 36 seconds."

These feats were in the infancy of the industry. To-day, says J. G. Butler, a veteran of the industry, the great car dumpers will lift a car containing 110 tons of coal, dump its load, and repeat at the rate of 30 cars per hour, with no manual labor beyond pressing a button.

"Now we have vessels loading as high as 12,000 tons at the upper ports in one or two hours with one or two men on the dock, and unloading their cargo directly into 50-ton cars in about the same time, with practically no manual labor.

"Now we handle this vast tonnage entirely by machinery. Steam shovels mine the ore; it flows by gravity into great vessels; huge unloaders transfer it to railroad cars, and car dumpers empty it under ore bridges—all the work being done by power and at a speed little short of miraculous."

THE COST OF THE PROPERTIES

And what did these properties cost? Said Mr. Oliver, in 1897:

"I propose at a risk of using our credit to the extent of $500,000, or possibly $1,000,000, to secure these properties."

Says an authority associated with the United States Steel Corporation in 1903:

"On the organization of the United States Steel Co., the Carnegie, Oliver Co. owned two-thirds of the known Northwestern supply of Bessemer ore—roughly 500,000,000 tons, which Mr. Schwab has since valued at $500,000,000."

Says this authority, supposedly with Mr. Frick's approval, concerning the railroad just mentioned:

"It cost nothing beyond initial bonds, which the volume of traffic furnished by the Carnegie Steel Co., itself, made good."

These statements show that special congressional grants or taxing powers need not be given this or any other steel company, because of the cost to them of their properties.

The State of Minnesota retained its own mineral lands in the Superior region for its educational institutions instead of selling them for a song. Consequently, the University of Minnesota is estimated to own $100,000,000 of ore properties at a valuation far below Mr. Schwab's estimate above.

THE COST OF PRODUCTION

With these facilities "by 1897 the cost of steel rails on cars at the Braddock Mill was only $12 a gross ton"—2,240 pounds. Said Mr. Schwab, May 15, 1899, in a letter to Mr. Frick:

"I know positively that England can not produce pig iron at actual cost for less than $11.50 per ton, even allowing no profit on raw materials, and can not put pig iron into a rail with their most efficient work for less than $7.50 [additional] per ton. This would make rails at net cost to them of $19. We can sell at this price and ship abroad so as to net us $16 at works for foreign business, nearly as good as home business has been. What is true of rails is equally true of other steel products. As a result of this we are going to control the steel business of the world.

"You know we can make rails for less than $12 per ton, leaving a nice margin on foreign business. Besides this the foreign costs are going to increase year by year because they have not the raw materials, while ours is going to decrease."

WE HAVE THE TRADE OF THE WORLD

Said Mr. Carnegie in 1919:

"We have to supply the world—note last week's British advices * * * coke near $3.75 per ton and scarce. Impossible to increase supply of either coke or ore.

"Since we reach Atlantic ports at $1 per ton we have the trade of the world."

These predictions came true. For some 20 years England has made no attempt to get American business. Her costs will not permit. Only Belgium sends an occasional driblet to us, usually as ballast to the Pacific coast. In 1920 our imports of pig iron were 1.6 per cent of 1919 (census) production, and three-tenths of 1 per cent in 1921, with pig iron on the free list; of cast-iron pipe, imports were four one-thousandths of 1 per cent in 1921, against exports of 14.3 per cent; likewise on wrought-iron pipe. Imports of structural iron averaged $217,000 in 1920 and 1921, against exports averaging $32,500,000. This under the former duty of 10 per cent, which is now increased to 25 per cent.

PRICE FIXING AND WATERED STOCKS

It is commonly known that the half dozen great steel corporations of this country are a family group in essential respects. Usually they have fixed their prices to a penny and as high as the traffic would bear.

Properties valued at $400,000,000 were capitalized in 1901 in the United States Steel Corporation for about $400,000,000 in bonds and funded debt and $1,000,000,000 of common and preferred stock, all water, selling a little later at $8 a share.

Bar iron that had commonly sold a few months before this and other consolidations for 80 cents per 100 pounds was held by these price-fixing organizations for years at $1.60 per 100 pounds, and a further enormous sum added to profits by the exaction of the Pittsburgh rate of freight in all cases. A buyer, for instance, at whose door the steel competitors delivered their product for $6 freight per carload, was charged by the corporation $37 per carload, unlawfully, as the courts are likely to decide in pending cases.

By these price and other exactions the Steel Corporation quickly secured from the public profits that have given its preferred stock intrinsic value and accumulated against its common stock $1,318,864,413, after paying hundreds of millions in dividends.

While some of the smaller companies produce less advantageously than the great corporation, they are superior to foreign competitors.

PRICE FIXING AND THE TARIFF

Said Andrew Carnegie in the American Manufacturers, July 25, 1884:

> "We are creatures of the tariff, and if ever the steel manufacturers here attempt to control or have any general understanding among them, the tariff would not exist one session of Congress. The theory of protection is that home competition will soon reduce the price of the product so it will yield only the usual profit. Any understanding among us would simply attempt to defeat this. There has never been nor never will be such an understanding."

Said Mr. Phipps in 1889 to Mr. Carnegie:

> "I am gratified that we are not to go out of business, and especially to make room for a trust, which is by no means a creditable thing. As you say, the tariff would be repealed on rails and rightly so."

This was sound philosophy; the books of the Carnegie Steel Co. for 1889, however, show price agreements and pool settlements in large amounts, with protection running merrily on and Congress indifferent. For years following the consolidation American prices were European prices plus the duty and sometimes plus also freight to New York. In these same years the American producers were exporting freely at European prices, as they have done in recent years in enormous and unprecedented volume.

Justice Day, of the Supreme Court, in his dissenting opinion of March 1, 1920, held that the United States Steel Corporation—

> "for many years after its formation had exerted its power to control and maintain prices by pools, associations, trade meetings, and dinners, and that in combination with its competitors it had an ability to fix prices and restrain the free flow of commerce upon a scale heretofore unapproached in the history of corporate organizations in this country."

**It is the imperative duty of Congress, guardian of the public interest, to give no penny of duty not required upon definite proof.**

**The new Fordney law, however, puts duties upon all kinds of iron and steel products, for which no slightest excuse can be found in the theory of protection, as our costs are the lowest in the world as steel producers commonly allow.**

PROFITS

**No protection is needed on account of the financial condition of these steel companies, because they are the richest and most powerful of all the business organizations upon earth.**

**Organized with $400,000,000 of tangible property, covered by bonds, etc., and about $1,000,000,000 of watered stock, the net tangible assets of the United States Steel Corporation on December 31, 1921, amounted to $1,318,864,513, applicable to common stock. The aggregate net profits available for dividends in the 10 years 1912–1921 were $1,097,177,135.**

**Other steel companies have prospered correspondingly. The Bethlehem Steel Co.'s pre-war profits were approximately $4,250,000 annually. The average annual profits of 1916–1918 were approximately $29,000,000. The pre-war profits of the Cambria Steel Co. were approximately $3,800,000. In the two years 1916 and 1917 Cambria Steel made more than $50,000,000 of profit on a capital stock of $45,000,000. Crucible Steel and Republic Steel followed similar methods of capitalization, production, and sales prices as the other corporations, and to similar advantage.**

**United States Steel in 1916 earned, net, $271,531,730. In 1917 it made $340,651,016 after allowing $233,465,435 for Federal war taxes, etc. In 1918 it made $229,201,511 after paying for Federal taxes $274,277,835.**

Eighteen steel companies in the pre-war years 1912–1914 averaged a net income of $74,750,000 per annum.

These 18 companies and the Midvale Co., which was organized during the war, averaged in 1916–1918 profits of $337,000,000, or four and one-half times their pre-war profit. Their profits for these three war years totaled over $1,000,000,000.

To subsidize the steel industry, organized in half a dozen companies and virtually controlled by two or three financiers who think alike, is to legislate the money of the private citizen into such other private pockets as have least need of it.

> "To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprise and build up private fortunes is none the less robbery because it is done under the forms of law and is called taxation." (Supreme Court of the United States. Marshall case.)

PIG IRON

Underwood, free; Fordney duty, 2.2 per cent to 41 per cent; wages, 9.3 per cent.

We produced in 1914, $313,000,000 of pig iron at a wage cost at the furnace of 7.2 per cent of the selling price of the product, and yet the Payne tariff gave a protection of 7.6 per cent, or more than the total wage cost of production. Wages plus salaries and superintendence was only 9.1 per cent.

In 1919 with pig iron on the free list the product was valued at $794,000,000 with a wage cost of 9.3 per cent. We exported in 1919 $12,313,000, and imported $6,565,000 because our producers invited imports by charging all the traffic would bear. They were making enormous profits These imports, however, were only eight-tenths of 1 per cent of domestic production. In 1920 we exported $10,000,000 and imported $12,802,000 being one-sixth of 1 per cent of 1919 production. In 1921, still on the free list, we imported only $2,015,000, or three-tenths of 1 per cent.

COST OF FORDNEY DUTIES

The Fordney law now gives 2.2 per cent "protection" to ordinary pig iron, with 49.3 per cent on pig that carries manganese and 40 per cent carrying silicon, which alloys are necessary to us for high quality of steel.

The entire wage cost of conversion is only 9.3 per cent of the selling price. These duties, if used by the producers, will add $41,000,000 to their prices, which sum will be, at least, doubled to consumers in so far as they enter into the production of highly finished products like machinery and cutlery and by amortization charges on heavier materials.

Says Senator UNDERWOOD:

> "I am in the business myself. I represent a great iron and steel district. I would not willingly harm a people that I represented, but neither would I willingly betray a people I represented by taxing them unjustly for special interests. I know this iron and steel schedule and I know that it is a fraud and a shame upon the people of this country. I know that it is not even in the interest of the industry in the end. * * * It can compete anywhere in the world. We are the master iron makers of the world."

Regarding the farmer, he says:

> "Where the fallacy of this argument comes is that under the guise of doing something to help the farmers in some particular item, their support is asked for a bill of which, as a whole, it seems that for every dollar the farmers may derive from the bill they will pay $100 in taxes for the benefit of somebody else."

Senator UNDERWOOD thinks the pig-iron producers are competing to such an extent that they can not add this $41,000,000 to their prices. This, however, does not excuse Congress from offering them the opportunity.

Moreover, in every period of prosperity the competition has been from the other side. Consumers of pig iron, manufacturers of farm implements, stoves, and all other steel products have played into the hands of the producers by outbidding one another for supplies and themselves raised prices. Manufacturers with large contracts for their steel supplies have been compelled to buy in the open market at 20 to 30 per cent advance while their own contracted supplies were going to others at similar emergency advances in prices.

Why won't Congress do what it reasonably can to protect consumers instead of inviting a repetition of these experiences?

BAR STEEL

Underwood duty, 13 per cent. Fordney duty, 27 per cent. Wage cost, 22.2 per cent.

We are the world's greatest producers. We exported in 1914, prewar, 10.4 per cent of our domestic production. In 1919 we exported 16.1 per cent, or $57,000,000 worth. Under the former duty, which averaged 13 per cent on bars and billets, the wage cost of converting ore into bars was only 22.2 per cent of the mill selling price, and yet 27 per cent protection is now given. Our wage cost is the lowest in the world because of our large scale of production, the energy and skill

of our workers, and our unsurpassed mechanical devices. With the former duty of 13 per cent we imported in 1919 only one-half of 1 per cent. With such marvelous judgment do our steel producers lift their prices to the top of the tariff wall and hold them there with just enough imports trickling in to show that they can't make prices any higher.

COST OF FORDNEY DUTY

The Fordney duty of 27 per cent will add $75,000,000 to manufacturers' prices, which will be doubled in amount in the agricultural implements, automobiles, household utensils, and like articles, and amortized in coarser products, a final cost of $150,000,000. Twenty years' experience shows that the duty will be added to domestic prices.

STEEL RAILS

Underwood, free. Fordney, 5.8 per cent. Wage cost, 21.4 per cent.

The situation here duplicates bar steel, except that exports are still greater, being $10,000,000, or 19 per cent, on a production of $54,009,918 in 1914, and 42 per cent, or $39,000,000 of domestic production of $92,849,481 in 1919, 39 per cent of that production in 1920, and 19.8 per cent in 1921, with importations running a fraction of 1 per cent. And yet these commodities were on the free list. Imports were virtually embargoed, not by tariff but by our lower cost of production. The wage cost is 21 per cent only. The Fordney duty of 5.8 per cent makes a present to this industry of $5,000,000 to be doubled in amount against the consuming public, totaling $10,000,000.

STRUCTURAL IRON WORK

UNDERWOOD DUTY, 10 PER CENT—FORDNEY, 25 PER CENT FABRICATED, AND 4 PER CENT UNFABRICATED—WAGES, 20.3 PER CENT

If one iniquity exceeds another, here is a climax. The producers themselves say they beat the world. Exports in 1920, $38,000,000. Imports under the former 10 per cent duty, $284,000, or six one-hundredths of 1 per cent. Exports in 1921, $26,824,000, with imports $149,000, or three one-hundredths of 1 per cent of domestic production. It was not in vain that a representative of the steel industry haunted the room of the Finance Committee. Think of it! Congress dared to increase the existing 10 per cent duty under which imports were impossible to 25 per cent on the fabricated materials—as definite a tender of the people's money to a special and selfish interest as was ever made by a medieval despot, except that in this case the collection is to be made in such ways as may be by the grantee. The wage cost is only 20.3 per cent. Exports in 1921, with 10 per cent duty, were one hundred and ninety times greater than imports.

COST OF FORDNEY DUTY

If collected, the grantee secures $18,000,000 and the public pays $36,000,000 in amortization charges, freights, etc., and rents upon its stores and skyscrapers. The dwellers in hovels pay rent on skyscrapers, for in them is conducted to-day the principal enterprises of the world. "To him that hath shall be given, and to him that hath not shall be taken even that he hath."

All through this law some low rates are named apparently to deceive the public, being conditioned upon impossibilities. Here, for instance, unfabricated structural steel is admitted at 4 per cent instead of 25 per cent for fabricated. With a price difference of $20 per ton, it has been found in the past impossible to import mill lengths unfabricated, because on arrival they would have to go for fabrication to an American mill, with great wastage in cutting up and handling and an additional freight charge to point of erection.

The entire wage cost of converting ore into structural iron was in 1914, pre-war, 21 per cent of the mill price of product. The wage cost plus salaries was 28.6 per cent. In 1919 the wage cost was 20.3 per cent. The duty now on fabricated is 125 per cent of the entire wage of conversion.

CAST-IRON PIPE INDICTED FOR CONSPIRACY

UNDERWOOD, 10 PER CENT—FORDNEY, 20 PER CENT—WAGES, 29.3 PER CENT

This is one of many industries recently indicted by Federal grand juries. But Congress doesn't mind a little thing like this.

The indictment (December 28, 1921, United States Court of Southern New York) says they manufactured a universal necessity, "cast-iron soil pipe and fittings extensively used in the construction of apartment houses, hotels, dwellings, and office buildings, manufacturing plants, and structures of similar character."

They "have fixed and maintained arbitrary, uniform, and excessive prices."

"Each of said corporate defendants has had full information as to amount of tonnage * * * in the stock of each" of the others, "and as to the amount of tonnage" "due on orders placed with all corporate defendants."

In 1921 this Cast-Iron Pipe Trust, if so it is, exported three thousand five hundred and seventy-five times more than was imported of cast-iron pipe. This in the face of alleged "arbitrary, uniform, and excessive prices" in the American market that would have made imports great in volume if possible.

In 1920 it exported $9,753,000, or 19.3 per cent of (census) production. Imports were $41,074, or eight one-hundredths of 1 per cent of production.

Seven months' notice of this and to-day Congress, by a tariff of 20 per cent, makes a gift of $8,000,000 to this trust, as the indictment defines it, this $8,000,000 to become $16,000,000 to consumers at retail.

The duty isn't wanted for revenue for only $8,000 of duties will be collected.

WROUGHT PIPE

Underwood duty, 20 per cent.

Fordney, 27 per cent.

Wages, 19.2 per cent.

Forty-three million dollars, or 13.4 per cent, of 1919 production was exported in 1920 and $49,000,000, or 15 per cent, exported in 1921. Only two one-hundredths of 1 per cent, or $53,862, imported in 1921 and $66,816 in 1921 under the former duty of 20 per cent, which should be eliminated. Honest protection has put agricultural implements, shoes, sewing machines, and cash registers on the free list because they are produced cheaper here than elsewhere. The Fordney law offers 27 per cent, or $70,000,000, to the makers of wrought pipe, if they can collect it. The wage cost is 18.2 per cent of mill price of product. The Congress now requires the Government to prevent importations except on this basis of a duty of 150 per cent above the mill's entire wage cost of production. Is this in the wage earner's behalf?

TINPLATE AND TERNEPLATE

Underwood, 15 per cent.

Fordney, 8 per cent.

Wages, 5.9 per cent.

Production in 1914, $68,000,000. The wage cost of converting billets into these plates was only 5.8 per cent, yet the Payne duty was 35.1 per cent. Thus was the wage earner "protected." He got one-sixth of the duty supposedly given for his especial benefit. The manufacturer got the rest. Wages plus superintendence were only 6.9 per cent. Wages in 1919, 5.9 per cent. Exports were 5.5 per cent of domestic production and prices kept so high that 2.2 per cent came over the tariff wall, though we are exporting freely at the foreign price.

In 1920 we exported $40,545,000, or 41.6 per cent, of our entire domestic production, while importing $127,168, or one-tenth of 1 per cent of domestic production. In 1921 we exported $17,425,000, domestic production, while importing $127,168, or one-tenth of 1 per cent of domestic production. In 1921 we exported $17,425,000, or 17.9 per cent of 1919 production, and imported $126,000, or one-tenth of 1 per cent. This under the Underwood tariff of 15 per cent, which the Congress now reduces to 8 per cent, or 1 cent per pound. The Fordney rate is 135 per cent of the wage cost.

COST OF FORDNEY DUTY

It gives $7,000,000 to the manufacturers at a cost of much more than twice this to consumers, because the products must go through so many hands, including the tinplate men, the stamping works, wholesaler, and retailer. Cost to consumers, more than $15,000,000.

HARDWARE

Underwood, 20 per cent; Fordney duty, 40 per cent; wages on locks, 21.1 per cent; builders, 32.1 per cent; other, 27.2 per cent.

Locks, builders' hardware, and all other, except saddlery. Production 1914, $73,000,000, with exports $6,000,000. Production in 1919, $154,525,000, and exports $11,691,000, or 4.9 per cent of production. Exports in 1920, $17,000,000, or 11.3 per cent of production. Exports in 1921, $7,969,000, or 5.2 per cent of production; 1921 exports would be approximately 40 per cent more in price than here indicated, except for price reductions in 1921. Imports not of enough importance to be separately listed by the Government agencies.

Wages in 1914 were 30.8 per cent of the factory selling price. Wages, plus superintendence, averaged 40.8 per cent, yet the Payne duty was 45 per cent. In 1919 wages on locks were 31.1 per cent; builders, 32.1 per cent; all other, 27.2 per cent. The Fordney duty is 40 per cent, although the industry prospered and exported freely under the former duty of 20 per cent. The duty gives $44,000,000 to manufacturers, to be doubled against consumers, $88,000,000.

ELECTRICAL MACHINERY, APPARATUS, AND SUPPLIES

Underwood duty, 26.8 per cent; Fordney, 41 per cent; wages, 23.9 per cent.

Production, pre-war 1914, $355,170,194, with exports $23,060,844. The wages were only 22 per cent of the selling price of the product. With this 22 per cent of labor in 1914, being the principal difference in cost here and abroad, the Payne tariff averaged 37.3 per cent, and virtually embargoed imports which so far as classified were fourtenths of 1 per cent. Our workers and our methods are so much speedier than abroad that any difference in wage cost per unit is questionable.

The industry is in few hands and completely dominated by the world-powerful General Electric and Westinghouse companies. It must be manifest that any tariff on these products will be added substantially in full by the manufacturers. It would be difficult to conceive any business reason that would prevent these great corporations from using any permit from the Congress of the United States to maintain or to raise prices. In the manufacture of electric bulbs the domination of two companies is so great that the Census Bureau can not divulge cost

figures without violating the law against publishing private information. Indictments for price fixing are now demanded against electric-bulb manufacturers by the Lockwood committee of New York.

PRODUCTION, EXPORTS, AND IMPORTS

In 1919 the total domestic production was $97,968,119—a round billion dollars. Exports were $89,089,711, or 9 per cent, while imports, under the former tariff which averaged 26.8 per cent, were, so far as classified, four one-hundredths of 1 per cent. We had then a virtual embargo fostering price maintenance by act of Congress under the former duty of 26.8 per cent. This situation holds to-day, for exports in 1920 were $102,009,000, or 20 per cent of 1919 production, while classified imports were eight one-hundredths of 1 per cent. In 1921 exports were $95,817,885, and imports $732,357, or seven one-hundredths of 1 per cent of production. Can there be clearer proof that the duty should have been decreased or eliminated, as on agricultural machinery, shoes (and sewing machines until now), which are on the free list because made as cheaply in the United States as anywhere.

COST OF FORDNEY DUTY

The Congress, however, now nearly doubles the duty by making it 41 per cent average, against a wage cost of 23.9 per cent. This invites the industry to charge domestic customers $323,000,000 above the prices of their foreign competitors, which prices these producers meet throughout the world on their exports of $100,000,000 per annum. This $323,000,000 will reach consumers as $646,000,000.

WIRE, WIREWORK, INCLUDING WIRE ROPE, ETC.

Underwood: Wire, 15 per cent; wirework, 19 per cent; average, 16.8 per cent. Fordney: Wire, 28 per cent; wirework, 39 per cent; average, 32 per cent. Wages: 18.6 per cent on wire; 17.1 per cent on wire products.

Production in 1914, $190,747,732, of which we exported $15,233,000, or 8 per cent. Production in 1919, $444,697,689, of which we exported $51,210,000 of wire and $10,403,000 of wirework; total, $61,600,000, or 13.9 per cent under the former duty of 15 per cent on wire and 19 per cent on wirework. These duties virtually embargoed imports, which were one-tenth of 1 per cent. With what nicety did our manufacturers hold their prices at the top of the tariff wall, as indicated by this driblet of imports. With what masterly strength did they meet world prices in all quarters with $61,613,000 of exports. In 1920 exports were virtually the same as in 1919, totaling $61,834,000, with imports four one-hundredths of 1 per cent of production, or $1,509,000.

In 1921, with foreign markets depressed, exports totaled $19,000,000, with imports $1,433,000, or three-tenths of 1 per cent.

Wages in wire mills in 1914 were 13.5 per cent of the mill price of the product and 16.1 per cent on wire products. In 1919 they were 18.6 per cent on wire and 17.1 per cent on wire products.

Instead of lowering the present duties of 15 per cent on wire and 19 per cent on wirework and thereby assuring to the American public approximately the international price of these products, the Fordney law almost doubles the duty on wire, making it 28 per cent, and more than doubles it on wirework, making it 39 per cent, the Fordney duties being twice the wage percentages and absolutely unjustifiable on grounds of protection.

COST OF FORDNEY DUTY

The Fordney rates are a congressional permit to the manufacturers to add $122,000,000 to their prices at the mills, which sum would be greatly increased to consumers, making the total cost $244,000,000.

STAMPED AND ENAMELED WARE, NOT ELSEWHERE SPECIFIED

ENAMELED WARE

Underwood duty, 25 per cent; Fordney, 31 per cent; wages, 25.7 per cent.

The enameled ware industry was relatively small in 1914, pre-war, with small exports and imports. It has become great under the present duty of 25 per cent, exporting freely, with imports virtually embargoed.

Production in 1919, $37,636,584, with exports $4,073,455, or 10.8 per cent, and imports only $65,828, or two-tenths of 1 per cent. Exports in 1920 $5,054,000, or 13 per cent, against imports of $366,328, or 1 per cent of 1919 production. In 1921 exports fell, in dollars, to $1,835,233. Careful estimates of price decline indicate that if the prices of former years had held, the 1921 exports would have brought $2,735,000. Imports in 1921, $368,467, or 1 per cent of production. These imports would have brought $460,000 at the prices current in 1919.

The foregoing international trade was under the former tariff of 25 per cent, which Congress proposes to double, making it 51 per cent. A great manufacturer is reported as saying recently that he had nothing to fear from competition under any tariff. The total wages in manufacture in 1914 were 26.2 per cent of the factory selling price. Wages plus superintendence were 30 per cent. In 1919 wages were 25.7 per cent, or almost precisely the Underwood tariff rate.

The Fordney rate, namely, 51 per cent, will permit the industry to charge distributers $9,000,000, which would be easily doubled against consumers, $18,000,000.

STAMPED WARE

Underwood duty, 20 per cent; Fordney, 40 per cent; wages, 23.4 per cent.

The statistics on stamped ware are meager. It is virtually the same product as enameled ware, minus the enamel. Production in 1914, $49,000,000. In 1919 the product brought at the factory $161,694,000. The total wage cost of production in 1914 was 22.1 per cent of the factory selling price. Wages plus salaries were 31 per cent. In 1919 wages were 23.4 per cent of factory selling price. Underwood tariff, 20 per cent.

COST OF PROTECTION

The Fordney law increases the tariff 100 per cent, making it 40 per cent and about twice the wage cost of production, permitting the industry to charge $34,000,000 above foreign prices, to become easily twice that, or $68,000,000, against consumers.

SANITARY WARE, BATH TUBS, LAVATORIES, AND SINKS

Underwood duty, 20 per cent; Fordney, 40 per cent; wages, 30.5 per cent.

We lead the world in these products. Production in 1919, $4,923,000, with exports 19.9 per cent of production, 39.6 per cent in 1920, and 31.6 per cent in 1921. Volume of imports not given. The Underwood duty was 20 per cent; the Fordney law, 40 per cent.

Why not reduce the Underwood duty to an industry that sells one-third of its product at international prices. Its entire wage cost is 30.5 per cent of its selling price. In pre-war, 1914, it was 31.9 per cent.

It is generally believed that price understandings rule in this industry. Buyers have been refused merchandise for cash in the usual way and required to buy through accredited dealers at the latters' "standard" prices. (Later; October 19, 1922, manufacturers indicted by Federal grand jury for criminal practices, price fixing, etc.)

NAILS, WIRE

Underwood, free; Fordney, 16 per cent; wages, 14.8 per cent.

We have led the world in this product since its invention. Thirty years ago we were supplying a great part of the demands of free-trade England at prices so much below domestic prices that the American product was bought in England and reimported into this country at a great saving as against domestic prices. Production in 1914, $24,708,633. The pre-war Payne duty was 10 per cent, yet we exported 6.9 per cent with imports only six one-hundredths of 1 per cent.

In 1919 production was $44,426,860, of which we exported 19.4 per cent. Although nails were then, as now, on the free list, we imported only six-tenths of 1 per cent. In 1920 exports increased to $11,880,398, or 21.4 per cent of 1919 production, with imports 3 per cent of production. In 1921 exports fell to $3,172,054, partly accounted for by a decline of 32 per cent in prices, with imports $44,035, or eight one-hundredths of 1 per cent. Thus was our market controlled, with nails, like agricultural machinery and shoes, on the free list. The Congress, however, gives a duty of 16 per cent, being 60 per cent more than the Payne rate, and, allowing for the difference in prices, more than double in dollars, the Payne rate.

COST OF FORDNEY DUTY

The Fordney duty offers $9,000,000 to an industry that dominates all markets, to be doubled to consumers at retail, making $16,000,000.

The wage cost in the mills in 1914 was 9.1 per cent of the mill selling price, and in 1919, 14.8 per cent. The Fordney duty exceeds the total wage per cent of production.

SCREWS, WOOD

Underwood duty, 25 per cent; Fordney duty, 25 per cent; wages, 31.5 per cent.

Production in 1914, $6,216,940, rising in 1919 to $15,459,582, with exports $2,738,000, or 17.7 per cent, and imports $507, or three one-hundredths of 1 per cent. In 1920 imports were two one-hundredths of 1 per cent, and in 1921 one one-hundredth of 1 per cent. Wages in 1914 and 1919 were 31.5 per cent of mill selling prices. Wages plus superintendence were 40.1 per cent.

Imports fiscal year 1914 were $590, or nine one-hundredth of 1 per cent of domestic production. Some returning traveler must have brought in a pocketful. The duty then averaged 66.1 per cent. Exports then and for long years before were made at one-half the domestic price. By act of Congress the American dollar in the purchase of screws was made to go no further than the Englishman's 2-shilling piece, worth 50 cents at the same New England factory. Said a screw manufacturer, "I don't like this, but so long as Congress invites it, how could we help it?" Prices were "rigged to a nicety." In 1920 exports were $1,968,496, or 12.7 per cent of 1919 production, with imports $2,595, or two one-hundredths of 1 per cent. Wages were 31.5 per cent. Last year, 1921, exports 26.9 per cent, or $1,068,995, and imports $2,595, or one one-hundredth of 1 per cent.

It is interesting to note that these post-war imports were under the Underwood tariff of 25 per cent and that to-day we may reasonably believe that export are lower than domestic prices, not by the old 50 per cent, but by the recent duty of 25 per cent, which the Fordney

law continues to the advantage of the screw manufacturers in the amount of $3,000,000, which will be doubled at retail to consumers, $6,000,000.

FILES

Underwood duty, 25 per cent; Fordney duty, 44 per cent; wages, 38 per cent.

Ordinary sizes and kinds are made in the United States so cheaply that substantially none are imported. The former duty was 25 per cent, which is just the increase to-day in the prices of our file makers to domestic users above their lower prices to foreign users.

Wages, 1914, 38 per cent of factory price of product. Wages plus superintendence, 46.4 per cent. Wages in 1919, 35.2 per cent.

Congress is in the file business to the extent of this 44 per cent as definitely and precisely as the man at the lunch counter is chargeable with his meal ticket. The transaction is definite to a penny. Congress is subsidizing the file business to-day to the extent of $3,000,000 annually at a retail cost to consumers of $6,000,000. The Fordney law now nearly doubles the subsidy by making the rate 44 per cent instead of 25 per cent.

(Later, October 10, domestic prices advanced 15 per cent.)

Production in 1919, $17,616,563, of which 29.4 per cent was exported, against imports of three-tenths of 1 per cent, these imports being different in kind from domestic production, mostly extra fine, for use of jewelers, manicuring, and the like. Exports in 1920, $5,550,619, or 31.5 per cent, and in 1921, $2,542,153, or 14.4 per cent, which in volume would be much greater than these figures of money value indicate, because of price reductions in 1921. Imports for each of these years, six-tenths of 1 per cent. A recent investigation indicated a single ownership of most of the file companies of the United States and a tendency to identical prices in all quarters.

A representative of the File Trust, taking an order for Spain August 1, 1922, was asked, "How can you sell abroad?" "We can undersell the world." "Then why do you want protection?" "To maintain domestic prices."

CASH REGISTERS

Underwood, free list; Fordney duty, 25 per cent; wages, 29.1 per cent.

Duty 30 per cent under the Payne law. On the free list since 1914, with less percentage of imports under the free list than previously; with no imports of any account under either law. Wages 29.17 per cent. Proposed duty 25 per cent. Production in 1919, $31,000,000, of which 14.1 per cent was exported and two one-thousandths of 1 per cent imported. Somebody brought in a cash register. Exports in 1920, $5,942,000, or 19.2 per cent, with imports $324, or one one-thousandth of 1 per cent of production. Imports were $4,045 or one one-hundredth of 1 per cent in 1921, with exports $2,849,303, or 9.2 per cent. All this under the free list. The Fordney law gives 25 per cent against a wage cost of 29.1 per cent. If added to prices, this duty will give this industry which is under a single control, $6,000,000.

It may be said that this duty is put on for revenue purposes. If so, the Government takes a chance on increasing the consumers' price $6,000,000 that the Government may, itself, collect 25 per cent on imports which totaled $597 in 1919, $324 in 1920, and $4,045 in 1921.

Such a "revenue" argument was made in support of the proposed duties of 5 per cent on ordinary pig iron rising to 40 per cent on silicon pig. In 1921, these duties on pig iron would have netted the Government about $500,000, with the risk, which would be a certainty in good times, of profiting domestic manufacturers to the extent of $41,000,000, with twice that expense to the general public, or $82,000,000.

ADDING AND CALCULATING MACHINES

Underwood, 15 per cent; Fordney, 30 per cent; wages, 25.7 per cent.

Production in 1914, including cash registers, was $30,519,537. In the fiscal year, 1914, partly under the Payne rate of 30 per cent, which was 150 per cent of the total wages, we exported, including cash registers, 21.3 per cent at international prices. Production in 1919, $52,606,142, and exports $3,863,217, or 6.7 per cent of production. In 1920 exports were about doubled, being 12.9 per cent of 1919 productions. Imports not segregated. These postwar years were under the Underwood duty of 15 per cent, which has now been doubled, 30 per cent, thereby inviting the industry, which is a necessity now in our business life, to add $12,000,000 to its factory prices, which would be doubled against consumers. It is submitted that a well-established industry that exports freely at international prices a product made mostly by semiautomatic machinery should be required to submit absolute proof, including factory and other costs, before getting an increase in duty.

COST OF FORDNEY DUTY

Several domestic producers have recently consolidated. What they can do is evident. The Fordney duty invites them to add $13,000,000 to their foreign prices, costing consumers approximately $26,000,000.

The per cent of wages to factory selling price was 20 per cent in 1914, and 25.7 per cent in 1919, or 4 per cent less than the present rate of duty. In 1914 wages plus superintendence were 38 per cent of the factory selling price.

SEWING MACHINES AND PARTS OF

Underwood: Free list. Fordney duty: Under $75 value, 15 per cent; over $75 value, 30 per cent; wages, 44.2 per cent.

It should be a source of national pride that with the highest wages in the world, we make sewing machines as cheaply as anywhere on earth. In this fact is the justification and fruition of protection—high wages and low costs. It is said that one American company makes 80 per cent of all the sewing machines made in the world. It fills its orders from the Orient, which are great in volume, from its factory in New Jersey because it is a little cheaper to do so than from its great and equally well equipped factory in free-trade England. It is for these reasons that sewing machines were on the free list with agricultural implements, shoes, steel rails, and some other highly finished products. It is for this reason, and this only, that certain other highly finished products, like the majority of cotton goods, table cutlery, and cheap hosiery should be on the free list.

Protection was never meant to be a perpetual burden upon the American people. It is an economic falsehood to say that in many cases our rate of wages requires this, because the per cent of the product going to wages is often as little here as anywhere in the world, and duties therefore, benefit the employer only. This is the judgment of many leaders who are posted in the premises.

The per cent of labor in the production of sewing machines was 41.4 per cent in 1914, pre-war. Labor plus superintendence was 50.1 per cent. In 1919 labor got 44.2 per cent of the factory selling price.

In 1914 exports of sewing machines were $11,494,081, or 53.7 per cent of the entire American production. This proved our ability to meet world prices. It was a public scandal that in pre-war years under the Payne duty of 30 per cent domestic prices were much higher than export prices, the entire duty being apparently used against the American consumer. The Congress now makes the rate 15 per cent on sewing machines, valued at $75 or less, and 30 per cent on more expensive machines, which rates, on the basis of recent imports, will average 20 per cent.

Although exporting 53.7 per cent of production in 1914, imports were only 2.7 per cent, consisting mostly, if not entirely, of special designs not produced here.

In 1919 production was $43,649,919, of which amount there was exported $12,774,124, or 25.5 per cent of production. Although on the free list in 1919, imports were only $225,541, or one-half of 1 per cent. This low per cent of imports has continued to date showing our unrivaled supremacy and the increased cost and relative inferiority of European production consequent upon Europe's permanent hurt from the war.

Still under free trade, in 1920 exports were $15,581,843, or 35.7 per cent of 1919 production, against imports of $346,519, or seven-tenths of 1 per cent. In 1921 exports were $7,306,074, or 16.7 per cent, this shrinkage being presumably largely in prices only. Imports in 1921 were nine-tenths of 1 per cent.

COST OF PRODUCTION

The proposed duties invite our sewing machine companies to add $11,000,000 to domestic factory prices above the prices at which they sell a large proportion of their product abroad. It taxes especially the poor. To say that the proposed tax is for revenue purposes is to admit that Congress seeks a revenue of $120,000 at the risk of increasing factory prices $11,000,000, which would be trebled to consumers, under current methods of retailing sewing machines.

PROFITS

Whether the American manufacturer needs the financial assistance of the Senate of the United States, and what will be done with the money, is indicated in part by the following statement of the earnings of the company which makes substantially all of our sewing machines, having a few competitors, also prosperous.

The capital stock of this company in 1912 was $60,000,000. It had no bonded debt. The following dividends are recorded:

| | |
|---|---|
| 1912, 13 per cent on $60,000,000 | $7,800,000 |
| 1913, 16 per cent on $60,000,000 | 9,600,000 |
| 1914, 12 per cent on $60,000,000 | 7,200,000 |
| 1915, 8 per cent on $60,000,000 | 4,800,000 |
| 1916, 9 per cent on $60,000,000 | 5,400,000 |
| 1917, 11 per cent on $60,000,000 | 6,600,000 |
| 1918, 10 per cent on $60,000,000 | 6,000,000 |
| 1919, 7 per cent on $60,000,000 | 4,200,000 |
| 1920, stock dividend 50 per cent | 30,000,000 |

In fact, for the first time in history the principle of protection has been publicly and definitely dishonored by its sponsors in the Senate. Honest protection keeps prices low by making duties equal only "the difference" in the cost of production here and abroad. Sewing machines cost no more, therefore they should be on the free list, as they were.

Chairman McCumber, however, declared (CONGRESSIONAL RECORD, June 10, 1922): "The duty should measure the difference between the

landing cost of the foreign article in the American market and the selling price of the manufactured article by the manufacturer in the American market." For clarity he repeated the statement: "The difference between the importing price and the selling price of the comparable American article by the American manufacturer."

Every line in the Fordney law shows this purpose of the maintenance of prices and whatever prices manufacturers dare demand hereafter.

It should be a matter of pride that American wages in the production of sewing machines, as in many other industries, are the highest in the world, because of American efficiency. This coupling of high wages with low wage cost was the purpose and hope of Washington and Hamilton in establishing the protective policy 150 years ago. Think of debauching the principle of protection now upon the fruition of its accomplishment.

BOLTS, NUTS, WASHERS, AND RIVETS

UNDERWOOD DUTY, 10.5 PER CENT; FORDNEY DUTY, 11 PER CENT; WAGES, 23.4 PER CENT

Made by automatic machines. A single operator, as in the case of screws, simply feeds long rods into as many machines as he can tend. The bolts drop out at the other end, cut to length, threaded, and headed, and so fast as to blur the vision. Total wages in the industry in 1914, 25.5 per cent; wages plus superintendence, 32.9 per cent; wages in 1919, 23.4 per cent. The Payne rate of duty was 21.4 per cent. Under this rate we exported in the fiscal year 1914, 4.9 per cent of 1914 production, which was $33,085,790, against imports of $45,724, or one-tenth of 1 per cent, presumably Swedish steel or special-purpose bolts.

Production in 1919 under the present tariff of 10.5 per cent, $109,333,177, of which we exported $7,769,893, or 7.1 per cent, against imports of $42,305, or four one-hundredths of 1 per cent. Exports were seventy-one times greater than imports. In 1920 exports were 6.7 per cent of 1919 production and in 1921, 4.5 per cent, against imports of seven one-hundredths of 1 per cent in 1920 and five one-hundredths of 1 per cent in 1921. In other words, exports in 1920 were 95 times greater than imports, and in 1921 ninety times. Our bolt makers are good friends, as they should be. Why invite them by nods and winks to "fix" materially higher prices on domestic business than export?

COST OF PROPOSED DUTY

The Fordney duty, averaging 11 per cent, offers the industry $11,000,000, which would be at least doubled against consumers and sometimes trebled, because bolts frequently go through more hands from production to consumption than the average article.

SADDLERY HARDWARE

Underwood duty, 20 per cent; Fordney duty, 42.5 per cent; wages, 28.6 per cent.

Production in 1919, $14,136,556. Exports and imports not enumerated separately in Government statistics. Wages in 1914 were 30.9 per cent and in 1919 28.6 per cent. Wages plus superintendence in 1914, 39.7 per cent. The Fordney duty, 42.5 per cent, offers the industry $5,000,000 to be doubled against consumers.

STEAM LOCOMOTIVES

Underwood duty, 15 per cent; Fordney, 15 per cent; wages, 24.8 per cent.

We lead the world. A recent German report tells of our getting foreign business at both lower prices and better deliveries than Germany can make. Under the Payne law, 30 per cent duty, we exported 8.5 per cent of our domestic production, with substantially no imports. Under the present duty of 15 per cent, production in 1919 was $156,269,730, of which we exported $30,275,728, or 19.4 per cent. Imports were entirely negligible, being two one-hundredths of 1 per cent, or about $40,000. Somebody brought in a few parts.

In 1920 exports rose to $63,629,847, or 34.3 per cent, with imports four one-hundredths of 1 per cent. Exports were eight hundred and fifty-seven times greater than imports. In 1921, presumably at lower prices, we exported $33,696,331, or 21.6 per cent of 1919 production, with imports still further decreasing to $20,050, being less than half the price of one ordinary railway locomotive and one one-hundredth of 1 per cent of our 1919 census production.

Does not honest protection, which safeguards consumers as carefully as producers, call for free trade in locomotives instead of continuing the Underwood duty or 15 per cent as given by the Fordney law? He who would put a duty on everything without regard to relative cost of production reads himself out of the ranks of protectionists by its every definition.

No nation compares with us in skill and mechanical ingenuity in the production of locomotives. In 1914 the wage costs in the factories was 25.6 per cent of the selling price of the product, or less than the Payne duty of 30 per cent. Wages plus superintendence were only 32 per cent. In 1919 wages were 24.8 per cent as against the Fordney duty of 15 per cent.

COST OF FORDNEY DUTY

The Fordney duty invites our locomotive builders to add about $20,000,000 to domestic prices above their export prices, at which a fourth to a third of their product is sold. There are few makers and nothing so easy as a price understanding.

STEAM ENGINES OTHER THAN LOCOMOTIVES

Underwood duty, 15 per cent; Fordney duty, 15 per cent; wages 22.7 per cent.

In the pre-war year 1914 (fiscal) we exported 5 per cent of our domestic production against one-tenth of 1 per cent of imports. We are shipping to all parts of the world. An imperial German commission reported long ago, in the heyday of German production, that the city of Berlin could buy the huge engines for her city waterworks in Milwaukee, Wis., with all charges of transportation and installation, to better advantage than from any German producer.

Production in 1919, $101,952,710, of which we exported 3.5 per cent against imports of three-tenths of 1 per cent. In 1920 we exported $4,009,225, or 3.9 per cent of 1919 production, with imports $148,878, or one-tenth of 1 per cent of our production. In the poor year 1921 we exported $1,944,155, or 1.9 per cent, with imports $5,733, or five one-thousandths of 1 per cent. In this bad year exports were forty times greater than imports. The factory wage cost of production in 1919 was 22.7 per cent of the factory selling price. The Fordney law continues the duty of 15 per cent.

WATER WHEELS, TURBINES, TRACTOR ENGINES, ETC.

These are made under the same conditions as steam engines. Many of the census enumerations cover all these things in a single group.

Production in 1919, $188,444,153. Factory wage costs, 22.7 per cent of the selling price of product. Former duty, 15 per cent; Fordney duty, 30 per cent.

INTERNAL-COMBUSTION GAS ENGINES

Underwood duty, 15 per cent; Fordney, 30 per cent; wages, 22.7 per cent.

Production in 1919, $174,377,872. We exported 12.4 per cent of the product of 1914, which was $72,121,112. Postwar exports and imports are not separately shown. Conditions are substantially the same as in steam engines, described above. The Fordney law doubles the Underwood duty of 15 per cent, making it 30 per cent, against a wage cost of 22.7 per cent. Whatever part of this is unnecessary it militates against every farmer, automobile user, many small manufacturers, and all other citizens indirectly.

PUMPS, STEAM AND OTHER

Production, 1919, of power pumps, $55,745,502, and all other pumps, $31,656,438. Exports in 1919, $9,067,458, or 10.6 per cent of production. This increased in 1920 to $13,684,468, or 16 per cent. In 1921, exports, $11,966,469, or 14 per cent of 1919 production. Allowing for price reductions, 1921 exports were not less than 1920. Imports not available.

Labor got 23.3 per cent of the factory selling price of the product in 1914 on power pumps and 21.9 per cent on other pumps, yet the Payne rate was 30 per cent. In 1919 the wage per cent was 25.6 per cent on power pumps and 18.9 per cent on other pumps. The former duty was 15 per cent on both kinds, which the Fordney law doubles—30 per cent—against a wage cost in 1919 of 15.9 per cent.

WASHING MACHINES AND WRINGERS

Former duty, 15 per cent; Fordney duty, 30 per cent; wages, 15.9 per cent.

Production in 1914, $7,599,802, rising in 1919 to $40,771,285. Under the Payne duty of 30 per cent in the fiscal year 1914 we exported 14.8 per cent of production. In the postwar years, under the present duty of 15 per cent, exports were: In 1919, 2.9 per cent; in 1920, 5 per cent; in 1921, 3.2 per cent.

The Fordney law gives 30 per cent, or twice the former duty of 15 per cent, and twice the wage cost, which was 15.9 per cent in 1919. Exports are not enumerated in the official figures.

WINDMILLS

Former duty, 15 per cent; Fordney duty, 30 per cent; wages, 21.6 per cent.

The modern windmill is an American invention. Our supremacy is unrivaled. Production in 1919, $9,952,585. Exports in 1919, 11 per cent of production; in 1920, 22.7 per cent; in 1921, 17.7 per cent. Imports not known. Has anyone ever seen in the United States an imported windmill of modern design in operation? Our exports dot all the earth's semiarid regions. Factory wage costs in 1914, 22.8 per cent of its selling price; wages plus superintendence, 32 per cent; wages in 1919, 21.6 per cent; Underwood duty, 15 per cent; Fordney duty, 30 per cent. The Fordney duty, if used, will make domestic prices at the factory about 30 per cent more than export prices, being an additional $3,000,000, doubled to consumers at retail, $6,000,000.

THE FORDNEY DUTIES AND HIGH PRICES

Some of the duties in the Fordney law are so high that only insanity could prompt the manufacturers to whom they are granted to add them to their prices. This does not excuse Congress, the trustee of the public interest, which violates its trust if it either invites or makes possible any increase in prices whatsoever not required by an accurate and just disclosure of facts, and particularly of the cost of production in this country and, when possible, of foreign costs. No considerable attempt has been made by Congress to get any costs of production whatsoever.

EVEN CHAIRMAN M'CUMBER:

> "The only good reason for allowing products to come into this country to compete with our own is to hold down and prevent any extortionate charges being made by the producers in our own country. We want foreign competition to prevent combinations." (CONGRESSIONAL RECORD, July 26, 1922.)

A manufacturer's cost book is his business Bible. He lives by it. If the committees of Congress wanted domestic costs they would get them with absolute ease by simply signifying the fact and requiring authentic costs as a part of every hearing or claim for protection from a would-be beneficiary. Those who don't use facts as a basis of action don't want the facts.

Says Chairman Fordney of the Ways and Means Committee, "Whatever duty you put on is for the purpose of bringing the foreign value (price) up to our value." The United States Tariff Commission, after years of experience and investigation, says:

> "Whenever any article that is manufactured here is continuously imported in any considerable quantity the tendency of the tariff is to make the price of the domestic product, as well as the imported article, equal to the foreign price plus the duty."

No one will import unless assured of a price in the United States equal to his foreign price, plus freights and handling charges, plus also, a profit above his costs of doing business. An analysis of over 100 articles in the (Reynolds) report of the 71 tariff experts employed by the Senate Finance Committee to report on foreign and domestic prices, shows that importers invariably sell for all they can reasonably get in the American market, and that in every case the price of the domestic article determines the price of the foreign. The importer often gets higher than domestic prices because his goods are preferred.

To make our prices higher than necessary by such a law as the Fordney is to tax our consumers $100, and in some cases $1,000,000 for each $1 that it will be possible to collect at the customhouse.

In fact, ordinary articles of general consumption sold in our stores and "made both here and abroad," cost American consumers about double the price they cost foreign consumers, and ordinary fancy articles like handbags, beads, and even eyeglasses that carry 50 per cent and higher duties retail here at about five times the foreign manufacturers' prices, so rapidly do percentages pyramid through many successive sellers to the consumer.

It is not unusual for a customs appraiser handling innumerable petty imports, and knowing, for instance, that an article of this sort retails for $5 to clear it offhand at $1 as a fair foreign manufacturers' price. This is on the basis of a foreign factory price of, say $1, to which would be added 10 per cent landing charges plus duty of, say 60 per cent, making the cost to the importer, landed, $1.70. To this he would be entitled to 50 per cent additional for costs of doing business in such articles, making $2.35 to the retailer and $5 to the consumer. This is for modest luxuries, so called. Margins would be greater on some things and much less on articles of general service. In any case the importer rightly figures his margins on his landed costs, duty paid. The duty is as much a part of the cost as the foreign price. What part of his final cost goes to a foreign manufacturer and what part to ocean freight and to duties is immaterial to him. It is, however, for Congress to heed the fact that duties are pyramided and each duty is doubled and often trebled in the ordinary course of normal business against the consumer. Duties like prices should be as low as circumstances warrant in every case.

This five-fold increase in prices of fancy articles is regarded as legitimate by impartial public servants who have figured percentages carefully. The increase, however, is a burden upon American life. It is not chargeable to retailers or others, for at this rate no one gets an excessive profit. These things can be bought, however, at retail in Europe usually for one-half the American price. A 50 per cent tariff alone often adds from 100 per cent to 200 per cent to the foreign factory price by the time the article reaches the consumer. When these facts are known protectionists will make certain that carelessness and partiality in tariff making does not aggravate this burden of high prices.

A CONGRESSIONAL GIFT—$351,000,000 TO MAKERS OF HEAVY STEEL PRODUCTS

The duties given in the Fordney law embargoes importations. They carelessly offer to the makers of heavy steel products—pig iron, cast and wrought iron pipe, structural iron, tinplate and terneplate, bar steel, steel rails, wire and wire work—$351,000,000, which sum will be doubled to consumers, making about $702,000,000 to be paid partly in the direct cost of highly finished products like automobiles and machinery, and the balance in amortization charges.

IMPORTS EMBARGOED—REVENUES NEGLIGIBLE

Imports would be negligible on these basic steel products with no revenue accruing worth collecting. If, however, the quantities imported in 1921 can be imagined as coming in under these high duties, and consequently as selling here, as would be necessary, at foreign prices plus duty and landing charges, this would be conclusive proof that the entire $702,000,000 tariff benefit had been added to domestic prices. On this basis the revenue from imports of heavy steel products here considered would total $1,287,043. The Government would get this, the people would lose $996,000,000 per year so long as these conditions prevailed. The Government would collect $1 for each $540 it made the public liable for.

TO USERS OF LIGHT STEEL PRODUCTS, $1,580,000,000

To the above $702,000,000 of protection on heavy steel products would be added a possible $1,580,000,000 on only 21 of the many highly finished steel products upon which the Government would collect only $5,603,907, or $1 against each $282 it made the public liable for.

*Cost of protection and revenue derived under proposed rates—Basis of 1919 production*

| 1<br>Article | 2<br>Tariff allowance to manufacturers | 3<br>Cost to consumer | 4<br>Revenue to Government |
|---|---|---|---|
| Bolts, nuts, washers, and rivets | $11,000,000 | $22,000,000 | $5,975 |

| Wire and wirework | 122,000,000 | 244,000,000 | 458,449 |
| Total 7 heavy steel products | 351,000,000 | 702,000,000 | 1,287,043 |
| Grand total 7 heavy and 21 light products | 1,141,000,000 | 2,282,000,000 | 6,890,950 |

[1] Not shown.

The Government will get $1 of revenue (col. 4) for each $330 it makes the public liable for.

A round billion one hundred million of dollars ($1,114,000,000—col. 1), mostly unwarranted, to steel men, and a burden of two and a quarter billions of dollars upon consumers (col. 2, p. 21), or as much of this amount as manufacturers can exact.

Here is a potential, and mostly unnecessary, addition to the American cost of living on heavy steel products plus only 20 of the greater number of highly finished steel products, of two and a half billion dollars ($2,282,000,000—col. 3, p. 21).

We invite the criticism that these figures are preposterous. The Fordney law is preposterous. Consequently its effect upon American life can only be preposterous. Its evil proposals can never be fully availed of by its beneficiaries. It gives these beneficiaries, however, the supporting arm of the Government for price rigging and price maintenance, with the consumers' recourse only to the Department of Justice against unlawful practices to which the bill incites its beneficiaries.

It prohibits importation in prosperous times, when manufacturers can charge what they want because of the excessive consumption demand. It starts protection, like the swine of old, "Down a steep place into the sea"—a sea of disrespect and corruption.

*Steel and iron and other metal trades—Relations of customs tariff rates to production, wages, trade extension, and cost of living*

[This and all following tables prepared by experienced statisticians from reports of Bureaus of the Census and of Foreign and Domestic Commerce, Washington, D. C. Since approved by an expert of the latter bureau assigned to similar work in the Senate's consideration of the tariff [1]]

[1] These tables were much used in the discussion of the Fordney bill. They disclosed, for the first time, many fundamental facts and relationships. Column 2 shows the increased production from the last pre-war normal year, 1914, to 1919, as per the census of these years. While this increase in money value is largely an increase in costs and prices only, it nevertheless indicates a very considerable increase in volume. Column 3 shows most fortunate post-war increases in exports as compared with pre-war 1914, even in 1921, when foreign trade was badly demoralized. As prices were about one-third lower in 1921, than in 1919 and 1920, the decrease in volume of exports in 1921 was less than here appears. Total exports of these commodities (column 4) were 4.8 times greater than imports in 1914; 13 times greater in 1920; and 15 times greater in 1921. It would seem that Congress might have been willing that we continue to buy $1 of imports while foreigners take $15 worth of the same goods from us. Instead, the Fordney law seeks to reduce the $1 of imports. The percentages (columns 5 and 6) of exports and imports to domestic production are most favorable. The percentages (column 8) going to wages from each $1 of product at factory prices indicate how little protection is needed for the wage earner. Column 9 compared with column 8 shows the relation of the Payne, Underwood, and Fordney tariffs to the wages in the various industries. Our wages are as low in many industries per yard or pound of product as foreign wages. Column 11 indicates the extent to which Congress has invited our manufacturers to raise their prices above foreign competition and above their own export prices, which have to be at foreign price levels, and are satisfactory as indicated by their huge volume, $845,922,774 in 1920 and $493,196,764 in 1921.

[2] Dutiable.
[3] Free.
[4] Not separately enumerated.
[5] Steam engines only.
[6] Carbon manufactures and electric lights only.
[7] Of iron and steel.

*Steel and iron and other metal trades—Relations of customs tariff rates to production, wages, trade extension, and cost of living*—Continued

This and all following tables prepared by experienced statisticians from reports of Bureaus of the Census and of Foreign and Domestic Commerce, Washington, D. C. Since approved by an expert of the latter bureau assigned to similar work in the Senate's consideration of the tariff[1]

[1] These tables were much used in the discussion of the Fordney bill. They disclosed, for the first time, many fundamental facts and relationships. Column 2 shows the increased production from the last pre-war normal year, 1914 to 1919, as per the census of these years. While this increase in money value is largely an increase in costs and prices only, it nevertheless indicates a very considerable increase in volume. Column 3 shows most fortunate post-war increases in exports as compared with pre-war 1914, even in 1921, when foreign trade was badly demoralized. As prices were about one-third lower in 1921, than in 1919 and 1920, the decrease in volume of exports in 1921 was less than here appears. Total exports of these commodities (column 4) were 4.8 times greater than imports in 1914; 13 times gerater in 1920; and 15 times greater in 1921. It would seem that Congress might have been willing that we continue to buy $1 of imports while foreigners take $15 worth of the same goods from us. Instead, the Fordney law seeks to reduce the $1 of imports. The percentages (columns 5 and 6) of exports and imports to domestic production are most favorable. The percentages (column 8) going to wages from each $1 of product at factory prices indicate how little protection is needed for the wage earner. Column 9 compared with column 8 shows the relation of the Payne, Underwood, and Fordney tariffs to the wages in the various industries. Our wages are as low in many industries per yard or pound of product as foreign wages. Column 11 indicates the extent to which Congress has invited our manufacturers to raise their prices above foreign competition and above their own export prices, which have to be at foreign price levels, and are satisfactory as indicated by their huge volume, $845,922,774 in 1920 and $493,196,764 in 1921.

[2] Dutiable.

[3] Not separately enumerated.

[6] Carbon manufactures and electric lights only.

[7] Of iron and steel.

*Steel and iron and other metal trades—Relations of customs tariff rates to production, wages, trade extension, and cost of living*—Continued

[This and all following tables prepared by experienced statisticians from reports of Bureau of the Census and of Foreign and Domestic Commerce, Washington, D. C. Sinced approved by an expert of the latter bureau assigned to similar work in the Senate's consideration of the tariff.]

[1] These tables were much used in the discussion of the Fordney bill. They disclosed, for the first time, many fundamental facts and relationships. Column 2 shows the increased production from the last pre-war normal year, 1914 to 1919, as per the census of these years. While this increase in money value is largely an increase in costs and prices only, it nevertheless indicates a very considerable increase in volume. Column 3 shows most fortunate post-war increases in exports as compared with pre-war 1914, even in 1921, when foreign trade was badly demoralized. As prices were about one-third lower in 1921, than in 1919 and 1920, the decrease in volume of exports in 1921 was less than here appears. Total exports of these commodities (column 4) were 4.8 times greater than imports in 1914; 13 times greater in 1920; and 15 times greater in 1921. It would seem that Congress might have been willing that we continue to buy $1 of imports while foreigners take $15 worth of the same goods from us. Instead, the Fordney law seeks to reduce the $1 of imports. The percentages (columns 5 and 6) of exports and imports to domestic production are most favorable. The percentages (column 8) going to wages from each $1 of product at factory prices indicate how little protection is needed for the wage earner. Column 9 compared with column 8 shows the relation of the Payne, Underwood, and Fordney tariffs to the wages in the various industries. Our wages are as low in many industries per yard or pound of product as foreign wages. Column 11 indicates the extent to which Congress has invited our manufacturers to raise their prices above foreign competition and above their own export prices, which have to be at foreign price levels, and are satisfactory as indicated by their huge volume, $845,922,774 in 1920 and $493,196,764 in 1921.

[4] Not separately enumerated.

STEEL PRODUCTS—RELATION OF PROPOSED RATES TO WAGES, EXPORTS, AND IMPORTS

Tariff rates often (cols. 2 and 3 below) exceed our total wage cost of production (col. 2) instead of the difference in cost here and abroad. It enormously favors industries that freely sell abroad at international prices, for instance, wrought iron pipe of which we export (col. 3) three thousand five hundred and seventy-five times more than we import.

| 1 | 2<br>Per cent of wages to factory selling price | 3<br>Fordney tariff rate | 4<br>1921 exports exceed imports by indicated number of times |
|---|---|---|---|
| Heavy steel products: | | *Per cent* | |
| Pig iron | 9.3 | 2.2 to 49.3 | |

A DIFFERENCE OF OPINION

[Extracts from the Senate debate on wool (CONGRESSIONAL RECORD, July 26, 1922.)]

Senator LENROOT: "The Payne-Aldrich bill was crooked, yet if it had not hurt the American people * * * there would have been no such political revolution as followed * * *

"There is very little difference between the Payne-Aldrich bill and the duties as reported in this bill."

Senator MCCUMBER: "We died for principle. That is the real thing that was back of the defeat of the Republican Party in 1912. * * *

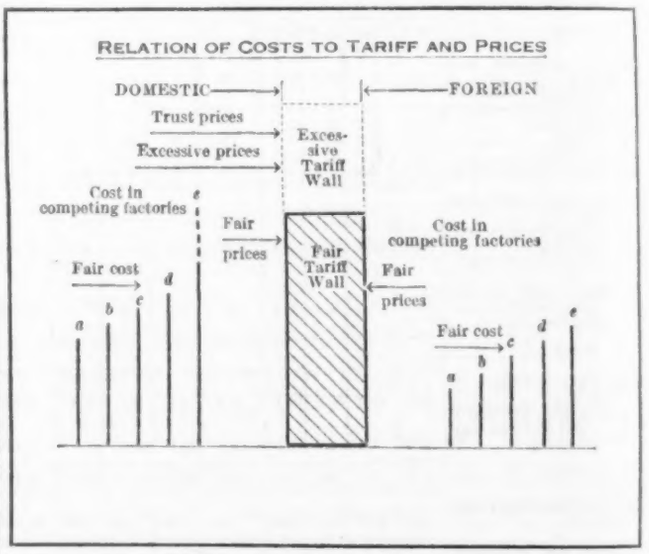
"The Senators who will vote on this matter have their minds made up—enough of them. They will come in at the ring of the bell."

The adequacy of present tariff rates to protect basic steel products, and, indeed, their ability to do without any protection whatever, is indicated by the following table:

*Basic iron and steel products*

| Product | Calendar year | Domestic exports | Imports for consumption |
|---|---|---|---|
| Iron and steel: | | *Dollars* | *Dollars* |
| Pig iron | 1919 | 12,313,183 | 6,565,106 |
| | 1920 | 10,074,377 | 12,801,834 |
| | 1921 | 933,093 | 2,014,926 |
| Total, 3 years | | 23,320,653 | 21,381,866 |
| Cast and wrought iron pipe | 1919 | 40,407,502 | 93,821 |
| | 1920 | 53,527,742 | 94,936 |
| | 1921 | 56,218,936 | 68,962 |
| Total, 3 years | | 150,154,180 | 257,719 |
| Structural iron | 1919 | 28,956,816 | 131,609 |
| | 1920 | 38,384,690 | 284,167 |
| | 1921 | 26,824,258 | 149,097 |
| Total, 3 years | | 94,165,764 | 564,933 |

*Basic iron and steel products*—Continued



| Product | Calendar year | Domestic exports | Imports for consumption |
|---|---|---|---|

| Per cent of exports to imports | | 2,109.4 | |

**Exports are twenty times imports.**

**Exclusive of pig iron, exports were $675,680,000, against imports of $13,405,034. Exports were fifty times greater than imports.**

**As Judge Gary is reported to have said, our steel industry is the greatest exporting industry in the world.**

*The theory of protection*

**Costs differ between domestic factories (lines a–e above). They likewise differ between foreign factories.**

**There is, however, an average and "fair cost" abroad, and there is a "fair cost" in the United States that deserves protection.**

**A "Fair Tariff Wall" (see chart) protects fair costs and the fair prices naturally flowing from fair costs. It does not protect stupid or careless manufacturers like domestic "e" above, who can live off the public under excessive protection, but under fair protection, must reform or quit.**

**BY PRICE FIXERS, FOR PRICE FIXERS**

**An "excessive tariff wall" is made by price fixers, for price fixers. It prevents importations in any volume under any circumstances. It enslaves the American people to the highest prices her manufacturers dare charge, and often far higher than these same manufacturers charge foreigners on their own sales abroad.**

**The Senate tariff bill is the worst ever offered in these reports.**

**The Fair Tariff League consists of representatives of 2,500,000 farmers, manufacturers, officers of 500,000 wage earners, merchants, and others, who believe in ample protection for American standards of living and wages.**

**It opposes the misuse of protection at the behest of great and selfish interests. It desires the cooperation of all who so believe.**

THE FORDNEY LAW RAISES THE TARIFF 177 PER CENT UPON THE "SHODDY" FLANNEL CLOTH USED IN MAKING WORKMEN'S CHEAP "WOOL" SHIRTS

The old duty was 35 per cent.
Fordney duty is 97 per cent.
The increase is 177 per cent.

The Fordney law does not provide a straight percentage, but, like the infamous "Schedule K," it provides two duties, one based upon the value and another based upon the weight.

SEE HOW THE FORDNEY LAW DOES IT

| | Per cent |
|---|---|
| The wholesale value of the cloth is 46 cents a yard, and the weight 9 ounces per yard, therefore the cloth is assessed, first | 50 |
| And, second, 45 cents per pound on the "wool content." As it contains 7.65 ounces of "wool shoddy" this equals 21¼ cents per yard, or | 47 |
| Total Fordney duty | 97 |

This increase amounts to 28¼ cents per yard. As 2¼ yards are required to make a shirt, this means an increased cost per shirt of 71 cents, at wholesale, if the "protected" woolen manufacturers take advantage of it. Because of the number of hands through which the cloth must go before it reaches the consumer, this increase would be fully $1.25 per shirt at retail.

In order to "protect" a few wool growers, and a few woolen manufacturers, the American public must not only pay hundreds of millions of dollars in excess prices every year, but all except the rich must wear inferior "shoddy" clothing.

The Fordney law assesses just the same duty per pound on this cheap shoddy as upon the finest cloths. This results in a higher percentage of tax upon the clothing of the poor than upon the clothing of the rich.

For example, the Fordney tariff upon a very fine pure wool 18-ounce cloth is less than two-thirds the duty upon the cheap shoddy.

NOTE HOW THE FORDNEY LAW FAVORS THE RICH

The same double duty of 45 cents per pound and 50 per cent of value apply to this fine cloth as to the cheap "shoddy" cloth. This fine cloth weights 18 ounces per yard. At 45 cents per pound duty this equals 50 cents per yard. But as the wholesale value in England is $3.90 per yard, this equals only 12.8 per cent; to this must be added the "ad valorem" of 50 per cent, making the total Fordney duty 62.8 per cent.

Think of that—97 per cent for the poor, but only 62.8 per cent for the rich.

That is why the American farmer or workingman must wear inferior "shoddy" clothing while his European brother can wear pure wool.

When similar rates, but not so high, were in force under the Payne and Dingley laws, manufacturers said that, "In midwinter, the average farmer and wage earner is clad in a rag-shoddy overcoat; a suit that is 60 per cent shoddy, 20 per cent cotton, and 20 per cent defective wool, and in all-cotton underwear.

Less than 2 per cent, some estimate less than 1 per cent, of our farmers raise sheep in commercial quantities. Why do our farmers cheat themselves out of the use of good wool clothing by unreasonably high duties?

[The above prepared for the Fair Tariff League (nonpartisan), 2 Rector Street, New York City, by F. B. Shipley, 44 East Twenty-fifth Street, New York.]

THE NEW TARIFF AND WOMEN'S WINTER WOOL TWEED SUITS AND CLOAKS

[This statement prepared in September, 1922]

Thirty million bought annually. Additional cost to American women, $120,000,000. The Fordney law raises price from $4 to $5 each above Underwood bill. Let us consider the item of wool cloth for the fashionable and comfortable tweed suits and cloaks, on which it is proposed to tax American women an additional $120,000,000. Men's suits and other woolen wear increases this $120,000,000 tax to $250,000,000, conservatively figured.

All this is to get about $40,000,000 into the pockets of a few wool-growers and $62,000,000 of duties into the Public Treasury.

Only 7 per cent of our farmers raise any wool at all, and less than 2 per cent (some say 1 per cent) raise wool in considerable quantities. The big flocks are mostly in a few hands on great western grazing lands—too poor for anything but sheep.

This is a big tax—$250,000,000—for the purpose of putting less than one-fifth of it, or $40,000,000, in the pockets of these few wool-growers.

This is how the duty figures on the cloth: Sample D, drawn English suitings, 12 ounces—

| UNDERWOOD TARIFF | | NEW FORDNEY LAW | |
|---|---|---|---|
| Foreign cost, 2s. 11d., at $4.40 exchange | $0.64 | Foreign cost | $0.64 |
| Duty, 35 per cent | .22 | Duty, 50 per cent | .32 |
| Insurance, freight, etc | .06 | Duty, 45 cents per pound | .33 |
| | | Insurance, freight, etc | .06 |
| Cost, duty paid | .92 | New cost, duty paid | 1.35 |

Duty is increased more than double over Underwood, or 213¼ per cent.

This is how it figures in women's suits: (Figured in July, 1922, before recent price advances.)

Cost of ladies' suits in D range (English cloth):

| UNDER UNDERWOOD DUTY | | SAME SUIT UNDER FORDNEY LAW | |
|---|---|---|---|
| Three yards, at 92 cents | $2.76 | Three yards, at $1.35 | $4.05 |
| Two yards silk lining, at $1.25 | 2.50 | Two yards silk lining | 2.50 |
| Buttons, canvas, thread, etc | .50 | Buttons, thread, etc | .50 |
| Labor | 4.00 | Labor | 4.00 |
| Manufacturers' cost | 9.76 | Manufacturers' cost | 11.05 |
| Manufacturers' profit, 28 per cent | 2.43 | Manufacturers' profit, 28 per cent | 3.09 |
| Selling price, net | 12.00 | Selling price, net | 14.25 |
| Retail profit, 65 per cent | 7.50 | Retail profit, 65 per cent | 9.25 |
| | 19.50 | Retail price | 23.50 |

Advance under Fordney law, 27¼ per cent, or $4.

In the above no consideration is given the short-lived, hastily enacted emergency tariff of 1921, which came between the Underwood and Fordney laws, as vast accumulations of wool previous to the emergency law made it ineffective on prices.

(October 11, 1922. To-day the American Woolen Mills increased their prices on spring suitings 20 cents per yard.)

HOW THE FORDNEY LAW HAS RAISED THE TARIFF 350 PER CENT ON COTTON BLANKETS FOR THE BENEFIT OF THREE COTTON MILLS

Imitation wool blankets, made entirely of cotton, are on sale in every dry goods store in America, generally under the names "Beacon," "Esmond," or "Whittemore." Every housewife is familiar with them, and these facts can be verified by any dry goods merchant.

Although they go to the consumer in the form of blankets, they are simply cotton cloth with a napped surface, automatically woven "by the mile," cut into suitable lengths, and the ends stitched or bound.

UNDER THE OLD LAW, WHEN IMPORTED AS COTTON CLOTH, THE DUTY WAS 10 PER CENT—UNDER THE FORDNEY LAW THE DUTY IS 45 PER CENT, AN INCREASE OF 350 PER CENT.

If the Fordney law assessed them, as it ought, as cotton cloth, the duty would be only 18 per cent. Even this would be an increase of 80 per cent. But the Senate tariff makers were not satisfied with that. They claimed that these goods were "luxuries," and the Fordney law went out of its way and made a special classification for these goods by name (see par. 909 of the Fordney law), and assessed them at 45 per cent, the highest duty in the cotton schedule, or three and one-half times the old duty.

Before the war, when there was some danger of foreign competition, these blankets retailed, as every woman knows, at from $2 to $5 each. Since then, when foreign competition has been entirely cut off, the prices have been raised to from $5 to $16. This means that these blankets, although they are merely cheap cotton cloth, with a napped surface, containing no wool at all, are bringing as high as $3 per pound. The retailer is not responsible for this. He must pay what the mill charges him.

What was the reason for this increase? None of these blankets are imported, and the increase can not therefore go into the Public Treasury. These cotton blankets are made principally by only three mills in New England. They were already astonishingly prosperous. No one claimed that they needed additional "protection." They do not pay high wages to their workpeople. In fact, it is estimated by experts that the total wages paid are less than 25 per cent of the mills' selling prices.

Read about the remarkable profits of just one of these blanket mills. See if any conscientious person can even dream that they need any "protection."

This statement was widely published by Sanford & Kelly, New Bedford, Mass., a responsible stock and bond firm, acting as fiscal agents.

It was read in debate in the United States Senate (CONGRESSIONAL RECORD, p. 11020), and has not been denied. These extracts are quoted literally:

> "The Beacon Manufacturing Co. started its present active progress about 1905. They had a capital of $400,000 preferred and $400,000 common stock. Since that time they have increased their assets so that they have a plant insured for $5,500,000 and a surplus of net quick assets of $1,300,000. The only additional capital during that period was 4,000 shares of preferred, so that they have made the common in comparatively few years worth on actual assets over $1,000 a share. For many years they earned at the rate of many times the dividends on the common and preferred shares. * * * This has been done almost entirely from profits as their capital to-day is only $1,200,000 as compared with $800,000 in 1914. In that year their sales were $1,800,000; in 1920 their sales increased to $7,627,000. This gain in sales was not due entirely to increased output, because the selling price of the blanket was doubled in the last few years. * * * However, the Beacon did not raise its price but one-third as much as its competi-

tors, although at no time could they entirely supply the demand for their goods. The reason prices were not raised further was that the company believed their then profit was sufficient and that it was good business in the long run not to increase the cost of their product to the consumer to such an extent as other manufacturers did, as by not doing so they were likely to have better satisfied customers, and their profits already had so increased that the larger proportion of any further increases they might have charged would have gone to the Federal Government in the shape of excess-profits taxes."

Think of it; they were easy on the consumer, because they did not want to pay excess-profits taxes.

"In the year 1920 the Beacon Manufacturing Co. charged off from their inventories an amount equal to their average outstanding capital for that year. Even then they showed a profit equal to their entire outstanding preferred capital. After charging off a million dollars from their liquid assets they then showed a surplus of net quick assets amounting to $1,800,000, or 50 per cent larger than their combined preferred and common capital, and net tangible assets of $375 a share for the preferred, taking the book values as shown in the balance sheet. Should the real or insurable value of their plant, which is in the neighborhood of $5,500,000, be used instead of the book value of $1,229,000, it would be found that the actual net tangible assets behind each share of Beacon preferred would be $875 a share for each $100 par value."

Remember, this is not a great trust, but just one privately owned cotton mill. But it is a conspicuous example of the kind of mill favored by this outrageous cotton tariff. Although these astounding profits were made under a 10 per cent duty, the Fordney law boosts it to 45 per cent.

[The above prepared for the Fair Tariff League (nonpartisan) by F. B. Shipley, 44 East Twenty-fifth Street, New York.]

HOW THE FORDNEY TARIFF BOOSTS THE DUTY ON THE CLOTHING OF THE POOR

Take the case of Amoskeag apron gingham, the cheapest cloth suitable for women's and children's dresses and workmen's shirts. Made by the Amoskeag Manufacturing Co., of Manchester, N. H., reputed to be the richest and most profitable cotton mill in America.

The old duty was 15 per cent, but the Fordney law classes it as a "luxury" and doubles the duty. This is not done openly and honestly, but by a complicated system of compounding four separate rates of duty upon the same cloth, totaling 31½ per cent, an increase of 110 per cent.

THIS IS HOW THE FORDNEY LAW DOES IT

First, a basic rate of 15 per cent; second, an extra rate of five-sixteenths of 1 per cent per average yarn number (24 numbers), 7½ per cent; third, an extra 4 per cent because dyed with "vat dyes"; fourth, an extra 5 per cent because woven with the "drop box" loom motion; total Fordney duty, 31½ per cent.

Even under the old duty of 15 per cent there were no importations, yet the duty is doubled to "protect" this "infant industry," which has paid good dividends every year since 1834.

In defending the high rates imposed by the "joker" paragraphs of this law, Senator SMOOT represented to the Senate that the cloths so affected "are luxury cloths, very difficult to make, and requiring one skillful weaver to each loom." This cloth is one of these "luxuries" and is woven by girls tending as many as 20 looms, at wages as low as $12 per week. The mill does not tell the public what this cloth costs to make, but experts estimate that it is less than 10 cents per yard. According to President Taft's Tariff Board, the total wages paid in the gingham industry were as low as 18.83 per cent of the mill cost, so the total amount paid to labor is less than 2 cents per yard. As the duty is calculated upon the wholesale price of 13½ cents, it will be seen that the actual "protection" is 4½ cents, or 42½ per cent, more than double the total wages.

Labor does not get the benefit of this, for the Amoskeag Co., together with 40 other large cotton mills, reduced wages 20 per cent in 1921 and again 22½ per cent in 1922. At the same time it increased hours from 48 to 54 hours per week. Its employees struck last January against this, since when there has been no agreement. Published figures show that the Amoskeag Co. has increased its capital out of profits from $4,000,000 to $44,500,000 and that during the last eight years of the present low duty of 15 per cent its profits were $27,298,881. Remember that this is not a great trust but just one privately owned cotton mill.

In defending the Amoskeag Co., Senator MOSES, of New Hampshire, said (CONGRESSIONAL RECORD, p. 11020) that "to break the consumers' strike * * * it had reduced its price from 27½ cents to 12½ cents." Think of a private concern so intrenched by protection that it can reduce its price two-thirds at will. Before the war its price was as low as 6 cents, but when foreign competition was shut off entirely it was able to raise its price to 37½ cents at wholesale. At the average wholesale value for the past five years this 31½ per cent Fordney "protection" authorizes the collection from the public on the product of this one mill of $13,315,773 per year, or at retail about $26,000,000.

According to President Taft's Tariff Board, the wages paid for making these ginghams is less per yard in America than in Europe. With the last 22½ per cent reduction in force the average wages paid in all cotton mills in New England is $13.77 per week.

This cloth is sold in every dry-goods store, and these facts can be verified.

(The above prepared for the Fair Tariff League by F. B. Shipley, 44 East Twenty-fifth Street, New York.)

COTTON CLOTH AND THE TARIFF

Let us consider "Indian Head" cloth, widely advertised and known to every woman in America.

The old duty was 15 per cent, but the Fordney law boosts it to 23 per cent, an increase of over 53 per cent.

Although this duty is one of the lowest in the Fordney cotton schedule, it was utterly uncalled for, because there are no competitive importations. In fact, millions of yards of this and similar cloths are freely exported by American mills. Cloths of this kind are made more cheaply in America than abroad. According to the report of President Taft's Tariff Board the total cost of labor in this cloth is about 12 per cent in America. The wages abroad are less per day, but more per yard, because American mills use automatic machinery, and one girl runs as many as 24 looms for $12 to $15 per week. This cloth is made entirely of American cotton, and if the foreign mills paid nothing at all for labor they could not compete in America, even under free trade.

The only effect of the tariff is to enable American mills to get high prices. Two weeks after the Fordney law was enacted the price of this cloth was raised 12½ per cent. Before the war the price of Indian Head cloth was 8½ cents a yard. During the war, when all danger of foreign competition was shut off, it was raised to 37½ cents.

The price was afterwards reduced to 27½ cents, but as soon as the Fordney bill passed it was increased to 31½ cents. This means that the American woman must pay 50 cents a yard at retail. The Indian Head mills do not make their costs public, but disinterested experts estimate that their total cost is less than 15½ cents a yard. If this is correct, then it means that the Fordney tariff allows this manufacturer to make 100 per cent profit on sales of ordinary cotton cloth.

While cotton mills have been reducing wages they have been raising prices and dividends.

The Indian Head mills are part of the Nashua Manufacturing Co., Nashua, N. H. This "infant industry" was established in 1823. At the time of its last published statement, October 30, 1920, it had a capital of $10,000,000 and a surplus of $9,993,374.29. In addition, it has paid good dividends for 98 years. Its average dividends for the last seven years of the Underwood low tariff were 26½ per cent.

This mill reduced wages 22½ per cent in 1921, and again 20 per cent in 1922. Its employees claimed that they could not live decently on these reduced wages and went on strike last February, and no settlement has since been made.

It is clear that this "infant industry," 99 years old, does not use the tariff to pay high wages, and every housewife knows that it gets a high price for its product. Yet this is the kind of concern that the Fordney law protects.

In this connection it is interesting to note the relation of wages and tariff to the whole cotton-goods industry in the United States. Wages are half the duty or less. Who gets the rest?

The following figures are from the United States Census reports:

Census 1904, wages, 24.2 per cent; duty average, 50 per cent, Dingley tariff; census 1914, wages, 21.6 per cent; duty average, 43.4 per cent, Payne, fiscal year 1912; census 1919, wages, 16.3 per cent; duty average, 22.9 per cent, Underwood; 1922 (estimated), wages, 16.5 per cent; duty average, 41 per cent, Fordney.

Wages in the cotton industry is the lowest of any great industry in America. The Fordney cotton tariff is more than double the total average wages.

(The above prepared for the Fair Tariff League (nonpartisan) by F. B. Shipley, 44 East Twenty-fifth Street, New York, October 15, 1922.)

WAGE EARNERS AND THE TARIFF

AMERICAN LABOR DECRIVED AND DISCREDITED BY TARIFF PROFITEERS—THE PUBLIC MISINFORMED AND CHEATED—OURS THE CHEAPEST LABOR IN THE WORLD IN MANY KINDS OF STANDARDIZED QUANTITY PRODUCTION

[This reprint issued by the Fair Tariff League, 2 Rector Street, New York City. H. E. Miles, chairman]

Informed men know that high wages with their resulting good health, good will, and energy, are cheap wages. To show this by facts and figures is more than a national service. It tends, by America's example, to raise the wages of all countries to the betterment of the race, as Mr. Miles shows. (Wm. H. Johnston, president International Association of Machinists.)

It is in the nature of things that well-paid labor is cheap labor. The well-fed, well-paid, well-conditioned man or beast has little to fear from those of opposite sort. To decry American labor in general as not earning its wage, and on that charge to give great corporations a

virtual monopoly of any of our domestic markets through excessive tariff rates is to challenge Divine Providence that wills that men shall prosper in the measure in which they help others to prosper.

We know too little of the power and value of America's relatively high-wage scale. Mr. Miles's illustrations are refreshing and valuable. As he says, a committee of labor leaders, studying the tariff in co-operation with representatives of other economic groups, would render a valuable public service in finding what protection is needed and eliminating the element of exploitation from the tariff. (Jas. P. Noonan, International Brotherhood of Electric Workers.)

Neither the public nor labor itself is sufficiently informed on America's contribution to civilization in terms of high wages, low costs, and quantity output.

A study of the tariff should be made by representatives of labor to find what protective duties are needed and how far excessive duties are used by tariff profiteers to the common hurt of labor and the public and are responsible for the fact that an income of $20 per week now goes no further than $12 pre-war. (E. H. FitzGerald, grand president Brotherhood of Railway and Steamship Clerks.)

---

Europe envies our low wage cost per unit of product in many industries in which America excels.

Where tariff protection is needed to shield our markets from low merchandise prices due to sweated foreign labor all political parties and all true Americans want that protection and will have it; where, however, American labor is falsely made an excuse for high tariffs that give $10 to trusts and price fixers to $1 to labor our wage earners suffer with the rest.

The Fair Tariff League and Mr. Miles should have the support of all who stand for the right use of protection and not its abuse. (William H. Johnston, president International Association of Machinists.)

---

American wage earners want their due, not more, not less.

They have a right to be understood.

Tariff rates that are many times the difference in costs of production here and abroad are not helpful to labor * * *. Such rates and resulting high prices for the necessaries of life fatten trusts and oppress labor and the public generally * * *.

Mr. Miles's article in the Engineers' Journal is a valuable contribution to the subject and to the public welfare.

Where tariff protection or other legislation is needed to shield our markets from low merchandise prices due to sweated foreign labor all political parties and all true Americans want that protection and will have it.

Where, however, as Mr. Miles shows, American labor is made a cat's-paw for high tariffs that give $10 to trusts and the like to $1 to labor our wage earners suffer with the rest.

The Fair Tariff League and Mr. Miles should have the assistance and good will of all who stand for the right use of protection and not its abuse. (Edward Keating, editor Labor.)

---

Your article should "stab our readers wide-awake," as Stevenson says, "and make them think." (Albert F. Coyle, editor Brotherhood of Locomotive Engineers' Journal.)

---

AMERICAN LABOR THE CHEAPEST AND BEST IN THE WORLD IN MANY KINDS OF STANDARDIZED QUANTITY PRODUCTION

As I said to President Harding last March, "Mr. President, why not develop a widespread appreciation of the power and dignity of American labor, the best and cheapest in the world?"

I wish everyone had seen the kindly seriousness with which he seemed to approve.

THE MIRACLE OF AMERICAN PRODUCTION

An American girl in an easy day's work, running 25 or 30 knitting machines, knits 1,800 pairs of good cotton socks in a day for a piece price of 2 cents per dozen pairs, or one-sixth of 1 cent per pair. If this is a high price, how much would you reduce it? She is satisfied, because this nets her $3 per day—the lowest price and the highest wage in the world in the industry. No lower paid, undernourished, poorly housed, foreign competitor could equal her.

A man running a number of machines makes a spark plug for an automobile with two diameters inside and several outside, in six seconds, for one-eighth of a cent. Do you think anyone anywhere does it for less? And yet this output nets him 75 cents per hour. With fair allowance for machine upkeep, this man is 100 times cheaper than a handworker with the facilities of prepower days, working 14 hours for 35 cents per day and making about two such pieces in a day, with a wage cost of 17 cents each.

Running six screw machines, a man makes a three-fourth inch bolt with a hexagonal head and 7 inches long, cut to length and threaded, every 35 seconds, at a wage cost of about one-half cent.

There is a total of about 3 cents of labor in an ordinary fluted-edged bread knife with 10-inch blade that sold at American factories, for shipment in quantities all over the world, for 6½ cents in 1922; now 9 cents to American wholesalers under our high tariff.

An American operative weaves 4,500 yards of ordinary cotton cloth in a week's time for about $14 per week. She runs three or four times more machines than an English operative.

An East Indian cotton mill, well equipped, with cotton growing near the factory door, pays its operatives an average of $1.25 per week, and yet India sends to the United States for drills and denims because ours are made cheaper with our $14 wage than hers with her $1.75 wage.

No informed person measures wages by the amount paid per hour or per day, but by the return in production for the wage paid.

A FARMERS' TARIFF LESSON

We used to import rice from the Orient, where it was grown with 10-cent labor, using a hoe and clad in a breechclout. Now we export freely. Recently we had 180,000 tons more than we knew what to do with. Mr. Hoover asked the foreign representatives of his department to find a market, and where was it sold? In riceland—in China and Japan—at the American price plus transportation, because that 10-cent worker with the breechclout is more expensive than our labor-capitalist at $3 per day.

Our farmers have always competed successfully with the lowest paid labor in the world. That is largely why farmers formerly prospered with 89 per cent of all their products sold on a free-trade or export basis in world-wide competition, their export price determining their domestic price. The farmer began to go bankrupt when the present high tariff made it impossible for his foreign customers to exchange their goods for his products and compelled him to pay profiteering prices for most of his requirements.

Farmers and others should think of this when told that American factory labor can not compete, and our manufacturers, by cajolery and threats alike, secure tariff rates from two to five times the rates they pay their labor. If such statements were true, the manufacturers would not have exported in 1923 $1,500,000,000 of manufactures ready for consumption, and also $550,000,000 of partly manufactured goods, including $300,000,000 of machinery, $230,000,000 of iron and steel, $200,000,000 of automobiles, and other quantities of hardware, hollow ware, nails, cheap cutlery, $140,000,000 of cotton goods, and the like.

LABOR LESS THAN HALF THE COST

There is much ignorance and no little dishonesty in the statements made about American high wages. The census of 1920 discloses that out of each dollar of the factory selling prices in the following industries, labor got: In cotton goods, 17 cents; in silks and woolens, 16 cents; in hosiery, 18 cents; glassware, 30 cents; in sugar and salt and linseed oil, 3 cents; glucose, 6 cents; aluminum goods and gloves, 18 cents; shoes, 27 cents; carpets and rugs, 20 cents; in bar steel, rails, and structural iron, about 22 cents; gas engines, 23 cents; electrical machinery, 23 cents; hardware, 32 cents. These figures have not changed materially in 20 years. Prices change, but not labor's proportion of the income. In many cases labor's share is lower now than ever before.

The labor involved in the prior preparation of the materials used in these industries, plus the labor expended in these industries as named above, and in all other industries, brings the total wage cost from raw material to finished product to an average of one-half of the factory selling price or one-fourth of the retail price, for retail prices are usually about double factory prices. This is the finding of the most experienced investigators. For instance, to the 27 cents of labor cost in the shoe factory out of each dollar of product sold is to be added 10 cents for tanning the leather, a total of 37 cents from the raw hide to the finished shoe and about 13 cents more for the many other petty items, each in itself often too small to think of.

To-day wages average only about one-fourth of the consumer's price, thanks to modern machinery and processes. The days when "everything is all labor," the days of hand production, are gone forever. Thus wage cost, important as it is, is relatively insignificant. The wage earner must be as fit as a race horse entering a race. He must respond as freely, not for the wage but for the love of accomplishing. High wages are the only wages anyone can afford to pay who would produce economically.

WAGES AND TARIFF MISREPRESENTATIONS

Examples: Glucose, silks, cottons, glassware, etc.

If the truth were known, the example of American labor and high wages would be surpassed by no force in the world for human advancement. Standards would everywhere advance and the spiritual and cultural progress of mankind would mark a new epoch in civilization.

Unfortunately, however, certain manufacturers (by no means all) gain annually vast sums by inculcating a general belief that American labor gets more than it earns, that every housewife must add to the price of each purchase a charity, a Peter's pence or a $10 bill, for an American wage earner who needs it but hasn't earned it.

Glucose manufacturers, who give their labor 6 cents for the production of one dollar's worth of their product, made of Illinois corn, the cheapest material in the world for the purpose, have 50 cents of "protection" as against each 6 cents of labor. They got it in 1922, although we had imported in the previous year only $142 worth of glucose under a tariff of 15 per cent, and exported $6,062,000. A recent 50 per cent dividend indicates who gets the housewife's extra pennies. The very wage earner who got the 6 cents was cheated with the rest of us. This tariff of 1922 invited our glucose manufacturers, then in the Federal courts for price fixing, to add $59,000,000 to their domestic prices above their export prices.

Silk manufacturers, paying 17 cents for labor out of each dollar's charge, have an average duty of 57 cents on the dollar. They are, therefore, invited by Congress to add $277,000,000 to their prices above those of their foreign competitors (this sum to be doubled at retail) although not a yard of ordinary competing silks are imported into this country, but only novelties in design or quality not made here or the noncompetitive cheap silks of China and Japan. Woolens and cottons are as bad.

When glass bottles were blown by mouth Alexander Hamilton gave the blowers 10 per cent protection. Now a machine blows 50,000 pint bottles in a 24-hour day, with no labor beyond keeping it oiled, and Congress gives this machine 50 per cent protection on each dollar of glass sold. Who gets the 50 cents? The oiler? The story of window glass is worse.

Americans are protectionists to the point of sentimentality. Some of them would let a manufacturer pick gold fillings from their teeth if told that a dollar's worth of the fillings is needed to pay that girl one-sixth of a cent for knitting a pair of cotton socks, or the cotton weaver 35 cents for weaving 100 yards of cloth.

### TRUSTS ENCOURAGED—A $2,000,000,000 TEMPTATION

Under the spell of these evil and misleading statements regarding wages, Congress was induced, all too knowingly, to permit certain manufacturers to add approximately $2,000,000,000 to their prices if they could by any means contrive to put this vast sum over on the public, to be doubled in retail prices. Only insanity would let statesmen go so far.

Our one protection against these exactions is competition. Where competition is keen it compels manufacturers, with or without a tariff, to sell at fair prices, and sometimes less; but with profiteering tariffs the temptation to form consolidations and price agreements is almost irresistible, and in such cases tariff additons to prices are made in huge amounts. These manufacturers beguile us by talking of the $3 that the hosiery girl gets, and conceal the truth that her contract is 2 cents per dozen pairs and nothing else. Her piece price has not increased, but the retail price of the socks is doubled.

They conceal the one-eighth cent wage cost of the spark plug and decry the 75-cent wage per hour. They don't tell that we are selling hardware freely in England and in all neutral world markets.

Domestic sugar factories pay 3 cents in wages on each dollar of sugar produced. They plead for the farmers who grow sugar. These factories get for themselves about $18,000,000 of tariff benefits, and pass on to the farmers only $24,000,000 out of the $216,000,000 that the sugar tariff costs the consumers. And one factory exhibits profits at the rate of $13,000,000 per year.

If anything can despoil wage earners and farmers of the just protection that the public is determined to give them, it is their misuse as cat's-paws after this fashion. Our tariff permits a few great industries that can control their sales prices to make a billion dollars per year, or twice that, by befooling the American public on the wage question.

> "A protective tariff is essential to the interests of our wage earners. Hence the difference in the cost of production here and abroad is the fundamental consideration.
>
> "But I do not believe in making this policy a cover for exorbitant rates or for obtaining special privileges from the Government which are not based upon consideration of the general welfare." (Charles E. Hughes, 1908, now Secretary of State.)

### TARIFF RATES THREE TIMES THE WAGE DIFFERENCE

The following table indicates the extent to which tariff rates are perverted. The so-called low rates in the tariff of 1913 far exceeded the wages in the industries. The present rates (tariff of 1922) are often from three to five times the wages. To whose advantage are these excessive rates? Have they any honest relation to protection or are they at bottom profiteering?

*Present tariff not made for labor*

| Product | Who sets the excess | | Present tariff on each dollar imported |
|---|---|---|---|
| | Wage per dollar of factory product | Underwood tariff on each dollar imported | |
| | *Cents* | *Cents* | *Cents* |
| Cotton manufactures | 16⅔ | 34 | 51 |
| Silk manufactures | 15¾ | 42½ | 57 |
| Woolen manufactures | 15½ | 32 | 68 |
| Hosiery | 17¾ | 37 | 67 |
| Glassware | 30⅓ | 35 | 38½ |
| Glucose | 6 | 15 | 50 |
| Aluminum | 17½ | 20½ | 45 |
| Cutlery | 38 | 39½ | $1.82 |
| Stamped ware | 23½ | 20 | 40 |
| Gloves, leather | 17½ | 13⅔ | 50 |
| Buttons | 33 | 30 | 99 |
| Chinaware | 41 | 55 | 60 |
| Shoes | 27 | Free. | Free. |
| Agricultural implements | | Free. | Free. |
| Sewing machines | 44 | Free. | 15 |
| Cast-iron pipe | 14.8 | 10 | 20 |
| Wire | 18½ | 15 | 28 |
| Glass bottles | 30 | 30 | 60 |
| Oilcloth and linoleum | 11½ | 32½ | 35 |
| Carpets and rugs | 19½ | 48 | 40 |

Remember, in reading this table, that a protective tariff should not equal the total American wage cost but only the difference, liberally figured, between that and the foreign wage cost.

### GREAT INJURY TO COMPETITIVE INDUSTRIES

The present tariff virtually guaranteed to our great steel makers their profits of about $350,000,000 in 1923. They exported freely at world prices, which were $1.60 per 100 pounds for bars in October, and at the same time charged domestic consumers, including our farm-implement makers, about $2.40, or 50 per cent more than international export prices. This higher price, together with the increased cost of labor and everything else, due to the general tariff inflation, made farm implements cost their makers about $50,000,000 too much, or $100,000,000 at retail—and yet farm implements are on the free list.

As our farmers are virtually on a free-trade basis in their sales and income, although "enjoying" nominal tariff rates (mostly as worthless as counterfeit dollars), they have to absorb this extra $100,000,000 or do without new implements. Consequently they do without, and for two years our implement makers have produced only one-third of normal quantities and 20 of them have lost $50,000,000.

Dozens of competitive industries have been similarly but less seriously hurt.

Many Englishmen like our high tariff. It lessens their trade with us, but it cripples us in international markets, leaving England freer there. She loses $10,000,000 of cotton business here, but holds more securely $500,000,000 in other countries. She is suffering now from the restricted buying of those markets, but she looks to their early recovery.

### WHY IS AMERICAN LABOR SO CHEAP

There are 9,000,000 wage earners in American factories using 29,500,000 horsepower, which is equivalent to the physical power of 236,000,000 men working with hand tools. Furthermore, our machines are of such speed and accuracy that they are at least four times more efficient than the mere power involved indicates.

Consequently each wage earner exerts the power of 26 hand workers of olden times and equals 100 such workers in matter of speed and efficiency. It is because each man's wage thus counts for 100 formerly that the item of wage cost is relatively inconsiderable if only he gives himself wholeheartedly to his task. It is this hundredfold power that makes the worth-while worker rejoice in his task and makes the American employer hate a slacker.

An American factory worker uses from two to three times more horsepower and produces from two to three times more dollars' worth of goods than an English worker. At double or treble the wage the American worker only breaks even. To earn this he must keep up to pitch. It was much the same when we were English colonies. It will be so, regarding all countries, so long as they underpay and underfeed their workers. Let not selfish men blur this record for their pocket's sake.

A great Englishman with factories in England, France, Germany, Belgium, Italy, the United States, and Japan finds substantially no difference in these countries in the wages paid per unit of product. His labor in the United States is the cheapest of all.

If America's "high wages" from the beginning of her history and to-day are not cheap wages in terms of accomplishment, then let it be proved. It may shake our confidence in God's Providence, but we had best know.

HIGH WAGES, WELL EARNED, ARE CHEAPEST, LET THE WORLD KNOW

If high wages are cheap wages, let itching palms be stayed and our workers themselves get whatever protection is needed, with none diverted to tariff profiteering. This consummation would bring American wage earners to a position of unparalleled eminence and make our wage rates the accepted standard everywhere.

It would make living cheaper, government honest, and raise living standards in every land. It would evidence the close relation of labor and religion as indicated in these quotations:

"In all true labor, be it but true hand labor, there is something divine." (Carlisle.)

"He who builds a factory builds a church. He who works there worships there." (President Coolidge.)

"In the Middle Ages the church was the agency of civilization. Now industry is the agency of civilization." (Dr. Charles Eaton.)

A LABOR-TARIFF COMMITTEE NEEDED

I can conceive of few things more helpful to American labor and to mankind in general than a committee of foremost representatives of labor, determining the value and the character of American labor from the standpoint of its wage, it performance, its social service; and, on the other hand, assessing at proper value the claims of tariff profiteers.

Meantime this country can set an example by honestly and intelligently appreciating American labor—what it stands for, what it does, and what should be done for it.

SPECIAL INTERESTS

"We are not and should not be a Nation of special interests or special priviliges, and the recent trend of affairs is a rebuke that was deserved to special interests in this country." (President J. R. Howard, American Farm Bureau Federation, December, 1922.)

BY PRICE RAISERS FOR PRICE RAISERS

An "excessive tariff wall" is made by and for overgreedy interests only. It prevents importations of many competitive articles in any volume under any fair conditions. It enslaves the American people to the highest prices these manufacturers dare charge, and often far higher than these same manufacturers charge foreigners on their own sales abroad. Many American manufacturers know this and disapprove.

The present tariff law is the worst ever in these respects.

The Fair Tariff League consists of representatives of 2,000,000 farmers, manufacturers, officers of 900,000 wage earners, merchants and others, who believe in ample protection for American standards of living and wages.

It opposes the misuse of protection at the behest of great and selfish interests. It desires the cooperation of all who are so minded. Join now.

WOMEN'S GOWNS AND THE TARIFF—$52.50 BECOMES $300

$17.50 BECOMES $65 ON ONE GOWN AND $75 ON A DUPLICATE WITH 30 CENTS OF BRAID ON IT

[Prepared by the Fair Tariff League, 2 Rector Street, New York]

The following invoice of customhouse and incidental charges on two dresses from Paris presents a startling tariff lesson to American women. The first item in this invoice shows that these two "Paris models" cost $105, or $52.50 each. They were ordered from Paris by an American dressmaker of exquisite and modest taste who went into business, as many superior women have done, upon the death of her husband. One gown was taffeta and chiffon, the other of knitted wool. With 100 per cent added to producers' prices to cover the expenses and profits of wholesalers and retailers, these gowns would retail in Paris at $105 each. In exclusive Paris shops they cost $125 to $135.

If forwarded direct from Paris to Chicago, the transportation and insurance charges would be $4 each, and if there were no tariff would retail with the same percentages added at $115 to $145 each.

Why do these $52.50 gowns retail in Chicago at from $275 to $300 each? Because these and other articles of grace and refinement, outward tokens of woman's innate loveliness and therefore dear to most hearts, are declared by our Congress to be luxuries, and therefore are taxed in amounts more than doubling their cost to American consumers. They are put beyond the reach of ninety-nine women out of every hundred.

|---|---|---|---|
| Marks and numbers | Shipment: 1 case wg. appl. | | |
| | Duty, $105 at 90 per cent | 94 | 50 |
| | Foreign charges to ship's side at Havre, ocean freight $3.50 | | |
| | I. T. entry and N. Y. shipping charges 4.50 | | |

Bill No. 629
File No. 15671
Dr.

| Steamer Paris. | Shipper | —— Ltd. | |
|---|---|---|---|
| Marks and numbers | Cartage at N. Y., incl. cording and sealing inland $2.00 | | |
| | Freight: Express to Chicago 1.50 | | |
| | 11.50 | | |
| | Disbursement charge .25 | | |
| | Our handling fee 2.50 | | |
| | | 14 | 25 |
| | Special services effecting prompt customs release | 10 | 00 |
| | Copy of liquidation $0.50 | | |
| | Customs fees and blanks, $0.45; entry 5.00 | | |
| Entry No. 9180 | | 5 | 95 |
| | Cartage | | |
| | Storage | | |
| Bond No. | Marine insurance and war risk $1.81 | | |
| | Duty ins .31 | | |
| | | 2 | 12 |
| Pkgs. ordered into appraiser's store all | Insurance in appraiser's store | | 25 |
| | Warehouse insurance | | |
| | Bond | | |
| | War-tax stamp | | 50 |
| | Telegrams | 2 | 50 |
| | | 130 | 07 |
| Pkgs. examined at depot | Less allowance on above special-service charges | 5 | 00 |
| | | 125 | 07 |

The above are the actual charges on these gowns. The abuses of the tariff are more clearly shown in the following analysis:

| | | |
|---|---|---|
| Two gowns, foreign value, first item in the bill | | $105.00 |
| Duty, 90 per cent (par. 1430) | $94.50 | |
| Incidental tariff clearance charges, 21 per cent | 22.50 | |
| Tariff cost (111 per cent of foreign cost) | | 117.00 |
| Foreign cost plus tariff charges | | $222.00 |
| Transportation and insurance, Paris to Chicago | | 8.00 |
| Cost in Chicago, two gowns, all charges paid | | 230.00 |
| Retailer's cost in Chicago, each gown | | 115.00 |

With the same additions in Chicago as in Paris for retail expenses and profits, the retail price in Chicago would be $230 to $265.

The retailer, however, is justified in an extra charge to cover the special annoyances, risks, and anxieties due to the tariff exactions manifest in the bill, as against the ease of selling domestic articles bought close at hand. Also the tariff has raised the price until only the rich can purchase, and the rich expect costly sales service in rents, furnishings, and attendance, necessarily increasing the retail price. For these reasons these gowns retail in exclusive establishments at from $275 to $300.

Thus Congress keeps countless American women from enjoying at modest cost the things they want and deserve; intensifies "class distinctions" by making good taste too much a matter of the fat pocketbook; tempts women of scant means and girls to pay unnecessarily high prices, to their economic and social hurt. It helps no honest man. Clothiers and retailers denounce it. It makes innumerable little things cost women $7.50 that should cost $3.

Two beautiful, new-style, knit-silk outing suits, each costing $17.50 in Paris, were expected to retail in an exclusive ladies' establishment in New York for $46 each under the "silk-outerwear" duty of 60 per cent; but 30 cents of plain braid on four pockets of one of the coats raised the duty on that suit to 90 per cent and the retail price to $75—$10 addition for 30 cents of braid!

Fringe worth 75 cents on one end of an oriental rug costing $50 abroad raises the duty on the rug from 55 per cent to 90 per cent; adds $17.50 to importers duty and $35 to the retail price of the rug—$35 for 75 cents! Dozens of these tricks incorporated in our high tariff are so sly that even experts are slow in discovering them. They are called "jokers." Does the woman buyer see the joke?

In millinery there are many such "jokers." Also lingerie.

And what do France and our other recent allies want in payment for their products? Our money? No; bread. They are hungry and undernourished, partly because through our profiteering tariff we have virtually refused to accept of their product in payment for our wheat, meats, cotton, and other basic products, and they haven't a dollar of gold to spare. Meantime our foodstuffs sell below their cost of production and some of our wheat is fed to hogs.

Honest protection requires no tariff, and incidental charges of 111 per cent, or $58.50 on a $52.50 silk gown containing only from 3¾ to 5 ounces of raw silk worth about $2.25 and a bit of lace trimming. The labor cost of converting raw silk into a dollar's worth of cloth at the factory selling price averages only 15¾ cents; nor 111 per cent duty on a knit-wool suit costing the same to produce as the silk.

We knit woolens as cheaply as any people, as shown by our exports in 1920 of $61,373,000 of hosiery and knit goods at international competing prices against imports in 1920 of $5,677,000.

The present tariff hits women and farmers hardest of all.

TWO GROUPS CRUCIFIED—WOMEN AND FARMERS

The present tariff crucifies two groups—farmers and women. Farmers, by reducing the purchasing power of their products until "the farmer's dollar is a 75-cent dollar" and by severely restricting their foreign markets. Women, by declaring everything they wear a luxury and taxing it as if its purchase were a sin. It would compel women to dress as severely as men, ignoring the requirement of all the ages that women adorn themselves with things of modest beauty for the joy of the world and as an outward token of their inner loveliness. It is brutal to tax things from 60 to 80 per cent, leaving only the rich to use beautiful things from abroad of slight initial cost, and to make American retail prices sometimes five times the foreign costs.

The present tariff is a betrayal of the principle of honest protection. It adds $216,000,000 to our annual sugar bill and $300,000,000 to our wool clothing.

It doubles the previous adequate duty on many common "ginghams" used for aprons, shirts, and dresses. It adds $4 to $5 each, or $120,000,000 to women's tweed coats and suits, of which 30,000,000 are bought annually. All told it adds annually $2,500,000,000 to the prices of the general merchandise that fills our stores.

This tariff is a principal reason why, as Prof. Irving Fisher says, a $20 a week salary goes no further now than $12 before the war.

It has about as much relation to fair protection as robbery to honest work.

THE TARIFF COMMISSION

Fifteen years ago the public began to see that Congress makes tariff rates on the special pleas of interested parties and without an adequate basis of facts. After a long struggle the Tariff Commission was established as a quasi judicial, impartial fact-finding body.

For years it presented to Congress and the President such clear and compelling information that the tariff profiteers saw that they must "get" the commission or the commission's facts would stop the profiteering. Consequently, the Frelinghuysen bill in 1922 sought to deprive the commission of its powers and make it merely advisory to the Secretary of Commerce, to whom the commission's powers were to be transferred. This would have caused the profiteers to concentrate upon the choice of a Secretary of Commerce of their sort, and might have resulted as unfortunately as the oil leases under Secretary Fall. The bill was defeated.

President Harding, however, was induced to appoint three tariff commissioners, two hotfoot from the long-time service of the overprotected interests, and the third, Mr. Glassie, with a family interest of $150,000 in sugar production.

These three commissioners were so committed to high tariff that the commission has been mostly deadlocked since their appointment by a 3-to-3 vote. The overprotected interests are virtually in control, because these three votes negative the affirmative proposals of the three disinterested members.

Congress recently eliminated Mr. Glassie from the sugar hearing and likewise Mr. Burgess from chinaware and pottery, by a special provision in the commission's appropriation bill. Consequently, by a 3-to-2 vote of the remaining commissioners, the commission's sugar findings will doubtless meet with public approval.

The law now requires that no commissioner shall participate in the investigation of any industry in which he or his relatives have a financial interest, or for which he has acted as agent, special representative, or attorney. Except, however, in sugar and chinaware, the commission is still blocked, 3 to 3, with the overprotected interests having, as many believe, practically a veto as before.

The Tariff Commission must be utterly above suspicion and reproach. It must possess the utmost public confidence. The members who, by their conduct, have greatly impaired the standing of the commission, should surrender their offices in the public interest.

SHOULD THE DUTIES ON COTTON CLOTH BE INCREASED?—RECENT IMPORTS AND EXPORTS

The United States produces normally about 6,000,000,000 yards of cotton cloth annually. About two-thirds of this, or 4,000,000,000 yards, are produced as cheaply, and most of them more cheaply, than elsewhere in the world. Our labor is higher priced, but we use so many more automatic machines, and each American operative runs so many more machines that our costs per yard are lower than elsewhere.

These goods are of the coarser and cheaper variety, that constitute the bulk of production. For a generation we have exported these goods freely to all countries and would hold our domestic markets under free trade. The Tariff Commission, the former Tariff Board, and all authorities agree as to this situation.

Some of our largest cotton mills have their own distributing offices in England, the center of foreign competition, and do a big business there.

The United States also exports a considerable quantity of certain finer goods. There are certain other extra fine goods that Europe produces of better quality than the United States can produce or is willing to produce. For instance, what we call broadcloths, which are very fashionable at this time. These broadcloths have such a luster, fineness, and texture and strength that they are frequently mistaken for heavy silks. An "English broadcloth" shirt, though made of cotton, is often charged in the laundry bill as a silk shirt.

The English excel in these and certain other cloths because they use only long-staple Egyptian cotton in them and take especial care in the weaving. Also because the English operatives are English born; also members of a family have lived and worked in the cotton mills of their home towns for generations, while American labor is mostly immigrant and often of poor quality and inexperienced. One big mill operator says he can use workers who are almost intellectually incompetent on some of his machines.

This is no reflection upon such better-grade American workers as are found sprinkled through our mills, and occasionally in considerable numbers.

This Egyptian cotton takes an extra-fine luster when mercerized and is superior in every way. American mills use comparatively little of it, and when they do use it they seem to get inferior qualities, the best of each grade being likely to go to England, which has the bulk and the pick of the crop in Egypt and more or less a preferential treatment there.

Likewise, Swiss voiles and dotted muslins have a peculiar and superior quality only remotely comparable with like goods made in this country.

In fact, most of the cottons (substantially all) that have been and are now being imported into the United States are not competitive. Under any tariff our well-to-do and rich people will buy these superior qualities, and when silks are high priced they will buy a certain amount of these cottons instead of silk.

All that a high tariff can do is to keep some people of modest means and poor people from purchasing these goods.

That we have never imported any considerable amount of cotton goods, as compared with our domestic production, is shown by the following percentages of imports to domestic production. In 1914, pre-war, we imported 3.4 per cent of domestic production and exported 5.9 per cent of our own cotton goods. In 1919 we imported 1.3 per cent and exported 10.2 per cent. In 1920 we imported 3.5 per cent and exported 16 per cent. In 1921 we imported 2.6 per cent and exported 4.8 per cent. The years 1919 and 1920 were abnormal because of the war, but 1914, 1920, and 1921 are fairly representative.

The Monthly Summary of Foreign Commerce of the Bureau of Foreign and Domestic Commerce, in the February, 1924, number, shows that in the eight months ending February 29 last we exported 281,153,362 yards, of a value of $48,170,373, against exports for the corresponding period of the year previous of 376,122,120 yards, of the value of $57,291,267. This shows a falling off in export, but this decrease indicates, nevertheless, that we are holding our export trade about as well as any country, because, in fact, there is a sort of "buyers' strike" the world over on cotton goods, due to the great increase in the cost of the raw material and of the finished product.

Cotton is the only clothing for hundreds of millions of poor people in the Tropics, most of them unbelievably poor and unable to spend any extra penny that they can possibly save. Europe also is economizing in every conceivable way. Consequently the cotton mills of England are as hard hit as those of the United States. Neither increased tariffs nor other artificial remedies can help materially.

Imports: In the eight-months' period ending February 29 last, the United States imported 142,035,999 yards, of the value of $29,265,095. The Monthly Summary does not state the number of yards of cotton cloth imported in the corresponding period the year before, but does give the value of those imports as $24,009,836. This shows an increase in the money value of imports of about 20 per cent, but as prices were decidedly higher in the 1924 period the increase in the yardage imported was virtually inconsiderable.

People in distress these days apparently look to Congress for immediate and full relief at the expense of the taxpayers. Certain cotton manufacturers, after this fashion, now show a

desire to influence the President to raise the duties on cotton goods, with a view to increasing American prices generally by shutting out the small quantity of those noncompetitive, superior, foreign goods. If they succeed, as is not in the least likely, they will be helped about as much as the wheat farmers, who recently got an increase, by action of the President, of 40 per cent in the wheat tariff, and immediately after were selling at lower prices than before.

Our cotton manufacturers would then get higher prices, but they would not get appreciably more business, while our consumers would pay considerably more.

Another reason why the United States is importing as much or more of these special, high-priced cotton goods is that we are the only prosperous country in the world, and are buying choice things freely. We have most of the gold of the world. As a Nation we owe no other country, while most other nations owe us great amounts. They must buy food from us or go hungry, and they must pay for this food by this sort of imports. If we raise our duties we simply increase the hardship of these nations in getting their necessary food and other requirements from us and in paying their huge debts to us.

It is a matter of simple economics and of national morality to let these nations, our best customers, deal with us on as reasonable a basis as possible with adequate protection but not extortion.

What protection is needed: In ordinary cottons, the raw cotton is sometimes two-thirds or more of the total cost of the cloth. Generally speaking, all authorities agree that the raw cotton is about one-half the total cost. On light-weight goods the high price of the fine cotton used offsets the diminished quantity, and leaves the raw material still about one-half of the total cost. As cotton is the same price in all countries and is never taxed by tariffs, this 50 per cent of the cost of the cloth calls for no protection.

This leaves only the other 50 per cent, being the conversion cost, labor, overhead, and profits, subject to protection.

Consequently, any duty that is spread over the whole product is twice as high on the items that require protection as the duty itself. That is, our present duty of from 40 to 45 per cent on fine imported cottons is equal to 80 per cent to 90 per cent on the total foreign conversion costs and profits. This would seem to be too much. Surely American brains and energy in cotton mills should not require 80 per cent to 90 per cent of protection tax against English brains, energy, profits, and wages.

Wages: In 1904, out of each dollar of factory price for the cotton cloth sold (not including carpets, handkerchiefs, and wearing apparel), labor got 21.4 cents. Labor plus superintendence got 23.6 cents. In 1909 labor got 21.1 cents, and labor plus superintendence got 24.4 cents. In 1919 labor got 16.3 cents. The present tariff and all previous tariffs have been much more on high-grade cottons than the total average wages paid American operatives. Instead of that, the tariff should not be much more than the difference between the wages paid here and abroad. The excess above this has swelled the profits of our manufacturers amazingly for many years, except in periods of special distress, like the present.

In view of these and other considerations, the Tariff Commission has announced that in its judgment it is not advisable for it to make an investigation, and that the industry must await an improvement in world conditions.

CATCHING THE FARMER

I come from an agricultural State. * * * It seems to me that the Senator from North Dakota (Mr. McCumber), in his zeal to put such an immense tariff on these agricultural products—higher than we have ever had before, higher than there was any necessity for—has done so simply to oil the protection machine for the woolen schedule and some other schedules in the bill. (Senator Knute Nelson, Republican, Minnesota, in CONGRESSIONAL RECORD, August 11, 1922.)

MAKE THE TARIFF RIGHT

There is only one reason for continuous tariff agitation. Every tariff made in the old way has been bad in important respects, bad the day it was made and every day thereafter until succeeded by another also bad. We are compelled to agitate as against error and misuse. Make a tariff right, and agitation will be impossible as well as unnecessary and unjustifiable. (National Association of Manufacturers, 1908.)

A NICKLE HERE AND A DOLLAR THERE

(Tariff hearing, November 24, 1909)

CHAMP CLARK, Ways and Means Committee. The truth about the whole business is that the way you will make your money is by getting a little here and a little there from a great many people, so that there is not enough for one of them to come here and testify against you about it, and the general total of the rake-off amounts to a fortune.

WITNESS. Yes. Every little helps.

THE FARMER HAS MUCH TO LOSE

So far as a high or low schedule may be concerned, the farmer probably has much more to lose by high tariffs on the things which he buys than he could ever hope to gain by any tariff on his own commodities. Our economists have all reported convincingly on that point. There may possibly be some exceptions to it. (President J. R. Howard, American Farm Bureau Federation, 1922.)

EVEN CHAIRMAN M'CUMBER, OF THE FINANCE COMMITTEE, UNITED STATES SENATE

(CONGRESSIONAL RECORD, July 26, 1922)

The only good reason for allowing products to come into this country to compete with our own is to hold down and prevent any extortionate charges being made by the producers in our own country. We want foreign competition to prevent combination.

THE TARIFF AND RADICALISM

There is commonly an element of injustice and widespread abuse in or behind the radicalism of sound-minded people. This although their leaders often advance strange proposals apparently against existing institutions generally.

It is the part of wisdom to search out and remove these provocatives to radicalism.

When the present tariff was before Congress, many American farmers, misinformed and misguided, virtually agreed to carrying the losses of agriculture, if any, and to carry whatever other losses might be put upon themselves in order to give a few manufacturers what profits they wanted by means of tariff rates that even many manufacturers opposed. Other great social and economic groups were likewise wronged. Their wrongs must be righted.

It especially devolves upon us to require that protection is not perverted into a means of exploitation.

Well-earned profits are a measure of character and ability, and are only a small part of the value of a successful enterprise to the general public.

Such profits must not be confused with excessive profits acquired by bad legislation like the present tariff. It is equally necessary to remove the sources of ill-gotten profits that afflict the public and to safeguard profits that are fairly earned.

RAILWAY RATES AND THE PRESENT TARIFF

Railway rates are high because of high operating costs.

So much of the income of the railroads is paid out for equipment, fuel, and wages that all other expenditures are comparatively inconsiderable.

The wages of 2,000,000 railway men are unusually high, principally because the cost of living is high beyond all precedent, and railway workers must be paid accordingly. Fuel is high for the same reason—high wages in mine and transportation and high cost of retail distribution.

Railway equipment is extremely expensive because of high general wages, and because manufacturers of many products used in railway equipment are overprotected and their prices are higher than they would be under a fair tariff. This affects 2,580,000 cars, 60,000 locomotives, rails, and other supplies.

The cost of living to the people of the United States would be reduced about $3,000,000,000 by a moderate and reasonably protective tariff in lieu of the present Fordney law. This reduction in living costs would quickly bring a reduction in freight charges, which reduction Senator CAPPER, chairman of the Senate farm bloc, says is the most important matter before Congress in the interest of agriculture.

It is estimated that the cost of operating our steam railways would be reduced $500,000,000 annually by fair tariff rates on their purchases.

As transportation is an enormous charge upon agriculture, American farmers, especially in their present distress, feel keenly the hurt of high freight rates, and should be relieved by the immediate correction of the present tariff, a correction that would help everyone and hurt no one.

MANUFACTURERS AND THE TARIFF

The public sees a few great manufacturers forcing legislation in their own interest, especially those that are so organized that they can largely control their selling prices, and therefore can profit enormously by high duties. It sees little open opposition from other manufacturers to this procedure. Also discredit is thrown upon manufacturers and others who oppose excessive duties. The proponents of high rates color the entire situation. Their tariff profits are indicated in this and other pamphlets of the Fair Tariff League.

In fact, the majority of American manufacturers want only moderate rates. They disapproved of the excessive rates of the McKinley, Wilson, Dingley, Payne, and Fordney (present) tariffs, effective since 1890, except for the nine years of the Underwood (Democratic) law, which was of little effect for most of that time because of war conditions.

Most of these moderate-tariff manufacturers are not greatly injured by excessive tariff rates, because, so far as they pay such rates on their semimanufactured materials, they must and do pass these excess rates on to their customers.

Clothing manufacturers, for instance, with excellent evidence, made every possible objection to the enormous tariff on some of their materials.

Manufacturers of soap objected to duties on certain of their materials and suggested free trade in soap if the duties were fair on their raw materials. Higher duties than they cared for on their own products were virtually thrust upon them.

Automobile manufacturers asked for reasonable rates on aluminum, of which about 200 pounds is used on all cars except the cheapest. The outrageous aluminum duties (see Aluminum, Fair Tariff League) must be paid by automobile manufacturers and passed on to their customers with additional charges at every step from factory to consumer. Likewise, many excessive duties on steel products. The automobile people were given higher duties than they cared for.

Furniture manufacturers oppose excessive duties, desiring moderate duties on their own products and materials.

Carded woolen manufacturers have fought for years for lower rates that would benefit the public as well as remove discriminations hurtful to themselves. Machine-tool builders have wanted moderate and lower rates generally for many years. Shoes and agricultural machinery likewise. They are on the free list. Implement makers suffer from excessive rates on most of their supplies, with consequently higher prices on their products than they like to charge or farmers like to pay.

Among the industries that get no direct advantage from the tariff are the building trades, foundries, agricultural implements, wagons and carriages, bread and other bakery products, canning and preserving, some heavy chemicals, confectionery, cooperage, the makers of repairs and upkeep materials, tobacco manufacturing, lumber and timber products, automobiles and their repairs, job and newspaper printers, slaughtering and meat packing, railway cars and equipment, and furniture. Add to these 2,000,000 railway men and their families, merchants, clerks, salaried and professional people, and the owners of farm lands that raise the 89 per cent of our crops that sell on a free-trade basis at export or world prices, and we see how easily the tariff will be made fair when these interests intelligently oppose the selfish exactions of the few who now make our tariffs. The latter are entrenched and powerful, but in numbers they are insignificant.

THE WOOL TARIFF AND THE FARMER

[Extracts from Senate debate July 26, 1922]

Unfortunately the Senator from Idaho [Mr. GOODING] can not convince the American people of the correctness of the position that he takes, that no tariff is too high to suit him. The Senator wants an embargo upon everything that we produce, and if that policy could be carried into effect he would strike a blow at every wheat grower in America, at every farmer in America, who must have a foreign market for his surplus.

Mr. President, let us see where the logic of the Senator from Idaho leads us. He is willing, he says, that we put up a tariff wall so high that Europe can not establish any credits here; that Europe can not pay us for any of our surplus products. He is willing to drive Europe to Australia and to South America to purchase all of its wheat. He is willing that the 100,000,000 or 200,000,000 bushels of surplus wheat that is produced in this country shall not find any outlet abroad and thus reduce the domestic price of wheat to 50 or 60 or 75 cents a bushel.

That is the kind of a friend of the farmer that the Senator from Idaho is in the policy that he advocates, and what is true of wheat is true of other agricultural products.

Mr. President, let us see from another standpoint the friendship for the farmer in the policy advocated by the Senator from Idaho.

The farmer in the United States is entitled to two kinds of protection. He is entitled, first, to a reasonable protection upon the things that he produces in order that he may fairly compete with those who are producing like commodities abroad. He is also entitled—and this the Senator from Idaho forgets—to purchase at a reasonable price the things that he must have to live and exist. (Mr. LENROOT, Republican, Wisconsin.)

FACTS, FACTS, FACTS, ARE WHAT ARE WANTED—LORD BRYCE

Honest protection represents "the difference in the cost of production here and abroad."

Such protection safeguards American wages and ideals. It protects the consumer from excessive prices.

Dishonest protection fattens trusts. It enslaves Congress and weakens the foundations of Government.

IN CONCLUSION

In the days gone by, when the majority of our citizens were not informed on national affairs, it was a very easy matter to make them believe that the salvation of this country depended on a high protective tariff. But times have changed; the women have been enfranchised; first-hand information is being brought into the home, and no longer will politicians whose campaign expenses are largely borne by the "tariff barons" be able to make the rank and file of the people vote against their own interest. Everyone knows that the present robber tariff is the highest in the history of the country. Only last week Senator WALSH in the United States Senate called attention to the mills that were closed and the thousands who are out of employment in the New England States. In Massachusetts alone over a million dollars a month is being lost because of this situation.

After all, it resolves itself down to one fact, and that is that the law of supply and demand has always been the ruling factor, and unless the producing class can be kept at a healthy normal condition all other occupations will eventually suffer in like proportion. Therefore the time has come to call a halt by repealing the confiscatory tariff laws that have driven the farmers to bankruptcy.

CONGRESSIONAL ISSUES

Mr. CLANCY. Mr. Speaker, Congress to-day is in every man's private life and in every man's pocket by means of laws which give the executive and administrative branches of the Government powers which are subject to abuse and which often are abused.

Human rights and property rights of the people of this country are continuously threatened. That is all there is to life so far as Government is concerned—human and property rights.

That is all there is to the two great American documents, the most important governmentally ever struck off by the hand of man—the Declaration of Independence and the Constitution—just statements and safeguards of what are human and property rights.

In my votes and acts in Congress I have tried to express the sentiments of my district, the east side of Detroit, on human and property rights. O. Henry, America's greatest story writer, said that every large American city had a voice, and that if one listened closely and intelligently enough he could distinguish that voice and find out what the city is trying to express; what is in its soul.

Time will not permit of my discussing my entire record so far in Congress, but I wish to discuss briefly my stand on five questions which were hard fought in the House:

Aviation.
Relief for starving German women and children.
Immigration.
Automobile taxation.
Obtaining $15,000 appropriation to establish in Detroit a branch office of Bureau of Foreign and Domestic Commerce.

AVIATION

Aviation or flying machines and the development thereof came up in the form of a million and half dollar appropriation for the United States air mail.

The Detroit Board of Commerce started a campaign to increase this item to $3,000,000, a sum originally asked by the Post Office Department and cut down by the Director of the Budget. The larger sum was necessary for night flying and to build larger and more capacious flying machines to carry the mail between New York, San Francisco, and way points.

The reason for the item was that commercial aviation and to some extent military air preparedness were at stake.

I led the Democratic fight, and in a savage passage at arms the million and a half was killed temporarily on a point of order by Representative CRAMTON, of Michigan. This appropriation was passed by the Senate at $3,000,000, and passed by the House with only a quarter of a million cut. The final appropriation was $2,750,000.

Thus the United States air mail was preserved and strengthened materially. Aviation will be a tremendous factor in every man's life in the near future. For saving commercial aviation, particularly in competition with Europe, the Detroiter, official publication of the Detroit Board of Commerce, gave me the credit.

RELIEF FOR STARVING WOMEN AND CHILDREN

When the Fish bill, appropriating $10,000,000 for starving women and children in Germany, came before my committee, the House Foreign Affairs Committee, leading members of the committee predicted it would be speedily killed. I was most

active in its behalf on the Democratic side, and after a hard fight in committee the bill was passed favorably to the floor of the House.

A bitter contest took place on the floor, in which I helped to marshal the Democratic forces, and the bill was passed favorably on to the Senate.

IMMIGRATION

The hardest and most involved question this session had to handle was that of immigration. Regulation of immigration had been dodged and shelved for three years by Congress, because it was known it would stir up trouble. But it was faced in the House on April 8, 1924.

I was in favor of immigration restriction and voted to that effect, but I was against the racial discrimination features of the Johnson bill. I favored the bill reported by the Senate committee. That called for the 1910 census as the basis for fixing the quota of immigrants from each country.

The 1910 census is the basis of the present law, but the Johnson bill went back to the 1890, went back 34 years, instead of taking what it should have taken, the latest census, that of 1920, or sticking to the 1910 basis. The reason frankly given in the House and Senate debates for the 1890 census was to discriminate against the peoples of southern and eastern Europe.

They were already discriminated against in the present law, because it calls for 55 per cent Nordics and 45 per cent southern and eastern Europeans. The Senate or Colt bill, which all of the stigmatized races favored and which I voted for when it was proposed in the House as an amendment to the Johnson bill, called for the same proportion—55 per cent Nordic and 45 per cent others. But the advocates of the Johnson bill wanted to make the insult sink in and stuck for the rank discrimination and stigma.

They called the prejudiced races riffraff, scum, garbage, undesirables, and unassimilables. I have too many friends and constituents among the insulted nationalities to help degrade them by voting for the Johnson bill. Tens of thousands of Poles, Italians, Jews, and so forth, live in my district. Therefore I took great pleasure in voting against the Johnson bill.

It carried in the House on Saturday 322 to 71, and will work untold havoc with our foreign relations and with our foreign trade. As a great exporting city, much of Detroit's prosperity depends upon selling our surplus manufactures to foreign nations. One of these is Japan, which buys $200,000,000 worth of American goods every year.

I did help to amend the Johnson bill by changing the clause which threw the burden of proof on an immigrant who faced deportation. The Johnson bill aimed to deny even the basic legal right of a human being to be considered innocent until proved guilty. That vote was close—197 to 193—and the enemies of that provision did good work in lining up enough votes. Even the author of the bill, Congressman ALBERT JOHNSON, voted against this vicious clause in his bill.

THE CANADIAN QUOTA

I also took a leading part in killing the proposed Canadian quota. The Secretary of Labor in advocating the Johnson bill had requested that Canada be placed on a quota basis for the first time in our history. The Canadians were tremendously angered by this stigma and, of course, would have undertaken reprisals.

They have us at their mercy for our wood-pulp and print-paper supply; also the digging of the Great Lakes to Gulf of St. Lawrence waterway; Niagara Falls power; the Chicago Drainage Canal; our nickel supply; and on the Newfoundland, Alaskan, and Pacific fisheries.

To have put Canada on an immigration quota basis would have cost this Nation dear in more ways than one. Canada is one of our best customers, and the United States sells Canada yearly over $650,000,000 worth of goods.

I took this matter of the Canadian quota up in my committee, the Foreign Affairs Committee, which handles matters of dispute with Canada. I pleaded vigorously with the committee. No member disagreed with me.

I talked with Secretary of State Hughes and he agreed with me fully. The chairman of my committee agreed to place the matter before the Immigration Committee.

A few days after the question was discussed in my committee the Immigration Committee killed the Canadian quota proposal.

AUTOMOBILE TAXATION

In November, 1923, two days after I was elected, I was called upon to make a speech near the Statler Hotel, and I predicted that the present Congress would be one of the hardest-fighting Congresses the Nation had ever seen. Indeed, I could only think of those Congresses preceding the Civil War, when the flaming questions of slavery and secession were debated with hot rage and exceeding bitterness, as likely to surpass this Congress in heavy fighting.

And it must be recalled that many Members of the House and Senate of those days left the Halls of Congress to go into the armies of the North or South to determine by bloodshed unparalleled in this country the questions they could not solve by debate, oratory, parliamentary procedure, and constitutional government.

I also said in that speech of 17 months ago, a year before this Congress first met, that the Congress would be like a big football game, played on a slippery field, with teams evenly matched and contesting like demons for the victory. There would be plenty of chance for fumbles and breaks in luck, and that the Congressman who could keep his head and his feet in the critical moments and snap at the fumbles and see the breaks as they came would overcome his opponents and win the victory.

It seems to me that is just the way the Congress has gone; and those in the grand stands—that is, the people of the country—got a series of thrills which were almost too much for normal nerves.

That was not a snap prophecy on my part about the nature of this present Congress. It was apparent then that there was much rottenness in the Government and that crooked big business had intrenched itself in certain parts of the Government. I talked that in my campaign. It was clear two days after the election that the old guard would fight as fiercely as it always fights to hold its ground, and it was apparent that a coalition of Democrats and progressives would be forced to combat the old guard and that it would control in pinches. In fact, in that speech, printed in local papers at the time, I predicted that this coalition would control.

Not only were there fighting questions at stake, but the personnel of the Congress included more than the ordinary number of fighters. For the country was anxious and disturbed and worried in 1922 about the nature of the Government at Washington, and few men won seats in Congress in that election who did not contest vigorously and prove to the people that they were scrappers. The disclosures made by these men in this session of Congress confirmed the fears of the people that the landslide of 1920 had brought some dangerous men into high places in the Government.

I put over 20 years of deep study of politics and of government and 20 years of practical experience in the maelstrom of politics into that prophecy. I decided to risk my own political future on that diagnosis, and so I chose the legislative questions upon which I would make my chief fights. I did not choose too many subjects, for it was Theodore Roosevelt who said that a politician must be practical and center his strength on causes and crusades that are attainable; that one must not waste one's talents and energy in being too idealistic nor in scattering one's fire too much.

So I centered my attention upon the general welfare of Detroit, which fortunately in all my stands in Congress has meant the general welfare of the country and of mankind, in my humble opinion, for Detroit is one of the great beacon lights of civilization, with its genius for manufacturing certain great necessities of life at low cost and with its gospel of high wages, short hours, high speed, quantity production, and the utmost utilization of machinery.

Every Member of Congress I ever met showed intense interest in Detroit and asked questions about our wonderful city, its leaders, its workers, and its industries. Henry Ford got the House's vote for Muscle Shoals solely on his own reputation and Detroit's reputation for doing things. Many voted for Muscle Shoals, in the last analysis, on that faith. I know I did, because I hesitated to give that great Government plant to any man or company for a hundred years in whose honor and ability I did not have perfect faith.

Detroit's unparalleled growth, prosperity, and international fame is due almost entirely to the automotive industry. That industry is now the second most important in the United States. The automotive business has overtaken and passed railroads, textiles, iron and steel production, and every other American industry but agriculture, and is pressing hard on agriculture's heels. Over $20,000,000,000 is directly involved in the automotive industry to-day.

If any setback or disaster would happen to the auto industry, Detroit would collapse like an eggshell. Nearly every Detroit business man would find his fortune cut down or threatened by serious injury to the automotive industry; tens of thousands of workers would be immediately thrown on the

streets, and soon gaunt want would stalk in their homes. Brevity forbids my elaborating on the fearful picture.

That was why I formed what is generally known throughout the country as the "automobile bloc" in Congress. And that was why there was written in a couple of months this past winter what is called by the official magazine of the automotive industry "the most interesting chapter in the political history of the motor vehicle."

Few people knew before I began my fight that on the automobiles and motor trucks running to-day over a billion and a quarter dollars in taxes have been levied. These taxes are paid by the owners of the cars—the 15,000,000 of motorists in the country—and they, least of all, knew that they are paying twelve hundred and fifty millions of dollars on their machines in Federal, State, county, city, and village taxes.

Detroiters, vitally affected in their pocketbooks by this industry, did not realize that the auto is taxed more highly and more often than any other commodity used in the United States. It has been singled out by legislative bodies, tax assessors, and collectors in every political unit in the country.

This crushing burden of taxes is a millstone around the neck of the auto industry, which has had such marvelous vitality and buoyancy that it has kept afloat and progressed in spite of the handicap. But in hard times or in a period of retrenchment the billion and a quarter taxes would be enough to put many workingmen on the streets through curtailment and even enough to ruin some factories. For every reduction of the cost of cars and of the selling price has seen more cars sold. Conversely, such a fearful load of taxes must curtail sales.

That was why the amazing success of the automobile bloc in the recent session of Congress was the most interesting chapter in the political history of the automobile. For the auto is in politics. Congress and politics are in every man's life, his private life, telling him what to drink and taxing what he has to eat; and in his public life as never before in the history of mankind. And so many utilities, as the moving picture, railroads, the radio, the auto, and so forth, are dependent for their very existence upon politics.

But let this official magazine, published in New York City and known as Automotive Industries, tell the story of the automobile bloc. So trustworthy and up to date is this magazine regarded by auto manufacturers that one auto company in Detroit buys 2,700 copies each issue and supplies them to its officials and workers so that they may keep in touch with the latest developments of the auto business.

Let me quote a few excerpts from its issue of March 6, 1924, as follows:

The automobile bloc in the House of Representatives has scored a great victory in its fight for a reduction in automotive excise taxes. Success is the more surprising because there was no such bloc until December 10, 1923, and when it was organized it contained only one member. * * * Representative ROBERT H. CLANCY, Democrat, of Michigan, conceived the notion of organizing his one-man automobile bloc. * * *

Mr. CLANCY is not unfamiliar with the intricacies of politics. He knows all about the voices which Congressmen must hear before they can be convinced. * * * With his convictions, his vision, and his political astuteness, Mr. CLANCY had no great difficulty in adding the Democratic members of the Ways and Means Committee to his bloc. Under his leadership they vigorously espoused the cause of automotive excise tax removal or reduction. He made a ringing speech on the floor denouncing the majority for deserting the Nation's greatest industry and in support of the bills he had introduced for the removal of all the automobile excise levies. * * *

While demands for action poured in from outside, Representative CLANCY argued and cajoled inside the House. He is not a simple, trusting soul. He doesn't believe everything he hears, and thus it was that he was skeptical of success even 24 hours before the automotive sections of the bill came up for debate on the floor. Although he made his plans carefully he was suspicious that some one would try to "put something over" on him.

Those persons who are interested in motor vehicles are not likely to forget, however, that it was Mr. CLANCY who championed their cause when it had few friends in the House, and that but for the fight led by him the automotive sections of the tax bill would have been left exactly as they were when the measure was reported by the Ways and Means Committee.

That is, the auto people would have gotten nothing and would have paid during the current year in Federal war excise taxes alone upward of $160,000,000.

I now read a few more expressions of thanks for the fight I made for Detroit's basic industry.

Harry M. Jewett, president of the Paige-Detroit Motor Car Co., wrote me as follows:

I certainly wish to congratulate you on the splendid efforts you have made in cutting down the Federal excise tax on motor vehicles and parts.

You put up a game fight for a good cause and represented us in splendid shape.

Now, Detroit has many great factories manufacturing parts and accessories for autos, such as the Fisher Body Co., the Briggs Manufacturing Co., American Motor Body Co., J. C. Widman & Co., employing tens of thousands of workmen.

The secretary of the Automobile Body Builders' Association, having been through the entire fight in Washington, wrote all the body companies of the United States as follows:

We have the honor to make an announcement that, to our knowledge, has never been made in the automobile industry before.

He then tells of the reduction voted by the House, and goes on to say:

We have to thank for this result the untiring, fighting, and maneuvering of the young Representative, ROBERT H. CLANCY, of Detroit. * * *

We sincerely urge that you will make it your business to see that proper credit is given to Mr. CLANCY. He has proven a successful champion of the automobile industry, and we do not hesitate to state that we believe such a man would be a good one to keep in Washington.

Similar expressions came from other great auto organizations of the country, also from hundreds of dealers, firms, and individuals from nearly every State in the Union.

The manufacturers' association, the National Automobile Chamber of Commerce, met in New York City, praised my efforts, and sent me a warm letter of thanks.

The American Automobile Association expressed to me its gratitude. So did the Motor & Accessory Manufacturers' Association, the National Automobile Dealers' Association, and other auto and motor-truck organizations.

They placed the leadership of the fight in the House absolutely in my hands, and then when the battle was transferred to the Senate they paid me the further compliment of giving me the leadership there. I had 15 to 20 close friends in certain Senators, and they helped us to victory there. Both in the House and Senate I used Democrats and Republicans to win the victory. I tried to make championship of the automotive industry nonpartisan and bipartisan, and in view of the particularly partisan bitterness of this present Congress, the result was peculiarly successful.

One of the strange features of this campaign was that the "farm bloc" came to my aid and gave powerful assistance. I had attacked the "farm bloc" early in the session and had begun the organization of the "city bloc" to protect human and property rights of cities. But the "farm bloc" came to the aid of my "auto bloc," and in consideration of the friendliness of the "farm bloc" to the "automobile bloc," the activities of the "city bloc" were temporarily dropped. However, the "city bloc" contains elements of strength and cohesiveness that may sometime exert control in Congress.

Even if we had not gained a dollar of tax reduction in the House and Senate for the auto cause, we achieved two strategical victories which are full of hope for the future. First, I aimed to make it a Democratic policy to adopt the auto industry as a favorite child, as a favored cause, and that crusade was successful. It is now the historical policy of the Democrats to protect the auto industry. I lined up all the House Democratic leaders and the 11 Democratic members of the Ways and Means Committee, also the entire rank and file, over 200 Members, of the House.

Then I went to the Senate Democrats, who with the insurgent Republicans control that body, and showed them what the House Democratic policy was. They fell into line.

This Democratic policy is of tremendous importance, because all the portents of the coming fall election are that the Democrats will be given control of the White House, departments, House, and Senate. The Democrats also fathered the Federal good-roads cause and established that bureau of the Government in President Wilson's administration.

The other big achievement fruitful of good to come is the uniting of jealous or noncooperating automotive organizations. This Federal fight for tax reduction brought that alliance and understanding about. In union there is strength. I insisted as forcefully as I could from the beginning that the automotive organizations make every possible sacrifice to protect the industry and the customers who paid the enormous taxes.

With unified organizations and with powerful friends in the House and Senate the auto industry can go on in the near future from victory to victory.

DEPARTMENT OF COMMERCE BRANCH

The obtaining of a $15,000 appropriation to establish a branch office of the Bureau of Foreign and Domestic Commerce in Detroit is a tremendously important achievement for Detroit. It can be easily demonstrated that increased prosperity for the automotive industry and for Detroit and Michigan may be achieved in large measure through getting foreign trade. The dropping of the tariff against autos in England and other European developments made the time for establishing the Detroit office peculiarly auspicious. For 10 years Detroit had spasmodically, and now and then desperately, tried to obtain this branch office.

The $15,000 appropriation was a last-minute affair. Detroit was tied up with Los Angeles and Portland, Oreg., and the whole item was slashed out in the Senate. Just one hour before the completed bill, without the Detroit item, was going on the Senate floor, I got very busy and lined up a considerable bunch of Senators—Democrats and Republicans. I interviewed personally the Republican Senator who is chairman of the Senate Appropriations Committee, Senator WARREN, and I found him very fine. He called his committee for a very hasty meeting at a very busy time, when the immigration bill was creating a furore on the Senate floor, and allowed me to address it for two or three minutes.

I got Senator FERRIS out of the Post Office Committee, and he really helped tremendously. He was very kind, in the first place, to leave his important postal-increase matters, and so forth, to come with me. Senator HARRIS, of Georgia, was also of the greatest assistance. I was such good friends with some of the Democratic Senators of the committee, who had to stay on the Senate floor, that they gave me their proxy to vote, not understanding my proposition fully and not having time to listen to it. That showed an unusual degree of confidence on their part. Senator OVERMAN, the ranking Democratic member of the committee, threw his support heartily to me in the committee.

My speech ran about like this:

Senators, it is a rare and gracious thing you have done to-day for me. I know how busy you are, how harassed. I know how carefully you considered this item for Detroit before you cut it out. I know how unusual it is for you to reopen an appropriation bill after it is fully printed and ready to go on the floor of the Senate. Your able and most distinguished chairman, Senator WARREN, has been more than generous in allowing me, a Member of the other House, to presume to address you. I am very grateful.

You know my city, Detroit, which has done so much to make life easier and happier for all mankind. You know that magic name, Detroit, as a beacon light for struggling and suffering humanity. You know our high scale of wages, our modern high-speed, mass-quantity production methods. You know our never-say-die spirit as typified by Ty Cobb and others of our nationally famous men.

This is an export-trade item. Can you name me a city in the world of more distinct manufacturing genius? Surely you can not name me one in this country which you are serving. We have the greatest factories in the world in certain lines, driven by most enlightened and progressive men. Why, during recent years give such an office to other cities and not to Detroit? How absurd!

We lead the world in automobiles, adding machines, stoves, drugs and medicines, varnishes, and a number of other products which I shall not name. I must hasten on, for time presses.

I know the marvelous foreign service you have built up through the millions you have appropriated during the past 11 years. I helped to give birth to that service in a small way. I was with Secretary of Commerce Redfield and Assistant Secretary Sweet in the department from 1913 to 1917 when the hard pioneer work was done. In 1913, when the United States first went after foreign trade in a conscious and intelligent manner, Germany was spending more money in New York City alone to get our trade than the United States was spending all over the world for foreign trade. But it is different now. High-grade American commercial attachés and agents are found all over the world.

Give Detroit a real chance to utilize that service and we will see that this $15,000 comes back to our mutual country ten thousandfold. We buy our raw materials for our manufactured products all over this country—probably in all the States represented here at this committee meeting. When Detroit gets hundreds of millions of foreign trade it can not but boost prosperity in the United States. This is one country, and what helps one city helps all.

Give us a chance and we will take this world trade from our competitors in Germany, Italy, England, Japan, France, Belgium, Holland, etc. We can meet the world face to face and lick them at their own game with our spirit, our machinery, our driving methods, our high-speed, quantity-production system.

You know I am not boasting nor trying to bunk you. You are well-informed men. You know I speak the truth. You know world-trade competition, and you know that wonder city and its products—Detroit and "made in Detroit"—already known around the planet wherever human beings toil and suffer and aspire.

I am very sorry if I have talked too long. I thank you again for your generosity and forbearance in hearing me. I will now withdraw.

Senator OVERMAN asked me some questions. Senator JONES of Washington, in charge of the commerce appropriation bill, also did. They asked Senator FERRIS if he wanted to speak. He said he did not, that his friend CLANCY had covered the subject fully. All he wanted to do was to vouch for Detroit and his wise young friend CLANCY. He hoped earnestly all would vote for Detroit.

I then withdrew. Senator JONES, the Republican in charge of the bill, moved that the item of $15,000 be included for Detroit, but that no other cities be given such an agency at this time. The motion went through unanimously. An unusual thing was that when the bill went to the Senate floor the Detroit item was written in ink and the rest of the bill was printed. That demonstrates the last-minute action.

I then went to work on the Senate, where I understood some Senators were going to fight the increases made by the Senate committee over the House bill. Later when Senator KING, of Utah, a former University of Michigan man, made protest on the floor against a number of Commerce Department increases, and particularly those dealing with foreign trade, the only exception he made was on the Detroit item. That went by on the preliminary debates unanimously, with always enough Senators on hand to save it if it were contested and a vote taken. All my Senate friends were loyal.

On the final debate Senator MCNARY, of Oregon, tried to get through a similar branch office item for his largest city, Portland. He is one of the most popular Senators, is a Republican on the powerful steering committee of the Senate, and was up for reelection and needed help. But the Senate voted him down. Senator JONES defended the Detroit item, eulogized Detroit as a great manufacturing center and as a contender for world trade. Detroit won in the Senate.

Then came a nasty fight with the House conferees. Two out of the three were dead set against such increases in the Senate, and a powerful conferee was very much opposed to the Detroit item.

I worked on the two hostile conferees, one a Republican and the other a Democrat, for two weeks. I brought all my friends and all my knowledge of politics to bear. The loss of either conferee would probably have been enough to defeat the Detroit item.

I won them both on the Detroit item and did what I could to line them up for the other foreign-trade increases. They cut the latter down but let the Detroit item go through in full.

Then the House confirmed the conferees' report. I had enough friends on hand to sustain the Detroit item if it had been contested.

Finally the President signed the Commerce appropriation bill, and it became a law.

FURTHER DETAIL ON THIS AUTO IMX-REDUCTION CAMPAIGN

The most interesting chapter in the political history of the motor vehicle has just been written, according to an article in the Automotive Industries magazine by James Dalton.

But it should never be forgotten that if it were not for the powerful support, cooperation, and assistance given me by the nine automotive organizations, and particularly by their Washington representatives, the victory probably never would have been won.

In the dark, critical moments of this fight—for fight it was through six long months of intense strain and anxiety—I developed a certainty of the loyalty of these Washington agents.

Among these men were Pyke Johnson, Alfred Reeves, C. C. Hanch, and Norman Damon, of the National Automobile Chamber of Commerce; Ernest Smith and M. O. Eldridge, of the American Automobile Association; Carey E. Quinn, F. D. Mitchell, and F. D. Willoughby, of the Automobile Body Builders' Association; Mr. Heminway, of the Motor and Accessories Association; and a number of others. These men were particularly helpful and efficient.

These men paid me the great compliment after the fight had been going on some weeks of accepting me as the leader in the crusade. They accepted my advice as to what was the best thing to do, and they did what I asked them to do, whether it was to send out thousands of telegrams stirring up the country or putting a short, snappy argument in the form of a card,

cartoon, or display sheet on the desk of each Congressman or Senator for 29 or 30 days consecutively.

It was that kind of earnest cooperation, teamwork, and common counsel which really won the first great political battle the automotive industry ever staged. Each day we met in my office for many weeks and planned the strategy for the drive and took common counsel.

It is no secret to the men who were on the inside of this fight that at first it was rather hard to whip the organizations into line and get them to bring their great resources of membership to bear upon Congressmen and Senators. That task required infinite patience, forbearance, and also pressure carefully applied.

The organizations were discouraged. For three long years they had been rebuffed by the Treasury Department and Congress. Secretary Mellon had brusquely told them that the war excise taxes on autos should be raised rather than lowered. He said that anybody who could afford the luxury of an automobile could afford to pay these taxes.

That was the general attitude of the old guard leaders in the House and Senate and is shown clearly in the hearings and speeches. That was why I took the House floor and went after the old guard hammer and tongs February 18, and told them 15,000,000 motorists were getting ugly, angry, and indignant, and were going to vote their wrath at the great injustice being handed out them in a hard-boiled manner.

I had my charts and maps there and explained how well organized these motorists are in nine big associations, led by men who are keen, alert, intelligent, and full of fight. That speech I really think was the turning point of the session's struggle. I had the Democrats very well in hand, some 210 of them, and I had all their 15 or so leaders 100 per cent. We had the progressives pretty well also. After that speech the liberal Republicans began to come on our band wagon and soon the one-man bloc consisted of 435 Members, for the old guard leaders of the House scudded for shelter before the storm.

The 11 Democratic members of the Ways and Means Committee, and 2 Republican members of that committee—Representatives MCLAUGHLIN of Michigan and CROWTHER of New York—had worked for auto-tax reduction in the committee, but failed to gain their objective. Then we took the fight to the floor of the House, and what did we accomplish?

THE CAMPAIGN GAINED MUCH

We struck off the backs of the motorists of the country and off the industry a tax burden of what we conservatively estimated at $25,000,000 per year, but what is in reality, I believe, closer to $35,000,000 on this year's taxes and a larger amount each year hereafter, as the number of cars in the country increases.

We killed all the sales taxes on the light trucks of the country, and we killed half the sales taxes on tires, tubes, parts, and accessories. The trucks repeal involves an admission that the automobile is not a "luxury," which is the chief argument used by the Treasury Department and Congress for insisting upon these sales taxes; and the other repeal does the same and is a direct gain to every user of automobiles in the country in that it saves on replacement parts between twenty and thirty millions.

But that is but a small part of the victory. For the first time the greatest industry in the land has been taught its political strength. The bloodsuckers and the parasites on its body have been pointed out, and it will soon cleanse itself. Torpid and stupid politically, the industry has been lashed into action. It has been taught that it is mean and ignoble, treacherous and short-sighted not to protect the industry as a whole, and particularly the customers thereof, against gouging and grafting exactions.

When our country was but a puny infant among the nations of the world it shocked European diplomacy by defying the pirates and parasites of Tripoli with the slogan "Millions for defense, but not one cent for tribute."

The automotive industry is now the giant of them all in this country, having passed railroads, textiles, iron and steel, telegraphs and telephone, and so forth. But it not only pays tens of millions tribute in a mean, stupid way to the multimillionaires of aluminum, oil, iron and steel, rubber, copper, brass, glass, lumber, and so forth, through manipulation of the tariff, through other governmental agencies and combinations of trade; it also pays taxes to all the political units of organized society—Federal, State, city, county, and so forth.

The amount was $450,000,000 last year. That is staggering. And it all need not be.

All that will become clear in the months to come if I have my way. Our recent victory has torn the scales from our eyes, as well as showing us our strength. We are beginning to see who our enemies are as well as our friends.

AUTO INDUSTRY MUST WAKE UP

Above all there should be some ethics in this industry, some ideals, some loyalty, some enlightened unselfishness, if not downright generosity and gratitude. All the world hates an ingrate. It is the solemn duty of the orgnizations of the various parts of the industry and of the motorists to protect the motorist, the customer who has made all these factories, all these stupendous fortunes. For we all know these hundreds of millions of dollars of exactions of which I speak fall solely upon the back of the user of the cars. They are on his neck and reach into his pocket. They are at the same time a millstone on the neck of the industry itself.

The auto industry must protect itself or it will be the prey of despoilers and assassins. Let me show the rule of life by two illustrations.

Last August, a few days before President Harding died in San Francisco, I was sailing up the Mexican coast in the Pacific Ocean. It was a wonderful day upon a wonderful ocean. We had not long since left old Panama, where Sir Francis Drake over 300 years ago had razed and raped, looted and murdered, and burned and destroyed in a frenzy of energy and passion. He had sneaked across the fearful trails of the Isthmus, so deadly with fever and a thousand perils, had found the city all unsuspecting, and had massacred men, women, and children. There are many Sir Francis Drakes looting honest business and Government to-day.

The fearless, upstanding young captain of a submarine beside me was telling me of a battle he had witnessed some months ago in these waters between a huge whale on the one side with a shark and a swordfish on the other. It was a titanic struggle between giants and the water was lashed to foam.

With demoniac fury the shark and the swordfish attacked the whale. The shark would shoot half its length out of water and fall with a crash on the whale's back and sides, tearing out with its razor-like teeth great chunks of flesh. With lightning-like speed and terrific power the gigantic swordfish would sink its spear into the vitals of the whale.

Soon the battle was over. The huge body of the whale quivered convulsively; the vibrant tail ceased its threshing. The leviathan of the deep was dead. The green-blue ocean was colored carmine with its blood.

The cold, calculating, murderous hate shining in the little eyes of the shark and of the swordfish turned to the victorious light of ardent desire, of blood lust about to be satisfied. Greedily they fell upon the still warm carcass and gorged themselves to their heart's desire, crowding each other avariciously for the vital parts. The carrion birds of the air came and picked out the eyes of the leviathan. They gorged themselves on the whale's body.

Tens of thousands of predacious, voracious, finny assassins and cannibals of lesser power than the shark and the swordfish swam madly to the feast. These gluttons tore fiercely at the whale for days.

The shark and the swordfish had shown no pity, no mercy, no sorrow, no remorse. Neither had the lesser fry. In all the animal world there was no pang of regret for the splendid leviathan, the biggest of all animals, land or water.

The shark and the swordfish hated each other with a bitter hate. They distrusted each other and would battle to the death to make a square meal out of each other if there were no easier food close by. But the whale was easy money, easy food, and they, these gunmen of the deep, took his life without a twinge of conscience. On the whale they developed perfect teamwork, fine cooperation.

It struck me at the time that the true parallel in business and politics would be to depict the automotive industry as the leviathan of big business to-day, being speared by oil as a profiteer and gashed by the railroad interests which fears auto competition, while a host of predacious, cannibalistic lesser fry, such as rubber, lumber, both soft and hard, aluminum, copper, and so forth, take their toll.

All these special interests are old at the Government game. Their creed is that government is to despoil the weak who can not defend themselves and the strong who are unwary. They use the tariff and taxation measures generally to mulct millions wherever and whenever they can.

Who can say that the Aluminum Trust needed the additional tariff raise it got in 1921? It admitted in the congressional hearings that it is a complete monopoly in this country, but claimed that it is a "benevolent trust." It maneuvered a tariff

raise, boosted the prices immediately to automobile manufacturers, and pocketed millions on the graft. Its notion was just as vicious, just as wrong, as that of oil was in paying $100,000 to a Cabinet member to help make $100,000,000 out of Teapot Dome. But it is done within the law.

I attacked that action of aluminum and if I stay in Congress I will see that tariff rate put back where it belongs. The auto organizations should help in that movement. The only safety when these sharks and swordfish are around is in keeping your eyes peeled and using the weapons God gave you. Now let me recount somewhat in detail some of the high lights of the fight and how we won our contentions.

GETTING ATTENTION

One of the most difficult things to do in Congress is to get attention. No matter how worthy the man, the measure, the movement, or the crusade all is impotent unless attention is gotten.

I have heard old Members say, and it is set down in the CONGRESSIONAL RECORD, particularly in the eulogies of deceased Members, that some men have been there at least 10 years before they could get an effective hearing. The House and Senate treat new Members as college men treat freshmen. They are to be seen but not heard.

The eight or nine powerful automotive associations have declared from time to time in bulletins, letters, telegrams, and magazine articles that I had the leadership in this fight both in the House and Senate; that I brought the question to the fore, and that the victory would not have been won without me. That has also been stated in some newspapers, particularly some eastern ones, as in the great dailies of New York City.

How did I get attention for this most worthy cause? Well, probably the most sensational way was by unconsciously starting a terrific fracas on the floor of the House, featured by a couple of near fist fights and the bandying of epithets, with personal and party feeling worked up to a furious pitch. That was the stormiest day of Congress in many years, that February 28, when the row over automobile reduction took place.

One hundred and twenty Members swirled in the well of the House that day, most of them yelling angrily at the top of their voices. I yelled as loud as, if not louder than, anybody there. One of my Democratic friends, mistaking something I said, threatened to knock my head off, and drew back his fist to do so. But luckily the fist was caught en route by our regular leader, a stanch friend of mine, FINIS GARRETT of Tennessee.

The representatives of the automotive organizations were in the gallery and were much alarmed. They met me a few moments after the fracas, white faced, and afraid that our cause had been ruined.

I told them not to worry; that it was but one stage in the development of the battle; that we were turning on the spigot of publicity; that we were telling the country that somebody was trying to fight for justice for 15,000,000 motorists who are voters; that a fracas or near fist fight is always sure shot for the front pages of newspapers.

I told them a beautiful row like this would carry on the front page of every live newspaper in the country; that the press associations would carry it big and the special writers would feature it; and that there would probably be editorials and magazine articles as an aftermath.

These organization men had complained to me of the cost of stirring up their people back in the districts by telegrams, letters, bulletins, and traveling agents.

"Now, you are stirring them up in the easiest way," I said. "You are getting a million dollars' worth of attention and publicity for your cause, scot free, absolutely gratis. Fear not. We have too much support now in the House to lose our objective. We are merely digging in, consolidating the ground we have taken, and will weaken the enemy with the propaganda that will come from back home as a result of this publicity."

The next day practically every paper in the country carried a story on the House fracas. The New York Times, quite generally recognized as the brainiest and most capable news gatherer of the country, broke out on the front page and devoted three and a half columns to that afternoon in the House. Other papers, according to their space and resources, carried it in less measure. Editorials also followed on the near fist fight of "Mustang Jack" and "Auto Bob." Even stirring poetry was written on that row.

But it would not be quite correct to overemphasize this fracas on the floor of the House as the crisis of the fight for auto-tax reduction. The basis for victory, for getting attention and favorable conviction of the minds of the House Members, was deeper and more varied than that. A more patient and sounder foundation was laid. More time, toil, and thought was expended than on that violent afternoon.

WHAT WON THE FIGHT

If I were to enumerate quickly the elements of the auto tax victory, I would say these were:

Friendship; automotive organizations; propaganda through the radio, newspapers, trade magazines, letters, telegrams, bulletins, circular literature, display literature, cards, small and large maps, huge charts for the House and Senate floors and committees; and party appeals.

Now let me try to make clear briefly what I mean by the above.

In a campaign of this sort there can be no success without friends. I think by far the greater part of the victory goes to my friends in Congress and in the automotive organizations.

I made friends among the Democratic leaders, and by patience, perseverance, persuasion, and above all, by the utmost persistence, I lined them up for the cause. The rank and file of my party fell in behind them. That was true of the House and Senate.

I had a few friends on the Republican side. I made more. I battered and pounded the opposing Republicans, stole away their support, then compromised with them and treated them generously.

That was how the victory was made unanimous, for our victory for $25,000,000, as estimated, was unanimous in the House and Senate. And we have left very few sore spots, very few enemies behind.

The Ways and Means Committee, the most powerful committee of the House and the one which handled the auto tax question, soon included several warm personal friends. These men did everything within reason to help me. So also in the Senate I had many warm, powerful friends. They made the fight a success there.

Many of these men had been in the House and knew me when I was in Washington before, and because of their merits had won promotion to the Senate.

If it had not been for the true friendship these men in the House and Senate bore, their ardent desire to grant me a favor and help me to reelection, I am absolutely confident we would not have won the recent fight.

If it had not been for the friendship of the representatives of the automotive organizations, the fight would have been tremendously handicapped. I had never seen any of them before December, but soon a warm friendship sprung up among us. We developed the camaraderie, the morale which is necessary for any crusade of this sort.

As for the third element, there is no more interesting phase of politics to-day than that of propaganda. The war made it popular, for the propaganda of the Germans, British, and other governments of the war awakened thoughtful men everywhere. The Red Cross, Y. M. C. A., Liberty loan managers, Knights of Columbus all used propaganda to raise their funds and swing public opinion.

There was good and bad propaganda. A few years ago I instituted a great propaganda drive to boost the University of Michigan, and it was very successful. The most carefully planned, most expensive, and widespread propaganda ever run in this country was the propaganda for the Mellon plan.

It was astoundingly successful throughout the country, and the country was sold on the plan. But the very methods of the propaganda defeated the cause it aimed to win. Congress was disgusted with the methods used to put over a plan very hard for the average person to understand, and became very suspicious of the source and motives of the men behind the propaganda. When the final votes were taken only 2 Senators out of 96 in the Senate voted for the Mellon plan.

Six voted against the revenue measure adopted, and which repudiated the Mellon plan, but of these six Senators four voted against the plan finally made law because it did not go far enough away from the Mellon plan. In the House only 9 out of 435 Members voted against the revenue measure adopted and for the Mellon plan.

Well, what the Mellon plan was in crudeness and inefficiency our automobile propaganda thrown on the country and on the House was not. That is sufficient. We had a careful system of propaganda, worked it to a peak, both in the House and Senate, held the interest long enough to put over the knock-out, and then receded. I have been in many propaganda campaigns, but have seen few worked more cleverly or to better advantage than the automotive drive. Many Senators and Congressmen say the same.

DEMOCRATS SEE OPPORTUNITY

As for the party pleas, they were effectual with all three parties. I showed the Democrats that we had an opportunity to take advantage of the blunder made by the Republican old guard in arousing the hostility of 15,000,000 voters. The Democratic leaders gave me the courtesy of addressing the rank and file in secret caucus. With my maps and charts I took full advantage of that opportunity and made scores of votes there; in fact sewed up the party pretty well, and that party had 210 votes in the House.

I showed them that under their recent great leader, Claude Kitchin, and their recent campaign chairman, Frank Doremus, whom they all loved, the Democratic Party had taken a stand against these auto-sales taxes from 1911 to 1917. I showed them that the Democrats had been the patron of good roads in the country and had founded the good-roads division in the Federal Government under President Wilson. The Democratic Party did that, and it is written into the CONGRESSIONAL RECORD by a number of our leaders. That party may soon win all branches of the Government in the fall elections. Then its friendship will be vital. It is quite so now.

There is common work ahead in taxation matters, in using the Government in various ways. For instance, I supported a $25,000 item in the Bureau of Standards, one of the finest laboratories in the world, to help develop the automotive engine by a series of profound studies and experiments.

THE RIGHT THING TO DO

Henry Ford told me at a football game at the University of Michigan last fall, in one of his serious moments:

The main thing in life is to find out the right thing to do in any case.

That was a very profound thought—not what is the easiest thing to do, the most selfish, or the most sensational—just the right thing; then go ahead and do it though the heavens fall.

The right thing for the automotive industry and its various organizations to do is to protect the industry, and above all its customers, from hostile governmental action, from greedy, unscrupulous interests which have been using government to despoil; then on the converse side use government to develop the industry by good roads, fair shipping rates, scientific bureaus, and the passage of laws for the general good of the industry.

The automobile is inevitably, and through no choice of its own, in politics. In fact, it has been for some time. But now it is conscious of how much it has been losing through politics, and how much it may gain. Why not make the most of it?

THE MELLON PLAN

A strange mania, a wild obsession, seized the business world last December when Congress went into session. Big and little business men went fairly frantic over their fears and hopes. The Mellon plan was the cause. If the Mellon plan was not adopted without the crossing of a "t" or the dotting of an "i," all was lost. Factories would close, banks would break, bread lines would form. Disaster and gaunt famine would stalk a theretofore fair and prosperous land.

For 10 days Congress was swept off its feet, for the country was absolutely solid on the Mellon plan. It was a bold politician who dared to raise his voice against the Mellon plan. Since then the Mellon plan has been absolutely repudiated by the Congress; and the President, a sled-length backer of the plan, accepted its repudiation by approving it with his signature.

In the Senate, well stocked with conservative and old guard Senators, only two Senators out of a total membership of 96 stuck to the end for the Mellon plan and voted against the Simmons plan which repudiated it. Six Senators in all voted against the Simmons plan, but four of these six were Farmer-Laborities or Progressive Republicans who thought the Simmons plan did not go far enough against the Mellon plan.

In the House, only 9 out of 435 Congressmen voted against the plan which repudiated the Mellon plan, and some of these 9 said they voted against the victorious plan because they did not like certain incidentals such as publicity of the amount of tax paid by income-tax payers which was a check against fraud and the dodging of taxes. The publicity did not provide for revealing the details of a man's business or private fortune. The proposed publicity had been found helpful in some States in getting tax dodgers to stop falsifying their tax returns.

Now, why this most astounding debacle of the Mellon plan in the morning marching proudly and confidently to anticipated victory, with banners flying and all hands gaily chanting; and in the afternoon a thing of rags and tatters, overwhelmingly defeated and in utter rout, with but a scant few of the rear guard making a dodging, running resistance? What of the old guard, whose only claim to respect was that it knew how to die?

The old guard dies, but never surrenders.

Well, some of the old guard say their attack was "scientific," and the battle must be fought over again this fall, with the people deciding instead of Congress, which does not fight on "scientific" lines. But science never fails, the old guard says.

In just what respect was the Mellon plan "scientific"? I received about 400 telegrams and letters from a big business city of a million and a half people asking me to stick for the Mellon plan because it was "scientific" and would save the business world of the country. Just then the country was having its greatest prosperity.

These 400 were the result of an intensive propaganda, carefully thought out and planned many months ahead, in which practically all of the million and a half of Detroit were solicited to write or wire me. The moving-picture houses asked their patrons to write me; great business organizations of tens of thousands of members were asked to write or wire me; employers asked their employees to do the same.

But only 400 fell for the propaganda. They sent me circular letters or telegrams already prepared for them, or they varied the forms slightly, or they advanced their further thought on the subject.

I received most of these letters or telegrams before the Mellon plan was known. It could not possibly be known, for the bill was not printed; and despite the most desperate efforts of Senators and Congressmen to get a copy of it at the time their mail was being swelled by the propaganda they failed.

Finally it came out, and contained 344 pages of highly technical language. I had been a tax expert of some experience, for I had been through the revisions of the Wilson administration. I had also been United States customs appraiser of Michigan for five and a half years, interpreting taxes to the people. But I did not get the full meaning of the Mellon plan at first.

For two months the House Ways and Means Committee went at it with detailed hearings, and then the Senate Finance Committee went at it. After four or five months the truth was quite clear. It was difficult for opponents of the Mellon plan to get figures and statistics from the Treasury Department. But tax experts were consulted. Also many Congressmen and Senators are tax experts of from 10 to 25 years' experience in framing tax laws and in digesting nearly everything of note written on tax theory and science and practice.

Well, briefly, the Mellon plan meant that the very rich should get a 50 per cent reduction of their taxes and that the middle and lower classes of people should get a 25 per cent reduction. It meant that six very rich men, of whom Mr. Mellon was one, should get twice as much tax relief as 1,000,000 other income-tax payers of the country.

Is there any wonder that the Republicans themselves refused to stand for it? The theory of the income tax which is adopted in all the largely civilized countries of the world is that those who have the ability to pay taxes shall pay the larger portion of them. That is the theory adopted in this country after many years of intensive debate. The Supreme Court passed on the question a couple of times. It is provided for in an amendment to the Constitution. It is recognized universally as just and fair. Only a very few rich men, getting their enormous fortunes from organized society and protected in holding them by organized society, try to fight the principle of the income tax.

It is recognized that a laborer with six children must see some of those children go without some of the necessities of life, as food or shoes or clothing or fuel, if he is taxed severely by the income tax. Every single dollar counts. It is inconceivable that a multimillionaire or his children should go without the necessities of life if he pays the taxes called for in this country.

But the Mellon plan provided that those who could afford to pay should have their taxes cut in half and the poorer people should get only a quarter reduction. That was why the leader of the Republicans in the House, Representative NICHOLAS LONGWORTH, refused to support the Mellon plan. That was why the chairman of the Ways and Means Committee fought the Mellon plan. That was why one Republican leader after another in the House and Senate split their party and faced political ruin. Nobody ever accused them before of disloyalty to their party. But the Mellon plan was too raw, too hard-boiled, too selfish. It would get through to the people eventually, and then the party would be ruined anyway.

The Fordney-McCumber tariff was raw and hard-boiled and was put over when the Republicans had an enormous majority of the House and Senate in 1921 and had carried the White House by 7,000,000. But the Republican Party lost the House and Senate immediately in 1922 largely because of the Fordney-McCumber tariff and the double-crossing on the bonus. The party had promised the bonus in the elections of 1920, from President Harding down, and had then double-crossed. That had an effect, but the Fordney-McCumber tariff was the big thing.

In that tariff law the Republicans of the House and Senate had seen Mr. Mellon's aluminum trust, the Aluminum Co. of America, which admitted in the hearings that it was a complete monopoly, write a plank which raised the price of aluminum to the consumers of the United States and took an enormous toll in tariff graft.

They did not have so very much confidence in the altruism of Mr. Mellon's motives, and they did not believe the propaganda that Mr. Mellon was sacrificing a whole lot by going into politics. I believe, in fact, that no American, living or dead, and no man in the world's history has made more money indirectly out of participation in politics than Mr. Mellon. And he also has stood for multimillionaires of his class making money out of politics, out of the tariff and of taxation.

Briefly, the plan which repudiated the Mellon plan in the House and Senate and became law meant much to the very persons who write me from Detroit.

It meant a reduction of about twenty-five millions in automotive taxes. These taxes are on the motorists of the country and on the 200,000 and over owners of trucks and autos in Detroit. They are a millstone on the neck of the automotive industry, which has made Detroit's prosperity and benefited every resident of Detroit in larger or lesser measure. The motorists of the country pay $450,000,000 on their machines alone in Federal, State, county, city, and so forth, taxes. There is a burden of over one billion and a quarter dollars on the autos now running in the country in these taxes alone.

Yet Mr. Mellon said the auto taxes should not be decreased but should be increased. He believes in a sales tax to help him and his class escape the income taxes. He and his kind have schemed to break down the income taxes and substitute the sales tax, which would be a great burden to the poor. All the farm organizations and the American Federation of Labor are bitterly opposed to the sales tax. Mr. Mellon wants it badly, and he wants the auto "soaked" because it is a luxury, he says, which is untrue. The railroads want the taxes increased on autos because they compete with the railroads in hauling passengers and freight. Mr. Mellon is the best booster the railroads have in this country.

I had the leadership in the fight for the automotive industry in both the House and Senate, according to the auto magazines and organizations. It was rather peculiar wit and humor for Detroiters who made their fortunes out of the automotive industry, directly or indirectly, to send me letters and telegrams to support Mr. Mellon and his plan, which was "soaking" Detroit. Some of them got real ugly about it, too.

None of them circularized me to save Detroit or the automotive industry or the motorists. None of them wrote me letters or telegrams to that effect. That was my own fight, with my back to the wall, against Mr. Mellon and his gang in the House and Senate.

They were all for tax reduction, but none of them wrote or wired me when I fought against the Anti-Saloon League crowd increasing their raids on the Federal Treasury 600 per cent in a tax-reduction year. The Anti-Saloon League fellows got nine millions plus last year, and this year they asked for $53,000,000. We fought them down to $35,000,000 or thereabouts, but it was not the Mellon boys who helped.

The Mellon plan meant in Michigan that of the 250,147 income-tax payers in Michigan 174 very rich men would get much more benefit than the other 249,973 taxpayers. The plan which was adopted gave a 25 per cent reduction on last year's taxes to both the rich and poor and also the middle classes. It provided also for a general tax reduction on this year's taxes of 50 per cent on all but the very rich. The latter it gives a 20 per cent reduction.

What is the matter with that plan? Oh, it is not "scientific." The word "scientific" intimates a great mystery in taxation. Some say the very rich will make the poor pay their taxes for them by incidence, by increasing the cost of what the poor buy. But the very rich can not do that fully and in all cases. That was why they were for the "scientific" Mellon plan.

The nub of the whole tax problem is this: The State and State units make the people pay much more taxes than the Federal Government does. Also the great bulk of taxation levied by Congress is war taxation. We must pay the $20,000,000,000 debt arising from the Great War. We must also pay the three or four billion dollar adjusted compensation or bonus obligation, which was very clearly a war debt just as our Civil War pension bill of many billions was a war debt.

Now, who is going to pay this twenty-four billions of war debt? The Mellon plan said the very rich must not pay their fair share; Congress almost unanimously said the very rich must. That is the nub.

Eighty cents out of every dollar appropriated by Congress this year goes to pay the debts of past wars or as insurance against future wars in the form of appropriations to the Army and Navy.

Congress is abused for the tax bill, but war should get the chief abuse. So should the State units get their share. Congress does spend some money which probably could be saved, but it is a very small part of the whole.

THE BONUS

Now, Mr. Mellon said we should not pay the soldiers' adjusted-compensation debt. He was a part of the Republican campaign machinery in the campaign of 1920, when the bonus was promised by Candidate Warren G. Harding and written into the Republican platform in a plank. This plank was interpreted all over the country by Republican orators as a promise to pay the bonus if the Republicans were given power. They also pointed out that Woodrow Wilson was opposed to the bonus.

Representative LAGUARDIA, of New York, said on the floor of the House this session that he was one of those paid orators, and that he was instructed by the Republican campaign committee to promise all American Legion men the bonus. He said the committee paid his campaign expenses.

Senator FESS, of Ohio, also said the bonus was plainly promised. The party got a 7,000,000 majority largely on that issue, and then Mr. Mellon repudiated, in some measure, their plank. A number of persons of Detroit who voted for that 1920 platform and candidate have written me that they are against the bonus. They repudiated their votes of 1920, which was easy for them, because they are not in public life.

One of the planks of my platform in 1922 when I ran for Congress declared for the bonus or adjusted compensation as a matter of justice to the men who sacrificed their time and their salaries in the Great War. I could not repudiate that pledge, and I did not. I voted for adjusted compensation and supported it.

Washington, Lincoln, Sheridan, Sherman, and many of our finest patriots, statesmen, and generals were eager to get the bonus their country gave them. I do not think they commercialized their patriotism any more than the men of the Great War do to-day by accepting a bonus.

CHILD LABOR AMENDMENT

Mr. WARD of North Carolina. Mr. Speaker, I was disabled from sickness to attend the general debate on the resolution to submit the child labor constitutional amendment, and because it is still, if only nominally, a pending question until the legislatures of the States act upon it I avail myself of the privilege of extension in the RECORD. If I had been here, I would only have been numbered with those who spoke to no effect and stood with earnest souls before the fatal steam roller. It was originated and kept in agitation by impulses and emotions and self-trained opinions of government that in modern politics do not stop nor halt for opposition, but simply characterize the opposition in disparagement and keeping up the swell of increasing self-exaltation rolls on to its appointed end. It did not originate, in my opinion, in a fair understanding of our theory of government nor in a correct estimate of its application to social or economic conditions in all parts of the country.

But no wit, nor wisdom, nor reason, nor logic, nor invocation of political doctrine, nor governmental policy, nor constitutional principle can lately seem to stop the progress of this and kindred movements that clothe themselves with the assumption of superior morality, humanitarianism, and righteousness, call to their support ecclesiastical and feminine zeal, and start out on their political crusades to capture the devil and put him in chains by force of constitutions and statutes.

By more than a two-thirds vote of both Houses of this Congress an amendment to the Constitution has been submitted to the States for ratification, short and simple in its words. It simply says that "the Congress shall have power to regulate, limit, and prohibit the labor of persons under 18 years of age." If ratified, Congress may by law say to a boy or girl 17 years, 11 months, and 29 days old, "You shall do no work"; and

shall have the power to say to the parent or person in loco parentis, "You shall not let him or her work." In most of the States yet reserving to themselves the right to regulate marriage the girl may marry with the consent of the parent—and the parent may as freely grant that consent—at 16. This is the law of my own good State. In the undisturbed harmony of nature she will be a mother certainly once and not improperly twice before she attains her liberty, under the new Constitution, to work. Poor father! Poor baby! Wife and mother under restraint of a Federal officer against the right to work. Do I suppose an extreme case? "Extreme cases are the quicksands of the law"; and lawmakers should avoid quicksands. The case I put is squarely and reasonably and very probably within the purview of this proposed Constitution. "Congress shall have power to prohibit the labor of persons under 18." Of course, such a law is only made in such a case to be contemned and disregarded. It operates, of necessity, directly upon the child doing the work as well as upon the parent or employer or person in control. Nobody in such a case would regard it. But disregarded constitutions and laws are not promotive of the public good. They have less force of morality in them when contemptuously breached than may be pointed out by the moralist in the conditions referred to in the hearings for support of this resolution.

Will the enabling act go to the extent of the granted power? This question may yet be open to controversy and will be kept open pending the ratification. Only such instances as are above suggested will be persistently met by the contention that the Congress will not go that far, but will introduce exceptions and qualifications in the enabling act. These contentions are of doubtful sincerity. They are not to be taken as based on an intelligent knowledge of congressional psychology. They are not supported by the history of congressional action in such instances in the past. A large and intelligent class have believed and still insist that the last time Congress was privileged to write an enabling statute based on a constitutional amendment it went beyond, rather than stopped within, the limits of granted powers. Legal controversies have not stopped in the test of that question, although six years have passed since the act was written. It is not in keeping with the natural tendency of legislative bodies writing a statute in pursuance of express constitutional mandate to leave well-defined authority unexercised and unasserted. The tendency is the other way. Besides, no student of affairs, no observant person, can doubt for a moment that this enabling act will be written by the same hand that wrote the amendment, guided by the same genius for suggestions of legal restrictions, the application of these restrictions to individual life and conduct, and the certain and unfailing prescription of Draconian penalties by which to lash the failing wretch into obedience.

The facts are, Mr. Speaker, this enabling act is already written. It is now on the files of some secretary or president of some of the various politico-social organizations that continue to keep up agitation for new laws to better social conditions as they see them. Let no one imagine for a moment that these proposed laws recently so numerous and persistent at the doors of Congress, coming from every source of social agitation and from innumerable organizations of a mixed social and political kind, are written in the first instance by Members of Congress. They are brought here in perfect form, no "t" uncrossed nor "i" undotted, and the enabling act to put in force this amendment is in the files of some man or woman to-day who has never been and probably never will be a Member of Congress, awaiting only the jacket of the Congressman to be selected to introduce it.

If this is taken as an assumption, let us examine the facts as to the attitude of the proponents as this amendment went swinging through the House and Senate. Numerous proposals for amendment and modification were made, supported by the most earnest and eloquent effort. In the beginning these efforts were met on the floor of the House by the words sent around, "Do not commerce to change it now; if you let them start that, they will destroy it. The proponents of this measure want it as it is or not at all." That is accurate quotation.

Will the enabling act exempt farm labor? Look at the RECORD and see what the vote was on the amendment proposed to make that exception in the text of the constitutional amendment itself. The vote was not materially different from the final vote on the passage of the measure. Exactly this amendment was proposed in both Houses and the proponents stood like Jackson at Manassas. I listened to Senator REED put a clear, strong instance of its possible application to farm life in support of his proposed amendment. I felt like I could improve upon the illustration and multiply it many times—perhaps because I have an advantage over Senator REED in familiarity with farm life and its unlimited trials, "dangers, toils, and snares"—but it was plain and strong, and it made no impression outside the line-up. I say now, without the slightest doubt, that if and when the legislatures ratify this amendment the Congress, under the same stimulation that evolved it, will write a statute whose words will attempt to suggest that a fine, healthy, romping farm boy of 17 years old may sit in the shade and eat green apples all day, or loiter around the swimming hole, and look on the father in the sun at the end of a 6-foot helve as he digs and prays for his daily bread. In discussions of this possibility I have heard the answer made that the country boy or girl was as much entitled to the protection of the law as a city boy.

The legislatures will be unable to qualify the provisions of the amendment. They must take it or leave it exactly as they find it. They must grant this unlimited power to the Federal Government to enter into the private personal affairs of everyday life or withhold it in toto.

Returning to the question what may be expected of the Congress that passes the enabling act: Efforts were made on the floor of both Houses to reduce the age to 14, then to 16, then to 17. No variance in the vote. "The proponents of this measure demand it as it is. If you let them commence to amend it, it will not be acceptable to them."

Here, Mr. Speaker, is concretely presented a fair illustration of why this law ought not to be put into the Constitution of the Federal Government, and why it should be left to the States as their internal domestic affair; laws can not well be enacted and enforced that apply differently to various classes within its scope. Uniformity of application and of enforcement is nearly essential to the successful administration of any law. The Federal Government embraces 48 States of popular occupations and environments and social and industrial conditions so varied and so distantly opposite that the difficulty is at once appreciated of writing a Constitution with a sufficient variety of application to affect differently and appropriately all these varied interests and conditions; therefore, the proponents finding themselves unable to adopt a general law to such distant and divergent interests reject all suggestions of adaptation, turn away from the task, and sighting the main object of the objective "wade on through slaughter to a throne." This is not necessary. The necessity is removed by the very form of our Federal compact presenting 48 independent States possessing in themselves the power to make laws in neither of which is nearly so much variety of interest as in the whole, and in each of which a condition may be found different to that in any other. In my own good State this question of child labor has been most diligently studied and its problem worked out. It is there well recognized that intelligent guardianship of child life at work and play at home and abroad is of immense importance, and expensive agencies of State government and social development are effectively employed in child culture. Its people are satisfied except such of them who, seeking an opportunity to advance a social reform, want to extend the force of their opinions to the citizenship of distant States with whose life problems and conditions they have had no contact and know nothing except by appeals of mercy and merely asserted humanitarianism vehemently advocated by social reformers. It is best that the matter rest with the States where the wise builders of the Government left it.

Mr. Speaker, it does not conduce to the public good in any way; it does not stimulate patriotism nor regard for laws to command by the power of the Government a prescribed line of personal conduct and habits of life, affirmatively, and the substitution of Government control for parental discretion and authority is likely to prove disruptive of the peace and good order of society. A line of conduct or a custom of life may be well adapted to the State of Georgia and all out of keeping with the State of Maine. Applying the conditions of child labor to factory labor only, which is its most necessary objective, it does not even follow, and is not probably so, that a factory in Maine is a factory in Georgia. In one State it would operate with doors and windows locked airtight and in another the balmy air and health-giving sunshine float every germ away and give life and health to every lung. But the percentage of different occupations vary so materially that a law that aims at the greatest good to the greatest number can not fit both alike. Let Maine therefore have hers and Georgia hers. There is just as much wisdom, morality, and parental care in either of their governments as in the Federal Government. For what were these States left in their separate existence? What reason can either give for its separate sovereignty if they may not prescribe domestic laws for its own people?

I have heard no answer to these questions better than that "some will and some will not and all ought to, and there is one place to go to compel them all to fall in line—that is the head of that government that has the power to command them all." The propaganda behind this proposition, so far as my own scrap basket has experienced, has mostly proceeded from religious and social organizations acting collectively in the name of Christian civilization. In this name most agitations can conquer, and certainly ought to if the cause is wise and efficient in its adaptation and fitted to the psychology of its objective.

Religious and social advancement organizations are well membered and have lofty and righteous purposes, but are not the best judges of governmental policies. Governmental policies and church policies and those of social-advancement societies are not alike in the psychology of adaptation. History is my witness, and its evidence can not be disputed. If this were not so, the union of church and state would have been a success rather than a failure. But the facts are that nothing is so repugnant to prevailing political sentiment in America. Church control of governmental polices was tested in days when the faith was as firmly and intelligently held as now, and perhaps more so. It was tested in the days when the trial of bishops for heresy and the rending asunder of churches by heterodoxy was less frequent and less pronounced than now. So that it is certain that the sure way to enforce humanitarianism is not by governmental command through statutes and constitutions.

Mr. Speaker, this amendment proposed is as inadaptable to the South as was the fifteenth amendment. And here, sir, is proof by illustration, "strong as proof of Holy Writ," that the success and wisdom of a law is a question of adaptation and of psychology and not of charity or morality. The charity and morality behind the antislavery agitation was as irresistible as an avalanche, and so zealous that after the objective was attained it was deemed necessary by the same forces that promoted it to make it perfect and complete in its broad humanitarian hopes and aspirations. To that end a constitutional amendment was proposed. It took on the attributes of divinity and clothed itself in the shining garments of charity and righteousness and, calling on God, started on its rushing, invincible, irresistible march. It wrote its constitution, and there is not to-day, after 58 years of its trial, a respectable school of sentiment in America that does not know and generally admit that its enforcement would have utterly destroyed what was as fine a civilization as the world ever knew. That civilization, Mr. Speaker, has preserved itself against the mandates of this constitutional amendment by its own inherent ingenuity and character, and the fountains of such resources have not yet dried up. Law and the agencies of its enforcement are far from omnipotent. Their strength is not in their conscience but in their judgment; their success is in their adaptation to natural law and to necessity of enforcement as seen and understood by inherent popular conceptions of the public good.

This proposed amendment has no such necessity as justifies so wide departure from the time-honored policy of this Government as that of putting Federal enforcement officers in authority over parental control and advice or over the independent action of persons 17 years old as to whether they shall do any work. It is false and hurtful in its suggestion to children that work is a source of danger and of harm rather than of strength and success. That improper and harmful conditions of child servitude have been discovered I do not doubt. But they are not beyond the reach of social and religious persuasion, teaching, and education; and if persuasion and teaching were as popular in these recent times with religious and social advancement organizations as are criminal statutes and penalties it would not have received 30 per cent of the vote of the Congress; it would never have been proposed. But criminal laws still seem to grow in their popularity, especially with the churches and their auxiliaries, and Draco's altar is the favorite shrine in the temple of Jesus. There was a period of Roman history when an officer known as the lictor was armed by the legal authority with a staff to which was nailed a leather strap about 2 feet long. With this he went about among the disorderly, and when he saw disorder he applied his strap at once and upon the spot. Sure as fate our drift is in that direction. How much further it will go is yet unseen. How well its conceptions of rule and regulation of personal conduct will work out a happier and better condition I am afraid will appear only too certainly before it has advanced much further. Just what the total size and strength of the Federal army of law-enforcement officers will be when this amendment has called for its necessary share has not been fully appraised. It is appalling to contemplate. That army will cost its hundreds of millions, but when that point is made against it, Draco answers, "It costs nothing." The Government got it back in penalties. The answer and every man who makes it are contemptible and unworthy of respectful recognition.

Mr. Speaker, the need of the hour is less Government; fewer laws and better laws; fewer officers and better officers; more natural human rights, safeguarded and cultured by the broad, tolerant spirit that forgives rather than condemns, that persuades rather than commands, that is humble rather than self-righteous, and that knows how to resort to some other source for strength to improve the conduct of others than the arm of a criminal judge.

## TAX REFORM

Mr. HILL of Washington. Mr. Speaker, the big tax is the tariff tax and the consumer pays it. The amount of revenue collected by the Government under the present tariff law is about $550,000,000 a year, but this does not measure the burden of the tariff tax to the American people. The Fair Tariff League, an association composed largely of Republicans who believe in reasonable protection, makes the following statement:

> The tariff is a tax. It differs from most taxes in being indirect. Three-fourths of tariff taxes go, not to the Government but to private tax gatherers in their price advances, severely felt but not seen. The present tariff tax increases the cost of living to the American people some $5,000,000,000, and accounts for the staggering profits recently declared by its principal beneficiaries, who have drained the pockets of the consumers with small incomes.

In the recent "hue and cry" for the Mellon plan of tax reduction which was raised, paid for, and carried to every home in America by "big business" through paid propaganda costing millions of dollars, the heaviest of all tax burdens, namely, that of the tariff, was completely ignored. The reasons for this are obvious. "Big business" profits by the tariff and bears little of the burdens thereof. For every dollar of revenue the Government receives from the tariff tax "big business" receives about $9 under the protection which the tariff tax affords.

Tariff taxes, unlike income taxes, are all passed on to the consumer and are paid by him. And in the "passing" process the tariff taxes with the middlemen's percentages of profits added thereto are doubled by the time they reach the consumer.

Under the revenue law of 1921 there was collected for the fiscal year ending June 30, 1923, $2,280,117,117.73. All of this money went into the Treasury of the United States Government. Of that total amount $1,691,089,534.56 was derived from tax on incomes.

The existing tariff laws for the same period of time cast a burden upon the people of this country of four to five billions of dollars in increased cost of living, and of that enormous amount only about $550,000,000 went into the United States Treasury. The remainder of it went into the pockets of the tariff beneficiaries.

The burden of income taxes is the least capable of that of all taxes of being passed on, and it therefore becomes localized largely upon the person against whose income it is originally levied.

The tariff burden is passed on to the consumer. Only a small part of the income-tax burden can be passed on to the consumer.

The millionaires and multimillionaires have always opposed a tax on incomes, and a tax on incomes based on a progressively increasing scale has been and is especially obnoxious to them. They would have little objection to such tax if it were possible to pass the burden thereof to some one else, as, for instance, a tariff tax is passed on by adding it to the price of merchandise; for, in that event, the burden of an income tax might be converted into an asset through the collection back of the amount of the income tax plus a profit thereon. The recipients of large incomes can not, however, shift the burden of taxes thereon, and that is why they are so strenuously opposed to such taxes but so loud in their praises of the tariff taxes that impose almost intolerable burdens upon the great masses of the people.

Tax reduction means to the millionaire reduction of the tax he can not dodge and has to pay. It means the reduction of taxes on incomes. The tariff tax is not his burden. That is the burden of the common people and brings big profits to big business, which to his way of thinking is the primary purpose for which governments are instituted.

Mr. Andrew Mellon, the Secretary of the Treasury, is reputed to count his annual income by the millions. It is both natural and logical that he should have the millionaire's viewpoint relative to the placing of the burden of taxes, and that he has such viewpoint is conclusively shown by his plan of tax reduction or tax reform—as the administration chooses to

call it—known as the Mellon plan. This plan ignored the tariff taxes which constitute the great burden of the American people and presented under the much-heralded guise of scientific tax revision the proposal to cut surtaxes 50 per cent and normal taxes 25 per cent. In other words, the Mellon plan was presented and intended primarily for the relief of those who have large incomes and who are not only amply able to pay but should be required to pay taxes on their incomes in proportion to their ability so to do. Mr. Mellon's idea of scientific tax revision seems to be to cut surtaxes 50 per cent or more. In the preceding Congress he presented another so-called scientific tax-revision scheme. At that time the maximum surtax rate was 65 per cent and he proposed to reduce that maximum rate to 32 per cent, a cut of a little more than 50 per cent, and to repeal the excess-profits tax. The Congress at that session reduced the maximum rate of surtaxes from 65 per cent to 50 per cent and repealed the excess-profits tax, thereby relieving the big rich and big business of a half billion dollars a year in taxes. During the same session of Congress the Fordney-McCumber Tariff Act was passed, greatly increasing the burden of the consumers of the country. There is no record of a protest by Mr. Mellon against the tariff rates therein. On the other hand, it is freely asserted that he is a beneficiary thereunder through the increase of tariff rates on aluminum ware.

At the recent session of Congress, Mr. Mellon's idea of scientific tax revision still being that of a 50 per cent reduction of surtaxes, he demanded that Congress cut the maximum surtax rate from 50 per cent to 25 per cent. But not one suggestion came from him or the administration in power that there should be a revision downward of the tariff schedules.

Numerous specious arguments were employed by the proponents and advocates of the Mellon plan in the effort to secure or force its acceptance by the country and the Congress as the panacea for all the economic ills of taxation. It was contended that by reducing surtaxes 50 per cent more money would be available for capital investments, industrial securities, and so forth; but the business annals disclose that there has been no retardation of such investments. It was also argued that such a reduction of surtaxes would turn capital from investments in tax-exempt securities into the channels of business activities; but the only way to prevent the buying of tax-exempt securities is to stop their issuance.

The Mellon plan would have reduced income and excise taxes to the extent of about $339,000,000. This reduction would have been decidedly in favor of the large taxpayer, since, under the Mellon plan, there would be a reduction of 50 per cent in surtaxes plus 25 per cent on normal taxes on the large incomes, as against a reduction of 25 per cent of the taxes on incomes subject to normal tax only. The Mellon plan was the scheme of the rich man to reduce his own taxes, and the rich man spent millions of dollars in propaganda to make the people believe it was the only scheme for tax reduction. The Mellon plan at no time had a chance to become law. It was so obviously a tax evasion scheme in the interest of the millionaires that there was at all times a safe majority of Republicans against it and the Democrats were practically solidly against it. Every Member of Congress who represented the interests of the people as a whole voted against the Mellon plan. Only the recipients of large incomes and their paid or deluded propagandists felt aggrieved at its defeat.

But a tax reduction bill was passed, carrying a reduced surtax rate on incomes over $10,000 and graduated up to a maximum surtax rate of 40 per cent on incomes in excess of $500,000 and greatly reduced normal tax rates. This bill was passed by an overwhelming vote, both in the House and Senate, and was reluctantly signed by the President.

It gives a greater reduction of taxes than that proposed in the Mellon plan and gives a greater percentage of reduction to the taxpayer on small incomes and a smaller percentage of reduction to the surtax payer than that proposed in the Mellon plan. Mr. Mellon did not like that and he is the President's adviser as to the Government's fiscal policy; hence the President's reluctance to sign the bill.

Hon. WILLIAM R. GREEN, the chairman of the Ways and Means Committee of the House and a Republican, speaking of the new revenue law, stated on the floor of the House (CONGRESSIONAL RECORD, June 6, 1924, p. 10564) as follows:

> Mr. Speaker, among the achievements of the Sixty-eighth Congress will be the revenue bill recently passed, which will be known as the revenue act of 1924. The act is not perfect, for no tax law ever was or ever will be, but it is vastly superior to the present law and superior to any other plan that was presented.
>
> A continuous and most extraordinary propaganda in the way of misrepresentation of the bill has been kept up in the press. Only yesterday I saw a cartoon in my home paper representing Congress as refusing to consent to any tax reduction and tying hand and foot the taxpayers of the country to heavier taxation. Yet the fact is that the bill reduces taxes for the fiscal year ending June 30, 1925, by $361,000,000 and will reduce taxes for the fiscal year ending June 30, 1926, over $400,000,000. According to statements made by the Actuary of the Treasury, it reduces taxes for the fiscal year 1925 $22,000,000 more than the Mellon plan, and for the fiscal year 1926 more than $100,000,000 more than the Mellon plan. It also reduces individual income taxes of 1923, payable during this calendar year, $232,000,000 more than the Mellon plan, which made no provision whatever for a reduction in the income taxes payable this calendar year.
>
> The proposition to reduce the taxes payable this year by 25 per cent was, as every Member in Congress knows, originated by myself without any suggestion from anyone. In accordance with my plan it was incorporated in the revenue bill when reported to the House, and, although some newspaper correspondents hired to misrepresent the bill have stated to the contrary, the fact is that it has been in the bill from start to finish, and this particular provision was approved by the House by an overwhelming vote. Those who paid one-fourth of their income taxes on March 15 will only be required to pay 50 per cent of the regular quarterly returns on June 15 and will get 25 per cent off on each of the following payments this year. Those who paid their income taxes in full at the time of the first payment will get a refund of 25 per cent.
>
> Included in the reductions for the fiscal year ending June 30, 1925, is a $136,000,000 reduction in excise taxes, commonly known as nuisance taxes. A few of these reductions went into effect immediately, but the most of them will not go into effect until 30 days after the passage of the bill, but all of them will apply to the last half of this calendar year, which constitutes the first half of the fiscal year of 1925. I have attached to these remarks a table of the reductions in excise taxes specifying the particulars. For the **first half** of this calendar year the 25 per cent reduction in the income taxes **will** take off a little more than half of the $232,000,000 for the full calendar year, or from $116,000,000 to $120,000,000. Adding this to the $361,000,000 for the fiscal year ending June 30, 1925, we find that the total reduction for the 18 months beginning with January 1, 1924, is about $480,000,000, and yet some newspapers are still stating that Congress was unwilling to reduce taxes. In these 18 months the taxes are reduced more than $250,000,000 above what was proposed by the Mellon plan.
>
> It is now admitted that this great reduction will be effected and the Treasury will still carry over a handsome surplus at the end of the fiscal year 1924, and also should have a surplus at the end of the fiscal year of 1925. One annual payment on the bonus has already been appropriated out of the revenues of this fiscal year and a sufficient surplus will be carried over into the next fiscal year to make another annual payment.

Hon. NICHOLAS LONGWORTH, the Republican floor leader of the House, speaking of the new revenue bill (CONGRESSIONAL RECORD, May 26, 1924, p. 9546), made the following statements on the floor of the House:

> During the process of consideration of this bill and afterwards I was considerably criticized for what was termed "spineless leadership" because, forsooth, I did not insist that, so far as I was concerned, we were to have the Treasury tax bill or nothing. I thought then, and I think now, that it would have been mighty poor leadership to have taken that position. It seemed to me that no one who had in mind the experience of Congress in the last session in tax reduction, and particularly with the action of the Senate, could think it possible, even if desirable, to reduce the high surtaxes 50 per cent at one fell swoop. It could not be done, gentlemen, particularly if you only reduced the normal taxes 25 per cent. * * *
>
> I am ready to vote on this proposition. I think it is a fair and just tax bill. It may have some defects that I would prefer to have remedied, but the general proposition to reduce the tax by 50 per cent on the little fellow and 25 per cent on the big fellow can be justified anywhere in America.

The new revenue law will give greater relief to 97 per cent of the income-tax payers and less relief to 3 per cent of the income-tax payers than would have come through the adoption of the Mellon plan. This fact makes the bill that was passed better for the country than the Mellon plan would be and wins for it the commendation of the people and the condemnation of Mr. Mellon. In Washington, including Alaska, 115,688 persons made income-tax returns in 1921. Of this number 21 would be benefited more by the Mellon plan than by the new revenue law, and 115,667 would be benefited more by the new law than by the Mellon plan.

No one can gainsay that a tax reduction of $400,000,000 is a substantial reduction, and it was accomplished without fol-

lowing the Mellon plan and in the face of the opposition of Mr. Mellon and the frowns of the President.

But a reduction of $400,000,000 in taxes is small compared with the great burden of four billions of dollars imposed annually upon the American people under the Fordney-McCumber Tariff Act.

An honest tariff revision is the paramount issue in tax reform. (Fair Tariff League.)

Such revision is especially vital to the farming industry. As bearing forcefully upon this question I shall quote from a speech of Hon WILLIAM A. OLDFIELD (CONGRESSIONAL RECORD, June 4, 1924, pp. 10048–10049), made on the floor of the House, as follows:

THE FARMERS AS SELLERS AND AS PURCHASERS

The following statement gives a list of 51 articles of common necessity with their relative prices before the war and in March last. (Taken from the report of the Government known as its "Index of wholesale prices of commodities.") These prices are compared with the pre-war and present prices of farm products so that the present purchasing power of farm products as to these 51 articles may be found.

The third column of figures gives the present prices of such 51 articles in percentages of their prices before the war. That is, 100 cents' worth of salt before the war now costs 244 cents; so in the Government index of prices the pre-war price is set down as 100, and the present price of a like amount at 244, for easy comparison by percentage. In the case of salt, then, the present price exceeds the pre-war price by 144 per cent. And so with each of the other 50 articles. Thus, knives and forks have gone up from the pre-war price of 100 to 260.9, or by 161 per cent.

The same Government report shows that prices moved from 100 before the war to 107.3 for the following 11 farm products, which represent well over two-thirds of farm production: Hides, hogs, barley, corn, rye, oats, wheat, lard, beef cattle, rice, eggs.

*Index prices, March, 1924; 1913=100*

| | |
|---|---|
| Corn | 126.1 |
| Hides | 53.4 |
| Hogs | 87.5 |
| Rye | 107.6 |
| Barley | 120.3 |
| Oats | 127.9 |
| Wheat | 120.9 |
| Beef cattle | 122.7 |
| Lard | 104.9 |
| Eggs | 98.7 |
| Rice | 109.1 |
| Average—simple | 107.3 |

That is, the prices of these farm commodities, taken together, advanced from an average of 100 before the war to an average of 107.3 in March last, while the weighted average price of all commodities advanced from 100 to 150. Meanwhile, the prices of the 51 articles set forth below advanced from 100 to the figures given in the third column of figures—generally much above the general average of 150.

The last column gives the proportion of each of such 51 articles which the farmer's present dollar will purchase as compared with what it would purchase before the war.

The second column of figures gives the ad valorem tariff rates on these 51 high-priced articles, such tariff rates having been enacted to maintain the prices of such articles.

*Comparison of price indexes of certain commodities and 11 farm products, with their tariff rates under tariff act of 1922*

| Average | | 50.26 [2] | [1] 226.6 | [3] 111.2 | [1] 48.3 |

[1] Average of 48 commodities.

[2] Average of 51 commodities

The average index prices, as stated, for all commodities rose from 100 pre-war to 150 in March, 1924. While the foregoing farmers' index price of 107.3 is 40 per cent short of this average of 150, the average index price, 226.6, of these 51 articles exceeds this farmers' average index price by 111 per cent and the general average of all commodities by 51 per cent. The average ad valorem tariff on these higher-priced articles is 50.26 per cent. Observe that the prices of these 51 articles exceed the general average of 150 by about the same percentage as the tariff, while this farm dollar can purchase less than one-half, 48.3 per cent, as much of them as before the war.

Let not complacent townsfolk think that these tariff-maintained high prices concern the farmfolk alone. All persons whose salaries or wages have not gone up to match these high prices are similarly pinched. So also are the beneficiaries under pre-war insurance policies or superannuated persons living on pensions and all persons holding bonds or securities issued before the war.

The question is raised whether these high tariffs, designed to maintain these excessive prices, are not fundamentally unjust. Has the lawmaker the right to so greatly prefer or discriminate in favor of one set of producers at the expense of other equally worthy producers? Is not the lawmaker through such tariffs directly confiscating just so much of the farmer's labor and property in favor of the sellers of such high-priced commodities? Why should such "protection" tariffs be maintained in favor of these high-priced articles if such tariffs are not intended to maintain these very prices, although the farmer is compelled to accept European prices for his products even when selling to these high-price beneficiaries? Why should the lawmaker continue such tariff supports for exorbitant prices?

It should be noted, furthermore, that these price comparisons are based upon market prices in the principal cities. Because of the increase in freight rates and expenses of distribution, the spread between market and farm prices is considerably greater than it was during 1909–1913. A dollar at Chicago or New York, therefore, means much less at the farm than it did before the war. Thus, the freight rate upon wheat from Larimore, Minn., to Minneapolis in 1913 was 12 cents per 100 pounds, compared with 17.5 cents in 1923, an increase of 45.8 per cent; from Wichita, Kans., to Galveston it was 25 cents, compared with 44 cents, an increase of 76 per cent. The increase in freight rates upon other agricultural products ranges from 50 to 75 per cent.

To show directly and concretely the economic interest which the tariff holds for the State of Washington I quote the following calculations and tabulations issued by the Fair Tariff League under date of February 28, 1924:

*What the tariff does to Washington*

[Population, 1,356,621; farmers, 283,382; woolgrowers, 4,244 (census 1919).]

| Crops | Agricultural schedule: Gain to a few growers on wild lands | Tariff gain to a few farmers | Cost to farmers as consumers | Cost to nonfarming population | Cost to State | Cost to United States |
|---|---|---|---|---|---|---|
| Wool | $375,132 | $93,783 | $279,300 | $2,952,000 | $3,731,000 | $300,000,000 |
| Sugar beets | | 122,459 | 566,700 | 2,146,500 | 2,713,200 | 216,000,000 |
| Flaxseed | | | 85,000 | 322,000 | 407,000 | 30,000,000 |
| Lemons | | | 28,400 | 107,100 | 135,700 | 10,000,000 |
| Tobacco | | | 48,200 | 182,400 | 230,600 | 53,000,000 |
| Total | 375,132 | 216,242 | 1,507,600 | 5,710,000 | 7,217,500 | 609,000,000 |

| | |
|---|---|
| Farmers as consumers lose on agricultural schedule | $1,507,600 |
| A few farmers gain | 216,242 |
| Loss to farmers on agricultural schedule, net | 1,291,358 |
| The State, as a whole, loses on agricultural schedule, net | 6,626,126 |

Farmers lose on their schedule $7 to $1 of gain.

The State loses on agricultural schedule $12 to $1 of gain.

| | Manufacturers' schedule (on the basis of one-half duties added to prices in certain industries): Cost to farmers as consumers | Cost to nonfarming population | Cost to State | Cost to United States |
|---|---|---|---|---|
| Heavy steel products | $1,417,000 | $3,577,000 | $4,994,000 | $375,000,000 |
| Light steel products | 2,125,000 | 8,049,600 | 10,174,600 | 750,000,000 |
| General store merchandise | 6,801,000 | 25,758,000 | 32,559,000 | 2,475,000,000 |
| Total | 10,343,000 | 37,384,600 | 47,727,600 | 3,600,000,000 |

| | |
|---|---|
| Loss to farmers, manufacturers' schedule | $10,343,000 |
| Loss to State, manufacturers' schedule | 47,727,000 |

Farmers lose, on all schedules, net, $11,634,000, or $54 to $1 of gain.

The State loses, on all schedules, net, $54,353,000, or $94 to $1 of gain.

With a population of 1,356,621, including 283,382 farmers, the State's only substantial tariff gain, $591,000, goes to 4,244 woolgrowers, or 1 resident in 320, including about 1,500 farmers, or 1 farmer in 190, and to 484 sugar growers.

To further illustrate the relative importance and weight of the burden of the tariff tax in the State of Washington, I present for comparison the following tabulation of amounts of Federal and State and county taxes collected or collectible in that State in the year 1922:

*State of Washington, fiscal year 1922*

| | | |
|---|---|---|
| Income and profits taxes collected | $18,733,630.39 | |
| Miscellaneous internal revenue collected | 4,877,151.88 | |
| | | $23,610,782.27 |
| Total taxes collectible by State in 1922 | | 17,319,059.11 |
| Total taxes collectible by counties in 1922 | | 38,475,327.52 |
| Tariff tax estimate | | 54,945,000.00 |

By tariff tax is meant herein the added financial burden which the tariff law entails upon the people.

The data as to the income and profits taxes and miscellaneous revenue is taken from the official report of the Secretary of the Treasury for 1922; the data as to the State and county taxes is taken from the first official biennial report of the director of the department of efficiency of the State of Washington; the data as to the tariff taxes is taken from statements of the Fair Tariff League.

A comparison of the above figures readily shows that the tariff tax is the largest single class of tax that the people of Washington have to pay. The tariff tax is about three times as large as the State tax and much larger than the total taxes of all the counties in the State. Such comparison also shows that the tariff tax is about three times as large as the total income and profits taxes collected in that State for the fiscal year 1922,

and that the tariff burden of the State of Washington is almost two and one-half times as great as the total of the income and profits taxes and the miscellaneous internal revenues collected in that State for the fiscal year 1922.

I repeat that the big tax is the tariff tax and that "an honest tariff revision is the paramount issue in tax reform."

INJURIES FROM ARMY GAS EXPERIMENTS

Mr. ROGERS of Massachusetts. Mr. Speaker, the first week in May last the annual convention of the Women's International League for Peace and Freedom was held in Washington. Under date of May 3, as reported in the Washington Post of May 4, Dr. Gertrude Woker, of Switzerland, declared from the platform—

that 700 soldiers were now in the Edgewood, Md., hospital suffering as the result of experiments made there by the chemical warfare branch of the Army.

Doctor Woker was stated in the article to be "a woman scientist of renown."

I regarded the statement, if true, as a very serious indictment of conditions existing in our Army Chemical Warfare Service. Accordingly I wrote Gen. A. A. Fries the following letter under date of May 6:

MAY 6, 1924.

Brig. Gen. AMOS A. FRIES,
*Chief Chemical Warfare Service,*
*War Department, Washington, D. C.*

DEAR GENERAL FRIES: I wonder if you could give me an official statement as to the facts relative to the charges recently made by the Women's International League for Peace and Freedom at its current Washington convention concerning the number of men hospitalized as a result of gas experiments.

Sincerely yours, JOHN JACOB ROGERS.

Under date of May 12 and June 6 I have received the following replies from him:

WAR DEPARTMENT,
OFFICE CHIEF OF CHEMICAL WARFARE SERVICE,
*Washington, D. C., May 12, 1924.*

Hon. JOHN JACOB ROGERS,
*House of Representatives, House Office Building,*
*Washington, D. C.*

MY DEAR MR. ROGERS: Replying to your letter of May 6, asking an official statement relative to the charges recently made by the Women's International League for Peace and Freedom concerning the number of men hospitalized as the result of gas experiments, I am sending you this as an immediate and incomplete reply.

As I understand, the charge made at the Women's International League for Peace and Freedom was that there were 700 men in the hospital as a result of gas experiments. I have investigated and find that there was not a single man in the hospital at Edgewood Arsenal as a result of gas experiments; neither were there any in the hospital due to accidents with gas.

I might add that we have so few men sufficiently affected by gas to be sent to the hospital during peace that I do not recall offhand more than a half dozen cases in the last two years among the officers, civilians, and enlisted men all combined.

I am asking Edgewood Arsenal to give me as complete records covering the period since the war as it is possible to obtain. When that is received, should you care for more complete information, I shall be glad to furnish it.

Sincerely yours,

AMOS A. FRIES,
*Brigadier General, United States Army,*
*Chief of Chemical Warfare Service.*

---

WAR DEPARTMENT,
OFFICE CHIEF CHEMICAL WARFARE SERVICE,
*Washington, D. C., June 6, 1924.*

Hon. JOHN JACOB ROGERS,
*House of Representatives,*
*House Office Building, Washington, D. C.*

MY DEAR MR. ROGERS: An 11-day trip to Fort Sill, Okla., Fort Riley and Fort Leavenworth, Kans., and to Wisconsin is the reason for my delay in giving you the further data concerning gassed patients admitted to the hospital at Edgewood Arsenal.

I have had a report compiled covering all the cases of men suffering from the effects of chemicals at Edgewood Arsenal in the five years four and one-half months from January 1, 1919, to May 15, 1924. In that period of nearly five and one-half years 162 men were admitted to the hospital or treated at home for accidents of sufficient importance to lose one or more days at work. Many of these were injured by chemicals that can not in any way be classed as poison gases such as phosphorus.

Of the 162 so treated 99 lost less than 10 days' time. The accidents mentioned cover not only all research work in nearly five and one-half years but the accidents due to the handling, storing, and caring for several thousand tons of chemicals. A great proportion of all these chemicals was sold and had to be handled in shipping.

So far as the gas experiments were concerned probably one-fourth only of the accidents were due to experiments and those the lighter ones.

Trusting that this will furnish you with the information desired, I am,

Very sincerely, AMOS A. FRIES,
*Brigadier General, United States Army,*
*Chief of Chemical Warfare Service.*

Doctor Woker, we must assume, was misinformed. Instead of 700 soldiers having been at the time in the Army hospital suffering from poison gas experiments "there was not a single man in the hospital at Edgewood Arsenal as a result of gas experiments, neither were there any in the hospital due to accidents with gas." I refer to this matter to indicate the desirability of accepting with caution statements made by foreigners who come to America for purposes of pacifist propaganda.

THE NEW REVENUE LAW

Mr. GARNER of Texas. Mr. Speaker, the American people well remember the great cloud of Mellon tax propaganda that swept over the country for some months beginning in November last. The people did not stop to inquire or realize that most of this propaganda was cooked up and paid for in advance by a few thousand of the largest income surtax payers. Many periodicals hitherto pretending to be nonpartisan, such as the Saturday Evening Post and the Literary Digest, were made constant vehicles for the distribution of great masses of this propaganda, which in large measure was either deliberately false or misleading. It is a tragedy at times that the people in the rush of their private affairs are so gullible and susceptible of such paid propaganda influences. Millions of income-tax payers who all the time were receiving larger and more logical tax reductions under the Democratic proposals than under the Mellon plan, have been yelling themselves hoarse for the Mellon plan and have been in mortal fear that there was no possible method of reducing their taxes except by the Mellon method.

A vast number of these same people have not yet thrown off the prejudice created by the Mellon propaganda and realized just what the Democratic proposal means and has meant to them from the beginning.

Another ludicrous phase of the tax situation has been the self-constituted championship and guardianship of the cause of tax reduction by President Coolidge and Secretary Mellon. The propaganda in support of them has sought to create the impression that all persons and officials in Congress who were not willing to swallow the Mellon plan whole are, and all the time have been, enemies of every sort of honest or logical tax reduction. It is amazing that Secretary Mellon and his propagandists would have the impudence in the circumstances to assume the championship rôle in relation to tax reduction as he proposed. In the face of the notorious fact that the Mellon-Coolidge influences in public affairs have been the unwavering supporters of the infamous Fordney-McCumber tariff measure, which is literally robbing 110,000,000 people in the way of extortionate prices of what they buy to the tune of three to three and a half billion dollars a year, we nevertheless find them playing the rôle of leaders in tax reduction, which, of course, does not include one penny of tariff-tax reduction. During past months if any Member of Congress dared to mention the idea of reducing the outrageous tariff taxes one dollar, he was instantly assailed by the Mellon tax propagandists as an enemy to all tax reduction. The bigotry and intolerance of these propagandists became so insolent that not the slightest publicity has been given by them to any tariff reduction utterance or proposal.

The American people have but to stop and think one-half of a second to realize that all citizens at all times stand for the fullest measure of tax reduction and that the Democratic Party for a hundred years has a consistent and wonderful record for rigid economy in public expenditures and for the lowest consistent level of honest, equitable taxation. This, of course, is the true Democratic attitude to this day, as is so conspicuously illustrated by the Democratic record during the present and preceding Congresses.

A brief recital of the outstanding facts and features of the Mellon tax proposal and of the new tax reduction law, the rates of which were written solely by Democrats in Congress, will clearly reveal the one paramount purpose of the Mellon propagandists to give the chief measure of tax reduction either to the large owners of wealth or the well-to-do.

In the first place, the American people are annually paying taxes in the aggregate amount of $7,400,000,000. The Mellon proposal would effect a net reduction of $323,000,000. This almost infinitesimal reduction, relatively speaking, shows the amazing exaggerations of the Mellon tax proposal. The Mellon proposal to reduce taxes embraced only two miscellaneous taxes, to-wit, the telegraph and telephone tax and the admissions tax, aggregating $100,000,000. The income surtaxes, affecting large incomes in the main, were to be cut nearly $200,000,000, according to best Treasury statistics; the normal tax, chiefly affecting the smaller taxpayers, was cut 25 per cent, aggregating $92,000,000, as compared with the surtax cut of 50 per cent on large incomes. These, together with an earned-income reduction of 25 per cent, are the sum total of the Mellon proposal about which there has been such a vast volume of noise and misinformation during recent months.

Every intelligent person in Washington knew from the beginning that the absurd Mellon proposals had not a remote chance to pass Congress, many of the membership of which were far more familiar with the principles and even the technicalities of internal taxation than Secretary Mellon. The Democrats in Congress, at once seeing that there would be no tax legislation unless a feasible tax program should be offered, immediately presented the Democratic (Garner) tax-reduction plan. It is not unfair to say that the entire principle and policy of this plan was carried out by Congress and is now a law. The Mellon-Coolidge propagandists constantly announced that it should be the Mellon plan or nothing, or that there should be no compromise. Thanks to the Democrats in Congress, aided by many Republicans who realized the legislative situation, the American people to-day have a tax reduction law far sounder and more logical than the Mellon proposal, which gives the people larger reductions in the aggregate than the Mellon plan. Except for the false and misleading Mellon propaganda and the ignorance and prejudice it has created in regard to the tax situation, the American people, including 99 per cent of the business men, would to-day be thanking and lauding the Democrats in Congress for having been responsible for a splendid tax measure carrying tremendous tax reductions to them.

Instead of a reduction of $323,000,000 confined to a few tax items, as Mellon proposed, the Democratic tax measure carries total tax repeals or heavy tax reductions throughout the miscellaneous tax schedule, as shown by the table hereto appended and marked No. 1.

The Democratic bill now a law effects a total tax reduction for the fiscal year ending June 30, 1925, of $361,000,000, and for the fiscal year ending June 30, 1926, of over $400,000,000, while it reduced taxes for the fiscal year 1925 $22,000,000 more than the Mellon plan, and for 1926 $100,000,000 more. In addition to these wonderful reductions, which according to the Treasury will leave a surplus during the next two years, there is reduction of $232,000,000 for 1923, which was not included in the Mellon plan.

The difference in principle between the Mellon and the Democratic plans is best illustrated by the fact that the Mellon plan would reduce normal taxes resting on more than 6,200,000 individuals on the income-tax list only 25 per cent as compared with the Democratic reduction that will average 60 per cent on all incomes of $10,000 and below. At the same time the Mellon plan would cut in half the taxes on incomes of $100,000 and over while the Democratic measure gives them only 22 per cent reduction. In other words, the Mellon rates would allow larger reductions on incomes of $66,000 and over than the Democratic plan, while the latter rates allow much larger reductions on those with incomes below $66,000. The net result is that of the more than 6,600,000 individuals on the income-tax rolls, according to the latest Treasury statistics of 1921, all derive greater tax reductions under the Democratic tax rates except 6,100 of the very largest income owners, whose taxes would be cut 50 per cent at one step by Mr. Mellon. I append to my remarks a table showing the amount of tax imposed by the present law, by the Mellon plan, and by the Democratic (Simmons-Garner) plan, and also showing the amount of total income-tax reduction.

I also append comparative table showing number of beneficiaries of the Democratic law and of the Mellon plan by States, the same being based on Treasury statistics for 1921.

Democrats welcome any further efforts of Messrs. Coolidge and Mellon to make an issue on the dead and defunct Mellon plan. To enact that plan now would have the effect of raising the taxes of this 6,600,000 income-tax payers for the sake of reducing the surtaxes of 6,100 top surtax payers from 40 per cent down to 25 per cent, as demanded by the Mellon proposal. I take it that these millions of beneficiaries under the new Democratic law will not be so foolish as to listen for a moment to any further wails by the Mellon propagandists.

The readjustment of the estate-tax rates, accompanied by a gift tax designed to fit in the income and inheritance tax situation, is but in keeping with the best modern thought on taxation. We have no apologies to make for this policy advocated by Theodore Roosevelt and other Republicans, as well as Democrats.

Taken all in all, Democrats are proud of their tax record during this Congress; they welcome the fullest discussion and comparison of it with the tax attitude of Messrs. Coolidge and Mellon, which was primarily designed, as already stated, to aid the largest owners of wealth in this country.

*What the revenue act of 1924 does in addition to reducing income taxes*

| Article: | Saved to taxpayer |
|---|---|
| Telephone and telegraph messages | $34,000,000 |
| Beverages and constituent parts thereof | 10,000,000 |
| Admissions of 50 cents and under | 33,000,000 |
| Excise taxes: | |
| Auto trucks and bodies, chassis costing $1,000 and body $200 exempt from 3 per cent tax | 5,000,000 |
| Tires, tubes, parts, and accessories, tax reduced from 5 per cent to 2½ per cent | 20,000,000 |
| Smokers' articles, 10 per cent tax on humidors and smoking stands repealed | 1,000 |
| Candy, 3 per cent tax repealed | 13,000,000 |
| Slot device weighing machines, tax reduced from 10 per cent to 5 per cent | |
| Knives, dirks, daggers, etc., tax is repealed | 30,000 |
| Liveries and livery boots, and hats, 10 per cent tax repealed | 140,000 |
| Hunting and shooting garments and riding habits, 10 per cent tax repealed | 180,000 |
| Yachts and motor boats and pleasure boats and canoes if sold for more than $100, 10 per cent tax repealed | 319,000 |
| Carpets and rugs (square yard tax); trunks, sold in excess of $35; valises, traveling bags, suit cases, etc., if sold in excess of $25; purses, pocketbooks, shopping or hand bags, sold in excess of $5; portable lighting fixtures, lamps, and lamp shades, sold in excess of $10; fans sold in excess of $1; 5 per cent tax on all the foregoing repealed | 1,800,000 |
| Jewelry: 5 per cent tax does not apply on articles sold for $30 or less; on watches sold for $60 or less; on church goods, musical instruments, and silver-plated flat tableware, irrespective of price. (Eyeglasses and spectacles and surgical instruments are exempt) | 11,000,000 |
| Stamp taxes: | |
| Sales of produce on exchange, cut from 2 cents to 1 cent per $100 | 4,000,000 |
| Promissory notes, drafts, or checks, payable otherwise than at sight or demand, tax of 2 cents per $100 or fraction thereof, repealed | 2,150,000 |
| Occupational taxes: | |
| Brokers exclusively negotiating sales of produce or merchandise, exempt from $50 tax | $400,000 |
| Theater seat tax, etc., repealed | 1,600,000 |
| Total reduction | 136,620,000 |

MISCELLANEOUS

| Item: | Increase. |
|---|---|
| While the bill reduces the tax on slot weighing machines from 10 per cent to 5 per cent, it now applies the 5 per cent tax to all classes of coin-operated machines which will increase the revenue from this source about | $150,000 |
| Playing cards: Rate increased from 8 cents to 10 cents per pack | 700,000 |
| Mah jongg pung chow, and similar tile sets taxed at 10 per cent | 1,000,000 |
| Total increase | 1,850,000 |
| Total taxes eliminated | 136,620,000 |
| Total taxes added | 1,850,000 |
| Net total reduction | 134,770,000 |

ADDITIONAL EXEMPTIONS

Tax on pool tables and bowling alleys of $10 per table or alley, does not apply if no charge is made for use of same.

Seat tax on automobiles for hire does not apply in respect of automobiles used exclusively for conveying school children to and from school.

*Comparison of the Mellon and Democratic (Simmons) tax plans with the 1921 law (married person without dependents), the first $5,000 of all income to be deemed to be earned; balance unearned*

| Number of persons making returns in each class for 1921 | Income | Amount of total tax under— | | | Amount of reduction of total tax under— | | Amount of greater reduction of total tax under— | | Percentage of reduction of total tax under— | |

Mr. KENT. Mr. Speaker, I do not propose to discuss local taxation. In the great propaganda which spread over the Nation when Congress went into session last December those responsible for it sought to lead the people into the belief that local taxes were to be reduced. Congress has no power of local taxation. We have dealt with governmental revenues only. The State, county, city, borough, and township have their own powers of taxation, and we in Congress are responsible to the people only with regard to Federal taxes. The measure recently passed had to do only with income taxes and the usual revenue measures.

Section 8, Article I, of the Federal Constitution reads in part as follows:

The Congress shall have power to lay and collect taxes, duties, imposts, and excises, etc.

Section 7 of the Constitution provides:

All bills for raising revenue shall originate in the House of Representatives but the Senate may propose or concur with amendments as on other bills.

The sixteenth amendment to the Constitution reads as follows:

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

These have been my only guiding principles in voting upon reform in taxation.

Since the present session of Congress began it has been a great mystery to me why some Republican leader in the House of Representatives did not propose a tax reduction or revenue measure so that the same might be thoroughly discussed in the House. Before Congress had convened a letter was written by the Secretary of the Treasury to the chairman of the Ways and Means Committee suggesting a plan of tax reduction. Immediately after the writing of this letter a vast fortune was spent by persons unknown to the Congress in an endeavor to browbeat and induce Congress to adopt this particular plan of tax reduction.

It is significant that the chairman of the Ways and Means Committee refused to vote for that plan, and the President finally signed a different one after an overwhelming majority in Congress had adopted another plan.

Every Congressman and Senator has taken an oath which impels him to go conscientiously into matters of this kind, and I rejoice that the dignity of Congress has been upheld and that the legislative department, fresh from the people, has adopted a plan which gives proportionate relief to all of the people.

At the outset of the tax-reduction discussion it was my idea to make taxes on a going business as moderate as possible, because every tax on business is passed on to the public and necessarily increases the cost of living. That is still my idea. But taxes on personal incomes can not be passed on to the public, and such taxes, as well as those on inheritances and gifts in anticipation of death, should be increasingly heavy as the income increases in amount and the individual fortune increases in size.

Nearly every great fortune in America goes back to the foundation of an exploitation of the natural resources of the country, directly or indirectly. Most of the huge fortunes which have been and are being created in this country are made possible by the tremendous natural resources with which God Almighty endowed the land. Many of them do not represent creative genius as much as the ability to translate natural wealth into money. I have no disposition to tax those fortunes out of existence. Wealth is necessary to conduct and maintain our business structure, but I believe that these fortunes which found their inception and their possibilities in the exploitation of the natural resources of the American people ought to pay a generous share for the conduct of the Government which makes them possible and keeps them in existence.

I have been importuned in all sorts of propaganda to vote for the so-called Mellon plan, which, by the way, the President rejected in affirmation of the overwhelming sentiment of Congress and the American people. Very few people gave

me their reasons for such requests. I am convinced that 99 per cent of them are pleased with the tax-reduction measure which has been passed and framed by the lawmaking branches of our Government.

We were compelled to use the tax returns for 1921, filed in 1922, as the basis for estimates for 1923 and 1924.

At my request the Treasury Department furnished me with the following table, showing total amounts of money paid by taxpayers of a certain class:

| Income class: | Total tax |
|---|---|
| $4,000 and under | $69,721,721 |
| $4,000 to $10,000 | 91,940,010 |
| $10,000 to $25,000 | 126,886,410 |
| $25,000 and over | 430,838,965 |
| Total | 719,387,106 |

It will thus appear that the small taxpayer who earns under $4,000 per year is paying only about $70,000,000 per year in taxes. I am convinced that it costs as much to handle and tabulate the returns according to the present way of doing business in the revenue division.

Other figures are interesting. For the same period the total number of persons making income-tax returns was 6,662,176. The so-called Mellon plan would have benefited 9,433 people more than the law as it existed before this Congress met. The plan which has gone into effect and which my colleagues will bear in mind and which was really the Garner-Simmons or Democratic plan has benefited 6,641,262 taxpayers more than the old law benefited. In my own State of Pennsylvania for the period just mentioned 621,103 people filed income-tax returns. Eight hundred and thirty-three more people would have been benefited in my State by the so-called Mellon plan than by the existing law, but according to the Garner-Simmons or Democratic plan which we have adopted we have benefited 620,270 more people. In my own congressional district based upon the so-called Mellon plan and the records on file with the Treasury Department about 29 more people would have been benefited. Under the Garner-Simmons or Democratic plan every taxpayer in my district or 15,062 have been benefited.

I think we have arrived at the point where we can begin our exemptions upon earned incomes under $5,000 for men with families, and every single man who earns under $2,500 should be exempt. I think the exemptions should begin there for all taxpayers. Those who earned from $4,000 to $10,000 per year paid only $91,940,010 in the period mentioned. Those who earned between $10,000 and $25,000 paid $126,886,410, whereas those who earned $25,000 and over paid $430,838,965.

The great home-owning, home-building class of people came within these proposed exemptions. About 6,000,000 of them have been filing income-tax returns, and I am firmly convinced that the cost of operating the revenue division with regard to this multitude of tax returns is more than the amount actually received in taxes. You will find that the average married man, earning under $5,000 per year, is trying to raise a family, educate his children, buy a home, keep up his fraternal and religious standing, trying to appear with his family dressed decently in public, and endeavoring to purchase a few of the small and reasonable luxuries of life which give him spiritual and educational inspiration. From this class of wage earners we can well afford, in the last analysis, to lift the burden of trifling income taxation.

The so-called Mellon plan offered 50 per cent of tax reduction to the large taxpayer, approximately 246 in number, who would have been exempt from the payment of millions of dollars on income tax, whereas it offered to the small taxpayer only 25 per cent reduction. My vote, which was consistent and sustained by the overwhelming majority in the House and Senate and also by the President's signature, gave proportionate tax reduction equitably and ratably to all taxpayers.

If this country had been struggling under a heavy load of taxation in March, 1923, the President and his Secretary of the Treasury knew it. This Congress was elected in November, 1922. Neither President Harding nor President Coolidge called it into session. It met under the Constitution in December of 1923. I voted against its adjournment, because this administration, having permitted it to remain home for a period of nine months, should have permitted it to remain in session until relief had been given to the farmer and until the matter of threatened industrial disputes had been legislated upon. I regret that the President and his Secretary of the Treasury did not call into conference Democratic and Republican leaders in the House of the people's representatives, where all revenue legislation must originate, and go over with them thoroughly the tax-reduction question. Unquestionably, the great men upon both sides of the House would have agreed upon a fair and equitable basis for the reduction of taxation. The general conduct of this matter savors strongly of a desire on the part of the administration to throw this question into politics and make it a campaign issue for 1924. I so stated practically to all persons who wrote me on this subject and requested them to write to Secretary Mellon and ask him to use his great influence with the administration to stop the saturnalia of expenditure which has characterized every act of the present party in power. Increased appropriations were demanded by every department of the Government. These departments are presided over by the Cabinet members who meet together and with the President every week and upon call of the President. The expressed and intense desire of the people, and especially the Democratic Members of Congress, for broad and sweeping tax reduction and governmental economy was met by governmental extravagance and lump-sum appropriations which stagger the imagination.

In 1916 we appropriated for the Army $119,530,829; for the Navy, $150,526,634; a total of $270,057,464. This year Congress has appropriated for the Army $300,000,000 and for the Navy almost $295,000,000; approximately $595,000,000; an increase over 1916 of about $285,000,000, and we were getting ready for the World War in 1916.

And in the face of it all, with millions of dollars of the people's money thrown to the winds in governmental extravagance, by this tax reduction bill forced through this Congress by constitutional Democrats, we have reduced taxes 25 per cent for 1923, payable in 1924, and we have given a reduction for 1924 of three hundred and sixty-one millions, and for 1925 of four hundred millions of dollars, and this reduction has not been affected by payment of adjusted compensation for ex-service men.

If this administration had eliminated its deficiency bills, amounting to $372,195,711.61, if it had eliminated all governmental extravagance, we would have been enabled to grant an exemption of income tax upon all those earning under $7,500 per year, and we could have eliminated every nuisance tax known to modern business, and we could have paid the much-needed increases to postal employees.

Congress is about ready to go home. In a few days most of the people throughout the Nation will know something about the possibilities of tax reduction in this country for the great home-owning, home-building, and family wage earner, and then the work of those who forced the present tax reduction bill through the present Congress and past the President's signature will be appreciated and the possibilities for the future will be realized.

RECORD OF VOTES

Mr. CARTER. Mr. Speaker, under leave to extend my remarks I am printing herewith the record of my votes in the last two sessions of Congress:

SIXTY-SEVENTH CONGRESS, FOURTH SESSION

TREASURY APPROPRIATION—H. R. 13180

December 9, 1922: Amendment for substitution of power for hand presses in Bureau of Printing and Engraving. Yea. Passed.

Appropriation bill passed without roll call.

NAVY APPROPRIATION—H. R. 13374

December 14, 1922: To consider. Yea. Passed.

December 16, 1922: Campbell, Kansas: Amendment asking for negotiation for limitation of aircraft construction. Yea. Passed.

December 18, 1922: Motion to recommit. Nay. Passed.

Bill passed without roll call.

PENSIONS—S. 3275

December 21, 1922: Granting pensions for service in Civil and Mexican Wars. Motion to recommit. Nay. Failed.

No vote on final passage.

POST OFFICE APPROPRIATION—H. R. 13593

January 3, 1923: Slemp: Pneumatic tube amendment for New York City—$513,911.50. Nay. Passed.

INTERIOR DEPARTMENT APPROPRIATION—H. R. 13559

January 3, 1923: For support of Indian pupils at Greenville (Calif.) School. (RAKER.) Nay. Failed.

January 3, 1923: Temple amendment: After the word "forests," strike out "$324,500" and insert "$500,000." Yea. Passed.

AGRICULTURAL APPROPRIATION—H. R. 13481

January 3, 1923: JONES, Texas: For expenses of publication on diseases of the horse. Yea. Passed.

January 3, 1923: To table appeal from decision of the Chair against Carter motion to recommit with seed distribution amendment. Nay. Passed.

FOREIGN SERVICE OF UNITED STATES—H. R. 12880

February 8, 1923: For increase of salaries and retirement on half pay. To recommit. Yea. Failed. No roll call on passage.

REFUNDING FOREIGN DEBT—H. R. 14254

February 9, 1923: Motion to consider. Yea. Passed.
February 9, 1923: Passage of bill for settlement of British World War debt. Yea. Passed.

FEDERAL FARM LOAN ACT—H. R. 14041

February 20, 1923: Anderson amendment to strike out section 5. (Section 5 provides that loans could be made by agents of Federal farm loan banks.) Yea. Passed. No roll call on passage of act.

WAR DEPARTMENT APPROPRIATION—H. R. 13793

February 21, 1923: Motion to recede and concur with amendment against recruiting boys under 21 without consent of parents. Nay. Failed.
February 21, 1923: Anderson motion to recede and concur with amendment prohibiting retired Army officers from holding positions with firms furnishing supplies to Army or War Department. Yea. Passed.

TRADING WITH ENEMY ACT AMENDMENT—H. R. 14222

February 23, 1923: Motion to recommit. Yea. Failed.
February 23, 1923: Passage. Yea. Passed.

DEFICIENCY BILL—H. R. 14403

February 26, 1923: To consider. Nay. Passed.

BONUS FOR CIVIL EMPLOYEES—H. R. 14435

February 28, 1923: Passage of bill to grant $240 extra per annum. Yea. Passed.

FARM CREDITS—S. 4280

March 1, 1923: Passage of bill. Yea. Passed.
March 3, 1923: Agreeing to conference report. Yea. Passed.

COAL FACT-FINDING COMMISSION—S. 4160

March 2, 1923: Passage of bill to create commission with appropriation of $600,000. Nay. Passed.

ADDITIONAL COLLECTION DISTRICT FOR INTERNAL REVENUE—S. 2051

March 2, 1923: Passage of bill. Nay. Passed.

TRADING WITH CHINA ACT—H. J. RES. 455

March 2, 1923: To strike out the words "resident of China." Bill passed. Yea. Passed.

SIXTY-EIGHTH CONGRESS, FIRST SESSION

H. J. RES. 136—TAX-EXEMPT SECURITIES

Amendment to Constitution providing for Federal taxation of State securities and State taxation of Federal securities. Motion to recommit. Yea. Failed.
Passage of joint resolution. Yea. Passed.

H. R. 6715—TAXATION

Earned income derived from combined personal service and capital. Yea. Passed.
Hawley substitute for Garner plan. Nay. Failed.
Longworth substitute for Garner plan. Nay. Passed.
Tax on cigars: Strike out "$3" and insert "$4." Yea. Passed.
Motion to recommit. Yea. Failed.
Passage. Yea. Passed.

H. R. 518—MUSCLE SHOALS

Motion to recommit. Nay. Failed.
Bill to authorize the Secretary of War, for national defense in time of war and production of fertilizer in time of peace, to sell Muscle Shoals to Henry Ford. Yea. Passed.

H. RES. 216—CHARGES AGAINST TWO MEMBERS OF CONGRESS

Graham, Pennsylvania, amend: Requesting Attorney General to proceed at once to investigate charges. Yea. Passed.
Passage of resolution as amended. "That the House take no further action." Yea. Passed.

INCREASE OF COAST GUARD—H. R. 6815

Passage of resolution to authorize a temporary increase for law enforcement. Yea. Passed.

H. R. 5078—INTERIOR DEPARTMENT APPROPRIATION

To concur with conference report. Nay. Passed.

H. R. 7959—WORLD WAR VETERANS' COMPENSATION

Passage of bill. Yea. Passed.

H. J. RES. 180—RELIEF FOR GERMANY

Bill to give $10,000,000 to German children and women. Nay. Passed.

H. R. 6202—CONVERSION OF SHIPS

Amendment to merchant marine act of 1920 for improvement to modernize ships. Yea. Passed.

H. R. 8233—INDEPENDENT OFFICES APPROPRIATION

Amendment to increase appropriation for Federal Trade Commission from $980,200 to $940,000. Yea. Passed.

H. R. 8262—COMPENSATION OF SENATE AND HOUSE EMPLOYEES

Bill to increase salaries. Yea. Failed.

H. R. 5726—OSAGE INDIANS

Division of lands and funds in Oklahoma. Yea. Passed.

H. J. RES. 195—NARCOTIC DRUGS

Appropriation for participation of United States in two international conferences for the control of traffic in habit-forming drugs, $40,000 for five representatives. Nay. Passed.

H. R. 8143—PROTECTION OF FISHERIES IN ALASKA

Sutherland amendment: To prohibit use of traps. Yea. Passed.
Bill passed without roll call.

H. RES. 254—CHANDLER V. BLOOM

Substitute for resolution: That Sol Bloom was duly elected to Sixty-eighth Congress from nineteenth district of New York. Yea. Passed.
Passage of resolution as amended. Yea. Passed.

H. R. 7995—IMMIGRATION

Begg amendment: The burden of proof that he is not subject to exclusion shall be upon any alien who attempts to enter the United States. Nay. Passed.
Passage of bill for limitation of immigration. Yea. Passed.

H. R. 655—DISTRICT OF COLUMBIA GASOLINE TAX

Passage of resolution for tax of 2 cents per gallon. Yea. Passed.

H. RES. 243—AIR SERVICE INVESTIGATION

Underhill amendment: To limit investigation appropriation outside of District of Columbia to $15,000. Yea. Failed.

H. R. 7229—AGRICULTURAL APPROPRIATION

Thirty thousand dollars may be used for manufacture of blackleg vaccine. Yea. Passed.
Motion to recommit. Nay. Failed.
Bill passed without roll call.

H. J. RES. 184—CHILD LABOR

Passage of resolution to consider. Yea. Passed.
Amendment to change from 18 years to 16 years. Yea. Failed.
Passage of resolution for regulation of child labor. Yea. Passed.

H. R. 6357—REORGANIZATION OF THE FOREIGN SERVICE

Motion to recommit. Yea. Failed.
Bill passed without roll call.

H. J. RES. 248—CHINESE INDEMNITY

To provide for the remission of further payments of the annual installments of the Chinese indemnity. Nay. Passed.

H. RES. 278—CAPE COD CANAL

To consider bill for purchase by the Government. Present. Passed.

H. R. 7995—RESTRICTION OF IMMIGRATION

Conference report. Yea. Passed.

H. R. 7959—ADJUSTED COMPENSATION

To postpone consideration of President's veto. Nay. Passed.

H. R. 7959—WORLD WAR VETERANS' COMPENSATION

To pass bill over President's veto. Yea. Passed.

H. R. 6715—REVENUE; TAX REDUCTION

Conference report. Yea. Passed.

H. R. 8233—INDEPENDENT OFFICES APPROPRIATION

Conference report. (Disagreement on navy yard amendment.) Nay. Failed.

H. R. 9033—M'NARY-HAUGEN BILL

Final vote on passage. Yea. Failed.

H. R. 6645—BUREAU OF PROHIBITION

To create a bureau in Treasury Department. Yea. Passed.

S. 1398—POSTAL SALARY INCREASE

Conference report. Yea. Passed.

## EIGHTEENTH AMENDMENT

Mr. RAKER. Mr. Speaker and gentlemen, in compliance with the permission given me by the House to extend my remarks on the eighteenth amendment I shall to some extent reply to the gentleman from Ohio and include an article which shows how real property has advanced instead of declining in value, as predicted by those who were opposed to the eighteenth amendment and the Federal laws enacted by Congress to carry out its provisions.

Every variety of camouflage is used by the wets in order to attempt to defeat the enforcement of the eighteenth amendment. Pleas for beer and wine, in spite of the plain letter of the Constitution; attacks upon enforcement officials who are loyal and active, without assaults upon those nominees of wet Congressmen who are complaisantly nullifying the Constitu-

tion; home-brew statistics telling of crime and drunkenness which never finds any record in police statistics; appeals to religious prejudice, to sectional pride, to racial animosities, to the baser impulses of humanity, diversified by lofty invocations of temperance and moderation—we have heard all these oft repeated.

A gentleman from Ohio—a general, distinguished soldier on the Union side in the Civil War, and statesman of many years—Saturday, January 19, 1924, repeated these arguments to the House. The oldest Member of the body, he portrayed youth as a victim to-day of the drink evil. I assert that to-day the young men and young women who are alcohol addicts are only a small fraction of those who habitually drank two years ago. We are outdoor folk to-day. Athletes, both boys and girls, are never drunkards. They drive high-powered autos with rarely an accident because of drunkenness. They dance through the night. Alcoholized bodies could not stand that strain. They have packed every college to the limit of its capacity and have surpassed the scholarship records of our fathers and our grandfathers. Minds stupefied by alcohol could never do this. The churches record the unprecedented gain in young people's societies, both in membership and in activities. Youth lost in drink does none of these things. They are demanding and are assuming a larger part in the public and business life of the Nation.

What honest observer of society can believe that the revolution in the life of youth could be possible if the drinking habits of only a half decade ago were still in force? Youth to-day is cleaner than in any age in our history. The liquor traffic still ruins boys and girls, but for each one who goes down that road to death to-day a thousand were destroyed by the legalized traffic just a few years back.

To unfavorably compare our record in crime with Europe and then to draw the conclusion that prohibition is responsible for the greatest number of murders in America argues either ignorance of the facts or unwillingness to face them. We have more crime than Europe has. But the alien in our midst commits the greater portion of that crime. The records show that over 80 per cent of the violations of the eighteenth amendment and laws enacted thereunder, both Federal and State, are committed by aliens. Our record for murder and homicide has long been worse than other nations. But where other countries, particularly in Europe, have shown an increase in crime since the war, America alone among the nations of the world has recorded a falling crime rate. When we shut the doors of the saloon we cut off the source of much of our crime.

I know not how to answer one who cites the number of arrests and convictions of those charged with violation of the Volstead Act as evidence of failure to enforce that very law. The violation of the liquor laws has always been one of our most serious problems. Before the arrival of national prohibition we closed our eyes to many of these violations. We knew that moonshine stills were running in many rural districts. We knew that peddlers sold the product of these stills against the law. The words "moonshiner" and "bootlegger" were not invented after the Volstead Act. They are an inheritance from the days when the gentleman from Ohio voluntarily placed himself under personal prohibition. We arrested and punished only a small fraction of those who illegally manufactured liquor in those days.

Who ever heard of a saloon observing the law under the license régime? When the front door closed the rear door opened. In many places no pretense of closing the front door was even made. It was this defiance of all restraints that made prohibition inevitable. We outlawed the saloon because the saloon would keep no law. I question if any city in America to-day has as many illicit dealers in intoxicants as it had under the license system. Comparison of the Federal internal revenue figures with the local license totals in any city will reveal the existence of thousands of "speak-easies" before prohibition. Add to these the probable number of illegal dealers who did not even have a Federal license, and the total will astound you. The actual fact is that we are dealing with the greatest foe to law the world has ever known. Where in former years we compromised with this enemy and closed our eyes to the host of daily violations of law, to-day we are waging a war to the death. Law against outlaw; democracy against organized booze; that is the array of forces in the greatest contest we have ever faced.

The old-time saloonists themselves protest against the Ohio gentleman's defense of their order. I hold in my hand one of the letters sent to the gentleman from Ohio. He has doubtless received others, perhaps scores or hundreds. I do not know just what the church people, the ladies' organizations, and the friends of prohibition in Ohio have said to him about his attack on the Puritan and on prohibition. But from an hotel man, an enemy of the eighteenth amendment and one who fought its adoption, there came to him this letter, by which we may gauge how greatly the gentleman from Ohio misunderstood his own State:

SUNDAY, JANUARY 20, 1924.

MY DEAR CONGRESSMAN: When I reached Cleveland in 1889, it was not very long before the name "——— ———" became well known to me. Tom L. Johnson was then aspiring to a seat in Congress, which he later on attained. From this great man the principles of democracy were learned. If you remember the debates in the lower House on the income tax, with Bryan for and Johnson against, you will perhaps admit that the writer is somewhat familiar with the political history of his adopted country. It was with some astonishment, therefore, that I read in Sunday's paper, January 20, your reference to the "Puritan," where you state that the present spirit of those who would see the law enforced was similar to that of "the old Puritans of the seventeenth century, who hung Quakers in Connecticut and burned witches in Massachusetts." For a Congressman from Ohio, especially one from within a stone's throw from the fire lands of the Western Reserve, where the Puritan farmers of Connecticut were placed by the Puritan government of the State of Connecticut, to cast aspersion upon the very founders of the State he is supposed to represent, then he must be requested to explain just what he means when he states that Mr. UPSHAW is the "reincarnation of the kind of Puritan you say he is."

The records show that 22 people were done to death for witchcraft—22 in all the history of New England. Are you aware that 66,000 human beings were done to death for the same thing in old England and 153,000 in France? "Hanging Quakers and burning witches" forsooth. Why do you point to the Puritan? What was the Spanish inquisition doing at the same period of world history to which you refer, namely, the seventeenth century? Why, 22 human beings would not make up an "auto-de-fe" for an afternoon's burning in any large city in Spain at the time to which you refer. Well, sir, are those who are the successors to the authority for the burnings ordered by the Spanish inquisition to be called "religiously tolerant," "politically charitable," free from bias and prejudice, or do you belong to the tribe of alien thought—alien to the very highest aspirations of this great country of ours? Have you lent yourself to the propaganda of abuse and mendacious slander that those religiously opposed to the Puritan now as well as the seventeenth century indulge in? Have you forgotten the history of the Western Reserve? Has your age made it impossible to make a proper analysis of the present situation, where the Puritan spirit is asserting itself in the interests of constituted law and order? Have you ever visited Painesville, Ohio? Read what is carved in stone as you enter the county courthouse. On one side "That regard for the public welfare is the highest law" and on the other "The right to a free government presupposes the duty of every citizen to obey that government."

Who gave America Harvard and Yale? The Puritan.

Who gave America and the world the first and only Constitution of the people? The Puritan.

Who gave America its first free public schools? The Puritan.

Who established Hudson Academy, that later on blossomed into the Western Reserve University? The Puritan.

Which part of these United States gave more of her sons to help save the Union in the war of which you yourself was a part? The Puritan Western Reserve. * * *

Where were the "underground railways" maintained that gave freedom to thousands upon thousands of colored folks during the Civil War? The Puritan Western Reserve.

* * * With all the traditions of that part of the country the soil of which has given us so much that is sacred to our institutions, you might have left the Puritan and all the glorious heritage he has handed down to us alone. * * *

Your friends now are the alien bootlegger, as well as the Governor of New York State, who has made every citizen of the State of New York a constructive anarchist and rebel against the Government of the United States. And you have done all this for a drink of booze!

In conclusion, the writer fought the eighteenth amendment as it was being gradually brought to us with all the power he possessed. As a hotelkeeper, my bar was part of my stock in trade and my selfish interests made me its defender. I spoke before literary societies, Rotary and Kiwanis Clubs, Protestant churches, and opposed with what strength was mine against the impending eighteenth amendment. My father was a distiller of Scottish whisky. I have been a consistent drinker all my life; but whatever I may have expected from a Democrat in New York State * * * I never thought I'd live to see a Congressman from the great Buckeye State defend booze. * * *

Very sincerely yours,

JOHN McF. HOWIE.

The Hon. ——— ———.

There has been a decrease in the number of divorces sought because of intemperance. Comparatively few suits are brought

on this ground to-day. The breaking up of home life and the decline in birth rate among the native born is attributed by many of our social students to the presence of married women in industry, with the inevitable decadence of the home.

Prohibition has reduced crime amazingly. Drunken men are rarely seen on any of our streets. Judge Gemmill, of Chicago, has published statistics showing a decrease in arrests for drunkenness amounting to 500,000 in 1923, or 2,000,000 in the four dry years. Nearly 2,000 penal institutions were empty when the 1922 census of prisoners was taken. Our crime rate dropped 5.8 per hundred thousand between 1917 and 1922. Our death rate has written new records for the world, and the decrease since prohibition is equivalent to the saving of 873,000 lives. We have decreased public charity, due to intemperance, by $74,000,000 annually. We now have 250,000 fewer industrial accidents per year caused by alcohol-numbed minds or muscles. We have closed the doors of nearly all the brothels which once ruined the minds, morals, and bodies of our people. We have checked—if not halted—the flood of evil forces dragging down the State.

The billions of dollars once spent for strong drink now speeds up the wheels of industry and commerce over all our land.

Each month we have been buying a billion dollars' worth of life insurance policies. In each of the three last dry years some insurance companies have paid more money in dividends to living policy holders than they have paid in death claims. Our savings deposits now amount to over $18,000,000,000, or within one-seventh of the total amount of the national debt. One in every seven persons in the Nation owns an automobile. Over 4,000,000 autos manufactured last year found ready purchasers.

We are constructing over 2,000 more homes per month now than in 1919. Even the high cost of building can not halt this building, which surpasses both industrial and business construction. Department stores, general retail trade, amusement houses, jewelry and luxury trades have reported unprecedented growth in the amount of business done. For one single item of amusement alone, the radio, we spent last year $400,000,000.

We are richer than any nation the world ever knew. Physically, we are healthier and stronger than in the past. The Census Bureau reports an increase in longevity since prohibition. We are morally better, as the statistics of our churches as well as the reports of our criminologists prove. We are happier, as every legitimate amusement enterprise can testify. Without prohibition none of these things would have been possible achievements.

There are defects in enforcement of prohibition, but these defects are neither so numerous nor so serious as the opponents of prohibition wish they were or as they would have us believe. The most casual comparison of conditions to-day, in spite of whatever defects we may find in enforcement with conditions under license, will satisfy any fair-minded student of our national life that we have made unparalleled gains in every field of human progress since prohibition.

The condition of the drink-sodden nations of Europe, the rising tides of crime there, the political power of the liquor traffic in England, France, Spain, and Italy, the general smuggling of high-powered alcohol, the home distilling in France, the evasion of all laws for control, the mounting death rate in nearly every European country, the unemployment, the poverty, all these approve in strongest terms that which President Coolidge has termed the American policy of government in his message to Congress, when he uttered these words:

> There is an inescapable personal responsibility for the development of character, of industry, of thrift, and of self-control. These do not come from the Government but from the people themselves. But the Government can and should always be expressive of steadfast determination, always vigilant, to maintain conditions under which those virtues are most likely to develop and secure recognition and reward. This is the American policy.
>
> It is in accordance with this principle that we have enacted laws for the protection of the public health and have adopted prohibition in narcotic drugs and intoxicating liquors.

An unbiased observer of effects of prohibition, Felix Isman, one of the best-known realty experts in America, writes as follows in the Saturday Evening Post of March 1, 1924:

THE EFFECT OF PROHIBITION UPON REALTY VALUES

When the Volstead Act went into effect in 1919 it was obvious and inevitable that the status of scores of millions of dollars' worth of realty holdings would change. Whether this change would be for better or worse few persons were in position to say. The most natural guess to make was a pessimistic one. To the superficial observer it seemed clear that if thousands of locations which had been producing an income from the sale of intoxicating beverages could no longer be used for that purpose prohibition would fall like a blight upon the real-estate market.

Any such conclusion, however, overlooks a fundamental characteristic of real estate as a basis of value—real estate is more or less indestructible in itself. You can't chop the head off real estate either with an ax or with a Volstead Act.

People are the basis of value; the best way to destroy real-estate value would be to destroy the people; which reminds me of the story of the dog and the pig:

"What a wonderful animal you are, pig," said the dog. "Why, every part of you is worth money; your tail, your legs, everything—even your hair is used for bristles. My body—what is it worth? Absolutely nothing! It is less than worthless." Touched to the quick by this realization of his own worthlessness, even though he had expressed it, the dog continued:

"But you are still nothing but a pig." Now, prohibition killed the saloon, but the corner lot on which it stood was not a dead dog. It was a dead pig. The question confronting the real-estate man was what to do with the corpse.

BURYING THE CORPSE

War-time prohibition had rendered the property in question useless for its former purpose, as the owners thought, but for a temporary period. They were willing to bide their time. But when national prohibition became a certainty and the knowledge that new usage must be created or obtained for the tremendous quantity of realty used in the sale of alcoholic stimulants became an acknowledged fact there was little short of panic among owners and long-term tenants. Not only had the realty conditions to be met but considerable finesse and a thorough understanding of the condition of the owners' minds and temperaments were required to restrain panic-stricken ones from upsetting all the carefully laid plans of those who had been called upon to bury the corpse.

A difficult part of the situation was the feeling by many owners that saloonkeepers had been paying excessive rent for the use of their realty, and the thought of a sure and certain return to normality was a condition fraught to many with anticipation of great distress.

For years a part of the American public scarcely realized that the subject of prohibition was other than an argument. The question as to whether deprivation of alcoholic stimulants was a moral issue or whether it was a deprivation of personal liberty became practically the only discussion. To the real-estate mind, however, there was another aspect of the case: Prohibition would change the status of value for better or worse to the owners of untold millions of realty holdings.

How to bury the corpse was a question of great perplexity, even to the expert who had taken the time to study records of the effects of prohibition upon realty values in the various prohibition States. In spite of the persistent manufacture of statistics by the propaganda agencies of both wets and drys, real-estate experts who had studied this subject thoroughly knew the effects of prohibition upon values in small towns, counties, States, and fairly large cities. But all this information now had to be considered in the light of an unprecedented situation, for there was a tremendous difference between the largest city in any prohibition county or State—at the time it went dry—and New York in 1919. In the smaller towns and cities values had naturally not become stabilized; many things might affect them. In the larger cities values are much more definitely fixed.

The effect of prohibition in its various phases could not have been so far-reaching years ago, because the cities were much smaller and values were naturally much less, whereas in 1919 not only had the cities grown tremendously in size but realty—probably out of proportion to growth in population—was at its peak. The imminent change so soon to descend upon these fairly stabilized conditions with a century or more of tradition behind them presented a problem which may be fairly described as stupendous.

The effect of State prohibition upon realty, however helpful, was a very different condition from that of national prohibition. The effect of State prohibition upon realty formerly used for the sale and manufacture of liquor could be nowhere nearly so great as the conditions which the Volstead Act created, for many reasons.

THE TURN OF THE TIDE

The lessons taught by modified and absolute State prohibition upon realty were manifold. Many of us will remember the great apprehension which realty owners of liquor establishments had when the new law in the so-called prohibition States went into effect; how the magazines were flooded with illustrations of the city deserted, and how, during the first year, realty values of property used for either the manufacture or dispensation of alcoholic liquor were frightfully hurt; but to everyone's surprise, little by little these establishments were taken for other enterprises and they were, in the main, quite successful. Business picked up generally; the savings banks began to find an increase in their deposits; people began buying their own homes, and merchants their business establishments; the jails were being emptied; a general air of prosperity became increasingly apparent, and what

was more important, comfort and good will in the minds of the public began to become plainly apparent. There was less friction in the air; then realty prices commenced to advance, not only recovering lost ground but taking decided strides beyond former peak prices.

Now this is what the realty broker who had studied the history of the effect of State prohibition knew. So it was not so much the fear of depreciation in price which disturbed him as the gigantic problem of disposition.

Not only was the saloon the object of attack but practically every hotel proprietor throughout the country, representing a tremendous investment, was in a quandary how to meet changed conditions, and very much worried whether he could meet, not only his expenses but his rent as well.

In addition, the brewery owners, were confronted with a far greater problem, because they held special buildings, erected for special and particular purposes, and were upon the horns of another dilemma; only theirs was far more perplexing. Distilleries were the breweries' twin brothers; in fact they were Siamese twins.

This is particularly a story of how the corpse was buried, for the job has been done with startling success. Thousands of saloons have gone out of business; other thousands of restaurants have either adjusted their affairs to the new conditions or given way to other branches of trade endeavor. Thousands of breweries, distilleries and wholesale liquor warehouses are now, in the main—not. Additional thousands of hotels that faced the problem of how to give up their bars without the use of red ink on their books solved the difficulty.

And thereby hangs our tale. These problems have met a happy ending

NEW TENANTS AT HIGH RENTALS

Let us begin with the corner saloon; it was the most widespread real-estate problem. It was very different from the hotel, because the saloon was a comparatively small investment in proportion to the latter. Now, a strange thing happened in and around New York City. Many saloons had occupied most prominent corners. Some of them presented opportunities for representation—I mean opportunities for national advertising purposes—far beyond the worth of the space for mere merchandising purposes. The chain stores waited in line for them. They outbid one another, and in almost all cases the prominent locations brought more money than the saloons ever paid for them. The chain grocery stores took up many of the others in less prominent spots. Many saloons had leases made before the neighborhoods had changed for the better, and they subleased the properties at a substantial profit. In this way the situation was dealt with in a complete and profitable manner.

There is a peculiar condition which surrounds a certain kind of building—one where the space is used for a limited length of time per day. The largest saloon, occupying considerable space, at its busiest times would really have use for but a small portion of its space. This is also a condition with a billiard hall. It is necessarily so with a theater. Now, the chain stores sensed the saloon situation. Many of them could do business in a very small space. They required no tables, chairs or lounging space; in fact the founder of the largest chain-tobacco stores told me that the keystone of his business was founded on the inability of the store to permit a customer to remain longer than the consummation of a purchase. So the larger space was cut up by the chain store into small stores, utilized for business purposes requiring small and frequent purchases, and in this manner better utilization became immediate.

THE HOTEL MEN'S PLIGHT

The saloon was practically a one-man business. One could run an endless number of stores from a main center, but not saloons; in fact, in most States it was unlawful to do so. One prominent grocer in New York City wants but a dollar per day profit from each of his stores. A large candy manufacturer advertises the slogan "A penny a pound profit." Now, the saloon man had to live from the profits of his one establishment. The chain store, if its location is successful, can part with a portion of its profit as additional rent so that, all in all, the transition from saloon to the various branches of merchandising has resulted not only in an increase of value but in a much higher grade of investment, and also in at least a better outlook for the future in point of permanent returns. Likewise the restaurateur is better able to pay rent, even though he does but a legitimate business. People eat more and more frequently. They pay better prices. They have the money they formerly spent in saloons to aid them in doing so.

The hotel, however, presented a vastly different and far more stubborn problem, because its furnishings were in many cases very elaborate and expensive. The saloon fixtures could be hauled off in a truck and that's that, but if a hotel with 200 rooms or over found itself unable to pay the rent because its bar had been put out of business, the owner couldn't dump at least $200,000 worth of stuff on trucks and rent the place to a chain grocer. Many different solutions had to be found before the hotel was out of trouble or out of business without damage to its realty value.

At first some of the managers experimented with cider at $2 a bottle, but they didn't get very far with that. Then, with great apprehension, nearly all of them raised the prices of rooms and food. That was sound and almost immediately lifted a great number out of their difficulty. Their principal competition was with restaurants of the better sort, which had also been selling liquor, but those restaurants were either raising the price of food or going out of business also. But the most important revenue-producing change in hotels began with renting the space formerly occupied by the bar to a merchant. This the realty expert knew was the first step. Then he discovered that there was ample space for a lot of other stores. By making a few changes he could offer merchants show windows facing both the street and the lobby. Then, again, first-floor restaurants were removed to the mezzanine or second floor. This helped to solve the problem for a lot of them.

But not every hotel was so situated or constructed as to make this solution possible. The proportion of bar receipts to other income would vary, of course, very widely with different establishments. Scores of hotels could not survive, even after landlords had made adjustments in the tenants' rent. In this article we are not considering the fate of the hotel, but the real estate. Therefore the hotel man who went out of business because of prohibition may read with astonishment a statement that the problem was solved by turning the establishment into an office building, which brought larger returns than the hotel. This statement can be accounted for by easy arithmetic: A room averages 12 by 16 feet, or, roughly, 200 square feet. A high rent for wholesale hotel space would be $2 per night per room, predicated upon 300 nights per year, or $600 per room annually. Now, it was quite easy to obtain $3 per square foot for office space; so the owner recovered first or ground floor space, also considerable second-floor space, and considerable of the basement space, which had been given to Mr. Hotel Man as a by-product incident to his utilization of the rooms. That happened in numerous instances in the larger cities, and for the purposes of this article it is the happy ending.

The majority of hotel keepers who survived were most agreeably surprised to see how the public rose to the situation. Though the period of adjustment was very trying to all of them, the new air of restfulness which pervaded the establishment after the bar had been closed was most agreeable to everyone from manager to bootblack.

CONVERTED BREWERIES

Next let us consider the brewery. A lot of people, including directors of brewing companies, had been worrying for several years before prohibition, and about all they had for their pains was a headache. It was known that some of them might survive in a fashion by manufacturing "near" products, but it was doubtful whether "near" products would have a sufficient sale to permit of their being exclusively manufactured by the larger breweries. There they stood, enormous things—nearly every one covering as much as a city block of space. No revenue-producing business one could think of but would find them entirely too large. If a towering mass of brick could resemble a white elephant, the brewery did. The real-estate man looked at them and heaved a sigh. Their owners looked at them and groaned. Numerous proprietors of little manufacturing businesses wandered through them and decided that their enterprises might as well lease the Grand Canyon.

But other events were hurrying along a solution which the real-estate man was not slow to discover. Demand for old buildings of almost any kind or shape, of four brick walls, with a dependable roof, became so insistent by reason of the tremendous rise in materials and labor that the brewery buildings could no longer be overlooked. In short, these two problems—like the gingham dog and the calico cat—ate each other up. The prices of bricks, steel, cement, and, above all, labor, were mounting skyward. Here were vast structures in excellent repair, soundly built. The reproduction cost of these buildings would be enormous. Covered space was in demand. How about using them for warehouses? And quite a number went that way.

The machinery in them could be adapted to numerous uses besides the making of beer; most of this machinery was modern and economical of operating cost. Within a short time quite a number of breweries had been converted into some other kind of factory. The real-estate man, however, held the key to the situation for many of the oldest breweries, for often these establishments had originally sought cheap land some distance out. In the intervening years the city had grown and finally surrounded them. At the time national prohibition came if there had been no other use for the buildings of breweries so situated the bricks in them and the land could have been sold at a high profit in many instances. Many sales were made on this basis, whether the buildings were actually torn down or not. One of the largest and most prominent churches in New York City has been erected upon the site of an old brewery.

The procedure of successfully disposing of the distillery corpse was in a general way similar to that of the breweries, but do not overlook

the fact that this problem was not nearly so acute. Whisky is still being legally manufactured, which brings us to some of the unsuspected by-products of prohibition.

As before stated, a great deal of whisky is not only being manufactured but legally sold on physicians' prescriptions through drug stores. It is sold in a manner which reminds me of a story told years ago in the old Weber & Fields Music Hall. Little Joe Weber, in one of the plays, speaking of his experience in Europe, said, "One bought fruit over there and paid for jewelry." While the cheerful possessor of one of these little slips waits for the clerk to fill the bottle he is rubbing elbows with a crowd of men who rushed in for a sandwich and a cup of coffee. Back of these men is a small boy examining a radio outfit, and at the other counter stands a woman purchasing rouge. Or is it cigarettes? Maybe it is a fountain pen. Anyway the drug store, in addition to its prescription-whisky business, is now a soft-drink stand, restaurant, and miniature department store. Instead of having to seek low rents, as the old apothecary shop usually did, this new establishment is a bidder for the most expensive spaces in the world.

RUM'S COMPETITORS

Of course, you have thought of the motion-picture show and what happened to its receipts as soon as the saloon went out of business. As a matter of fact, the motion-picture theater had been giving the saloon a merry chase for some years previously. It is a well-known fact that one good motion-picture house could banish at least half, if not more, than that percentage of the saloons in its neighborhood.

That business is a simple merchandising problem. Entertainment is a staple commodity just as certainly as potatoes are food. Both are necessities of life. Booze and motion pictures came under the head of entertainment for most of those who purchased them. For not more than 50 cents one can purchase about two hours of entertainment in a motion-picture theater. Foreign and domestic travel, with music, is offered along with the company of kings, clowns, millionaires, heroes, vampires, cowboys, and Charlie Chaplin. You can laugh, cry, be thrilled, and informed without effort. The bartender couldn't offer so much for the money.

So motion-picture shows were beating the saloon in a bare-fisted fight, and they simply plunged to prosperity when their adversary was outlawed.

Nearly everyone saw that for himself; but perhaps you didn't know that before prohibition billiard parlors had an appalling mortality rate but are now solid investments, in the main. The original billiard and pool parlor usually nestled close to a bar, under the mistaken notion that it would draw trade from the brass rail. Quite the opposite always happened. Tom, Dick, and Harry stopped after the first game to have a drink and neglected to return.

Meanwhile the rent for all that floor space under the billiard table was going merrily on; also the light bill. The absentmindedness of Tom, Dick, and Harry put nearly as many billiard parlors out of business in the course of a year as other optimistic managers started.

When the brass rail went down, the uneasy manager of all those expansive, as well as expensive, tables thought he saw his finish. But he has a larger place now and pays a higher rent. Tom, Dick, and Harry continue at their game all evening. They play better and get more fun out of it since being released from that high-voltage attraction of that neighboring rail.

The increase in the demand for soft drinks since prohibition has been tremendous; so much so that a prominent orange-juice chain-store proposition has become a very important factor in the demand for ultra-central space—a condition which all users of such space must reckon with in a highly competitive sense.

Though nearly everyone guessed correctly that prohibition would have a marked effect upon soft-drink sales, but few thought it would multiply and multiply golf courses. If they thought of golf in connection with prohibition at all, it was probably to worry about the future of their country club after bar revenue was cut off.

But prohibition sent thousands of men scurrying out to the links who had never quite found time before.

The increase in golf courses has been tremendous, with absolutely no sign of diminution. This game requires so great an area for a limited number of persons that it seems impossible to predict limits to the demand for such space near metropolitan districts.

A golf course should have at least about 110 acres. Translate this into city blocks and line them up. One hundred and ten acres so arranged would stretch from Fourteenth Street to Harlem if laid down in New York City. It can not very well be used by more than 300 persons. The hours of play have lengthened since prohibition. Attendance is better. Men are more keenly interested in the game. They concentrate on mastering its technic, and the result shows in club receipts.

The new golf course is not only a considerable real-estate deal in itself but it brings about a condition which makes that neighborhood desirable. Nearly anyone would like to live near 110 acres of well-kept ground. So the real-estate man finds that formerly neglected acres are salable.

SPORTS BENEFITED

Locations for golf courses were naturally and necessarily selected in localities where land was cheapest, considering accessibility; so many sections, although possessing great merit, have increased tremendously in value through the advent of the golf course, hastened in its inception through the medium of the abolition of liquor.

All outdoor sports have been benefited by prohibition. The remarkable growth of interest in tennis is in some measure due to the absence of a strong counter attraction. In fact, tennis promises to run baseball a close race for premier honors.

Baseball, however, is probably a more outstanding example than golf. From California to Florida plans are being made for larger grand stands and larger baseball parks. What has happened to baseball has nothing to do with Babe Ruth or pennants. It is the same thing that is happening to tennis, golf, prize fighting, boating, swimming, and amusement parks. Never before in this country was there such enthusiams for outdoor sports. What effect this will have on future generations of Americans is a subject for some one else. In dwelling upon it I might overlook the fact that if 10,000 persons attend baseball games where previously only 2,000 fans gathered, every little commercial establishment around the park has a proportionately larger value. Watch them grow from sheds to real buildings. You don't have to go back very far to recall when they were represented by the hot-dog man's basket as he stood on the curb. But you have already seen what happened to his basket. It's a small building now. Give its owner time to realize what these changes mean. One may be sure that the modern baseball park will cause changes in the neighborhood proportionate to its own evolution.

Many elements enter into the ever-increasing demand for better and more housing. Let no one say it is absurd that prohibition had a dominant part. John Workingman has more money to-day than he has ever had in the history of the country and probably in the history of the world, and the elimination of John Barleycorn for John Workingman probably means an additional room at least to his living quarters. My opinion of the housing situation is that prohibition has created, through its success as a money saver, a tremendous impetus in the mind of the latent home seeker, the desirability of investing his savings in some place where he knows he can find shelter, without the drag of the payment of rent, as quickly as possible, and he has become luxurious in his demands; not luxurious to the point of wastefulness, but he wants more elbowroom. He now has the money to pay for it and he is getting it.

UNEXPECTED BY-PRODUCTS

The tremendous demand for housing is universally known. There were never so many home seekers as at the present time, nor so many home purchasers. Where this condition exists prosperity always reigns. The branches of the building trade have so many ramifications that when it is prosperous generally so is the whole country. The savings banks through the public's savings must invest their funds so as to pay interest to the depositor, and much of this money seeks real-estate channels and helps the house builder to expand his operations.

Seashore resorts—but one could go on in an almost endless strain, showing the decided benefits which have accrued to real estate directly and indirectly through the medium of the abolition of the saloon primarily.

Now, a strange thing has happened regarding realty investment. Money is coming into it from sources hitherto unknown. Some one—many some ones—is making money from some source unknown to the realty dealer, and this money is going into real estate. It has been a tremendous impetus to the stability of the high prices prevailing at the present time. Just what trade or profession this capital comes from the realty dealer knows not, but you and I may probably make a very successful guess. Is it possible that the new mysterious money coming into realty is money made unlawfully? If so, it is not the only indirect aid to realty values derived in defiance of the law.

In New York race tracks, with betting rampant, exercise a decidedly beneficial effect upon the theater, restaurant, and so on. In New York State, like bootlegging, betting flourishes illegally. Dance halls, under the guise of so-called clubs, pay much higher rents, because a club is not compelled to close at the legal hour.

From the time the Volstead Act went into effect it has been a prime factor in the real-estate business. The corpse of Demon Rum has been handled almost as successfully as that of the porker, but no pig ever had so many unexpected by-products as prohibition. It will be interesting to see how many more are yet to turn up.

Years ago the first Armour said one used everything about the pig but his squeal; the realty expert did more than that with the realty used for liquor purposes—he utilized the squeal.

HISTORY OF THE AMERICAN MERCHANT MARINE

Mr. DAVIS of Tennessee. Mr. Speaker, the Democratic Party has always favored an adequate American merchant marine unhampered by adverse laws and consequently not needing antidoes in the form of subsidies from the Public Treasury. Only under the propitious policies of Democratic

rule has an American merchant marine ever flourished. It was under Democratic administration that American shipping passed through its golden era and the white-winged argosies flying the American flag sailed the seven seas without the aid of subsidies or other artificial stimulants. When the Republican Party first came into power, the United States had the largest merchant marine in the world, and American vessels carried twice as much of our rapidly growing exports and imports as all others combined, besides engaging extensively in carrying the trade between other nations. Under the blighting effects of high protective tariffs and other Republican policies after 50 years of nearly continuous Republican rule our former eminence on the sea had dwindled until more than 90 per cent of our own imports and exports were carried under alien flags.

As soon as the Democratic Party came into power in 1913 it began constructive and effective efforts to restore the American flag to the seas, and within three years and before we entered the World War American shipping engaged in the foreign trade, and the percentage of our greatly increased imports and exports carried in American vessels had more than doubled, which was described in the report of the Commissioner of Navigation as "a growth without precedent in our own history or in that of any other maritime nation."

When we were drawn into the World War and the need for additional ships to help win the war became immediate and imperative, the Democratic administration consummated the most prodigious shipbuilding program in the world's history, with the result that our merchant marine became the second largest in the world—nearly as large as that of Great Britain and greater than the combined tonnage of the next five national merchant marines. When the war was won and our troops and supplies returned, our Government-owned vessels were placed in the mercantile operation, and trade routes were established to every principal foreign port upon more than 400 routes in nearly 600 services, American flagships carrying over 50 per cent of our imports and exports. For the first time in a third of a century 50 per cent of the crews on American vessels engaged in the foreign trade were American citizens.

Although having passed through nearly a year of the world slump in shipping, this immense Shipping Board business had to its credit over $400,000,000 net profit from the operation of its vessels when the Republican administration came into power.

Then followed a saturnalia of extravagance, inefficiency, and favoritism, and a deliberate program to disparage and discredit Shipping Board vessels and trade routes so as to get the Government out of shipping at once and at whatever sacrifice at the behest of private shipping interests, both foreign and domestic. In order to favor the same interests the Republican administration strenuously endeavored to put through the infamous Lasker ship subsidy bill, but it was so obnoxious that even an overwhelmingly Republican Congress did not dare enact it into law, and the recent Republican national platform did not mention it. In a tremendous effort to effect the passage of this vicious bill the proper functions of the Shipping Board and Emergency Fleet Corporation were wholly neglected, and public funds appropriated by Congress for the merchant marine were illegally diverted and prostituted to a nation-wide propaganda for a subsidy to a few favored interests. This was pursuant to a deliberate scheme to turn the cream of the Government-owned fleet over to a shipping monopoly at a song and permit them to wax rich at public expense, and to scrap the remainder of the fleet to avoid a possibility of them coming in competition with a few hand-picked favorites. In order to justify such a course in the public mind Chairman Lasker and his cohorts carried on a tremendous campaign of disparagement of the ships and of Shipping Board operation, insisting that the Government-owned ships could never succeed, and that American-flag ships could not successfully operate without large bounties from the Public Treasury. This was accompanied by a rapid additional lay up of vessels and consequent destruction of our valuable trade routes, notwithstanding the fact that they were operating to full capacity carrying American products to foreign ports.

On January 1, 1920, 1,525 Shipping Board vessels of a total deadweight tonnage of 8,681,791 were in actual commercial operation. Notwithstanding the world-wide slump in commerce resulting in the worst shipping depression and the largest lay up of ships in history, yet when the Republican administration went into power March 4, 1921, there were still in active operation 981 Shipping Board vessels of 7,235,536 deadweight tons; it will be noted that there was a comparatively small reduction in tonnage, most of the ships laid up being of the smaller type. The ships have been steadily laid up until there are now in operation only about 364 Shipping Board vessels, and repeated and persistent efforts are being made by the president of the Emergency Fleet Corporation and other officials to effect still further drastic reductions. In fact, had it not been for the strenuous objection of Members of Congress and of certain patriotic members of the Shipping Board our Government merchant marine would doubtless have been wholly destroyed by this.

THE RECORD OF THE HOUSE OF REPRESENTATIVES, FIRST SESSION, SIXTY-EIGHTH CONGRESS—THE REPUBLICAN PLATFORM, 1924

Mr. LONGWORTH. Mr. Speaker, whatever may be said in approval or disapproval of the record of the House of Representatives in the first session of the present Congress, this fact at least must stand out uncontradicted—its legislative accomplishment is unexampled in volume and importance in recent years. The body which many people said at the outset would be impotent to legislate at all turned out to be one of the most efficient and effective legislative machines in history.

The Sixty-eighth Congress convened on December 3, 1923, and adjourned on June 7, 1924. The actual days in session numbered 142, as compared with 139 in the first session of the Sixty-seventh Congress, 144 in the first session of the Sixty-sixth Congress, and 114 in the first session of the Sixty-fifth Congress. The organization of the House and the committee assignments were not completed until December 17, and the permanent rules were not finally adopted until a month later. Thus it is to be noted that the organization of the House was not finally perfected and that the House was not completely equipped to do business until six weeks after it was first called to order.

Its legislative record therefore stands out all the more notably in comparison with that of the first sessions of the three previous Congresses, which experienced no such difficulties in organizing and adopting permanent rules of procedure. The number of bills and resolutions introduced during the session just closed total 10,481, as compared with 9,775 for the first session of the Sixty-seventh Congress, 11,419 for the first session of the Sixty-sixth Congress and 6,873 for the first session of the Sixty-fifth Congress. Of these 290 became public laws, as compared with 108 in the first session of the Sixty-seventh Congress, 93 in the first session of the Sixty-sixth Congress and 91 in the first session of the Sixty-fifth Congress. In addition to these there were finally enacted 37 public resolutions and 66 private laws and resolutions, making a grand total of public and private laws and resolutions finally enacted during the first session of the Sixty-eighth Congress of 393, as compared with 152 in the first session of the Sixty-seventh Congress, 121 in the first session of the Sixty-sixth Congress and 109 in the first session of the Sixty-fifth Congress. In other words, during the session of the Congress just closed more public and private laws were enacted than in the similar sessions of the three preceding Congresses all put together.

Coming now more particularly to the work of the House itself, the record is even more notable. There were considered and reported by the various committees of the House, and placed on the calendar, 632 public bills and 297 private bills, making a total of 929 as against 415 public and private bills in the first session of the Sixty-seventh Congress, 368 in the first session of the Sixty-sixth Congress, and 145 in the first session of the Sixty-fifth Congress. It thus appears that in the session just closed more bills were considered and reported by committees than were reported altogether during the similar sessions of the last three preceding Congresses.

Out of the 929 bills reported 594 were acted upon by the House either favorably or unfavorably, as against 293 in the first session of the Sixty-seventh Congress, 239 in the first session of the Sixty-sixth Congress, and 101 in the first session of the Sixty-fifth Congress. In other words, during the session just closed, with all the delays and disadvantages that existed at the outset, we actually considered, debated, and finally disposed of very nearly as many bills in the 142 days of the session as were acted upon in the 397 days of the three preceding Congresses.

The record of disposal of the public business, not counting the 135 resolutions passed by the House, makes an average of more than four bills a day considered and acted upon, which is unexampled so far as I know, and certainly during the more than 20 years that I have been in Congress.

It is a striking fact that this record was made under a revision of the rules of procedure which it was predicted would interfere with the power of the majority to dispose of legislation promptly and effectively. The House proceeded during the first month after its organization under the rules of the previous Congress, and during that month the Committee on Rules considered all proposals submitted for the revision and

amendment of those rules and the whole subject was fully and freely debated on the floor. As a result six changes were made in the rules which had been operative during a number of preceding Congresses, four of relatively minor and two of major importance.

Among the former, a new committee was created to deal with legislation for the benefit of disabled veterans of the World War, which legislation had been formerly under the jurisdiction of the Committee on Interstate and Foreign Commerce and other committees. There is no question but that this has worked well. It not only relieved the Committee on Interstate and Foreign Commerce, already overburdened, of some very important and technical legislation, but the new committee reported a most excellent bill which received the unanimous vote of the House. This committee has also been empowered by the House to make a complete survey of all soldiers' hospitals with a view to more effective coordination. Amendment of the rule relating to the Unanimous Consent Calendar was adopted requiring three objections to permanently erase a bill from the calendar on the second day of its consideration. This amendment seems to have been justified and to have worked well. Two other changes applied to the Committee on Rules, one requiring that a rule reported should lie over for a day unless authorized to be immediately considered by a two-thirds vote and the other that any bill reported must be actually taken up for consideration within a limited time. The object of the latter was to prevent the practice greatly complained of in previous Congresses, of the so-called "pocket veto" of a rule by the chairman or some member of the committee having it in charge. These changes seem to have worked well.

Of the other two, relatively greater in importance, the first was the repeal of the so-called "Underwood rule," designed to prevent the amendment upon the floor of revenue bills. This rule had been adopted in the Congress elected in the second half of the Taft administration by the Democratic majority for the frank purpose of facilitating the passage of the so-called "popgun" tariff bills, and it became so enlarged in its scope by chairmen's rulings that it virtually prevented any amendment of a tax or tariff bill upon the floor of the House. The rule was admitted to be unfair, even by its authors, and no objection was offered to its repeal by the majority in this Congress, although it was feared by some that it might impede the orderly consideration of revenue bills. The new system, however, was thoroughly tried out during the consideration of the tax reduction bill in the House and I think there can be no question but that the bill as it finally passed the House was in precisely the same form as it would have been had the amendment not been adopted.

The last of the amendments to the rules was of a more novel character, and its operation has been observed with interest both by its proponents and opponents in the only instance in which it has been tried out. This rule provides that when 150 Members sign a petition to discharge a committee from a bill referred to it 30 days previously it shall be in order to consider it, notwithstanding lack of action by the committee, on the first and third Mondays of every month. This rule was invoked in four instances during the session, but in only one were the necessary number of signatures procured. That was in the case of the so-called Barkley bill to abolish the Railroad Labor Board and make certain other amendments to the Esch-Cummins Act. It is not necessary for my purpose to consider the merits or demerits of the legislation itself. Opinion was very sharply and apparently quite evenly divided upon it. On two Mondays it was discussed, together with the rule, until late at night, and, so far as actual legislative progress had been made, the bill was in precisely the same situation at the conclusion of the discussion as it was at the beginning, and it became so evident that no further progress could be made that the rule was not invoked by the sponsors of the bill on the next Monday when it became in order. During the discussion of the rule two important decisions were made by the Chair; first, that no bill brought up under the rule could be considered except on Consent Mondays, and, second, that the motion to recess was not in order. Under these conditions two conclusions are inevitable, first, that no bill to which a majority, or even an aggressive minority somewhat less than a majority, is opposed can be finally acted upon within anything but an indefinite period, and, second, that to the extent that the rule is invoked the Consent Calendar is destroyed, and this without any actual filibustering or the employment of any but legitimate tactics in opposition. I would not be prepared to say that the rule has not some merit. Certainly there could be no valid objection to it if the original petition required the signatures of a majority of the House. It is not impossible to suppose a case where a committee might pigeonhole a bill which the majority of the House were sincerely anxious to have passed, and in such case the majority ought to be allowed to work its will. But if the rule is to be used by a minority to compel the majority to act upon legislation which it does not desire to consider, this rule has proved and will continue to prove a failure.

Once the organization had been perfected and the rules of procedure settled, the House proceeded to function with neatness and dispatch. It was generally agreed by the majority at the outset that every effort would be made to adjourn the Congress before the national conventions, and it was also agreed that before adjournment in addition to the necessary appropriation bills certain major pieces of legislation must be considered and acted upon. Among them were:

Tax reduction, further restriction of immigration, adjusted compensation for World War veterans, liberalization of the laws for the benefit of the disabled veterans of the World War, pensions for Civil and Spanish War soldiers and their dependents, the constitutional amendment for the regulation of child labor, action upon the several offers for the development of Muscle Shoals, increased compensation for postal employes, the constitutional amendment to make taxable the income derived from the bonds of municipalities and subdivisions of States, and agricultural relief.

Final action was had in the House upon all these measures. The last of the great appropriation bills, the second deficiency bill, carrying among other items $132,000,000 for the first payment under the adjusted compensation act, and some $25,000,000 for the payment of claims of the dependents of deceased veterans of the World War, failed in the Senate by reason of an individual filibuster. The Senate had added to the bill a general reclamation act and specific appropriations for the initiation of several new reclamation projects. In conference the House had agreed to the reclamation act and to all of these appropriations except two, one a project which seemed to have little if any merit. It was because of the failure of the House to agree to this appropriation that a Senator in the closing hours of the session talked the bill to death, with the result that the payment of some $150,000,000 to people entitled to it under the law is delayed for six months. Of course the first action of the House at the next session will be to pass this appropriation bill and to take up, I hope, the general subject of reclamation legislation which is of vital importance to many of the great Western States.

Under the circumstances one may well pause, I think, to question the wisdom of rules of procedure which permit one individual by the exercise of lung power alone to thwart the will of the practically unanimous majority of both Houses of Congress.

The bill providing for an increase in the salaries of postal employees was vetoed by the President on the main ground that it did not carry the revenue necessary to provide for the increase. No action was taken in the Senate, where the message first went, to override the veto, so that the bill did not become law for this session. Assurance was given in the House by the chairman and other members of the Committee on Post Offices that the question of providing from the postal revenues the additional revenue necessary to take care of the increases in pay contemplated will be taken up as soon as the Postal Commission established for the purpose of more equitably adjusting the revenues from the various classes of mail shall have made its report, and it may be fairly expected that a bill will be brought into the House early in the next session which will provide for a substantial increase in the pay of postal employees with the mail rates so adjusted as not to create a deficit in the postal revenues. In such case there would seem to be no difficulty in the way of final enactment f this legislation.

It may be noted that the House attached to this measure a well-considered corrupt practices act, which as a separate measure the President announced he would have approved.

Most unfortunately the constitutional amendment to tax the income derived from State and local securities failed to receive the necessary two-thirds vote by reason of the very large vote cast against it upon the Democratic side of the House, thus leaving in continued existence the greatest anomaly of our whole taxing system. It will be difficult if not impossible to finally arrive at an equitable adjustment of the graduated income tax system so long as it is possible by investment in this class of securities to escape all taxation whatsoever. Just so long as the rates on the larger incomes remain so high as to discourage investment in productive enterprise the temptation of very rich men by investment in these dead securities to escape all taxes will continue to prove to be irresistible.

The adjusted compensation bill which passed both Houses was vetoed by the President, and subsequently his veto was overriden, and consequently that measure is now a law. The compensation in this case takes the form of an insurance certificate payable at the end of twenty years. It is estimated that the total cost will amount to something over $2,000,000,000, with an average annual expense of something like $100,000,000—not merely so severe a charge on the revenues as the bill passed in the last Congress would have caused had it become a law.

The so-called Bursum bill providing increased pensions for Civil and Spanish War veterans and their dependents passed both Houses, but it was vetoed by the President and the veto sustained in the Senate.

The consideration in the House of the various offers for the development of Muscle Shoals resulted in the acceptance by a relatively small majority of the Ford offer. This, however, was locked in the Senate and an agreement made to consider the matter during the next session.

The immigration bill passed both Houses by large majorities and was signed by the President. It is generally considered to be the most carefully thought out and effective piece of legislation on this subject ever enacted by Congress.

Two bills passed by the House and which subsequently became laws of great benefit and importance to disabled veterans of the World War were, first, a law to increase their hospital facilities, and the other a bill so liberalizing the provisions of the existing law as to greatly simplify and facilitate their obtaining proper compensation.

The child labor constitutional amendment passed both Houses by considerably more than the requisite majorities, and now awaits action by the States.

Of all the major pieces of legislation the tax reduction bill gave rise to more extended consideration and debate than any other. The bill as first reported to the House was essentially that prepared under the direction of the Secretary of the Treasury, and made public even before the meeting of the Congress. Thus its provisions had been well known for months and had been extensively commented upon—favorably in general—by the great newspapers of the country. The outstanding features of the bill were the reduction of the high surtaxes to 25 per cent and the low normal taxes to 4 per cent, thereby reducing the high surtaxes 50 per cent and the low normal taxes 25 per cent. Scientifically accurate and wise as the bill seemed to many of us it was evident that unless the sentiment of Congress had changed very substantially since the last tax reduction measure was passed it would be impossible to make so great a reduction in the high surtaxes, certainly without at least a corresponding reduction in the low normal taxes. This seemed particularly true with regard to the Senate, that body having in the last Congress shown its preference for surtaxes higher than those approved by the House.

Upon that occasion the House had by a substantial majority reduced the high surtaxes from 65 to 32 per cent. The Senate, however, increased the House rate to 50 per cent, and in view of that action the House conferees were instructed to agree to the 50 per cent Senate rate. It was also to be noted that of the 174 members of the House who had voted to sustain the 32 per cent rate 73 had not returned to Congress, leaving 101 of the older Members who it was thought could be safely relied upon to vote for a rate so low as 25 per cent. A very careful poll, thoroughly checked and rechecked, revealed the fact that not to exceed 150 votes could be surely relied upon to sustain the so-called Mellon rates. This poll also showed that some 45 Members had expressed their unwillingness even to go below the existing rate of 50 per cent. It thus became indisputably evident that the 25 per cent rate could not be agreed upon, with the prospect that even the lowest rate that could be adopted in the House would be raised—as it in fact afterwards was—by the Senate.

Shortly after being reported the tax bill was taken up under the rules of the House in Committee of the Whole, with entire freedom of debate and amendment. Early in its consideration a substitute for the Mellon rates was offered by Mr. GARNER, of Texas, the ranking minority member of the Ways and Means Committee, increasing the high surtax rate to 44 per cent and reducing the low normal rate to 2 per cent. This, with other changes in the rates, it was estimated would create a deficit of more than $300,000,000. Another substitute was offered by Mr. FREAR, of Wisconsin, a member of the Ways and Means Committee, to retain the existing high surtax rate of 50 per cent. The accuracy of the poll to which I refer was proved in the test votes on the three separate rates. For the Mellon plan the vote was 152 as against 244, or 2 more favorable votes than had been counted on; for the Frear amendment the vote was 46 as against 254, or 2 more favorable votes than had been counted upon, and the Garner amendment was adopted by a vote of 221 to 196.

Under these conditions at the request of a number of my colleagues I undertook negotiations with a view to ascertaining whether it would be possible to agree upon a system of rates which could command united Republican support and stand as a Republican bill. Finally an adjustment was agreed upon, involving the decrease of all the then existing surtax rates by 25 per cent and the low normal rate by 50 per cent. In addition to this, provision was made for the arbitrary reduction of this year's taxes by 25 per cent.

When the bill was reported to the House from the Committee of the whole, this amendment was adopted, receiving the solid Republican vote, and the bill was later passed by a vote of 408 to 8.

As had been expected the Senate departed much further from the Mellon tax program than did the House, and adopted some very radical amendments. The high surtax rate of the House of 37½ per cent was increased to 40 per cent, but the intermediate rates remained practically the same, varying upon the standard incomes not to exceed ¼ on 1 per cent. In conference the Senate yielded on practically all of their amendments and the bill finally passed was essentially the House measure, and received the approval of the President.

The new law reduces taxes some $400,000,000. It remedies many of the administrative faults of the then existing law, makes an immediate cut of 25 per cent in all taxes and a cut for the future of 25 per cent in the case of the high surtaxes and 50 per cent in the case of the low normal taxes. As such it is a vast improvement over the tax law it superseded and can be successfully defended anywhere. People who were set upon the adoption of the Mellon bill exactly as introduced and who have criticized those of us who were willing to make certain concessions for the purpose of getting the best bill possible and one which could be finally enacted should pause to consider that had the House failed to pass a bill which commanded the support of the majority party not only would there have been no tax reduction legislation at this session but undoubtedly a bonus bill would have been passed providing for cash payments which would have doubled or tripled the outlay necessitated by the present law, and that other bills would have been passed which would have greatly increased the permanent charges upon the Treasury.

Of the 594 bills acted upon by the House 393, as I have said, became laws. In addition to those specifically mentioned, laws were enacted dealing with the following subjects:

Bering Sea sealing claims, the creation of a dairy bureau in the Department of Agriculture, a law providing additional appropriations for the eradication of the foot-and-mouth disease, agricultural credits, a law for the protection of fisheries in Alaska, a law extending further protection to animal reservations, establishing the upper Mississippi River wild-life and fish refuge, amending the national defense act and providing adjustment of pay in the Army, Navy, Marine Corps, and Coast Guard, providing for better roads in national parks, amending the national park act, extending for three years the provisions of the Federal roads act and authorizing an annual expenditure of $75,000,000, a law providing for the refunding of the debt of Finland, another for the refunding of the debt of Hungary, several laws amending the credits and refund provisions of the revenue act as recommended by the Secretary of the Treasury, a law providing additional inspectors for locomotives, a measure strongly recommended by the railroad operators, a law providing for a temporary increase of the Coast Guard for the purpose of more effective enforcement of the prohibition law, a law extending the time for final report with reference to rural credits, amending the Shipping Board act with regard to construction, reconstruction, and conversion of ships, prohibiting the entry from Mexico of tick-infested cattle, a law amending the act providing for vocational rehabilitation for civilians, extending the time for making advances by the war finance corporation, providing for the distribution of cannon and other war trophies, providing for compensation to United States employees injured in line of duty, a law providing for a Federal industrial institution for women, amending paragraph 3 of section 16 of the interstate commerce act relating to action by carriers for the recovery of charges, a law to prevent oil pollution of navigable waters, prohibiting the importation of crude opium for the manufacture of heroin, providing for the protection of forest lands, to provide for stock-raising homesteads, to furnish equipment to the Leavenworth penitentiary for the purpose of furnishing Government supplies and to compensate prisoners for labor, to continue construction work on the San Carlos Federal irrigation project in Arizona,

a law for the reorganization and improvement of our Diplomatic and Consular Service, 41 laws relating to Indian lands, compensation, per capita payments, and Indian schools, claims, allotments, irrigation projects, and so forth, 88 laws for the construction of bridges, and laws relating to the District of Columbia, among them, the gasoline tax law, law exempting the property of the D. A. R. from taxation, the incorporation of the National Medical Society, the teachers' salary law, law to amend the act to regulate the practice of dentistry, to regulate the practice of optometry, to regulate rents, adjusting the salaries of police and firemen, a law to develop the park and playground system in the District of Columbia, a law regulating traffic through the streets.

In addition to these bills which subsequently became laws the House also passed among others the Hoch resolution declaring agriculture to be the basic industry of the country, and to change freight rates on all products of agriculture, including livestock, to the lowest possible rates, a bill to establish a Bureau of Aeronautics in the Department of Commerce, a bill to amend the packers' and stockyards act of 1921, and a number of bills dealing with matters in Alaska, several bills relating to procedure in Federal courts and changes in judicial districts, several bills affecting the Postal Service, six omnibus pension bills, civil service reclassification legislation, and the monumental bill containing the revision and codification of the Statutes of the United States.

The two major measures designed to afford relief due to depressed agricultural conditions in certain States failed of passage. It seemed that neither the Agricultural Committee of the Senate nor that of the House were able to agree on a measure which could command the necessary support. The so-called Norbeck-Burtness bill reported by the Senate was beaten on the floor, as was the McNary-Haugen bill in the House. The failure of both was due largely to the fact that the farm organizations were unable to come together upon the precise measure which would afford the relief desired. It was understood in the Committee on Agriculture of the House that most of the western farm organizations were back of the McNary-Haugen bill, but it was equally evident that some very powerful farm organizations were opposed to it. The bill was very far-reaching, technical, and complicated, and while it received very thorough and extensive debate, a large number of Members of the House who were willing to go to almost any length to relieve the very serious depression in agriculture in some of the States were very seriously concerned lest the remedy proposed might not prove to be even a greater evil than the condition it was designed to relieve. The opposition to the bill was in no sense partisan, but it appeared that the main block of votes cast against it came from the Southern States.

Of the 12 appropriation bills presented during the session just closed 11 became law in practically the same form as passed by the House. It is not necessary to make more than a passing reference to them, as that subject has been exhaustively and ably treated by the chairman of the Committee on Appropriations, Mr. MADDEN, of Illinois, in a speech printed in the CONGRESSIONAL RECORD of June 7, 1924. Too much credit in my opinion can not be given to Mr. MADDEN and his associates for their efficient preparation and handling of these vitally important measures. They came out of the committee with the regularity of clockwork. It was seldom, indeed, that they did not appear on the exact date appointed, sometimes months in advance, and it was for this reason that the fixing of the date of adjournment and the preparation of the legislative program was a comparatively simple affair.

The bills had been so carefully and efficiently prepared, were so bullet-proof, so to speak, that amendments were rarely offered or adopted in the House. Of course, their totals were substantially added to in the Senate, as has been the custom for many years, but in conference these additions were pared down in the great majority of instances to about the figures agreed upon in the House. As a consequence the Budget estimates were exceeded in only an insignificant number of instances, and the total amount carried in all the bills showed a decrease below the Budget estimates of something over $10,000,000 and a decrease below the total sums appropriated for the preceding year of something more than $100,000,000. Had there not been appropriated in the deficiency bill which failed in the Senate, as above described, $132,000,000 on account of the first year's expense under the World War adjusted compensation act, the total reduction in appropriations as compared to the year previous would have been in excess of $232,000,000.

I think it can be fairly said that the record of the House of Representatives in the first session of the Sixty-eighth Congress is a decidedly creditable and noteworthy one in spite of the unusual delay incident to its organization and the adoption of the rules. In so far as the volume of legislation considered and acted upon was concerned it did as much work as was done in similar sessions of the last three Congresses all put together. Furthermore, the party in control with a majority of but 15 was able to carry out its program to the letter, not only with regard to the date of adjournment but with regard also to the legislative measures to be considered and acted upon.

I think it can be fairly said, too, that the House of Representatives of the present Congress has proved itself to be—in so far, at least, as the fiscal affairs of the Government are concerned, as was intended by the framers of the Constitution—the dominant body of the legislative branch of the Government.

Mr. Speaker, under leave granted for extension of remarks I insert herewith the platform adopted by the Republican Party in convention assembled on June 11, 1924.

REPUBLICAN PLATFORM 1924

"The delegates of the Republican Party in national convention assembled bow our heads in reverent memory of Warren G. Harding. We nominated him four years ago to be our candidate; the people of the Nation elected him their President. His human qualities gripped the affections of the American people. He was a public servant unswerving in his devotion to duty. A stanch Republican, he was first of all a true patriot who gave unstintingly of himself during a critical period of our national life. His conception and successful direction of the Limitation of Armament Conference in Washington was an achievement which measurably advanced the world along the path toward peace.

"As representatives of the Republican Party we share in the national thanksgiving that in the great emergency created by the death of President Harding there stood forth fully equipped to be his successor one whom we had nominated as Vice President—Calvin Coolidge. As Vice President and President, by word and deed, he has justified the faith and confidence which inspired his selection. He has put the public welfare ahead of all other considerations. He has given to the people practical idealism in office. In his every act he has won, without seeking, the applause of the people. The constantly accumulating evidence of his integrity, vision, and single-minded devotion to the needs of the people of this Nation strengthens and inspires our confident faith in his continued leadership.

SITUATION IN 1921

"When the Republican administration took control of the Government in 1921 there were four and a half million unemployed, industry and commerce were stagnant, agriculture was prostrate, business was depressed, the bonds of the Government were selling below their par value. Peace was delayed, misunderstanding and friction characterized our relations abroad. There was a lack of faith in the administration of government resulting in growing feeling of distrust in the very principles upon which our institutions are founded.

"To-day industry and commerce are active; public and private credits are sound. We have made peace; we have taken the first step toward disarmament and strengthened our friendship with other powers. Our relations with the rest of the world are on a firmer basis, our position was never better understood, our foreign policy never more definite and consistent. The tasks to which we have put our hands are not completed. Time has been too short for the correction of all the ills we received as a heritage from the last Democratic administration, but the notable accomplishments under Republican rule warrant us in appealing to the country with entire confidence.

PUBLIC ECONOMY

"We demand, and the people of the United States have a right to demand, rigid economy in government. A policy of strict economy enforced by the Republican administration since 1921 has made possible a reduction in taxation and has enabled the Government to reduce the public debt by two and a half billion dollars. This policy rigorously enforced has resulted in a progressive reduction of public expenditures until they are now $2,000,000,000 per annum less than in 1921. The tax burdens of the people have been relieved to the extent of $1,250,000,000 per annum. Government securities have increased in value more than $3,000,000,000 dollars. Deficits have been converted into surpluses. The budget system has been firmly established and the number of Federal employees has been reduced by more than 100,000. We commend the firm insistence of President Coolidge upon rigid Government economy and pledge our earnest support to this end.

FINANCE AND TAXATION

"We believe that the achievements of the Republican administration in reducing taxation by $1,250,000,000 per annum, re-

ducing the public debt by $2,432,000,000, installing a Budget system decreasing the public expenditures from $5,500,000,000 per annum to approximately $3,400,000,000 per annum, thus restoring the ordinary expenditures of the Government to substantially a pre-war basis and in the complete restoration of public credit, the payment or refunding of seven and a half billions of public obligations without disturbance of credit or industry, all in the short period of three years, present a record unsurpassed in the history of public finance.

"The intelligent assessment of taxes, their fair and scientific collection, and the efficient and economical expenditure of the money received by the Government are essential to the prosperity of our Nation.

"Carelessness in levying taxes inevitably breeds extravagance in expenditures. The wisest system of taxation rests most lightly on the individual and economic life of the country. The public demand for a sound permanent tax policy is insistent.

"Progressive tax reduction should be accomplished through tax reform. It should not be confined to less than four million of our citizens who pay direct taxes, but is the right of the more than one hundred million who are daily paying their taxes indirectly through their living expenses. Congress has in the main confined its work to tax reduction. The matter of tax reform is still unsettled and is equally essential.

"We pledge ourselves to the progressive reduction of the taxes of all the people as rapidly as may be done with due provision for the essential expenditures of the Government administered with rigid economy and to place our tax system on a sound peace-time basis.

"We indorse the plan of President Coolidge to call in November a national conference of Federal and State officials for the development of effective methods of lightening the tax burdens of our citizens and adjustment of questions of taxation as between the National and State Governments.

"We favor the creation by appropriate legislation of a nonpartisan Federal commission to make a comprehensive study and report upon the tax systems of the State and Federal Governments to serve as a basis for an intelligent reformation of our systems of taxation and as a basis for the proper adjustment of the subjects of taxation as between the National and State Governments with fairness and justice to the taxpayer and in conformity with sound economic priciples.

FOREIGN RELATIONS

"The Republican Party reaffrms its stand for agreement among the nations to prevent war and preserve peace. As an immediate step in this direction we indorse the Permanent Court of International Justice and favor the adherence of the United States to this tribunal as recommended by President Coolidge. This Government has definitely refused membership in the League of Nations and to assume any obligations under the covenant of the league. On this we stand.

"While we are unwilling to enter into political commitments which would involve us in the conflict of European policies, it should be the purpose and high privilege of the United States to continue to cooperate with other nations in humanitarian efforts in accordance with our cherished traditions. The basic principles of our foreign policy must be independence without indifference to the rights and necessities of others and cooperation without entangling alliances. This policy, overwhelmingly approved by the people, has been vindicated since the end of the Great War. America's participation in world affairs under the administration of President Harding and President Coolidge has demonstrated the wisdom and prudence of the national judgment. A most impressive example of the capacity of the United States to serve the cause of world peace without political affiliations was shown in the effective and beneficent work of the Dawes Commission toward the solution of the perplexing question of German reparations.

"The first conference of great powers in Washington, called by President Harding, accomplished the limitation of armament and the readjustment of the relations of the powers interested in the Far East. The conference resulted in an agreement to reduce armaments; relieved the nations involved from the great burdens of taxation arising from the competitive construction and manufacture of capital battleships; assured a new, broader, and better understanding in the Far East; brought the promise of peace in the region of the Pacific; and formally adopted the policy of the open door for trade and commerce in the great markets of the Far East.

"This historic conference paved the way to avert the danger of renewed hostilities in Europe and to restore the necessary economic stability. While the military forces of America have been reduced to a peace footing, there has been an increase in the land and air forces abroad which constitutes a continual menace to the peace of the world and a bar to the return of prosperity.

"We firmly advocate the calling of a conference on the limitation of land forces, the use of submarines and poison gas, as proposed by President Coolidge, when by the adoption of a permanent reparations plan the conditions in Europe will make negotiations and cooperation opportune and possible.

"By treaties of peace safeguarding our rights and without derogating those of our former associates in arms, the Republican administration ended the war between this country and Germany and Austria. We have concluded and signed with other nations during the past three years more than 50 treaties and international agreements in the furtherance of peace and good will.

"New sanctions and new proofs of permanent accord have marked our relations with all Latin America. The long-standing controversy between Chile and Peru has been advanced toward settlement by its submission to the President of the United States as arbitrator; and with the helpful cooperation of this country a treaty has been signed by the representatives of 16 American Republics which will stabilize conditions on the American Continent and minimize the opportunities for war.

"Our difficulties with Mexico have happily yielded to a most friendly adjustment. Mutual confidence has been restored, and a pathway for that friendliness and helpfulness which should exist between this Government and the Government of our neighboring Republic has been marked. Agreements have been entered into for the determination by judicial commissions of the claims of the citizens of each country against the respective Governments. We can confidently look forward to more permanent and more stable relations with this Republic that joins for so many miles our southern border.

"The wisdom of our policy, now well defined, of giving practical aid to other peoples without assuming political obligations has been conspicuously demonstrated. The ready and generous response of America to the needs of the suddenly stricken people of Japan and the starving in Russia gave evidence of our helpful interest in the welfare of the distressed in other lands.

"The work of our representatives in dealing with subjects of such universal concern as the traffic in women and children, the production and distribution of narcotic drugs, the sale of arms, and with matters affecting public health and morals, demonstrates that we can effectively do our part for humanity and civilization without forfeiting, limiting, or restricting our national freedom of action.

"The American people do cherish their independence, but their sense of duty to all mankind will ever prompt them to give their support, service, and leadership to every cause which makes for peace and amity among the nations of the world.

"We favor the holding from time to time of international conferences for the advancement and codification of international law.

FOREIGN DEBTS

"In fulfillment of our pledge in the national platform of 1920 we have steadfastly refused to consider the cancellation of foreign debts. Our attitude has not been that of an oppressive creditor seeking immediate return and ignoring existing financial conditions. Our position has been based on the conviction that a moral obligation such as was incurred should not be disregarded.

"We stand for settlements with all debtor countries similar in character with our debt agreement with Great Britain. That settlement, achieved under a Republican administration, was the greatest international financial transaction in the history of the world. Under the terms of the agreement the United States now receives an annual return upon the $4,600,000,000 owing to us by Great Britain with a definite obligation of ultimate payment in full.

"The justness of the basis employed has been formally recognized by other debtor nations. Thirty-five per cent of the total foreign debt is now in progress of liquidation.

"Great nations can not recognize or admit the principle of repudiation. To do so would undermine the integrity essential for international trade, commerce, and credit.

REORGANIZATION OF EXECUTIVE DEPARTMENTS

"We favor a comprehensive reorganization of the executive departments and bureaus along the lines of the plan recently submitted by a joint committee of the Congress, which has the unqualified support of President Coolidge.

CIVIL SERVICE

"The improvement in the enforcement of the merit system both by legislative enactment and Executive action since March 4, 1921, has been marked and effective. By Executive order the appointment of presidential postmasters has been placed on the merit basis similar to that applying to the classified service. We favor the classification of postmasters in first, second, and third class post offices and the placing of the prohibition enforcement field force within the classified civil service without necessarily incorporating all the present personnel.

THE TARIFF

"We reaffirm our belief in the protective tariff to extend needed protection to our productive industries. We believe in protection as a national policy with equal regard to all sections and to agriculture and industry. It is only by adherence to this policy that the interests of the consumers can be safeguarded and American agriculture, American labor, and American manufacturers be assured a return sufficient to perpetuate American standards of life.

"A protective tariff is designed to support the high American economic level of life for the average family and to prevent a lowering to the levels of economic life prevailing in other lands. It is the history of the Nation that the protective system has ever justified itself by promoting industrial activity and employment, enormously increasing our purchasing power, restoring confidence, and bringing increased prosperity to all.

"The tariff protection to our industry works for increased consumption of domestic agricultural products by an employed population instead of one unable to purchase the necessities of life. Without the strict maintenance of the tariff principle our farmers will need always to compete with cheap lands and cheap labor abroad, and with lower standards of living.

"The enormous value of the protective principle has once more been demonstrated by the effects of the emergency tariff act of 1921 and the tariff act of 1922.

"We believe that the power of the President to decrease or increase any rate of duty in the tariff act furnishes a safeguard against excessive duties and against too low customs charges, and affords ample opportunity for tariff duties to be adjusted after a hearing that they may cover the actual differences in the cost of production in the United States and the principal competing countries of the world.

AGRICULTURE

"In dealing with agriculture the Republican Party recognizes that we are faced with a fundamental national problem, and that the prosperity and welfare of the Nation as a whole is dependent upon the prosperity and welfare of our agricultural population.

"We recognize that agricultural activities are still struggling with adverse conditions that have brought deep distress. We pledge the party to take whatever steps are necessary to bring back a balanced condition between agriculture, industry, and labor, which was destroyed by the Democratic Party through an unfortunate administration of legislation passed as war measures.

"We affirm that under the Republican administration the problems of the farmer have received more serious consideration than ever before, both by definite Executive action and by congressional action, not only in the field of general legislation but also in the enactment of laws to meet emergency situations.

"The restoration of general prosperity and of the purchasing power of our people through tariff protection has resulted in an increased domestic consumption of food products, and the prices of many agricultural commodities are above the world price level by reason of direct tariff protection.

"Under the leadership of the President at a most critical time a corporation was organized by private capital making available $100,000,000 to assist the farmers of the Northwest.

"Realizing the disturbance in the agricultural export market, the result of the financial depression in Europe, and appreciating that the export field would be enormously improved by economic rehabilitation and the resulting increased consuming power, sympathetic support and direction were given to the work of the American representatives on the European Reparations Commission.

"The revival in 1921 of the War Finance Corporation, with loans of over $300,000,000, averted a complete collapse in the agricultural industry.

"We have established new intermediate credit banks for agriculture and increased the capital of the Federal farm loan system. Emergency loans have been granted to drought-stricken areas.

"We have enacted into law the cooperative marketing act, the grain futures and packer control acts; given to agriculture direct representation on the Federal Reserve Board and on the Federal Trade Commission.

"We have greatly strengthened our foreign marketing service for the disposal of our agricultural products.

"The crux of the problem from the standpoint of the farmer is the net profit he receives after his outlay. The process of bringing the average prices of what he buys and what he sells closer together can be indirectly expedited by reduction in taxes, steady employment in industry, and stability in business. This process can be directly expedited by lower freight rates, by better marketing through cooperative effort and a more scientific organization of the physical and human machinery of distribution, and by a greater diversification of farm products.

"We promise every assistance in the reorganization of the marketing system on sounder and more economical lines, and where diversification is needed, Government assistance during the period of transition.

"We favor adequate tariff protection to such of our agricultural products as are threatened by foreign competition.

"We favor, without putting the Government into business, the establishment of a Federal system of organization for cooperative marketing of farm products.

"The vigorous efforts of this administration toward broadening our exports market will be continued.

"The Republican Party pledges itself to the development and enactment of measures which will place the agricultural interests of America on a basis of economic equality with other industry to insure its prosperity and success.

MINING

"The mining industry has experienced a period of depression as the result of the abnormal economic conditions growing out of the Great War. This administration has accomplished much in improving the conditions affecting this great fundamental industry and pledges itself to continue its efforts in this direction.

HIGHWAYS

"The Federal aid road act adopted by the Republican Congress in 1921 has been of inestimable value in the development of the highway systems of the several States and of the Nation. We pledge a continuation of this policy of Federal cooperation with the States in highway building.

"We favor the construction of roads and trails in our national forests necessary to their protection and utilization. In appropriations therefor the taxes which these lands would pay if taxable should be considered as a controlling factor.

LABOR

"The increasing stress of industrial life, the constant and necessary efforts because of world competition to increase production and decrease costs, has made it especially incumbent on those in authority to protect labor from undue exactions. We commend Congress for its prompt adoption of the recommendation of President Coolidge for a constitutional amendment authorizing Congress to legislate on the subject of child labor and we urge the prompt consideration of that amendment by the legislatures of the various States.

"There is no success great enough to justify the employment of women in labor under conditions which will impair their natural functions. We favor high standards for wages, working and living conditions among the women employed in industry.

"We pledge a continuance of the efforts of the Republican administration to eliminate the 7-day 12-hour work week in industry. We regard with satisfaction the elimination of the 12-hour day in the steel industry and the agreement eliminating the 7-day work week of alternate 13 and 11 hours, brought about through the efforts of President Harding and President Coolidge.

"We declare our faith in the principle of the 8-hour day.

"We pledge a continuation of the work of rehabilitating workers in industry as conducted by the Federal Board for Vocational Education, and favor adequate appropriations for this purpose.

"We favor a broader and better system of vocational education, a more adequate system of Federal free employment agencies with facilities for assisting the movements of seasonal and migratory labor, including farm labor, and an ample organization for bringing the man and the job together.

RAILROADS

"The people demand and are entitled to have prompt and efficient transportation at the lowest rates consistent with good service and a reasonable return upon the value of the property devoted to public service.

"We believe that the American people demand a careful and scientific readjustment of railroad rate schedules with a view

to the encouragement of agriculture and basic industries without the impairment of necessary railroad service.

"The present laws regulating railroads which were enacted to meet postwar conditions should be modified from time to time as experience develops the necessity therefor.

"The consolidation of railroads subject to the approval of the Interstate Commerce Commission into fewer competitive systems will result in advantages to the public.

"The Labor Board provisions of the present law should be amended whenever it appears necessary to meet changed conditions. Collective bargaining, mediation, and voluntary arbitration are the most important steps in maintaining peaceful labor relations and should be encouraged. We do not believe in compulsory action at any time in the settlement of labor disputes.

"Public opinion must be the final arbiter in any crisis which so vitally affects public welfare as the suspension of transportation. Therefore the interests of the public require the maintenance of an impartial tribunal which can in an emergency make an investigation of the facts and publish its conclusions. This is essential as a basis for popular judgment.

"We favor a stable, consistent, and constructive policy toward our railroads.

GOVERNMENT CONTROL

"The prosperity of the American Nation rests on the vigor of private initiative which has bred a spirit of independence and self-reliance. The Republican Party stands now, as always, against all attempts to put the Government into business. American industry should not be compelled to struggle against Government competition. The right of the Government to regulate, supervise, and control public utilities in the public interest we believe should be strengthened, but we are firmly opposed to the nationalization or Government ownership of public utilities.

COAL

"The price and a constant supply of such an essential commodity as coal are of vital interest to the public. The Government has no constitutional power to regulate prices, but can bring its influence to bear by the powerful instrument afforded by full publicity. When through industrial conflict the supply is threatened the President should have authority to appoint a commission to act as mediators and as a medium for voluntary arbitration. In the event of a strike the control of distribution should be invoked to prevent profiteering.

MERCHANT MARINE

"The Republican Party stands for a strong and permanent merchant marine, built by Americans, owned by Americans, and manned by Americans, to secure the necessary contact with world markets for the sale of our surplus agricultural and manufactured products, to protect our shippers and importers from exorbitant ocean freight rates, and to become a powerful arm of our national defense.

"That part of the merchant marine which is now owned by the Government should continue to be improved by economical and efficient management, with reduction of the losses now paid by the Government through taxation, until it is finally placed on so sound a basis that with ocean freight rates becoming normal, due to improvement in international affairs, it can be sold to American citizens.

WATERWAYS, FLOOD CONTROL, AND WATER POWER

"Fully realizing the vital importance of transportation in both cost and service to all our people, we favor the construction of the most feasible waterways from the Great Lakes to the Atlantic seaboard and the Gulf of Mexico, and the improvement and development of rivers, harbors, and waterways, inland and coastwise, to the fullest extent justified by the present and potential tonnage available.

"We favor a comprehensive survey of the conditions under which the flood waters of the Colorado River may be controlled and utilized for the benefit of the people of the States which border thereon.

"The Federal water power act establishes a national water-power policy, and the way has thereby been opened for the greatest water-power development in our history under conditions which preserve the initiative of our people while protecting the public interests.

THE WORLD WAR VETERANS

"We reaffirm the admiration and gratitude which we feel for our soldiers and sailors.

"The Republican Party pledges a continuing and increasing solicitude for all those suffering any disability as a result of service to the United States in time of war. No country and no administration has ever shown a more generous disposition in the care of its disabled, or more thoughtful consideration in providing a sound administration for the solution of the many problems involved in making intended benefits fully, directly, and promptly available to the veterans.

"The confusion, inefficiency, and maladministration existing heretofore since the establishment of a Government agency for administering such benefits has in the main been cured by new legislation, and plans are being actively made looking to a further improvement in the operation of the bureau. The basic statutes have been so liberalized as to bring within their terms 100,000 additional beneficiaries. The privilege of hospitalization in Government hospitals, as recommended by President Coolidge, has been granted to all veterans irrespective of the origin of disability, and over $50,000,000 has been appropriated for hospital construction, which will provide sufficient beds to care for all. Appropriations totaling over $1,100,000,000 made by the Republican Congress for the care of the disabled evidence the unmistakable purpose of the Government not to consider costs when the welfare of these men is concerned. No legislation for the benefit of the disabled soldier proposed during the last four years by veterans' organizations has failed to receive consideration.

"We pledge ourselves to meet the problems of the future affecting the care of our wounded and disabled in a spirit of liberality, and with that thoughtful consideration which will enable the Government to give to the individual veteran that full measure of care guaranteed by an effective administration machinery to which his patriotic services and sacrifices entitle him.

CONSERVATION

"We believe in the development, effective and efficient, whether of oil, timber, coal, or water-power resources of the Government, only as needed and only after the public need has become a matter of public record, protected with scrupulous carefulness and vigilant watchfulness against waste, speculation, and monopoly.

"The natural resources of the country belong to all the people and are a part of an estate belonging to generations yet unborn. The Government policy should be to safeguard, develop, and utilize these possessions. The conservation policy of the Nation originated with the Republican Party under the inspiration of Theodore Roosevelt. We hold it a privilege of the Republican Party to build as a memorial to him on the foundation which he laid.

EDUCATION AND RELIEF

"The conservation of human resources is one of the most solemn responsibilities of government. There is an obligation which can not be ignored and which demands that the Federal Government shall as far as lies within its power give to the people and the States the benefit of its counsel.

"The welfare activities of the Government connected with the various departments are already numerous and important, but lack the coordination which is essential to effective action. To meet these needs we approve the recommendation for the creation of a cabinet post of education and relief.

UNIVERSAL MOBILIZATION IN TIME OF WAR

"We believe that in time of war the Nation should draft for its defense not only its citizens but also every resource which may contribute to success. The country demands that should the United States ever again be called upon to defend itself by arms the President be empowered to draft such material resources and such services as may be required, and to stabilize the prices of services and essential commodities, whether utilized in actual warfare or private activity.

IMMIGRATION AND NATURALIZATION

"The unprecedented living conditions in Europe following the World War created a condition by which we were threatened with mass immigration that would have seriously disturbed our economic life. The law recently enacted is designed to protect the inhabitants of our country, not only the American citizen but also the alien already with us who is seeking to secure an economic foothold for himself and family, against the competition which would come from unrestricted immigration. The administrative features of the law represent a great constructive advance and eliminate the hardships suffered by immigrants under the emergency statute.

"We favor the improvement of our naturalization laws and the adoption of methods which will exert a helpful influence among the foreign-born population and provide for the education of the alien in our language, customs, ideals, and standards of life.

HAWAII—ALASKA

"We favor a continuance for the Territory of Hawaii of Federal assistance in harbor improvements, the appropriation of its share of Federal funds, and the systematic extension of the settlement of public lands by the Hawaiian race.

"We indorse the policy of the present administration with reference to Alaska and favor a continuance of the constructive development of the Territory.

PHILIPPINES

"The Philippine policy of the Republican Party has been and is inspired by the belief that our duty toward the Filipino people is a national obligation which should remain entirely free from partisan politics.

"In accepting the obligation which came to them with the control of the Philippine Islands the American people had only the wish to serve, advance, and improve the condition of the Filipino people. This thought will continue to be the dominating factor in the American consideration of the many problems which must inevitably grow out of our relationship to these people.

"If the time comes when it is evident to Congress that independence would be better for the people of the Philippines with respect to both their domestic concerns and their status in the world, and the Filipino people then desire complete independence, the American Government will gladly accord it. The results of a careful study of the conditions in the Philippine Islands convince us that the time for such action has not yet arrived.

RECLAMATION

"Federal reclamation of the arid and semiarid lands in the West has been the subject of intensive study in the Department of the Interior during the past fiscal year. New policies and methods of operation have been adopted which promise to insure the successful accomplishment of the objects sought. The completion of this reorganization plan is regarded as one of the achievements of the present administration in the interests of farmers immediately and of all the people ultimately.

COMMERCIAL AVIATION

"We advocate the early enactment of such legislation and the taking of such steps by the Government as will tend to promote commercial aviation.

ARMY AND NAVY

"There must be no further weakening of our Regular Army. We advocate appropriations sufficient to provide for the training of all members of the National Guard, the Citizens' Military Training Camps, the Reserve Officers' Training Corps, Officers' Reserve Corps, and the reserves who may offer themselves for service.

"We pledge ourselves to round out and maintain the Navy to the full strength provided the United States by the letter and spirit of the Limitation of Armament Conference.

THE NEGRO

"We urge the Congress to enact at the earliest possible date a Federal antilynching law, so that the full influence of the Federal Government may be wielded to exterminate this hideous crime.

"We believe that much of the misunderstanding which now exists can be eliminated by humane and sympathetic study of its causes. The President has wisely recommended the creation of a commission for the investigation of social and economic conditions and the promotion of mutual understanding and confidence.

HONEST GOVERNMENT

"We recognize the duty of constant vigilance to preserve at all times a clean and honest Government and to bring to the bar of justice every defiler of the public service, in or out of office.

"Dishonesty and corruption are not political attributes. The recent congressional investigations have exposed instances in both parties of men in public office who are willing to sell official favors, and men out of office who are willing to buy them, in some cases with money and in others with influence.

"The sale of influence resulting from the holding of public position or from association while in public office, or the use of such influence for private gain or advantage is a perversion of public trust and prejudicial to good government. It should be condemned by public opinion and forbidden by law.

"We demand the speedy, fearless, and impartial prosecution of all wrongdoers, without regard to political affiliations or position; but we declare no greater wrong can be committed against the people than the attempt to destroy their trust in the great body of their public servants. Admitting the deep humiliation, which all good citizens share, that our public life should have harbored some dishonest men, we assert that these undesirables do not represent the standard of our national integrity.

"The Government at Washington is served to-day by thousands of earnest, conscientious, and faithful officials and employees in every branch. It is a grave wrong against these patriotic men and women to strive indiscriminately to besmirch the names of the innocent and undermine the confidence of the people in the Government under which they live. It is even a graver wrong when this is done for partisan purpose or for selfish exploitation.

"The Republica administration has already taken charge of the prosecution of official dereliction, and it will continue the work of discovery and punishment, but it will not confuse the innocent with the guilty nor digress for partisan advantage from the strict enforcement of the law.

LAW AND ORDER

"We must have respect for law. We must have observance of law. We must have enforcement of law. The very existence of the Government depends upon this. The substitution of private will for public law is only another name for oppression, disorder, anarchy, and mob rule.

"Every government depends upon the loyalty and respect of its citizens. Violations of law weaken and threaten government itself. No honest government can condone such actions on the part of its citizens. The Republican Party pledges the full strength of the Government for the maintenance of these principles by the enforcement of the Constitution and of all laws.

WOMEN DELEGATES

"We extend our greeting to the women delegates who for the first time under Federal authorization sit with us in full equality. The Republican Party from the beginning has espoused the cause of woman suffrage, and the presence of these women delegates signifies to many here the completion of a task undertaken years ago. We welcome them not as assistants or as auxiliary representatives but as copartners in the great political work in which we are engaged, and we believe that the actual partnership in party councils should be made more complete.

CONSTITUTIONAL GUARANTIES

"The Republican Party reaffirms its unyielding devotion to the Constitution and to the guaranties of civil, political, and religious liberty therein contained.

PARTY RESPONSIBILITY

"In our form of government parties are essential instrumentalities. Our Government functions best when the Chief Executive is supported in the Congress by a majority of the same political faith, united by common principles, and able by concerted action to carry out in an orderly way a definite, consistent, and balanced program.

"In urging the people to elect a Republican President and Vice President we ask them to elect to the Senate and House of Representatives men and women who believe in the Republican principles, acknowledge party responsibility, and who can be relied upon to keep faith with the people by carrying out the platform which the Republican Party now presents and pledges itself to fulfill."

ADJUSTED COMPENSATION

Mr. KENT. Mr. Speaker, every Member of Congress during the present session has received in every mail requests that he vote a certain way upon the "bonus" or "adjusted compensation" question. Very few letters have set forth any reasons for such requests, excepting that in most instances the service men suggested that favorable action upon this question would be some recognition for their comrades of the services rendered during the World War.

It is to be regretted that this matter comes before the present House for action. It should have been disposed of as soon as the war closed.

Let us examine for a moment the history of this controversy. In my judgment we must go back to the first days of our participation in the war to procure the proper perspective. In one of the greatest and most efficient plans ever conceived by man 5,000,000 of young men and women were transferred from the peaceful pursuits of industry and lodged in the armies and navies of the Nation. Other than food and clothing, they were allowed mere pittances, their dependents being allowed less. Those who were actually dependent were in some instances thrown upon the merciful charity of relatives. In this picture we must recall that we were then the most prosperous Nation in the world. We had not been affected, except favorably, by the battles in Europe. The wealth of the world had become centralized here. In every city, town, and village men had received "bonuses" that production might be stimulated. A new class of millionaires had been added to our population.

From this peaceful and prosperous existence went forth our young men and women to fight the battles of democracy. And as they went we assured them the battle was "to make the world safe for democracy." Their mothers were assured it was a "war against war" and this terrible conflict would never be repeated.

We who remained at home of course sacrificed in some ways. We even bought bonds "till it hurt." We still have the bonds, and they are worth to-day more than par. The wealth of the world is still here. Every class of our population received favored treatment except in a few rare instances, where industries classed as nonessential suffered. To stimulate production of essentials prices were paid which were never equaled in the world's history.

We commandeered only the man power of the Nation; everything else demanded its price and received it. I find no fault with the selective-service draft, but recognize the inherent sovereign right of a nation to commandeer and conscript its man power, place it upon the battle field, to be extinguished, if necessary, by the slaughter of war, to uphold the Nation's rights. This power exists and recognizes no right of compensation.

But we did not commandeer the material wealth of the country while spending freely of that greatest of all wealth—the healthy, strong citizenry of the Republic. We guaranteed the farmer a price for his product. We poured billions into the railroads and munitions plants. Hundreds of thousands of governmental employees each received a bonus of at least $240 per year. In my own home territory fabulous sums were paid out as "bonuses."

When the boys came out of the service they confronted a new order of things. A warlike nation had been transformed overnight into one of peace. The administration in power when war was declared had been "hamstrung" by a new and hostile Congress. The guaranties of peace were flung to the winds. What was once a nation, holding the moral leadership of the world, possessing a foreign policy which commanded respect, which could open the markets of the world to the products of America's labor and farms, became a nation, contemptuously regarded by her sisters, drifting aimlessly about in a sea of complicated international relations, her markets cut off, her laborers idle, and her farmers, in large measure, in bankruptcy and under the sheriff's hammer.

But there was enough honor left in her people to admit that great inequalities had been suffered by her service men. And so both great political parties and their leaders proceeded to assure the service men that some recognition would be given them. A small sum of money was to be given to each service man that he might take a short vacation, purchase something appropriate for his mother, wife, or sister, whose prayers had followed him to the cannon's mouth, or help to carry him along the road in his handicap and equalize in small measure the burden we had placed upon him in the service. And the money was to be raised by taxation imposed mostly upon those who profiteered during the war.

But as time went on the soldier found he had been "gold-bricked" most cruelly. This administration, upon the recommendation of the Secretary of the Treasury, refused compensation to the service men upon the theory that a vast deficit would be visited upon the Treasury if such a measure were passed. This prospective deficit became a surplus. The Treasury Department was only nine hundred and sixty-eight millions out of the way in its "guess." Meanwhile, the only tax measure which could have reached the profiteer was erased from the statute books. The old Congress went out. A new one, fresh from the people, came in, and by an overwhelming vote paid its tribute to the service men. The President, forgetting the proprieties, lashed with fury all service men and challenged their morality, as well as that of Congress, in attempting to equalize the burdens of the war. The President admitted there was inequality, but stated it could not be adequately compensated. But he forgot there could be appreciation expressed and a small pittance given in recognition of inequalities suffered and services rendered.

The floundering policy of this administration has lost the respect of our people. The service men, insulted and aghast, militant and ready again to die for their country, hold out a helping hand to the farmer who is prostrate in bankruptcy without a market and without hope for immediate relief.

Let us try now to think as we did in the days immediately following the armistice. Let us gauge the service man's problems as we then gauged them, as they should be, by the test of social, industrial, and political conditions as they existed then.

Mr. Speaker, before concluding my remarks I want to express my condemnation of the "legislative unmorality" of this administration in bringing this question out upon the floor in the manner provided by the Rules Committee, with a particular measure suggested and only 20 minutes debate to a side. A matter providing for the expenditure of $2,000,000,000, affecting 110,000,000 people, is worthy of more decent treatment. This merely follows out the usual practice of a leaderless administration.

I have given this question exhaustive thought without committing myself to the time of voting upon it. I feel that in speaking from my own heart and conscience I have spoken from the Nation's heart and conscience. And when we follow that test we shall never fall into error.

These remarks are not made to justify or excuse my consistent vote for this measure, but in gratification that at least one of the Nation's great moral obligations is met.

SPECIAL-PRIVILEGE SEEKERS

Mr. CROSSER. Mr. Speaker, on August 12, 1924, at the primary election, the people of the twenty-first district, in Cleveland, whom I represent, will answer the special-privilege seekers who arrogantly have been trying to bulldoze and browbeat the representatives of the people and to dictate to them by means of publications financially supported by these interests. This means which is used to control public opinion as much as possible is now commonly known as propaganda. The special-privilege seekers, having seen during war how seemingly certain were the results of propaganda, have ever since been using false propaganda in order to compel the adoption of policies they favor and to destroy public men who oppose the autocratic policies of these men.

The special interests demanded that the taxes on incomes above $100,000 per year be reduced twice as much as the taxes on the small incomes, and they threatened vengeance on Congressmen who would not obey their orders. They howled because I introduced a home loan bill to enable the people to get homes by means of long-time loans at a low rate of interest, and so they urged that an opponent be entered against me at the August 12 primaries. They did not want to give up any of their war profits to pay the men who did their fighting, and, of course, they raged at me because I favored doing something to make up for the loss of wages, salaries, and business suffered by the soldier boys during the late war. The special interests are always the first for a fight when they can get others to do the fighting and paying.

I know, however, that the people will on August 12 be alert and will vote. They will answer the hypocritical suggestions of special privilege with such emphasis and such a majority that they will not again insult the intelligence of the people.

ADJOURNMENT

Mr. LONGWORTH. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 11 o'clock and 7 minutes p. m.), under its previous order, the House adjourned until to-morrow, Friday, June 6, 1924, at 11 o'clock a. m.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. SNELL: Committee on Rules. H. Res. 350. A resolution to appoint a subcommittee of the Committee on the Judiciary to examine into and report on the bankruptcy law of the United States; without amendment (Rept. No. 975). Referred to the House Calendar.

Mr. RAYBURN: Committee on Interstate and Foreign Commerce. H. R. 9610. A bill granting the consent of Congress to the Board of Supervisors of Lowndes County, Miss., to construct a bridge across Tombigbee River; without amendment (Rept. No. 981). Referred to the House Calendar.

Mr. HUDDLESTON: Committee on Interstate and Foreign Commerce. H. R. 9612. A bill granting the consent of Congress to the State of Georgia, through its highway department, to construct a bridge across the Oconee River; with an amendment (Rept. No. 982). Referred to the House Calendar.

Mr. SINNOTT: Committee on the Public Lands. S. 1987. An act accepting certain tracts of land in the city of Medford, Jackson County, Oreg.; without amendment (Rept. No. 983). Referred to the House Calendar.

Mr. ZIHLMAN: Committee on the District of Columbia. S. 2694. An act to enable the trustees of Howard University to

develop an athletic field and gymnasium project, and for other purposes; without amendment (Rept. No. 984). Referred to the Committee of the Whole House on the state of the Union.

Mr. PARKER: Committee on Interstate and Foreign Commerce. S. 2887. An act authorizing transfer of certain abandoned or unused lighthouse reservation lands by the United States to the State of New York for park purposes; without amendment (Rept. No. 985). Referred to the Committee of the Whole House on the state of the Union.

Mr. LEAVITT: Committee on the Public Lands. H. R. 8333. A bill to restore homestead rights in certain cases; without amendment (Rept. No. 986). Referred to the Committee of the Whole House on the state of the Union.

Mr. RICHARDS: Committee on the Public Lands. H. R. 9883. A bill to add certain lands to the Nevada National Forest in Nevada; with amendments (Rept. No. 987). Referred to the Committee of the Whole House on the state of the Union.

Mr. GREENE of Massachusetts: Committee on the Merchant Marine and Fisheries. H. R. 9632. A bill for the protection of the northern Pacific halibut fishery; with amendments (Rept. No. 988). Referred to the Committee of the Whole House on the state of the Union.

Mr. HAUGEN: Committee on Agriculture. S. J. Res. 127. A joint resolution to provide that the powers and duties conferred upon the Governor of Alaska under existing law for the protection of wild game animals and wild birds in Alaska be transferred to and be exercised by the Secretary of Agriculture; without amendment (Rept. No. 989). Referred to the Committee of the Whole House on the state of the Union.

Mr. HAUGEN: Committee on Agriculture. H. R. 8981. A bill to establish standard weights for loaves of bread, to prevent deception in respect thereto, to prevent contamination thereof, and for other purposes; without amendment (Rept. No. 990). Referred to the Committee of the Whole House on the state of the Union.

Mr. JOHNSON of Washington: Committee on Immigration and Naturalization. H. R. 9639. A bill to change the title of Commissioner General of Immigration to Third Assistant Secretary of Labor, and for other purposes; without amendment (Rept. No. 991). Referred to the Committee of the Whole House on the state of the Union.

Mr. HAUGEN: Committee on Agriculture. S. J. Res. 98. A joint resolution authorizing the President to extend an invitation for the holding of the third World's Poultry Congress in the United States in 1927, and to extend invitations to foreign governments to participate in this congress; without amendment (Rept. No. 992). Referred to the Committee of the Whole House on the state of the Union.

Mr. HAUGEN: Committee on Agriculture. S. 2559. An act to establish an Alaska game commission to protect game animals, land fur-bearing animals, and birds, in Alaska, and for other purposes; without amendment (Rept. No. 993). Referred to the Committee of the Whole House on the state of the Union.

Mr. HAUGEN: Committee on Agriculture. S. 2148. An act to empower certain officers, agents, or employees of the Department of Agriculture to administer and take oaths, affirmations, and affidavits in certain cases; with amendments (Rept. No. 994). Referred to the House Calendar.

Mr. JOHNSON of Washington: Committee on Immigration and Naturalization. H. J. Res. 283. Joint resolution to permit to remain within the United States certain aliens in excess of quotas fixed under authority of the immigration act of May 19, 1921; without amendment (Rept. No. 995). Referred to the House Calendar.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. BURDICK: Committee on Naval Affairs. H. R. 811. A bill for the relief of Frederick Marshall; with amendment (Rept. No. 967). Referred to the Committee of the Whole House.

Mr. MAGEE of Pennsylvania: Committee on Naval Affairs. H. R. 3771. A bill for the relief of John Clarence Shea; without amendment (Rept. No. 968). Referred to the Committee of the Whole House.

Mr. LEAVITT: Committee on Irrigation and Reclamation. H. R. 5812. A bill for the relief of Katherine Macdonald; with an amendment (Rept. No. 969). Referred to the Committee of the Whole House.

Mr. SWING: Committee on Naval Affairs. H. R. 8072. A bill for the relief of Emma Zembsch; with an amendment (Rept. No. 970). Referred to the Committee of the Whole House.

Mr. DREWRY: Committee on Naval Affairs. H. R. 8566. A bill for the relief of Claude S. Betts, late ensign (pilot), naval air service; with an amendment (Rept. No. 971). Referred to the Committee of the Whole House.

Mr. DREWRY: Committee on Naval Affairs. H. R. 9204. A bill granting six months' pay to Constance D. Lathrop; without amendment (Rept. No. 972). Referred to the Committee of the Whole House.

Mr. BRITTEN: Committee on Naval Affairs. H. R. 9461. A bill for the relief of Lieut. Edward E. Byrd, jr., United States Navy; without amendment (Rept. No. 973). Referred to the Committee of the Whole House.

Mr. BRITTEN: Committee on Naval Affairs. H. R. 6755. A bill granting six months' pay to Maude Morrow Fechteler; without amendment (Rept. No. 977). Referred to the Committee of the Whole House.

Mr. DARROW: Committee on Naval Affairs. H. R. 7825. A bill for the relief of William C. Gray; without amendment (Rept. No. 978). Referred to the Committee of the Whole House.

Mr. BRITTEN: Committee on Naval Affairs. H. R. 8169. A bill for the relief of John J. Dobbertin; with an amendment (Rept. No. 979). Referred to the Committee of the Whole House.

Mr. WINTER: Committee on War Claims. H. R. 8727. A bill for the relief of Roger Sherman Hoar; with an amendment (Rept. No. 980). Referred to the Committee of the Whole House.

Mr. JOHNSON of Washington: Committee on Immigration and Naturalization. S. J. Res. 110. A joint resolution to admit Leia, Gersch, and Civia Lipman, three Russian orphan children, to the United States; without amendment (Rept. No. 996). Referred to the Committee of the Whole House.

Mr. HAUGEN: Committee on Agriculture. H. R. 5135. A bill for the relief of Leonard R. Coates; without amendment (Rept. No. 997). Referred to the Committee of the Whole House.

Mr. VINSON of Georgia: Committee on Naval Affairs. H. R. 5779. A bill to place John P. Holland on the retired list of the United States Navy; without amendment (Rept. No. 998). Referred to the Committee of the Whole House.

Mr. HAUGEN: Committee on Agriculture. H. R. 7053. A bill for the relief of the Pitt River Power Co.; without amendment (Rept. No. 999). Referred to the Committee of the Whole House.

Mr. WOODRUFF: Committee on Naval Affairs. H. R. 8234. A bill for the relief of Fayette L. Froemke; without amendment (Rept. No. 1000). Referred to the Committee of the Whole House.

Mr. VINSON of Georgia: Committee on Naval Affairs. H. R. 1343. A bill for the relief of Edward A. Grimes; without amendment (Rept. No. 1002). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on Naval Affairs. H. R. 5705. A bill for the reimbursement of certain persons for loss of Liberty bonds and Victory notes while naval general court-martial prisoners; without amendment (Rept. No. 1003). Referred to the Committee of the Whole House.

Mr. STEPHENS: Committee on Naval Affairs. H. R. 9308. A bill to authorize the appointment of Machinist Henry F. Mulloy, United States Navy, as an ensign in the regular Navy; without amendment (Rept. No. 1004). Referred to the Committee of the Whole House.

## CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (S. 2917) directing the Secretary of the Treasury to complete purchases of silver under the act of April 23, 1918, commonly known as the Pittman Act; Committee on Coinage, Weights, and Measures discharged, and referred to the Committee on Banking and Currency.

A bill (S. 1237) for the relief of settlers and claimants to section 16, lands in the L'Anse and Vieux Desert Indian Reservation, in Michigan, and for other purposes; Committee on the Public Lands discharged, and referred to Committee on Indian Affairs.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. WILLIAMSON: A bill (H. R. 9697) declaring the existence of an emergency arising out of the low price of wheat, and providing for the purchase of the surplus of wheat of the crop of 1924 available for export; to the Committee on Agriculture.

By Mr. ACKERMAN: A bill (H. R. 9698) to amend the revenue act of 1924; to the Committee on Ways and Means.

By Mr. MORROW: A bill (H. R. 9699) limiting the creation or extension of forest reserves in New Mexico and Arizona; to the Committee on the Public Lands.

By Mr. PORTER: A bill (H. R. 9700) to authorize the Secretary of State to enlarge the site and erect buildings thereon for the use of the diplomatic and consular establishments of the United States in Tokyo, Japan; to the Committee on Foreign Affairs.

By Mr. ZIHLMAN: A bill (H. R. 9701) to amend an act entitled "An act to fix the salaries of officers and members of the Metropolitan police force, the United States park police force, and the fire department of the District of Columbia," approved May 27, 1924; to the Committee on the District of Columbia.

By Mr. SNELL: Joint resolution (H. J. Res. 285) providing for the creation of a joint commission on national defense; to the Committee on Rules.

By Mr. SUMMERS of Washington: Joint resolution (H. J. Res. 286) to encourage the export of wheat and of flour manufactured in the United States from wheat grown therein; to the Committee on Banking and Currency.

By Mr. BACON: Joint resolution (H. J. Res. 287) authorizing the erection of monuments to Thomas Jefferson and James Madison, at the seat of Government, and authorizing the publication of Madison's Debates of the Federal Convention and relevant documents, in commemoration of the one hundred and fiftieth anniversary of the Declaration of Independence; to the Committee on the Library.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DICKINSON of Missouri: A bill (H. R. 9702) granting a pension to Missouri Ganson; to the Committee on Invalid Pensions.

By Mr. FREE: A bill (H. R. 9703) for the relief of Sophie J. Rice; to the Committee on Claims.

Also, a bill (H. R. 9704) for the relief of the Stearns Wharf Co., of the State of California; to the Committee on Claims.

By Mr. FROTHINGHAM: A bill (H. R. 9705) for the relief of Catherine W. Bussey; to the Committee on Claims.

By Mr. GARBER: A bill (H. R. 9706) granting a pension to Donie C. Eakins; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 9707) granting an increase of pension to Mary Crook; to the Committee on Pensions.

By Mr. HICKEY: A bill (H. R. 9708) granting a pension to John Swarts; to the Committee on Invalid Pensions.

By Mr. LOZIER: A bill (H. R. 9709) granting a pension to Frederick Robb; to the Committee on Pensions.

By Mr. MICHAELSON: A bill (H. R. 9710) granting a pension to Henry C. Rietz; to the Committee on Pensions.

By Mr. MOONEY: A bill (H. R. 9711) for the relief of Mary Moore; to the Committee on Military Affairs.

By Mr. ROGERS of Massachusetts: A bill (H. R. 9712) for the relief of Rebecca E. Olmsted; to the Committee on Military Affairs.

By Mr. RUBEY: A bill (H. R. 9713) granting an increase of pension to Mary E. Kirk; to the Committee on Invalid Pensions.

By Mr. SEARS of Florida: A bill (H. R. 9714) for the relief of William Alexander Somerville; to the Committee on Claims.

By Mr. TAYLOR of Colorado: A bill (H. R. 9715) granting an increase of pension to Louise W. Henderson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9716) granting an increase of pension to Mary M. Sturgeon; to the Committee on Invalid Pensions.

By Mr. THOMPSON: A bill (H. R. 9717) granting an increase of pension to Nancy E. Heller; to the Committee on Invalid Pensions.

By Mr. VAILE: A bill (H. R. 9718) granting permission to Lieut. Col. Kyle Rucker, Judge Advocate General's Department, United States Army, to accept the decoration of the Ordre Grand-Ducal de la Couronne de Chene (commandner); to the Committee on Foreign Affairs.

By Mr. WILSON of Indiana: A bill (H. R. 9719) granting an increase of pension to Martha P. Matthews; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9720) granting an increase of pension to Maria Forstmeyer; to the Committee on Invalid Pensions.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

3014. By Mr. BARBOUR: Petition of Wolters Colony Men's Club, of Fresno, Calif., relative to House bill 7016, and opposing any increase of parcel post rates; to the Committee on the Post Office and Post Roads.

3015. By Mr. COOK (by request): Petition of members and friends of the New Waverly (Ind.) Methodist Episcopal Church, in support of the constitutional amendment to prohibit sectarian appropriations (H. J. Res. 159); to the Committee on the Judiciary.

3016. By Mr. CRAMTON: Petition of members and constituents of the First Methodist Episcopal Church of Richmond, Mich., in support of the constitutional amendment to prohibit sectarian appropriations (H. J. Res. 159); to the Committee on the Judiciary.

3017. By Mr. GARBER: Statement of the Hon. Hugh Scott, medical officer in charge, United States Veterans' Bureau Hospital No. 90, Muskogee, Okla., in support of House bill 5209, and particularly the provision appropriating funds for the purchase of hospital at Muskogee; to the Committee on Public Buildings and Grounds.

3018. By Mr. HUDSON: Petition of the members of the Riverside Methodist Episcopal Church, of Flint, Mich., indorsing the proposed constitutional amendment to prohibit sectarian appropriations; to the Committee on the Judiciary.

3019. Also, petition of the members of the First Baptist Church of Pontiac, Mich., indorsing the proposed constitutional amendment to prohibit sectarian appropriations (H. J. Res. 159); to the Committee on the Judiciary.

3020. By Mr. MacLAFFERTY: Petition of the C. C. Thomas Navy Post, No. 244, of the American Legion, San Francisco, Calif., requesting that the U. S. S. *Albany* be allocated to the Naval Reserve Force of the twelfth naval district; also favoring legislation that will authorize the establishment of proper naval facilities on the lower portion of San Francisco Bay; and urging Congress to appropriate sufficient money to maintain the personnel of the Navy in conformity with the 5-5-3 ratio; to the Committee on Naval Affairs.

3021. By Mr. PATTERSON: Petition of the Taylor Memorial Baptist Church, of Paulsboro, N. J., in support of the constitutional amendment to prohibit sectarian appropriations (H. J. Res. 159); to the Committee on the Judiciary.

3022. By Mr. RAKER: Petition of Roosevelt Camp, Spanish War Veterans, Los Angeles, Calif., urging support of House bill 9270 in re relief for Spanish War veterans, and Charles A. Simmons, 1020 Union Street, San Francisco, Calif., in re House bill 9270; to the Committee on Invalid Pensions.

3023. Also, petition of California Federation of Women's Clubs, resolution in re forthcoming international opium conference; to the Committee on Foreign Affairs.

3024. Also, petition of Charles O. Busick, Sacramento, Calif., urging passage of the post-office salary bill; to the Committee on the Post Office and Post Roads.

3025. Also, petition of the Ebell of Los Angeles, Los Angeles, Calif., indorsing findings of military and naval affairs committee of the Los Angeles Chamber of Commerce providing for an appropriation to erect a general hospital of 1,000 beds on the grounds of the National Home for Volunteer Soldiers at Sawtelle, Calif.; to the Committee on Military Affairs.

3026. Also, petition of Jeremiah F. Sullivan, president California Bar Association, San Francisco, Calif., opposing Senate bill 624, relative to restricting the power of Federal judges in reference to instructing juries; to the Committee on the Judiciary.

3027. Also, petition of R. McLntyre, 1362 Seventh Avenue, San Francisco, Calif., urging passage of San Carlos dam bill (S. 966); to the Committee on Indian Affairs.

3028. By Mr. STRONG of Kansas: Petition of Swedish Methodist Church, of Scandia, Kans., by O. J. Lundberg, presiding officer, and Emil Isaacson, secretary, indorsing the proposed constitutional amendment to prohibit sectarian appropriations (H. R. 159); to the Committee on the Judiciary.

## SENATE

FRIDAY, *June 6, 1924*

The Chaplain, Rev. J. J. Muir, D. D., offered the following prayer:

Our Father and the God of our fathers, we come to Thee this morning gratefully accepting the opportunities of service, realizing that our dependence must be upon Thee, so that in the last analysis of possibilities in connection with that service we must recognize the hand that guides and the wisdom imparted to us. We beseech of Thee to be in the deliberations of this day and the deliberations following which will soon close the session.

Grant unto each one, we beseech of Thee, that the turning away from the duties of high responsibility may be with the sense of a holy satisfaction in connection with the duties accomplished. Guard each life, we beseech of Thee, so that no sorrow shall darken it and no bereavement shall shadow the home. We pray for Thy divine help. Seek for us places of service. Be near to us constantly, and when life's journey is ended be with us. Through Jesus Christ our Lord. Amen.

The reading clerk proceeded to read the Journal of the proceedings of the legislative day of Tuesday last, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 6941) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War, and certain widows and dependent children of soldiers and sailors of said war; requested a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. FULLER, Mr. ELLIOTT, and Mr. COOK were appointed managers on the part of the House at the conference.

The message also announced that the House had passed the bill (S. 1942) to protect navigation from obstruction and injury by preventing the discharge of oil into the coastal navigable waters of the United States, with an amendment, in which it requested the concurrence of the Senate.

The message further announced that the House had passed the following bills and a joint resolution of the Senate severally without amendment:

S. 697. An act providing for the disposal of certain lands on Crooked and Pickerel Lakes, Mich., and for other purposes;

S. 2159. An act authorizing annual appropriations for the maintenance of that portion of Gallup-Durango Highway across the Navajo Indian Reservation and providing reimbursement therefor;

S. 2761. An act to authorize the withdrawal of lands for the protection of antelope and other game animals and birds;

S. 2834. An act relating to the American Academy in Rome;

S. 2932. An act to quiet the title to lands within Pueblo Indian land grants, and for other purposes;

S. 3023. An act designating the State of New Mexico as a judicial district, fixing the time and place for holding terms of court therein, and for other purposes;

S. 3024. An act providing for the acquirement by the United States of privately owned lands within Rio Arriba and Taos Counties, N. Mex., known as the Las Trampas grant, by exchanging therefor timber, within the exterior boundaries of any national forest situated within the State of New Mexico;

S. 3244. An act granting the consent of Congress to the Board of Supervisors of Hinds County, Miss., to construct a bridge across the Pearl River in the State of Mississippi;

S. 3269. An act to amend an act regulating the height of buildings in the District of Columbia, approved June 1, 1910;

S. 3380. An act to grant the consent of Congress to the Cincinnati, New Orleans & Texas Pacific Railway Co. to construct, maintain, and operate a bridge across the Cumberland River, in the county of Pulaski, State of Kentucky, near the town of Burnside;

S. 3420. An act granting the consent of Congress to the construction, maintenance, and operation by the Denver & Rio Grande Western Railroad Co., its successors and assigns, of a line of railroad across the southwesterly portion of the Fort Logan Military Reservation in the State of Colorado; and

S. J. Res. 73. Joint resolution providing for the appointment of a commission for the purpose of erecting in Potomac Park, in the District of Columbia, a memorial to those members of the armed forces of the United States from the District of Columbia who served in the Great War.

The message also announced that the House had passed bills of the following titles, in which it requested the concurrence of the Senate:

H. R. 166. An act authorizing the Secretary of the Interior to issue patent to the city of Redlands, Calif., for certain lands, and for other purposes;

H. R. 3387. An act authorizing repayment of excess amounts paid by purchasers of certain lots in the town site of Sanish, formerly Fort Berthold Indian Reservation, N. Dak.;

H. R. 4088. An act to establish the upper Mississippi River wild life and fish refuge;

H. R. 5558. An act to authorize the incorporated town of Juneau, Alaska, to issue bonds in any sum not exceeding $200,000 for the purpose of improving the street and sewerage system of the town;

H. R. 6652. An act to authorize the city of Los Angeles, in the State of California, to construct and operate a line of railroad across the Fort MacArthur Military Reservation, in the State of California;

H. R. 8522. An act granting to certain claimants the preference right to purchase unappropriated public lands;

H. R. 9402. An act granting the consent of Congress to the Fullerton & Portsmouth Bridge Co. to construct a bridge across the Ohio River to connect the city of Portsmouth, Ohio, and the village of Fullerton, Ky.;

H. R. 9515. An act granting the consent of Congress to the Delaware State Highway Department to construct a bridge across the canal near Rehoboth, Del.;

H. R. 9516. An act granting the consent of Congress to the city of South Sioux City, in the State of Nebraska, to construct a bridge across the Missouri River between the States of Nebraska and Iowa;

H. R. 9517. An act granting the consent of Congress to the North Texas Co., of St. Jo, Tex., a corporation organized under the laws of the State of Texas, to construct a toll bridge across the Red River in the vicinity of Illinois Bend., Tex.; and

H. R. 9518. An act granting the consent of Congress to the State of Alabama, through its highway department, to construct and maintain a bridge across the Coosa River at or near Leesburg, Ala.

The message further announced that the House had adopted a concurrent resolution (H. Con. Res. 28) to authorize the printing of proceedings of Congress, together with the proceedings of the unveiling in Statuary Hall, upon the acceptance of the statue of Sequoyah, in which it requested the concurrence of the Senate.

### SUPPLEMENTAL ESTIMATES OF APPROPRIATIONS

The PRESIDENT pro tempore laid before the Senate a communication from the President of the United States, transmitting a supplemental estimate of appropriation for the Department of Commerce, fiscal year 1924, for protecting the seal and salmon fisheries of Alaska, in amount $55,000, which, with the accompanying papers, was referred to the Committee on Appropriations and ordered to be printed (S. Doc. No. 147).

He also laid before the Senate a communication from the President of the United States, transmitting a supplemental estimate of appropriation for the War Department, fiscal year 1924, for the transportation of the Army and its supplies, etc., in amount $167,384.93, which, with the accompanying papers, was referred to the Committee on Appropriations and ordered to be printed (S. Doc. No. 146).

He also laid before the Senate a communication from the President of the United States, transmitting a supplemental estimate of appropriation for the United States Veterans' Bureau, fiscal year 1924, for hospital facilities and services for patients of the United States Veterans' Bureau, in amount $6,850,000, which, with the accompanying papers, was referred to the Committee on Appropriations and ordered to be printed (S. Doc. No. 144).

He also laid before the Senate a communication from the President of the United States, transmitting a supplemental estimate of appropriation for the Federal Board for Vocational Education for vocational rehabilitation of persons disabled in industry, in amount $900,000, which, with the accompanying papers, was referred to the Committee on Appropriations and ordered to be printed (S. Doc. No. 145).

### TAXATION AND TAX-EXEMPT INCOME (S DOC. NO. 148).

The PRESIDENT pro tempore laid before the Senate a communication from the chairman of the Federal Trade Commission, which was ordered to be printed in the RECORD and to lie on the table and to be printed, as follows:

FEDERAL TRADE COMMISSION,
*Washington, June 6, 1924.*

The PRESIDENT OF THE UNITED STATES SENATE,
*Washington, D. C.*

SIR: I have the honor to transmit herewith a report of the Federal Trade Commission on taxation and tax-exempt income, in partial response to Senate Resolution 451, agreed to February 28, 1923 (Senator NORRIS). Additional reports in complete response to this resolution will be later submitted.

By direction of the commission.

Cordially yours,

HUSTON THOMPSON, *Chairman.*

REQUESTS FOR TARIFF INVESTIGATIONS (S. DOC. NO. 142).

The PRESIDENT pro tempore laid before the Senate the following letter from the chairman of the Tariff Commission, which was read, ordered to be printed, and referred to the Committee on Finance.

UNITED STATES TARIFF COMMISSION,
*Washington, June 5, 1924.*

Hon. ALBERT B. CUMMINS,
*President pro tempore United States Senate.*

MY DEAR SIR: In response to Senate Resolution 221, requesting the Tariff Commission to inform the Senate of the number of industries which have made bona fide requests for tariff investigations; the number of such requests upon which the commission has been unable to act; what, if any, sum of money should be provided by Congress in order to meet the legitimate requests of the business interests of the country for trade information and obtain necessary data concerning tariff adjustment, I have the honor to submit the accompanying report.

Respectfully,

THOMAS O. MARVIN, *Chairman.*

PENSIONS AND INCREASE OF PENSIONS

Mr. BURSUM. Mr. President, I ask that the action of the House of Representatives on the omnibus pension bill be laid before the Senate.

The PRESIDENT pro tempore laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 6941) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. BURSUM. I move that the Senate insist upon its amendments, agree to the conference asked by the House, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the President pro tempore appointed Mr. BURSUM, Mr. FERNALD, and Mr. WALSH of Massachusetts conferees on the part of the Senate.

BRIDGE NEAR REHOBOTH, DEL.

Mr. BAYARD. I ask the Chair to lay before the Senate House bill 9515, just received from the House.

The bill (H. R. 9515) granting the consent of Congress to the Delaware State Highway Department to construct a bridge across the canal near Rehoboth, Del., was read twice by its title.

Mr. BAYARD. Mr. President, yesterday the Senate passed Senate bill 3409. Identically the same bill was introduced in the House and was passed last night as House bill 9515. The Senate bill has not yet been taken up in the House, but the House bill itself came over from the House a few moments ago in a message, and has just been laid before the Senate. I ask unanimous consent for the present consideration of the bill.

The PRESIDENT pro tempore. The Senator from Delaware asks unanimous consent for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole, and was read as follows:

*Be it enacted, etc.*, That the consent of Congress is hereby granted to the Delaware State Highway Department and its successors and assigns, to construct, maintain, and operate a bridge and the approaches thereto across the canal between Rehoboth Bay and the Delaware Bay, being a part of an inland waterway, partly natural and partly artificial, from Chincoteague Bay to Delaware Bay, at a point suitable to the interests of navigation, at or near Rehoboth, in the county of Sussex, in the State of Delaware, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906: *Provided*, That the Secretary of War is hereby authorized, upon the recommendation of the Chief of Engineers, United States Army, to grant permission to the said Delaware State Highway Department, its successors and assigns, under such terms and conditions as the said Secretary may deem equitable and fair to the public, to cross and occupy such public lands pertinent to the United States Canal as may be necessary for the bridge and approaches thereto.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

POLLUTION OF COASTAL NAVIGABLE WATERS

Mr. WILLIS. I ask the Chair to lay before the Senate the action of the House on Senate bill 1942.

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 1942) to protect navigation from obstruction and injury by preventing the discharge of oil into the coastal navigable waters of the United States, which was to strike out all after the enacting clause and to insert in lieu thereof:

That this act may be cited as the "Oil pollution act, 1924."

SEC. 2. When used in this act, unless the context otherwise requires—

(a) The term "oil" means oil of any kind or in any form, including fuel oil, oil sludge, and oil refuse;

(b) The term "person" means an individual, partnership, corporation, or association; any owner, master, officer, or employee of a vessel; and any officer, agent, or employee of the United States;

(c) The term "coastal navigable waters of the United States" means all portions of the sea within the territorial jurisdiction of the United States, and all inland waters navigable in fact in which the tide ebbs and flows;

(d) The term "Secretary" means the Secretary of War.

SEC. 3. That, except in case of emergency imperiling life or property, or unavoidable accident, collision, or stranding, and except as otherwise permitted by regulations prescribed by the Secretary as hereinafter authorized, it shall be unlawful for any person to discharge, or suffer, or permit the discharge of oil by any method, means, or manner into or upon the coastal navigable waters of the United States from any vessel using oil as fuel for the generation of propulsion power, or any vessel carrying or having oil thereon in excess of that necessary for its lubricating requirements and such as may be required under the laws of the United States and the rules and regulations prescribed thereunder. The Secretary is authorized and empowered to prescribe regulations permitting the discharge of oil from vessels in such quantities, under such conditions, and at such times and places as in his opinion will not be deleterious to health or sea food, or a menace to navigation, or dangerous to persons or property engaged in commerce on such waters, and for the loading, handling, and unloading of oil.

SEC. 4. That any person who violates section 3 of this act, or any regulation prescribed in pursuance thereof, is guilty of a misdemeanor, and upon conviction shall be punished by a fine not exceeding $2,500 nor less than $500, or by imprisonment not exceeding one year nor less than 30 days, or by both such fine and imprisonment, for each offense. And any vessel (other than a vessel owned and operated by the United States) from which oil is discharged in violation of section 3 of this act, or any regulation prescribed in pursuance thereof, shall be liable for the pecuniary penalty specified in this section, and clearance of such vessel from a port of the United States may be withheld until the penalty is paid, and said penalty shall constitute a lien on such vessel which may be recovered in proceedings by libel in rem in the district court of the United States for any district within which the vessel may be.

SEC. 5. A board of local inspectors of vessels may, subject to the provisions of section 4450 of the Revised Statutes, and of the act entitled "An act to provide for appeals from decisions of local inspectors of vessels, and for other purposes," approved June 10, 1918, suspend or revoke a license issued by any such board to the master or other licensed officer of any vessel found violating the provisions of section 3 of this act.

SEC. 6. That no penalty, or the withholding of clearance, or the suspension or revocation of licenses, provided for herein, shall be enforced for any violation of this act occurring within three months after its passage.

SEC. 7. That in the administration of this act the Secretary may make use of the organization, equipment, and agencies, including engineering, clerical, and other personnel, employed under his direction in the improvement of rivers and harbors and in the enforcement of existing laws for the preservation and protection of navigable waters. And for the better enforcement of the provisions of this act, the officers and agents of the United States in charge of river and harbor improvements, and the assistant engineers and inspectors employed under them by authority of the Secretary, and officers of the customs and Coast Guard Service of the United States, shall have power and authority and it shall be their duty to swear out process and to arrest and take into custody, with or without process, any person who may violate any of said provisions: *Provided*, That no person shall be arrested without

process for a violation not committed in the presence of some one of the aforesaid officials: *And provided further*, That whenever any arrest is made under the provisions of this act the person so arrested shall be brought forthwith before a commissioner, judge, or court of the United States for examination of the offenses alleged against him; and such commissioner, judge, or court shall proceed in respect thereto as authorized by law in cases of crimes against the United States.

SEC. 8. That this act shall be in addition to the existing laws for the preservation and protection of navigable waters and shall not be construed as repealing, modifying, or in any manner affecting the provisions of those laws.

SEC. 9. That the Secretary is authorized and directed to make such investigation as may be necessary to ascertain what polluting substances are being deposited into the navigable waters of the United States, or into nonnavigable waters connecting with navigable waters, to such an extent as to endanger or interfere with navigation or commerce upon such navigable waters or the fisheries therein; and with a view to ascertaining the sources of such pollutions and by what means they are deposited; and the Secretary shall report the results of his investigation to the Congress not later than two years after the passage of this act, together with such recommendations for remedial legislation as he deems advisable: *Provided*, That funds appropriated for examinations, surveys, and contingencies of rivers and harbors may be applied to paying the cost of this investigation, and, to adequately provide therefor the additional sum of not to exceed $50,000 is hereby authorized to be appropriated for examinations, surveys, and contingencies of rivers and harbors.

Mr. WILLIS. Mr. President, I desire to make a brief statement concerning the bill and amendment, and following that to move that the Senate concur in the amendment of the House.

Senators will remember the oil pollution bill that was discussed here at some length and passed finally, including within its terms land plants as well as ships, seeking to protect the coastal navigable waters of the United States from pollution through the discharge of oil from ships or from land plants. Personally I quite agreed with the committee that it was altogether desirable that land plants should be included, but that idea did not find favorable reception at the hands of the House of Representatives. The amendment made excludes land plants, but does provide that the Secretary of War shall make an inquiry as to the extent of pollution of navigable waters from land plants. I believe on the whole that it is wise legislation and will be productive of public good.

I move that the Senate concur in the amendment of the House.

Mr. FLETCHER. Mr. President, I think the legislation, in order to carry out its purpose and be really efficacious, ought to include land plants, but, as the Senator from Ohio has said, it appears that there is a difference of opinion about it. I think the investigation would be very appropriate, leading to further legislation in regard to the matter. The measure before us certainly provides very definite progress along the lines which are desired and which are quite important. I agree with the Senator that the best procedure would be to concur in the amendment of the House.

The PRESIDENT pro tempore. The question is on the motion of the Senator from Ohio that the Senate concur in the amendment of the House.

The motion was agreed to.

## HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated below:

H. R. 6652. An act to authorize the city of Los Angeles, in the State of California, to construct and operate a line of railroad across the Fort MacArthur Military Reservation, in the State of California; to the Committee on Military Affairs.

H. R. 5558. An act to authorize the incorporated town of Juneau, Alaska, to issue bonds in any sum not exceeding $200,000 for the purpose of improving the street and sewerage system of the town; to the Committee on Territories and Insular Possessions.

H. R. 166. An act authorizing the Secretary of the Interior to issue patent to the city of Redlands, Calif., for certain lands, and for other purposes;

H. R. 3387. An act authorizing repayment of excess amounts paid by purchasers of certain lots in the town site of Sanish, formerly Fort Berthold Indian Reservation, N. Dak.; and

H. R. 8522. An act granting to certain claimants the preference right to purchase unappropriated public lands; to the Committee on Public Lands and Surveys.

H. R. 9402. An act granting the consent of Congress to the Fullerton & Portsmouth Bridge Co. to construct a bridge across the Ohio River to connect the city of Portsmouth, Ohio, and the village of Fullerton, Ky.;

H. R. 9516. An act granting the consent of Congress to the city of South Sioux City, in the State of Nebraska, to construct a bridge across the Missouri River between the States of Nebraska and Iowa;

H. R. 9517. An act granting the consent of Congress to the North Texas Co., of Saint Jo, Tex., a corporation organized under the laws of the State of Texas, to construct a toll bridge across the Red River in the vicinity of Illinois Bend, Tex.; and

H. R. 9518. An act granting the consent of Congress to the State of Alabama, through its highway department, to construct and maintain a bridge across the Coosa River at or near Leesburg, Ala.; to the Committee on Commerce.

## FINANCIAL DEPRESSION AND UNEMPLOYMENT

Mr. WALSH of Massachusetts. Mr. President, the President pro tempore just laid before the Senate a communication from the United States Tariff Commission upon which I wish to comment for a moment.

On May 12, 1924, I presented a resolution that was adopted requesting the United States Tariff Commission to inform the Senate of the number of bona fide requests by industries for tariff investigations, the number of such requests they were obliged to decline because of lack of funds, and, thirdly, the amount of money that it would be necessary to have appropriated by the Congress to permit them to make the investigations requested by bona fide industries under the flexible provisions of the tariff act. The report on this resolution has just now been presented to the Senate.

I call the attention of the present administration to the situation in which it will place itself if it adjourns this session of Congress without the appropriation asked for by the United States Tariff Commission. It will be held responsible in part for business curtailment. The report states that the Tariff Commission has instituted 37 investigations, and that there are 75 bona fide petitions of industries in the country which can not be given the investigation desired because Congress has not furnished the funds necessary for that purpose. The report further states that the amount of money that will be necessary to carry on these investigations is $396,000.

Mr. President, I call attention to the fact that for some reason or other the industries and the business of the country except in periods of panic. It is estimated by the representatives of labor in the country that there are to-day between 1,500,000 and 2,000,000 unemployed people. This is an appalling situation. How can Congress adjourn without doing something—without requesting every agency of the Government to find the causes and provide by legislation if necessary the remedies?

I am not going to take the time to suggest the causes of the business depression that has been increasing and spreading for months, but one of the reasons for unemployment is undoubtedly the fact that the purchasing power of the American people has diminished. Another reason is the plight of the farmers of the West. They have not the money with which to buy, and our industries are suffering by reason of the poverty, the financial losses, and numerous handicaps under which the American farmers are laboring.

An impression has been sent throughout the country that for some reason or other the industrial depression is not due to the diminishing purchasing power of the American people, to the farmers' dire condition, to the high prices that the American people are protesting against, to the apparent consumers' strike, but is due to importations of different commodities from Europe. With the industries of the country in very serious condition, with unemployment general, with the Congress about to adjourn, are we to surmise what is responsible for the present business depression and speculate as to whether or not it is the importations that are coming into the country from foreign lands, that can be prevented if the facts justify it and Congress and the President exercise their power? The administration can not afford to close this session of the Congress and allow these petitioners, these industries which are now suffering severely, to go on until December next without any information or assistance from the Government.

Many are asking, What can the Government do to relieve unemployment, what can the Government do to relieve the farmers? There is one thing it can do to help the industries of the country. If they believe it is the tariff, they have a right to know it and have an official investigation made. They at least have a right to the helping hand of the Government to give them the information which they have a right to have under the law; to have investigations made to determine what action should be taken under the flexible provisions of the tariff act. The President can correct all depressions in business due to flooding the domestic market with foreign goods. He has the power, but it must be exercised after full investigation by the United States Tariff Commission. I appeal

for the necessary appropriation. The sum of $396,000 is necessary to do that work. Congress, however, is to adjourn, and every industry that has requested an investigation and the relief the law provides will know that we refused to give them information that is available, and that we have provided for by law, because we have not appropriated the money.

Mr. President, I can not do more than protest; but I emphatically make my protest in the name of the unemployed, who are walking the streets suffering for want of employment and the necessaries of life, in the name of the industries that are shutting down in this country, and who ask this Congress to act.

Mr. HEFLIN. Mr. President, will the Senator from Massachusetts yield to me for a moment?

Mr. WALSH of Massachusetts. Certainly.

Mr. HEFLIN. Mr. President, not only is Congress about to adjourn without doing anything for the laboring men, but it is about to adjourn without doing anything for the farmers of the country. We had a bill pending here, and asked unanimous consent for its consideration, which involved the Ford offer for Muscle Shoals. It was stated that Mr. Ford would give employment to thousands of people if he got Muscle Shoals. Certain Senators on the other side of the Chamber, however, objected even to the consideration of the bill at this session of Congress. Not only that, but the Ford offer proposed to sell fertilizer to the farmers of the country at half price. That would have involved a saving of a hundred million dollars a year to the farmers, but Senators on the other side of the Chamber, the Senator from Nebraska [Mr. NORRIS], the Senator from Iowa [Mr. BROOKHART], and the Senator from Wisconsin [Mr. LA FOLLETTE] all objected even to the consideration of the measure at this session of Congress.

One of the reasons advanced for doing so was that it was too important a matter to be hastily passed upon. The bill, however, has been pending in Congress for nearly three years. Hearings were had twice on it in the House of Representatives; hearings were had twice on it in the Senate; and I hold in my hand [exhibiting] volumes of those hearings 8 inches thick. The Senator from Nebraska stated that it was too big a question to consider at this session of Congress. An attempt was made on Tuesday to get a hearing upon the measure, to have the measure considered in this body, but those Senators refused to permit a time to be agreed upon to consider this very meritorious bill at the present session.

Henry Ford had been invited by this Government to make an offer. He accepted the Government's invitation and submitted an offer. His offer has been pending for nearly three years, as I have stated. That offer, Mr. President, contemplates serving the Government in furnishing nitrates for war purposes; that offer contemplates furnishing the farmers of the country fertilizer at half price. The completion of the work at Dams No. 2 and No. 3 practically would complete the navigation of the river and make it navigable there for 65 miles, but we could not get those Senators who claim to be the friends of the farmer, who claim to be the friends of the laboring man, to let us even vote upon the question.

The Senator from Nebraska in his report charges that real estate agents are using the Henry Ford offer to sell lots about Muscle Shoals, stating that Ford is going to get Muscle Shoals, and that this property will be very valuable; but I suggested in my remarks the other day that if the Senator from Nebraska wanted to prevent that sort of propaganda, if he wanted to take away from those agents the opportunity to peddle Henry Ford's name in that fashion, he could have done so by voting upon his offer and turning it down if the Senate did not want to accept it.

If the Senate had accepted it, then the real-estate agents would have told the truth and work would have begun at once, and some of the army of unemployed who have been spoken of by the Senator from Massachusetts [Mr. WALSH] would have found work down at Muscle Shoals.

Mr. President, I want the country to know the exact truth as to what was done here and by whom it was done. We have been taught by the Bible, and it is literally true, that a tree is known by its fruits. So an administration is known by its fruits; a Senator is known by his fruits. He may protest that he is a friend to the laboring man, but if he then votes against the laboring man's interests his talk is as sounding brass and a tinkling cymbal. He may protest his friendship for the farmer, but when he has the opportunity to cut the farmer's fertilizer bill in two and will not do so his protestations are in vain.

Mr. President, I merely wanted to make this comment at this time following the remarks of the Senator from Massachusetts.

Mr. WALSH of Massachusetts. Mr. President, may I inquire what disposition was made of the report of the United States Tariff Commission in response to my resolution?

The PRESIDENT pro tempore. The Chair ordered, there being no objection, that the communication be printed in the RECORD and that the report be printed as a public document.

Mr. WALSH of Massachusetts. I am very much pleased with that disposition. May I make the additional request that the report be referred to the Committee on Finance?

The PRESIDENT pro tempore. The report will be so referred.

## UTAH NATIONAL PARK

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 668) to establish the Utah National Park in the State of Utah, which was, on page 2, line 4, after the word "Utah," to insert:

*Provided*, That all the land within the exterior boundaries of the aforesaid tract shall first become the property of the United States.

Mr. SMOOT. I move that the Senate concur in the amendment of the House of Representatives.

Mr. ROBINSON. May I ask the Senator from Utah what will be the effect of the House amendment if it be concurred in?

Mr. SMOOT. Brice Canyon can not be included in the national park until all the private lands within the exterior boundaries of the park shall have been transferred to the Government of the United States.

Mr. ROBINSON. And the House amendment requires that to be done?

Mr. SMOOT. The amendment would include those lands in the park.

The PRESIDENT pro tempore. The question is on the motion of the Senator from Utah to concur in the House amendment to the bill.

The motion was agreed to.

## SOLDIERS' ADJUSTED COMPENSATION

Mr. WILLIS. Mr. President, there has recently come to me from the Hon. Gilbert Bettman, a very distinguished citizen of Ohio, a very useful and interesting statement of fact with reference to the adjusted compensation bill which has recently become a law. I ask unanimous consent to print in the RECORD that letter, together with two newspaper clippings from the Cincinnati Times-Star relative to that same subject.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

CINCINNATI, *June 3, 1924.*

MY DEAR SENATOR: On my return to the city I find yours of the 27th. For over four years, as one of my Legion activities, I have pressed for recognition of the veterans' claim for adjusted compensation. Originally, in March, 1920, as one of the drafters of the first bill upon the subject; thereafter in May, 1920, as one of those who appeared before the Ways and Means Committee of the House; then before the Senate Finance Committee in December, 1920, and before the Senate Finance Subcommittee in June, 1921; and at every national convention except in September, 1919, the resolution passed by the convention has been drafted by me. During all this time naturally I have watched the arguments pro and con carefully, and it has been one of the most striking incidents in American history the tremendous propaganda that was created by those who opposed the measure. All of the avenues of publicity seem to have been open to opponents and very few to the proponents of the measure. Consequently, now that the bill has passed, those avenues are still open, and you of the Senate who voted in favor of the bill are hearing the shouts of protest that arise from those avenues rather than the words of approval from the service men.

None the less, the question has been rightly decided. Adjusted compensation was due the service men, not by reason of military service rendered or risks taken but because of the economic handicap suffered by reason of the service. Uncle Sam needed three elements to win the war—capital, labor, and the soldier—and of these three Uncle Sam drafted only the soldier, and ordered service at $1.25 per day. Wages doubled, trebled, and quadrupled, and capital reaped unheard-of profits. To approximately adjust this economic disparity was simple justice. The unanimity with which the American people have said that in the next war not only the soldier but capital and labor as well must be drafted is an ex post facto admission of the justice of the service man's claim. Looked at in the large, one of the puzzling aspects of the discussion has been this contention of paying for patriotism. Civilian employees received an adjustment of compensation, and hundreds of millions of dollars were paid to the railroads as an adjustment of the economic loss they suffered by reason of being drafted into the Government's service. The fact that the soldier suffered not only an economic loss but rendered a patriotic service has been the occasion of confusing the issue.

The civilian employee and the railroads secured their adjustment of compensation without a whimper going up from the tax-paying element. Should the soldier have been asked, not only to suffer the economic loss, but also because he rendered a patriotic service, to forgive the loss? This is the nub of the argument which has been made by the American Legion from the outset. You will find it set forth in our arguments before the Ways and Means Committee in the "Hearings before the Ways and Means Committee," House Documents, 1920. The Legion has never wavered from this position, and, mind you, the Legion never initiated the subject of adjusted compensation. Our resolution at the first convention in Milwaukee stated that the question was one for Congress, with which the Legion had nothing to do, and it was only when the Ways and Means Committee of the House invited the Legion to bottle-neck to Congress the judgment of the service body as to what form of soldier beneficial legislation would best meet the needs of the service men in the various parts of the country—that the Legion came to Washington and gave its judgment in the form of the original fourfold optional plan of adjusted compensation. This was the ground work of the original bill passed by the House in May, 1920, one of the chief options of which—the adjusted service certificate—has now been enacted into law.

But your judgment upon those who are still abusing the Members of Congress who voted for adjusted compensation must not be too severe. If the dire results forecast by the propagandists against adjusted compensation should eventuate, then their abuse is justified. But the fact is that those results will not eventuate, as we now already see by the passage of the tax reduction bill and its signing by the President.

As an American citizen, I shall always regret the propaganda of the opponents, that the adjusted compensation measure would forbid tax reduction. This assertion was demonstratably and arithmetically untrue. Yet the American people were polled at the expense of hundreds of thousands of dollars by the Literary Digest on the qustion, "which will you have, tax reduction or the bonus?" This propaganda was utterly insincere, because as a matter of arithmetic the bulk of the Mellon proposals could have been and now have been realized and the cost of adjusted compensation met at the same time. And not only was this contention arithmetically unsound, but it was utterly unmoral, because if the debt was a just debt, it should be met whether taxes could be reduced or not. It was just as unmoral to propound to the American people the question, which will you have, tax reduction or adjusted compensation, as it would be for a board of directors to propound to stockholders—which will you do, pay your debts or pay dividends?

Within a few weeks, when the country appreciates that adjusted compensation can be met and tax reduction had, the storm of criticism of the die-hards will abate. Surely, there is enough spirit of fair play in the American people in all elements to regard the battle as having been fairly waged, and now that the issue is decided, to abide by the decision. Moreover, I believe an accurate historian of this four-year controversy would record that one of the great contributing causes to the passage of the measure was the overplaying of their hands by those who opposed it. To continue to play after the game is over would unnecessarily produce bitterness.

Further, if the tax-paying elements would leave off consideration of false propaganda and get down to the facts (although I have worked for the service men in this cause diligently and hard, I can not escape having something of the reaction of the taxpayer), they would conclude that the passage of adjusted compensation will be in the end a saving for the United States Treasury. If adjusted compensation had not been passed, the coming of a pension system would be accelerated by decades, and the Treasury would pay in billions in pensions rather than adjusted compensation in millions. To have allowed 3,000,000 men to drop back into the body politic with the feeling that something was coming to them from their Government which did not come would, in my judgment, have produced within a very few years the coming of a pension system. At the American Legion convention at New Orleans in 1922 we passed a resolution which contained among other statements, "The American Legion stands foursquare in favor of adjusted compensation and against a pension." The Legion should be taken at its word, and now that adjusted compensation has been passed, a great bulwark has been raised up against the coming of any pension system.

Nor can you of the Senate in the Republican ranks who voted for adjusted compensation be chided for failure to support the President. Party regularity does not go to that extreme. If every proposal of the President had to be coincided in by every Senator or Member of Congress of the majority party, we would cease to need a Congress; and the balance of power provided by the Constitution, of judiciary, legislative, and executive, would be thrown out. The shoe is rather on the other foot. The President must now recognize that every time this question in any aspect has been voted on by the rank and file of the people of this country, and, further, when it has been voted on by the people's direct representatives in the House and in the Senate, the measure has been approved; and party regularity, now that the bill has become a law, rather suggests that the President fall in line. Further, the attack upon the Republican Senators in this aspect is just another overplaying of their hands by the opponents of the measure. I do not think you will find any general feeling of bitterness among the service men against the President for having taken the position that he did. The question, of course, had two sides, and the President took the most tenable which an opponent of the measure could take, to wit, that the claim never existed. The President did not take the position that the claim existed but could not now be met. He did not resort to the subterfuge of arguing that you could not have a reduction of taxes and adjusted compensation. And in all my contact with the service men in Ohio and elsewhere, I frankly have not heard any substantial criticism of the President. Moreover, you are familiar enough with the presentation of the arguments and position of the service men to know that the service men have merely presented, as they conceived it and according to their lights, the justice of their claim; and they have made no threats of political annihilation as a penalty for opposition and no promises of political favor as a reward for support. And, in conclusion, I believe among the more potent reasons for the passage of the law has been this difference in method of presentation between the two contending elements. The American Legion has stood solely upon the justice of the claim of the service men and has asked only for such recognition as was consistent with the country's welfare. No less a watchdog of the United States Treasury than Senator Penrose himself said when we appeared before him in 1921, that the position of the American Legion "was patriotic throughout."

Very truly yours,

GILBERT BETTMAN.

---

AMERICAN LEGION SHOULD BE SATISFIED—"MELLON TAX CUT CAN BE EFFECTED DESPITE BONUS," SAYS ONE OF AUTHORS OF SOLDIER BILL.

Gilbert Bettman, one of the authors of the original adjusted compensation bill, drafted by the American Legion's national legislative committee, of which he was chairman, said Wednesday, in commenting on the passage of the revised bill over the President's veto:

"The service man should be satisfied, because the bill recognizes the justice of his claim. The taxpayer should be satisfied, because by paying that claim in the form of insurance adjusted compensation forfends against a pension system, and thus constitutes for the taxpayer and the Treasury a saving in the end.

"The American Legion should be satisfied, because in the public eye adjusted compensation has unfortunately and mistakenly been looked upon as one of the Legion's major objectives. With the closing of the chapter on adjusted compensation, the Legion will be revealed to the American people in its true light, not as an organization attempting to get something from the Nation in its own behalf but as an organization dedicated to give something to the Nation by service, not only to comrades but to community, State, and Nation.

"The effect of the passage of the adjusted compensation bill on tax reduction has been grossly exaggerated. The substantial reduction contemplated in the Mellon plan can, as a matter of arithmetic, and will be made.

"The American Legion at its convention in New Orleans stood foursquare against a pension. The Legion should be taken at its word, and it will stand as a bulwark, now that adjusted compensation has been passed, against any pension legislation."

---

"COMPENSATION FOR SOLDIERS MISUNDERSTOOD"—ATTORNEY WHO HELPED DRAFT ORIGINAL BILL COMMENTS ON PASSAGE

"Adjusted compensation has been misunderstood by its opponents," said Attorney Gilbert Bettman, who was national chairman of the American Legion committee on legislation, which drafted the original "adjusted compensation" bill. Commenting on the passage of the bill Wednesday in the Senate, Bettman said:

"The bill has passed because it is just. Adjusted compensation has never been sanctioned by the American Legion as a payment to the soldier for military risks taken or military service rendered. That obligation rests upon all American citizens and can not be compensated in money. Adjusted compensation has been sanctioned, though not initiated, by the American Legion, as an approximate adjustment of the economic losses sustained by the service men during their war days of service. Uncle Sam needed three things during the war—capital, labor, and the soldier. Of these, only the soldier was drafted. The soldier served at $1.25 a day, while the profits of capital were unrestricted and the pay for labor in the industries, in the shipyard, and in the munition factories trebled and quadrupled.

"To approximately adjust the various economic disadvantages of the soldier is merely to meet a just economic obligation. The justice of approximately meeting this obligation has been recognized by the people throughout the country whenever they have had opportunity to vote upon the question, and has now been given decisive recognition by the House and Senate of the United States.

"With the closing of the chapter on adjusted compensation the Legion will be revealed to the American people in its true light, not as an organization attempting to get something from the Nation in its own behalf, but as an organization dedicated to give something to the Nation by service, not only to comrades but to community, State, and Nation.

"The President should be satisfied and should sign the bill, because he must now see that it reflects the will of the American people."

AGRICULTURAL CONDITIONS

Mr. FRAZIER. Mr. President, the day after the so-called bonus measure was passed over the President's veto I received a telegram which interested me somewhat, and I wish to read it. It is dated May 20, Cortland, N. Y., and reads as follows:

L. J. FRAZIER,
*Senate Chamber, Washington, D. C.:*

You are a traitor to your party, a menace to your country. If Congress knew how it stood in the eyes of the majority of the people, it would adjourn and its Members slink home. The people are with the President.

HENRY L. SQUIRES,
*9 Railroad St.*

I was interested in the telegram, and so wrote to this man Squires on the 21st of May, as follows:

Your interesting telegram of May 20th was duly received. In order to get your remarkable viewpoint I would appreciate very much if you would enlighten me a little further as to your views on the present political situation. I would also like to know in what business you are engaged.

I always welcome honest criticism and would appreciate any additional criticisms you wish to make.

Yours truly, ———.

A few days later I received a reply written on the stationery of the Brockway Motor Truck Co., of Cortland, N. Y., from the office of the president, signed "George A. Brockway." It starts out:

SIR: Acknowledging receipt of my indictment by wire, which was sent over the signature of my secretary, as well as a duplicate to 29 other so-called Republican Members of the Senate who voted to override President Coolidge, I am giving you my viewpoint of many subjects causing in this country to-day so much unrest and at the same time paralyzing business.

I appreciate the fact that I am not the only irregular Republican. On the so-called bonus vote it will be noted on page 8871 of the CONGRESSIONAL RECORD that there were only 26 regulars that day in the whole Senate, and 9 of them were Democrats.

Mr. President, it is interesting to note that the president of the Brockway Motor Truck Corporation had his secretary send the insulting telegrams to Members of the Senate; in other words, he has his secretary do his dirty work for him. He goes on in this letter:

In the first place, I feel it is up to men like yourself to enlighten your constituents, not to carry out in Congress any radical ideas they may have in the way of remedying the so-called evils that exist.

I want to read this because it is typical, apparently, of the viewpoint of the average big-business man. The writer continues:

North Dakota is a wheat-growing State, as I understand it. The price of wheat can not be stabilized or controlled by legislation.

That sounds very familiar.

I believe that the price of wheat, as well as any other commodity grown or produced all over the world, is based, and always will be, on the supply and demand—

There is another phrase that sounds very familiar—

particularly when more is grown in this country than can be consumed in the country.

The only way this compensation could be increased is by general prosperity, which will be reflected in the commercial centers consuming more food. In driving through Great Britain and on the Continent last summer I was surprised to see the vast quantity of grain grown. I am told that this condition is the same through eastern Europe and Asia. The people in those countries have gone to work and raised their own grain, for the reason that they did not have gold to pay for food imported.

It seems to me that if a business man, such as this man probably is, instead of going to Great Britain and Europe to study conditions there, while apparently knowing nothing of the situation in the agricultural States of his own nation, had gone out to the West and found out what the agricultural situation there was he would have been a great deal more enlightened on the subject, and could have talked more intelligently than he does. He talks about supply and demand controlling the market for wheat. Anyone who knows the wheat business knows that the law of supply and demand does not control the price but, as shown by past history of grain manipulation in this country, the grain gamblers have controlled the price of wheat the same as the price of meat products and other products which the farmer raises are controlled.

The writer of the letter continues:

I am located in a dairy country, and our farmers ship all their milk to the large cities, but through cooperation they have been able to organize and in that way secure a fair price for their milk; but this is a local situation, as you must know, and would not apply to grain. There is no way of overcoming the law of supply and demand, in my opinion, and if we are producing more wheat than can be used in this country, any surplus must be exported; and when that condition of affairs exists the price is based on the world-wide export price.

He says that there is no way of controlling the law of supply and demand; yet he admits that the farmers of his own community have a cooperative organization to control the price of milk, and have made a profit on it.

He goes on further and says:

MAGNUS JOHNSON and men of that type advocate reduction in freight rates as a panacea. I am of the opinion if the railroads hauled the wheat to seaboard for nothing, it would not make any difference with the price of grain to the farmer.

That is a mighty intelligent remark coming from anyone, I do not care whom—that if the grain were hauled to the seaboard for nothing it would make no difference in the price of the wheat to the farmer.

This gentleman states that the law of supply and demand governs the price of wheat, and yet he says that if the 15 or 20 cents freight paid on a bushel of wheat shipped to the central markets from the point where it is grown were not paid it would make no difference in the price of wheat to the farmer. Perhaps it would not, but if it would not there is something decidedly wrong with this gentleman's argument.

He says:

At the present time you must admit that Congress is discredited by the people—

I want my friends on this side of the Chamber to get this—

In fact, it does not stand as high as the ordinary board of county supervisors; and I believe that men like yourself, if they can only see the light, should advocate relief based on sound business principles, and go before your people with a program of that kind, and they will see it is not for their interests to secure temporary relief, which in the end will cause the country much distress.

No one wants temporary relief if he can get permanent relief, but if we can not get permanent relief we are willing to try almost anything.

He says further:

If Congress had carried out Secretary Mellon's plan in principle, had deferred any bonus legislation until such time as the country was in better shape, that you would see business booming all over the country.

Business booming all over the country, when thousands upon thousands of farmers in the agricultural States are absolutely broke and out of business! Still, he says, if we could lower taxes in the higher brackets for the millionaires, and a few things of that kind, we would see business booming throughout the country.

Many of our politicians in the West have tried their best for several years past to work up a sectional feeling. I doubt very much if this is a good thing for the country. Radicalism is all right for Russia, but I have too much faith and confidence in the American people to ever see that sentiment prevail in the United States.

Here is another interesting passage:

President Coolidge goes before the people as a candidate on the Republican ticket, and, in my opinion, goes to defeat, due to the action

of the Republicans in Congress. Whether things would be better in the hands of McAdoo, Al Smith, LA FOLLETTE, remains to be seen. As far as I am personally concerned, it makes no difference to me.

He apparently is absolutely discouraged.

He says further:

Men like yourself should give the situation to-day much thought, and any ills and evils to be worked out should be worked out on sound, conservative, and economical principles, not on the radical way of looking at things. I doubt very much if there is less than 25 per cent of the farmers in Dakota but what are driving their own pleasure cars. This is all right, and I favor it, providing they can afford it.

Providing they can afford it! But he goes on:

But with the readjustment of values that is now going on, it is necessary for one to "cut their garments according to their cloth," and when they do that things will be all right.

In other words, if the farmers are going broke and going out of business, as they are to-day all over the Nation, he says that if they will cut their clothing according to the cloth they will be all right. In other words, if they can not make any profit, let them starve for a few years until this readjustment takes place.

I have read only a part of this letter, but it seems to me it gives a fair sample of the attitude of the big business interests, especially of the East. The farmers' situation is mighty serious all over the Nation. I do not need to go into detail as to what their situation is. We have the best agricultural land in the world, and yet the farmers who own their own farms are going broke and out of business by the thousands.

I want to give a few statistics coming from the Agricultural College of North Dakota. They say that during the past five years, 1919 to 1923, inclusive, there was a loss each year on raising wheat in North Dakota, as follows:

| | |
|---|---|
| In 1919 loss per acre | $3.67 |
| In 1920 loss per acre | 10.90 |
| In 1921 loss per acre | 7.05 |
| In 1922 loss per acre | 1.69 |
| In 1923 loss per acre | 4.85 |

or an average loss for five straight years of $5.63 per acre, or an aggregate loss per acre for these five years of $28.16. That means that the average loss on every acre of wheat grown in North Dakota, and throughout the Northwest, for the past five years was $28.16. There was also a loss most of these years on cattle, hogs, sheep, and potatoes.

Taking all these losses into consideration, it is absolutely safe to say that during the past four or five years the farmers of the Northwest have had an aggregate loss on the products they have produced of more than the present cash value of their land. In other words, the average farmer who had his land clear five years ago has lost in these five years of deflation the total cash value of his farm, and the farmer who carried mortgages five years ago—and a big majority were mortgaged—has either lost his land entirely or is holding on through the clemency of his creditors.

The total loss on land values and farm products in the past four years is conservatively estimated at $50,000,000,000.

During the war time, through an act of Congress, a minimum price was fixed on wheat, which price became the maximum or fixed price. Of all the products which were necessary to maintain and successfully prosecute the war, wheat was the only one upon which the price was fixed by the Government. The farmer did not object to having this price fixed by the Government, but he did object, and rightly, because the prices of other commodities were not likewise fixed. We did not think it fair or just that the wheat grower should be singled out and thus discriminated against. We were compelled to sell at a Government fixed price and at the same time had to buy on the open market at war-time prices with war profits, the sky apparently being the limit; and when some of us objected to this unfair treatment, as some of us did, we were called pro-Germans and Bolsheviks.

The price was determined by a commission, after much discussion, at $2.20 at the terminals at Chicago, which was a little more than a dollar per bushel less than wheat had been selling for just previous to this on the open market. Two dollars and twenty cents was decided upon as a fair price as compared with prices of other products at that time, but the price of all other products went up and wheat remained at $2.20, which was our fixed price. Italy guaranteed $4.80, France $3.84, Holland $3.70, Switzerland $3.18, and Norway $4.00, and in some of the other neutral nations the price was still higher.

An appeal was made to the farmers to produce more wheat. The newspapers took up the slogan that "Wheat would win the war." In North Dakota our wheat acreage was increased more than 2,000,000 acres. The cost of production increased until we were producing at a loss, and the Government sold wheat to the allied governments at less than cost of production, at the expense of the American farmers. Yet, according to Senate Document 259, there were 10 flour mills that had profits ranging from 306 per cent to 2,628 per cent during that same time.

Throughout the war the railroads were given a magnificent profit. All business interests were allowed to make immense war profits. New millionaires were made by the wholesale, and the price of wheat undoubtedly would have gone a great deal higher had it not been fixed by the Government.

The Minneapolis Journal of August 22, 1920, quotes Herbert Hoover as saying:

Had not the Food Administration and the United States Grain Corporation assumed control of the wheat supply after the short crop of 1917, wheat would have gone to $6 a bushel, flour probably to $25 or $30 a barrel, and there would have been bread riots that would have interfered seriously with our participation in the war. Because of our large foreign population of recent arrival, men who had not yet absorbed fully the American ideals, we might have had most serious outbreaks if bread had gone up abnormally.

That, according to the Minneapolis Journal, is what Mr. Hoover said. It is rather a strange statement, too—that bread riots might be caused by foreign population who had not yet absorbed American ideals. In other words, good Americans would go hungry and starve to death and keep still about it! He is badly mistaken.

It has been said by some one that there are only three days' difference between the most intelligent people and the barbarians, that three days of starvation will make a savage out of anyone, and it will.

You know the farmers are criticized for not having business methods in farming. It is true that they have not the business methods that they should have, and yet it is pretty hard to get away from the situation that they are laboring under. The senior Senator from Ohio [Mr. WILLIS] made the statement the other day, when talking on the Postal Service regulation bill, that it was unbusinesslike for anyone to employ help and fix a salary when he did not know whether or not the returns from his business would stand that expense. That may be true, and yet the farmers do business that way all the time. They hire their help in the spring of the year, put in their crops, and do not know a thing about what they will receive for those crops when they are ready for market. They take chances on the elements of nature, on the bugs and grasshoppers, and all kinds of things, and then when their crop is ready for market they take chances on the grain gamblers and food gamblers who fix the prices of those products. As was well and aptly said by one of the witnesses who appeared before the Agricultural Committee of the Senate, "If the little bugs did not get the farmer's crops while they were growing the big bugs were sure to get them when they were ready for market."

The farmers have tried cooperative organizations; they have tried to better their condition by developing cooperative marketing, but, generally speaking, these cooperative concerns have been put out of business by unfair and unjust treatment by the big business interests that are organized against them. In North Dakota the farmers have been robbed for years on the grade of their grain. We finally passed what was known as the North Dakota grain grading act to allow the State authorities to grade the wheat that was produced in that State.

Under that law they were to grade wheat according to its milling value, according to the amount and grade of flour that could be made from it, and the amount of bread that could be made out of a bushel of wheat. That is not the way the grain is graded at the present time or was graded before this law was passed.

Wheat is raised to produce flour and bread, and we felt that it should be graded according to the amount of flour and bread it produced and the quality. So we passed this North Dakota grain grading act. We were taken into court on it, and finally taken clear up to the Supreme Court of the United States, and upon a five-to-four opinion the law was declared unconstitutional.

This grain grading act, while it was enforced there a couple of years, saved the farmers of that State millions of dollars each year, without any question, upon the narrowing of the margin paid to the farmer as compared with the price it was sold for in the market, and in paying the farmer for the foreign material, the dockage, that was in the wheat that had

food value, and in giving the farmer better grades for his wheat.

After the law was declared unconstitutional, the farmers, as well as the business man, were so impressed that the law had been good and that we should have another one, that in 1922 another grain grading law was initiated, which we felt might stand a decision of the court. It carried by 3 to 1 in the November election in 1922. It was again taken into the courts, of course. It is before the Supreme Court to-day. It was argued in the Supreme Court in this city on May 4, 1923. Up to date no decision has been given, and I do not look for any decision until after election, at least. I sometimes think it might be a very good stunt to investigate the Supreme Court, too.

The Senators perhaps know something of the farmers' attempt to organize in the Western States. There are a few so-called radical Members of Congress here, coming from those Middle West and Western States. I want to tell why they are here.

When the farmers tried to organize cooperative concerns, they were put out of business by unfair methods by the Chamber of Commerce of Minneapolis, by the Board of Trade of Chicago and Kansas City, and so forth, and they even went so far as to break up the farmers' meetings held to discuss the farmers' situation. Yes; they broke up the farmers' meetings. That was done in the great State of Minnesota. Speakers were tarred and feathered because they had the nerve to go before the people and tell them the condition of the farmers, and what they should do to organize and to better their conditions. That is why two Farmer-Labor Senators and some Farmer-Labor Congressmen are in the Congress from the great State of Minnesota to-day.

In South Dakota the same thing occurred. Tar-and-feather parties were organized, meetings were broken up, and the same thing was true in Kansas and Nebraska. The same thing was true in Montana, Idaho, Washington, and some other States out there. That is why some more so-called radical Senators have come to Congress, and I predict right here that there will be still more of the same type of men coming into the United States Senate from those States.

It is sometimes said that the farmers are "seeing red." Perhaps they are, and whose fault is it, after these conditions they have gone through? Whose fault is it that no constructive legislation has been put across for the relief of the farmers and the agriculturalists of this Nation at this present session of Congress? Senators on the other side of the aisle will say, undoubtedly, that it is the fault of the Republicans. I want to say right here that the RECORD shows, on page 10290, on the vote on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE] to recess until July, that 19 Democrats voted against that. On the next page of the RECORD, it is shown that on the amendment that was offered to postpone the adjournment until the 21st of June, 20 Democrats voted in the negative. We could easily have had enough to carry that proposition, to recess until July, and then have time to put acrosss some legislation, and to consider the Muscle Shoals question as well. In even two weeks' extra time we could undoubtedly have considered the Muscle Shoals question and some other relief measures for agriculture. But the Democrats stopped it.

Some one suggested, whether it was an English lord or some one who looked like an English lord, "By their fruits ye shall know them." I do not want the Democratic Party to go out and lay everything to the Republicans. There has not been a single day since the session opened last December but that there were enough so-called radicals on this side of the Chamber to vote with the Democrats to put across a progressive program—progressive legislation for the people, farm legislation or labor legislation, or anything else—for the benefit of the people. Senators over there know that as well as I do. On this side of the Chamber Senators are a little more to blame, I will admit, and yet, as I quoted from the RECORD a little while ago, there are only a few regulars on this side.

They say that the farmers are "seeing red." I want to say right here that more than the farmers are seeing red. There are a lot more seeing red. A presidential election is coming only a few months from now, and it is said that unsound economic conditions are not very conducive to safe and sane voting at the polling places. Perhaps that may be true. One thing I believe the people of this Nation can thank the so-called radicals on this side and on the other side of the Senate for at this session, and that is for all the developments brought out by the investigations. You can say what you like about those investigations, but they have brought the truth to the people that many a department and many a public official has been guilty of graft and unfair dealing, robbery of the Treasury of the United States and of the people of the money they paid in taxes.

There is no question but that the result of the next election will depend largely upon what the people think of the things brought out by these investigations, and in my estimation the developments from the investigations will have a mighty wholesome effect upon the coming campaign, and I predict some wonderful changes after next November.

Mr. President, I believe that the farmers of this Nation are going to demand legislation for their relief in more certain terms than ever before. It is said that that would be class legislation. Yes; perhaps it would, and yet if Congress thought as much of the farmers who produce the food products to feed the people of this Nation as they do of the railroad companies, which simply transport those products from one point to another, we would have a law for the farmers that would do for us what the Esch-Cummins Act does for the railroads of the country.

If Congress thought as much of the farmers as they do of the big bankers, we would have a law that would do for the farmers what the Federal reserve act does for the big banks.

If we here in Congress thought as much of the farmers as we do of the manufacturing interests, we would have a law that would do the same thing for the farmers as the Fordney-McCumber tariff bill does for the big manufacturers.

Talk about the farmers "seeing red"! What beats me, and what I can not understand for the life of me, is why they do not see a lot redder than they do.

Mr. JOHNSON of Minnesota. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Dakota yield to the Senator from Minnesota?

Mr. FRAZIER. I yield.

Mr. JOHNSON of Minnesota. Talking about farmers beginning to see red, the Senator from North Dakota referred to a party who wrote a letter to him, which he has just read, criticizing the tax bill which we have just passed. I received a letter from one of the biggest business men in the State of Minnesota, and this is what he said to me:

> The revenue bill I would consider a very meritorious bill, and I trust the President will sign it—

Of course, he wrote this before President Coolidge signed it—

> as it has a tendency to more materially reduce the taxation of the poor man than large incomes, which is only fair. I believe it is policy to shoulder the burden of taxes on the rich, and recognize fully the old theory, faculty and ability to pay should be considered in levying taxes.

That shows that the big business men of the Northwest are going to see a little more red in the future, and probably it would be a very good thing for them to do so.

Mr. FRAZIER. I do not think there is any question about that. Banks have failed by the wholesale out through the whole Northwest, and business interests are hard pressed, to say the least. There is no question but they realize that their welfare depends on the farmer's welfare. It seems to me that the only thing that will wake up the business men of the East is for hard times to strike them—and they are coming, and coming faster than a lot of people think.

Mr. KING. Mr. President, will the Senator yield for a question?

Mr. FRAZIER. I gladly yield.

Mr. KING. I think the Senator does not mean to defend the Bolshevik view, nor would he defend a policy on the part of the American farmer to become a communist. I sympathize with the position of the Senator that agriculture has suffered a great deal, but I call his attention to the fact that if we should become red, all property would be taken over by the Government, and there would be erected a despotism under which the farmers could suffer infinitely more than they are suffering to-day under a republican form of government. So I do not think the Senator ought to encourage, by any speech which he makes—and he is a patriotic American—the spirit of communism. What we need is more democracy and less communism, more independence on the part of the people, more local self-government, and less of the absolutism which characterizes the Soviet Government, and which some people would like to introduce into the United States under the form of a centralized system of government.

Mr. FRAZIER. Mr. President, I agree with the Senator from Utah exactly. North Dakota was one of the first States where the farmers and workers organized to better their economic conditions, and yet when we organized, the opposition,

headed by outside opposition, the big interests of this Nation and political parties, as well, called us Bolshevists, free lovers, atheists, and everything they could lay their tongues to; they broke up meetings and tarred and feathered speakers. That did not happen in North Dakota, however. I am thankful to say there was not a single tar-and-feather party or a single farmers' meeting broken up out in North Dakota.

Mr. JOHNSON of Minnesota. That is because they had a good governor, like Senator FRAZIER, of North Dakota. That is why they did not break up more meetings.

Mr. KING. The Senator remembers that in the last political campaign Governor Cox, the standard bearer of the Democratic Party, speaking for the party, went into the Governor's State—the present Senator's State—and there, in a very broad and comprehensive manner, attempted to deal with the social and economic problems of the farmer and the working people of the Nation, and I am sure that the broad views which he expressed, speaking for the Democratic Party, must have found cordial support upon the part of the distinguished Senator from North Dakota.

Mr. SHIPSTEAD. Mr. President, will the Senator yield?

Mr. FRAZIER. I yield.

Mr. SHIPSTEAD. When the Senator spoke of farmers seeing red, he meant by that the American interpretation of what constitutes seeing red, did he not?

Mr. FRAZIER. Absolutely.

Mr. SHIPSTEAD. The Senator is well aware that the American interpretation of what constitutes a "red" is of an individual who will not vote the Republican or the Democratic ticket, and does not use McCormick machinery on the farm. Is not that right?

Mr. FRAZIER. Absolutely.

Mr. KING. Mr. President, if the Senator will pardon me, I think it would be better to label him an "independent," or a "progressive," and drop the word "red."

Mr. FRAZIER. I am only using the common term, "seeing red." In North Dakota we tried to change conditions in the American way, by the ballot, the intelligent use of the ballot at the polls, and that is what I advocate throughout the Nation, for the people to interest themselves in their Government. Yes, and I believe they are becoming more interested, not only in the Middle West and West, but throughout the East, too. I believe they are going to put the Government back where the framers of the Declaration of Independence and those who adopted the Constitution of the United States intended it should be—in the hands of the people themselves. That is what I advocate and I believe that is coming about, and coming quicker than a lot of conservatives think it will come.

It is intimated that in this coming campaign the World Court will be one of the chief topics, or the League of Nations, or something of that kind, and the restoration of European markets. It is said we can not have prosperity until the European markets are restored. It will be a long time before prosperity comes, in my opinion, if it has to wait until that time.

But we do not have to wait for European markets to be restored to get prosperity in this country. If the Norris-Sinclair bill could be passed and the margin of profit regulated from the time the food products and other products leave the farm until they come to the ultimate consumer; if we could get an honest price for our farm products—yes, a price that would pay the cost of production and yield a little profit and not increase the cost to the consumer a single bit—that would be all we ask. Out of a 9-cent loaf of bread only 1½ cents goes to the farmer for his wheat. The rest of it is in the handling charges, the baking, milling, processing, and profits. The same is true of many other things. The only thing that will ever put the farmers on a paying basis is to give them the cost of production for their products and a little profit, the same as any other business must have in order to be profitable. All the farmers ask, and it is all they have ever asked—and, so far as I know, all that the workers have asked—is a square deal at the hands of Congress. They are not getting it, and I want to predict that at the coming election the people will speak stronger than they have ever spoken before. I believe that they will demand that they have a square deal here and will keep up the fight until they get it.

I was indorsed by the Nonpartisan League of North Dakota as a candidate for the United States Senate. They said it would be an awful disgrace if the people of that great State should elect a United States Senator who had been recalled as governor, and perhaps it was. I did not go to the convention. I told the boys who spoke to me that I had had my share of politics and wanted to go back on the farm and build it up again, because it had run down while I was away in office as governor. After the convention was over they wired me that I had received the indorsement as candidate for United States Senator and asked me to come down there. I went down and talked the matter over with them and went into the fight. We had to get money to pay for our campaign expenses. I want to say right here that, as Senators know, the senior Senator from Massachusetts [Mr. LODGE], on May 21, 1924, at page 9109 of the RECORD, in talking about campaign expenses, said:

> I think I am putting it moderately when I say that nine-tenths of the money expended on behalf of the party of the Senator from Arkansas, as well as my own, is raised in the city of New York.

Admitting that nine-tenths of the campaign funds of both of the great parties are raised in Wall Street——

Mr. HEFLIN. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from North Dakota yield to the Senator from Alabama?

Mr. FRAZIER. I yield.

Mr. HEFLIN. Does not the Senator recall that I challenged the statement of the Senator from Massachusetts and stated that nine-tenths of the Democratic campaign fund was raised about the country in $1, $5, and $10 subscriptions?

Mr. FRAZIER. I did not remember that the Senator had challenged the statement.

Mr. JOHNSON of Minnesota. Mr. President, will the Senator yield a moment?

Mr. FRAZIER. Certainly.

Mr. JOHNSON of Minnesota. Talking about campaign contributions, I introduced a resolution in this body about six weeks ago requesting the chairman and the treasurers of the two major parties to report to this body who helped to pay the deficit in their respective parties. Up to this minute not a single statement has been filed about the matter. I am told that there was a deficit last fall of $1,600,000 in the Republican Party alone. We found that Doheny and Sinclair had paid some of it. When I saw in the newspaper this morning that Lowden, of Illinois, is going to be the candidate for the Vice Presidency of the United States I was a little bit suspicious that perhaps he had helped pay a part of the deficit.

Of course, we can not go out and get the information. My resolution did not demand that they should produce it. It merely asked them to produce it, but they have not done it. It would be mighty interesting to have a report from those gentlemen if they dared to come out with it now. But no; they keep that away from the common people.

The Senator from North Dakota has mentioned the fact that we have to go out among the poor farmers and get subscriptions in $1, $2, and $5 amounts. That is true. But where did the other organization get their money? I want to say right straight from the shoulder here, and I do not hesitate, because I have first-hand information, that some "lame ducks" in the Republican Party were to be taken care of by the President of the United States. I got first-hand information that they did try to shake off some of them but could not do it because it was a promise made to them months before.

Mr. FRAZIER. Mr. President, during our campaign in North Dakota in 1922 and in all the other campaigns we have gone through since the farmers organized not a single dollar has ever come from New York, Wall Street, or any place else or from any of the rest of the big interests. The money has been put up by the people themselves generally through collections. In the last campaign we took up collections at every meeting. I sent in to headquarters from my meeting, after paying my expenses and the expenses of the men who traveled with me, over $1,200; and that was the bulk of the money they had for the whole campaign, resulting out of collections taken up at the meetings.

Just after the nominating convention I received a letter from a very prominent judge who had been a resident of our State since the early days. He was visiting in the West for his health. He wrote me saying that he was glad I had been indorsed as a candidate for the United States Senate. He said he was afraid that the farmers and workers in North Dakota might get discouraged after their apparent defeat by the recall, and said if the farmers and workers of North Dakota want to win, if they want to get anything to benefit themselves, they will have to enlist for the duration of the war. I want to say right here, Mr. President and Members of the Senate, that the farmers and workers of the Middle West and West have enlisted for the duration of the war and they are going through with this fight. Yes, if it takes a lifetime, they are going through with the fight until they put the Government back in the hands of the common people. I believe in proportional representation

and if the farmers and workers think by the greatest stretch of imagination that they can send corporation attorneys to the United States Congress and get fair representation, I do not understand their viewpoint. When two-thirds of the Members of Congress are attorneys, and most of them corporation attorneys at that, we can not expect to have the Government that Lincoln said we should have—of the people, by the people, and for the people.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2257) to consolidate, codify, revise, and reenact the laws affecting the establishment of the United States Veterans' Bureau and the administration of the war risk insurance act, as amended, and the vocational rehabilitation act, as amended.

The message also announced that the House had passed bills of the following titles, in which it requested the concurrence of the Senate:

H. R. 4971. An act to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved July 11, 1916, as amended and supplemented, and for other purposes;

H. R. 6095. An act to authorize the Secretary of War to sell real property, to wit, a portion of the Fort Revere Reservation at Hull, Mass.;

H. R. 6541. An act to amend an act entitled "An act to provide for the disposal of the unallotted lands on the Omaha Indian Reservation, in the State of Nebraska";

H. R. 7522. An act to authorize and direct issuance of patents to purchasers of lots in the town site of Bowdoin, Mont.;

H. R. 8308. An act authorizing the Coast and Geodetic Survey to make seismological investigations, and for other purposes;

H. R. 9314. An act to amend section 98 of the Judicial Code; and

H. R. 9380. An act granting the consent of Congress to Board of County Commissioners of Aitkin County, Minn., to construct a bridge across the Mississippi River.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

The message further announced that the Speaker of the House had signed enrolled bills and a joint resolution of the following titles, and they were thereupon signed by the President pro tempore:

H. R. 3104. An act granting 160 acres of land to the Western State College of Colorado, at Gunnison, Colo., for the use of the Rocky Mountain biological station of said college;

H. R. 8233. An act making appropriations for the Executive Office and sundry independent executive bureaus, boards, commissions, and offices for the fiscal year ending June 30, 1925, and for other purposes; and

S. J. Res. 142. Joint resolution providing for the United States Government to have representation at the celebration of the centennial of the first meeting of the Legislative Council of the Territory of Florida.

ORDER OF BUSINESS

Mr. WALSH of Montana. Mr. President, I inquire what is the order of business?

The PRESIDENT pro tempore. The regular order of business is the presentation of petitions and memorials.

Mr. WALSH of Montana. I shall insist hereafter on the observance of the order of business.

Mr. JONES of Washington. Regular order!

Mr. BRUCE. Mr. President, I ask unanimous consent——

Mr. NORRIS. Mr. President, there are quite a number of Senators who have bills to introduce and some have reports to make from committees. Could not Senators wait with their remarks until the routine morning business is finished and let us dispose of routine business?

Mr. BRUCE. It will only take a moment to dispose of the matter in which I am interested.

Mr. WALSH of Montana. With all due deference to the Senator, I must insist on the regular order.

The PRESIDENT pro tempore. The regular order is demanded, which is the presentation of petitions and memorials.

PETITION

Mr. HARRISON presented resolutions adopted by the Mississippi Funeral Directors and Embalmers' Association favoring the passage of legislation for the establishment of a mortuary corps as a part of the Military Establishment of the United States, with qualified funeral directors and morticians constituting the officer personnel thereof, which were referred to the Committee on Military Affairs.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated below:

H. R. 4971. An act to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved July 11, 1916, as amended and supplemented, and for other purposes; to the Committee on Post Offices and Post Roads.

H. R. 6095. An act to authorize the Secretary of War to sell real property, to wit, a portion of the Fort Revere Reservation, at Hull, Mass.; to the Committee on Military Affairs.

H. R. 6541. An act to amend an act entitled "An act to provide for the disposal of the unallotted lands on the Omaha Indian Reservation, in the State of Nebraska"; to the Committee on Indian Affairs.

H. R. 7522. An act to authorize and direct issuance of patents to purchasers of lots in the town site of Bowdoin, Mont.; to the Committee on Public Lands and Surveys.

H. R. 9314. An act to amend section 98 of the Judicial Code; to the Committee on the Judiciary.

H. R. 8308. An act authorizing the Coast and Geodetic Survey to make seismological investigations, and for other purposes; and

H. R. 9380. An act granting the consent of Congress to Board of County Commissioners of Aitkin County, Minn., to construct a bridge across the Mississippi River; to the Committee on Commerce.

H. R. 4088. An act to establish the upper Mississippi River wild life and fish refuge; to the Committee on Commerce.

CODIFICATION OF VETERANS' BUREAU AND WAR RISK ACTS

Mr. REED of Pennsylvania. Mr. President, I submit the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 2257) to consolidate, codify, revise, and reenact the laws affecting the establishment of the United States Veterans' Bureau and the administration of the war risk insurance act as amended and the vocational rehabilitation act as amended.

[For conference report see the RECORD, House proceedings, pages 11001 and following.]

Mr. REED of Pennsylvania. I ask that the conference report be agreed to.

Mr. NORRIS. Mr. President, I would like to ask the Senator if he will not allow morning routine business to be finished before we consider any of the conference reports?

Mr. REED of Pennsylvania. It will only take a moment, I believe. I move that the Senate agree to the report of the committee of conference.

Mr. DILL. I would like to know what are some of the changes presented in the conference report. I do not want to ask to have it lie over a day, but I would like to have a chance to examine it. I suggest to the Senator that he wait until the regular routine business is disposed of.

Mr. REED of Pennsylvania. I understand that a conference report is privileged at this time.

Mr. DILL. It is only the presentation of it that is privileged and not a motion to adopt it.

Mr. REED of Pennsylvania. A motion to proceed to its consideration is also privileged.

Mr. DILL. Not in the morning hour.

Mr. REED of Pennsylvania. The motion can be made after 1 o'clock, I understand.

Mr. DILL. No; after 2 o'clock.

The PRESIDENT pro tempore. The Chair is of the opinion that the conference report is in order at this time, and the question is upon the motion of the Senator from Pennsylvania.

Mr. WALSH of Massachusetts. Mr. President, I do not want to interrupt the Senator from Pennsylvania, but I would like to suggest that the Senator from Tennessee [Mr. SHIELDS] be sent for. He is interested in the report. He can be sent for while the Senator from Pennsylvania is explaining the conference report.

Mr. REED of Pennsylvania. Mr. President, Senators will find the conference report printed in full, beginning at page 11001 of the CONGRESSIONAL RECORD.

In substance the House has conceded to the Senate bill throughout. They have conceded the necessity for classification and have adopted our bill as the basis of the code. The only changes that were made that have any substance or are

of importance will be found summarized in the statement compiled by the House conferees at page 11010 of the CONGRESSIONAL RECORD.

As will be seen there, it is provided that we accepted the House provision regarding the annual report of the director, which involves no concession in substance. We next accepted the provisions barring conscientious objectors and aliens who used their alien citizenship during hostilities. We agreed to the amendment which the House had put in which provides for compensation regardless of misconduct to those men who are totally blind, to those who are paralyzed, to those who are afflicted with paresis, and to those in our hospitals suffering from constitutional lues while they are in the hospital. That will end by saving the Government money, because these cases not infrequently go on in increasing aggravation of ailments incurred during service, for which the Government would have to pay. The provision is very strictly limited, and it is substantially cut down from what the House had provided.

In the Senate the bill as reported from the committee was amended on the motion of the Senator from Washington [Mr. DILL] to extend the presumptive period in cases of tuberculosis and mental trouble to five years from the date of discharge. The House of Representatives "went us one better" on that and made it six years. We compromised that disagreement by agreeing on a uniform date which is actually about five and a half years from the date of the average discharge; that is to say, the presumptive period for all men runs to January 1, 1925. It seemed to us that that was a proper compromise between the Senate and the House provision.

Another amendment, which was offered by the Senator from Tennessee [Mr. SHIELDS], was put in the bill on the floor of the Senate. To that amendment the House of Representatives disagreed; and that is the only remaining matter of importance that I need detain the Senate to explain.

Mr. SHIELDS. I should like to have the Senator state fully what was done in reference to that amendment.

Mr. REED of Pennsylvania. That is just what I am proceeding to do. As the bill left the Senate it contained the so-called Shields amendment, providing that cases of tuberculosis which had not yet reached a state of arrest should be rated as permanent total disability, carrying $100 a month for a period of one year after the diagnosis of arrest. I think in substance that was the effect of the amendment; that is to say, if a man actually had tuberculosis, he should be entitled to a minimum of $100 a month until one year after the disease was pronounced cured, and that thereafter he should be entitled to a minimum of $50 a month for the remainder of his life.

That carried with it, by implication, a maturity of his insurance policy, if he had one; so that a single man who had the Government insurance would receive not only the $100 a month after he was pronounced cured but he would get $57.50 a month from his insurance policy, which provided for total permanent disability. The House of Representatives absolutely refused to agree to that. We had more trouble over that amendment than over any other point of disagreement. We finally worked out a compromise that seemed to all of the Senate conferees and to all of the House conferees to be a just one, and this is what it provides: So long as a man is in a hospital, under the present regulations he is given a total temporary disability payment which amounts to $80 a month. I am, of course, speaking of single men who are without dependents. That remains the law. If he can be discharged before his tuberculosis is pronounced to be arrested, then, under the conference bill, he is entitled to a rating of total temporary disability for not less than three years after his discharge in a state of quiescent tuberculosis, but after he is pronounced cured, when his disease is arrested, then the conference bill grants him that same temporary total disability allowance for six months after he is cured.

We all realized the force of the argument of the Senator from Tennessee, that a man may be pronounced cured, but if he is thrown instantly into hard physical labor he is apt again to break down and his disease may again flare up. We wanted, in so far as we could with justice to the Treasury, to give that man assurance of support for a period after he was pronounced cured. Senators will find the provisions of the bill on that subject in the last paragraph of page 11005 and the second paragraph of page 11006 of the RECORD. We did the best we could to hold the entire Senate amendment, as we deemed it our duty to do, and what we have done has been to secure a material improvement in the law relating to those cases.

I think there is nothing else of material improvement over the present law and of material improvement over the bill as it was reported to the Senate. The Senator from Tennessee may justly feel that he and those who worked with him for the amendment accomplished a great thing for the tubercular soldiers.

Mr. DILL. Mr. President, I wish to ask the Senator from Pennsylvania a question about the men who are in hospitals who have been placed there simply because they were ex-service men. There was a provision in the bill allowing those men a small compensation. As I understand, that provision was not retained.

Mr. REED of Pennsylvania. That provision we could not retain, though we tried to do so. I believed in it firmly, and I know my colleagues did, but it would have meant a disagreement if we had insisted. We did retain the privilege of hospitalization for all veterans; that much we gained.

Mr. DILL. Let me ask the Senator another question regarding the disability of men resulting from the treatment in hospitals. Is there any provision in the bill by which men can get compensation for such injury?

Mr. REED of Pennsylvania. Yes; that is in the bill exactly as if it were a service injury which was received during war time.

Mr. DILL. I asked that question because a few days ago when I made some remarks in the Senate regarding the use of the spinal puncture in the hospitals, an hour later an ex-service man who was in the gallery and overheard the discussion came to my office. He had had a spinal puncture used upon him, and he told me that he was laid up for 15 months, paralyzed, in the hospital as a result. He wanted an amendment of some kind put into this bill in order that he might have compensation as the result of that treatment; and it seemed to me that was a very just request.

Mr. REED of Pennsylvania. Such a provision is included in the bill.

Mr. DILL. I am glad to know that.

Mr. REED of Pennsylvania. And it will take care of such cases.

Mr. DILL. Mr. President, I wish to say to the Senator from Pennsylvania that I believe the spinal puncture treatment of these ex-service men in the hospitals ought to be stopped. It is cruel; it is inhumane; it is terrifying to those men. For instance, since I made the speech to which I have referred, I have received a number of letters from all over the country citing instances where men have been given the spinal puncture treatment and paralysis has resulted from it. The doctors insist on it as a method of determining whether or not there shall be compensation paid to such men. I believe that it ought to be stopped and stopped completely, because if these boys are in such condition that the doctors can not determine it except by puncturing their spines, they ought to be given the benefit of the doubt.

Mr. SHIELDS. Mr. President——

The PRESIDENT pro tempore. May the Chair make a suggestion? The conference report is of a privileged character and may be laid down at any time, but the question of whether the conference report is to be considered is a question that must be decided by the Senate. The Chair feels that that question ought to be put at the present time. The rule provides that it must be decided without debate. So the question is, Will the Senate proceed to the consideration of the conference report?

Mr. WALSH of Montana. Mr. President——

Mr. NORRIS. That is debatable, is it not, Mr. President? I wish to appeal to the Senator from Pennsylvania——

The PRESIDENT pro tempore. The rule provides that the question of proceeding to the consideration of a conference report is not debatable, but the report itself is debatable when once it is taken up.

Mr. NORRIS. Mr. President, the Senator ought not during the routine morning business try to push a measure of this kind through the Senate.

Mr. SHIELDS. Mr. President, I thought I had been recognized by the Chair.

Mr. WALSH of Montana. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Montana will state his inquiry.

Mr. WALSH of Montana. I have not heard anybody move to proceed to the consideration of the conference report. Was such a motion made?

Mr. REED of Pennsylvania. I made such a motion.

The PRESIDENT pro tempore. The question of consideration was raised, and it has to be decided without debate. The Chair will put that question now. Will the Senate proceed to the consideration of the conference report?

Those who are in favor of so proceeding will say "aye"; those who are opposed to it will say "no."

Mr. REED of Pennsylvania. I ask for a division.

The PRESIDENT pro tempore. A division is demanded. Those who are in favor of proceeding to the consideration of the conference report will rise and stand until they are counted.

Mr. REED of Pennsylvania. I call for the yeas and nays, Mr. President.

The yeas and nays were ordered, and the principal clerk proceeded to call the roll.

Mr. PHIPPS (when his name was called). I have a pair with the junior Senator from North Carolina [Mr. DIAL]. I am informed that if he were present he would vote as I intend to vote, and I therefore feel at liberty to vote. I vote "yea."

The roll call was concluded.

Mr. COLT (after having voted in the affirmative). Has the junior Senator from Florida [Mr. TRAMMELL] voted?

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). That Senator has not voted.

Mr. COLT. I have a general pair with the Senator from Florida, and therefore withdraw my vote.

Mr. ROBINSON. I desire to announce that the junior Senator from Indiana [Mr. RALSTON] is necessarily absent. If he were present he would vote "yea."

The result was announced—yeas 74, nays 0, as follows:

So the motion was agreed to; and the Senate proceeded to consider the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2257) to consolidate, codify, revise, and reenact the laws affecting the establishment of the United States Veterans' Bureau and the administration of the war risk insurance act, as amended, and the vocational rehabilitation act, as amended.

Mr. WALSH of Massachusetts. Mr. President, there is little about the changes made in this bill in conference that can be added to what the Senator from Pennsylvania [Mr. REED] has said. An opportune time, however, is at hand to call the attention of the country to just what the situation is concerning our disabled veterans.

There has been a good deal of criticism of the management of the Veterans' Bureau. I myself at various times have indulged in this criticism and am responsible for inaugurating the two investigations held since March 4, 1921. Recently the Senator from Nevada [Mr. ODDIE] presented some views in which he indicated that he believed that the management of the bureau was not at the present time satisfactory; that there was need of more dismissals and other reforms.

I think the public ought to distinguish between enacting laws that are beneficial and helpful to disabled soldiers and the managerial work of the bureau. The administration of the bureau is an executive function, and the executive department must be held responsible for the mismanagement of the past and that of the future. Congress is responsible for providing the money and for enacting the laws that will help to relieve the difficulties of administration due to red tape and divided responsibility.

In my opinion the present bill is a great step forward and one of the most satisfactory measures that could be enacted by the Congress in behalf of the disabled veterans—in fact, of all veterans of the war. I do not know of a single solitary reasonable request made by any organization of the veterans of the war or the bureau that has not been granted and included in this bill. I do not know of a single material feature in which this bill could be improved in so far as giving the necessary money to provide compensation, hospitalization, and rehabilitation for the veterans of the World War; and I want to take this occasion to compliment the Senator from Pennsylvania [Mr. REED] for his industry, for his ability, and for the long and tedious hours that he has given to the construction of this piece of legislation. It has been an honor and a privilege to be associated with him in the long and difficult talk of drafting this measure.

Mr. DILL. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Washington?

Mr. WALSH of Massachusetts. I do.

Mr. DILL. The Senator was a member of the committee that made the investigation of the Veterans' Bureau?

Mr. WALSH of Massachusetts. Yes.

Mr. DILL. Has that committee made its final report to the Senate?

Mr. WALSH of Massachusetts. I am very glad the Senator asked me that question. We have made three reports, and I have on my desk now a report which I am going to submit today dealing with the whole hospitalization situation, to which I have given a good deal of time and study, covering several months, and I hope it will be some contribution to the solution of the hospitalization problem and the improvement of the facilities for their care and the relief of their dependents.

Mr. DILL. I want to say to the Senator that I think the committee has rendered a very great service. There is a question in my mind as to whether or not the committee should be continued during the summer; and I wondered what was the Senator's idea, without speaking personally as to the value of such a committee, about continuing this work of investigation during the coming recess or adjournment of Congress.

Mr. WALSH of Massachusetts. In my opinion, it should be continued.

Mr. DILL. It will require a new resolution, however, to continue the committee, will it not?

Mr. WALSH of Massachusetts. There is some question about that. I think possibly under the present resolution the duties of the committee may end at the adjournment of this session, and it may be necessary to have a resolution introduced extending the time. I will tell the Senator why I think it ought to be continued—because a good deal of the work of the committee has been that of making helpful and sympathetic suggestions to the director. I hope the Senator from Pennsylvania will agree with me about that. We can not pass laws telling the director how to run or improve this or that department of the bureau, whom to place in this or that position, how many employees he ought to have, or how many and whom he ought to dismiss. It is largely administrative; and the Senator from Nevada [Mr. ODDIE] has been especially interested in that feature of the work of our committee, in examining into the personnel, in making recommendations as to the removal of incompetents in the personnel, and the removal of superfluous employees. In my opinion, all of this work, when sympathetically made, is very helpful and very beneficial; so that, in answer to the Senator, I will say that I believe that by keeping the committee intact it can from time to time send for the director and confer with him and discuss with him improvements in the bureau.

On many occasions the members of this committee have met and have conferred with the director, and only within a day or two the Senator from Pennsylvania, while we were in this conference committee, discussed very seriously some of the problems in the bureau that we thought ought to be corrected, and we were very frank in our statements among ourselves and to him that further improvements were desirable. Certainly no one has been franker or braver than the Senator from Nevada [Mr. ODDIE] in his suggestions about improving the personnel of the bureau.

If the bureau fails now, with this legislation, satisfactory to everybody, then the country will place the blame upon the man in charge of the bureau; and if the present director fails now, with all the requests granted that he made of Congress, then he must suffer the consequences and some other chief must be placed in his office. It is an office that requires the highest measure of ability, and sympathy with the veterans and courage and strength of character to master this great problem.

The office, however, is a most difficult one. It is an intricate one; and I have had a great deal of sympathy for the present director, for he went into a bureau that had reached about as low an ebb as it was possible for a governmental bureau to reach. He went into that office, when it was believed to

be encumbered with graft and corruption and incompetency; when there appeared to be no purpose to transact the business of that bureau orderly, intelligently, patriotically, or efficiently. The present director has had a very difficult problem; and the work of our special committee has been largely along the line of encouraging him, of cooperating with him, and of assisting him to work his way out of the mess of intrigue, of deception, of corruption, and of incompetence in which he found himself.

On the whole, I think the director has done well. He is honest. He must be more than that; he must be firm and yet kindly. I do not think he has by any means elevated the bureau to a state of perfection. I think there is much more to be done; but I must say that from my general survey of his work I think he has given of his best energy and of his best ability and has done a large amount of good. I think he is still on probation, as it were. While I have not had time to study all the evidence, I think it possible and perhaps necessary that some of the suggestions the Senator from Nevada [Mr. ODDIE] has made be carried out, but I think for the present we ought to continue to strengthen the director's hand and purpose; but that does not mean that we should not make constructive criticism. The past wrongs have been exposed. The evils of the past have been pointed out. The road to progress has been entered upon, the money has been provided, and the laws have been improved. There is absolutely no excuse for failure now; and if any complaints come in the future they must be complaints to remove from office the director, if he is not able to meet the requirements of the job and to administer the law properly and courageously.

Mr. President, I ask the indulgence of the Senate for taking up its time; but I did want to send word to the country that this measure is as liberal and as broad as it has been possible to make it. It grants all reasonable relief that has been asked for and meets with the satisfaction and approval of all the organizations of the veterans and their friends and everybody interested in this problem. It goes far beyond what the Government has ever done for the Spanish War veterans or the Civil War veterans. The director and President must now accept full responsibility. Congress has given them the machinery; time will determine if they are capable of operating it.

Mr. SHIELDS. Mr. President, the amendment in behalf of the tubercular ex-service men was one in which those afflicted with that trouble were much interested, and one which I believe was necessary for their comfort, for their cure, and for their welfare in every respect. I am disappointed that it did not remain in the bill as passed by the Senate, and I know those who were to be benefited will be sorely disappointed; but I am satisfied that the conferees upon the part of the Senate have made an earnest and persistent effort to have it retained as passed by the Senate, and I have no fault to find with them. On the contrary, I commend their efforts to get the compromise which now appears in the bill. While it is not sufficient to give the full relief these men need and which eventually, I think, they will have, yet it is an advance step, it is a recognition of the principle involved, and I hope that at a subsequent session the law will be made as provided in the amendment.

I will not object to the conference report, because the bill is one of great merit. I do not wish in any way to jeopardize it in the concluding hours of the session. I will not ask that it be recommitted for fear that something might occur so that it would not become a law, and for that reason I am going to acquiesce in it.

The Senator from Pennsylvania [Mr. REED] has given a very full and clear statement of it, and I do not care to repeat it; but I do deeply regret that the amendment could not be retained as passed by the Senate.

Mr. ODDIE. Mr. President, I have already commented at considerable length on the matters relating to the bureau. I have commented on the splendid and efficient work done by my colleagues on the committee, and I want to thank my colleague from Massachusetts [Mr. WALSH] for the kindly expression he has made about my work this morning. But, Mr. President, referring again to the work of the committee and to the conditions I have found to exist in the bureau, I stand squarely on the report I have made to the Senate. I have found no occasion to take back one word. In spite of the fact that insinuating statements have been made on this floor regarding what I have said—which can be answered—I am not going to stoop to small controversies. I stand on the broad principles I have enunciated and the facts I have stated.

Mr. WALSH of Massachusetts. Mr. President, the Senator from Nevada will agree that if the facts which he has presented to the Senate are well founded—and I do not doubt but that they are—the solution of the difficulties he has pointed out rests entirely and solely with the President of the United States and not with the Congress.

Mr. ODDIE. Mr. President, I admit that; but the President of the United States has been in a very difficult position in this matter in having received information regarding the bureau from many sources. I feel and I know that the President is anxious to clean up the conditions that are not satisfactory in the bureau; that he is working on that matter now, and that when he is convinced that certain things must be done he will do them. I hope that what I have presented will be of assistance to him.

Mr. SHIPSTEAD. Mr. President, I want to ask the Senator from Massachusetts a question. The Senator from Massachusetts was a member of the committee investigating the Veterans' Bureau, and the committee made a preliminary report last fall, promising to make a more complete report later. I have been trying to get a copy of that report, but I am informed that it has not been made up to this time. I would like to ask the Senator when a complete report will be made?

Mr. WALSH of Massachusetts. Mr. President, there have been three preliminary reports made. The first report was a recommendation for the codification of all present laws, and recommendations for the expansion and enlargement of the present benefits to veterans.

The second report was a discussion of the conditions the committee found in the Veterans' Bureau, plus a statement made by the attorney for the committee.

The third report was a report made by myself of the Veterans' Hospital at Rutland, Mass., which illustrated the general conditions existing in all hospitals throughout the country.

I have on my desk now a very extensive report upon the hospitals of the country at large, which I will present during the day. In addition to all these reports a great amount of work has been done and a great amount of time has been spent by the Senator from Pennsylvania [Mr. REED] and myself in trying to codify the laws relating to the veterans of the World War, and the result of that work, sometimes necessitating our presence at our offices on Sundays and many evenings, is the bill which is about to pass.

In addition to that the Senator from Nevada [Mr. ODDIE] has devoted himself largely to investigating and inquiring into the personnel of the bureau. He has made observations to the Senate, which we have all heard. He has carried his information to the President; and I want to repeat that even the investigating committee can not order men out who are inefficient. If there are incompetents there, if there is intriguing and conspiring going on, if there are men disloyal to the veterans or to their chief, it is the duty of the director—and if he can not do it, it is the duty of the President—to remove them. All that the Senator from Nevada is leading up to is to give proof that the present director has not either the courage or the ability or the capacity to clean out his department of disloyal men, and, of course, the President must be satisfied of the fact; and if he is, I have no doubt but that he will make a change, if one is necessary.

The Senator from Washington [Mr. DILL] suggests that our committee continue during the recess. I stated, and I think the Senator from Pennsylvania will agree with me, that a great deal of our work now is and in the past has been in the way of suggesting to the director that this ought to be done or that that ought to be done, trying to uplift and improve the administrative features of the bureau. I think it would be a very good idea for the committee to continue in existence, and I am glad to know, from the Senator's inquiry, that he believes the work should go on.

Mr. DILL. Mr. President, I have taken a somewhat critical attitude at times regarding this legislation for the Veterans' Bureau, but I want to say now that I think the legislation is indeed a very great improvement over the present law. I think the committee deserves a great deal of credit, and the thanks of the veterans and of the country, for having prepared legislation that meets so many of the needs of the Veterans' Bureau.

In the light of the fact that this investigating committee did such excellent work in finding the weaknesses of the Veterans' Bureau, which resulted in the improved legislation which we now have, I believe the Senate ought to pass a resolution before we adjourn either reappointing these Members or naming some other Members to act as a committee to sit during the recess of Congress this summer, in order that still further improvement may be made, and that whatever weaknesses are to be remedied may yet be remedied.

Mr. ODDIE. Mr. President, I will make one comment, as a member of the committee, that whether I remain a member of the committee or not, I intend to continue the work I have been

doing for the betterment of the bureau, and will continue to investigate certain other matters which I think need improvement.

Mr. NORRIS. Mr. President, I suppose everybody in the Senate is in favor of this report, and everybody is in favor of going forward, if the conference committee is not able to get what should be gotten for the veterans, because if there is one branch that ought to have kindly consideration more than any other branch of the Government, it is that which handles the affairs of the disabled veterans. I know of no objection whatever to the report.

I do want to say, however, that since we had a roll call to take up the report, it occurred to me that it was probably unintentional, but had the effect of putting some Senators in a wrong attitude, because they wanted to take this report up after the routine morning business was finished. I was one of those. We all knew, of course, that this conference report would come up, and that it would be approved, that there would not be a vote against it; but some of us insisted on the Senate adjourning yesterday in order that we might have a morning hour to transact some routine morning business, which can not regularly come before the Senate at any other time than in the morning hour.

We had taken recesses for a good while, and it was unanimously understood that we would have one adjournment in order that we could transact some morning business. It is now within 2 minutes of 2 o'clock, and no morning business can be taken up, and nothing has been accomplished except to delay. The Senator in charge of this bill himself called for a yea-and-nay vote to take up the conference report, when there was no use of that. It was going to come up anyway. I think he should have permitted us to have a morning hour and could then have taken up the report.

I have tried for two days to make a report from the Committee on Agriculture. I tried yesterday, and objection was made. I have on my desk to-day a resolution which I want to introduce and which I want to have passed before Congress adjourns, but under the law it will have to go to the Committee to Audit and Control the Contingent Expenses of the Senate, and I shall have to get a report from that committee. So every minute means something, and to quite a large number of people in my section of the country that resolution means something. Therefore it seemed to me that it was not unreasonable that we should have a morning hour. I will be at the mercy of anyone who wants to object, if I submit my resolution, because the morning hour has been taken up with other business.

Mr. PITTMAN. Mr. President——

The PRESIDING OFFICER (Mr. FESS in the chair). Does the Senator from Nebraska yield to the Senator from Nevada?

Mr. NORRIS. I yield.

Mr. PITTMAN. Does not the Senator believe that it would be in accordance with the rules if the Senator should at the present time ask unanimous consent that upon the disposition of this report the morning business be proceeded with until it is completed?

Mr. NORRIS. That request may be made. I do not know whether there would be any objection to it or not. I am willing, of course, to have a vote on this conference report. I do not want to delay that.

Mr. PITTMAN. I suggest to the Senator that he ask unanimous consent that upon the completion of the conference report morning business be taken up and continued until completed.

Mr. NORRIS. Carrying out that suggestion, I ask unanimous consent that as soon as the Senate has voted on the conference report routine morning business shall be in order, not to exceed an hour.

The PRESIDING OFFICER. The Senator from Nebraska asks unanimous consent that morning business be conducted for not to exceed an hour longer.

Mr. BRUCE. Mr. President, I do not like to object to any proposition, but I have been endeavoring for a long time to submit a report from a committee.

Mr. NORRIS. That is just the privilege the Senator will get under the proposed unanimous-consent agreement.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nebraska? The Chair hears none, and the unanimous-consent agreement is entered into. The question is on the motion of the Senator from Pennsylvania to agree to the conference report.

The report was agreed to.

### REVIEW OF THE REPUBLICAN ADMINISTRATION

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD, as a memorial, an editorial of the New York World of to-day entitled "1920 to 1924."

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The editorial is as follows:

1920-1924

Next week the Republican Party, meeting in national convention, will undertake to claim another term of power. It is a fitting time to ask how it has kept the faith.

We shall not ask here how well the party has kept its promises. That is to some extent a matter of argument. We shall not ask here whether one policy or another has been wise. That is a matter of opinion. We shall not ask here how competently any particular piece of business was managed. That can be disputed. Here we shall ask only whether the party as constituted to-day is honest enough to justify the renewed confidence of the American people.

On this page we submit a review of the evidence which leads us to the conclusion that the Republican administration which came into power on March 4, 1921, was inspired by so low a standard of public service, involving such easy-going tolerance of graft and waste, that it has produced the most extraordinary record of dishonesty known to this generation. There may have been in some past era of American history a record as bad. No man or woman in active life to-day has ever seen so many public men in such very high places, inside the Cabinet and intimates of the White House, do so much vulgar evil.

In reviewing the record we shall have nothing whatever to do with gossip and rumor. We shall have nothing to do with petty charges or second-string offenders. We ignore Roxie Stinson and many other associates of the former Attorney General of the United States. We take nothing from the Democratic opposition. Every charge rests either on an indictment, on evidence reported by Republicans in good standing, or on a confession under oath which has not been challenged.

We shall not complicate the record with lesser scandals, such as the dismissal of Arthur Powell Davis from the Reclamation Service, the selection of the author of the "Dear Ben" letters to be Secretary to the President, or the career of the Rev. Heber Votaw as superintendent of Federal prisons. Nor do we deal with the widespread scandal known to exist in the enforcement of prohibition or in the collection of internal revenue. These are scandals of a different order, in part because they are inherent in the nature of the laws themselves, in part because there is no evidence credible to us which connects these scandals in his department with Secretary Mellon himself. On the contrary, we dissociate Mr. Mellon, together with Messrs. Hughes, Hoover, Weeks, Wallace, Hays, and Davis, from direct complicity in the scandals themselves.

Nor shall we deal with scandals in the making of the tariff law. We have no time here to dwell upon the behavior of a sugar Senator like SMOOT, a glove Senator like Calder, or of wool Senators like GOODING, WARREN, BURSUM, and STANFIELD. We are concerned here not with incidental dishonesty but with fundamental dishonesty, not with special favors within the law but with gross violations of the law.

THE ACCUSATION

This administration stands accused of dishonesty, charged that in the person of Forbes the disabled veteran was betrayed, in the person of Fall the public property was looted, in the person of Daugherty justice was corrupted.

It is accused of shielding dishonesty, as demonstrated by the support of Newberry and the inexcusable delay and reluctance in dismissing Forbes and Daugherty.

It is accused of obstructing investigation, of resisting exposure, and of lending aid and comfort to dishonest men.

It is accused of permitting its agents to terrorize public officials in their pursuit of wrong by the use of spies against Senators LA FOLLETTE, CARAWAY, and WALSH, culminating in the attempted frame-up of WHEELER.

Finally, the respectable members of this administration are charged with slackness in preventing wrongs committed by their associates in the Cabinet, with timidity and partisanship in failing to assist their exposure, with complacency resulting in a bad moral example for failing to condemn publicly and unequivocally the dishonesty they have witnessed; and it is charged that, however honest they may be personally, they are neither vigilant enough nor courageous enough nor possessed of sufficiently stern standards of public duty to justify any confidence that they could prevent in the future the dishonesty they did not prevent in the past.

When the whole record is reviewed, the dangerous evil revealed by it is the decay of positive virtue among the respectable members of the administration. Forbes, Fall, and Daugherty are not typical Republican leaders. But they were tolerated and shielded and their exposers attacked. The leadership of the Republican Party, beginning with the preconvention campaign of 1920, has taken as its ideal national selfishness and national materialism; its spokesmen have preached contempt for idealism in the public service and have set a standard of morality which first invited dishonesty, then covered it up, and then gave it protection.

EARLIER SYMPTOMS

1. BEFORE THE ELECTION

That there was to be no nonsense about idealism was made plain even before the Chicago convention of 1920. As early as March of that year it was known that money in scandalous amounts was being used on behalf of Gen. Leonard Wood. The World at that time estimated the fund at his disposal as $1,000,000. The Kenyon committee, set up as a result of Senator BORAH'S action on the World's exposure, reported that the actual preconvention expenditures were as follows:

| | |
|---|---|
| Wood | $1,773,303 |
| Lowden | 414,984 |
| Johnson | 194,393 |
| Hoover | 173,542 |
| Harding | 113,109 |

This exposure made Wood, who was not the machine candidate, impossible. Lowden, the next strongest candidate, was put out of the running a few days before the convention by evidence showing that two Missouri delegates—Moore and Goldstein—had each received $2,500 Lowden money, that other delegates had received smaller amounts, and that Jacob L. Babler, Republican national committeeman, had received $17,000. The Lowden money was handled by E. L. Morse.

It was this Missouri delegation which led the break to Harding in the convention. After the election Goldstein was nominated by President Harding as collector of internal revenue. Under criticism the nomination was withdrawn. W. L. Cole, a delegate who had received Lowden and Harding money, was made special assistant to the Attorney General in Washington. Roy Davis, who received $500 of Lowden money, was made minister to Costa Rica. W. H. Allen, who received $400, was appointed a prohibition agent. E. L. Morse, who handled the money, was given a $90,000 contract for a Federal hospital site, later appraised at $35,000.

In the campaign the Republican National Committee spent $5,319,729 and the Democratic $1,318,274.

The Republican Congressional Committee spent $375,969 and the Democratic $24,498.

The Republican Senatorial Committee spent $326,980 and the Democratic $6,675.

The totals reported by the Kenyon committee for the campaign before and after nominations are:

By the Republicans, $8,100,739.

By the Democrats, $2,237,770.

"These figures," says the report, "do not by any means represent the entire amount of money expended in the campaign."

2. NEWBERRY

That the new administration had no strong scruples against corrupt practices was shown very early in its action in the Newberry case.

The seat of Truman H. Newberry, of Michigan, in the United States Senate, cost $250,000 in 1918. He was later convicted of corrupt practices in the United States district court in Grand Rapids and sentenced to two years' imprisonment, but in the end he was saved from going to jail by a decision of the United States Supreme Court on a technical point, four out of nine judges dissenting. In the meantime, as Senator from Michigan, he had made it possible for the Republicans to organize the Senate and to reject the Versailles treaty. He was their majority.

For two and a half years the Republicans, who were in control of the Senate, delayed consideration of the charges filed against Newberry. But the issue of corrupt practices could not be suppressed. Finally, a year after the advent of the new administration, on January 13, 1922, the Senate, by the votes of 46 Republicans, adopted a resolution declaring Newberry duly elected and hypocritically condemning the "expenditure of such excessive sums in behalf of a candidate" as "contrary to sound public policy, harmful to the honor and dignity of the Senate, and dangerous to the perpetuity of free government." He was saved from expulsion by five Republican votes.

The Harding administration was active in supporting Newberry. The President directly intervened to influence Republican Senators, and Secretary Hughes, who had served as Newberry's counsel in court, published a statement that his former client was a victim of social injustice and above moral reproach.

For nearly four years Newberry held a purchased seat in the Senate. But in November, 1922, nine Newberry Senators were beaten in the elections: Calder, of New York; France, of Maryland; Frelinghuysen, of New Jersey; Kellogg, of Minnesota; McCumber, of North Dakota; New, of Indiana; Poindexter, of Washington; Townsend, of Michigan; and du Pont, of Delaware.

Newberry faced an adverse majority in the Senate after March 4, 1923. On November 20, 1922, when he had studied the election returns, he resigned from the Senate because he was certain to be expelled when the new Senate came together.

THE INNER CIRCLE

The new administration which had descended upon Washington in 1921 consisted of an inner circle of friends, mostly from Ohio, and an outer circle of respectable men.

The respectable men were given the departments which manipulating politicians care least about, because there is not much in them by way of patronage, pork, pull, and the opportunities to make deals. The inner circle, which contained Daugherty, who had made Harding President, took personal charge of the department which spends the most money, the Veterans' Bureau; the department which administers the greatest amount of public property, the Interior; and the department which wields the greatest power over individuals, Justice. From the point of view of deals these departments outrank all others except prohibition enforcement, which, though it is under the Treasury, was conceded to the spoilsmen.

However, the inner circle reached out for more. With the help of the stupid Denby the naval oil reserves were brought within the jurisdiction of the inner circle by the Executive order transferring them from the Navy Department to Secretary Fall's Department of the Interior. By a special decision of Attorney General Daugherty it was made possible for Forbes to award hospital contracts without reference to the War Department. Thus by two transfers of authority the inner circle gathered unto itself the fat from the Navy and War Departments. It then reached out for the only remaining department with really important opportunity for graft. That was the Treasury with all its vast possibilities of favoritism in the handling of tax returns. The man chosen to bring the Treasury within the control of the inner circle was Mark Hanna's confidential man, Elmer Dover, of Ohio.

Dover was brought to Washington in 1921 and made Assistant Secretary of the Treasury. He was to be the patronage broker, because Secretary Mellon did not meet the requirements of the situation. Secretary Mellon was a plain business man who had no taste or understanding for such matters.

With the best will in the world Dover set about pleasing his Republican friends in Congress, but he was unable to make a clean sweep of Democrats in the Treasury Department without Secretary Mellon's assent. He had laid his plans and selected the victims for dismissal in order to make room for Republicans. But when it came time to put through his scheme and refurnish the Internal Revenue Bureau with Republicans, Secretary Mellon opposed having the bureau upset and the public service demoralized for the gratification of office seekers and their congressional backers. So the Dover scheme, after months of preparation, came to a dead halt.

The Republicans in the House went so far as to adopt a round-robin of protest against the shortage of patronage they were receiving. When the matter was brought to the White House for settlement, Mr. Harding had the choice of repudiating Secretary Mellon or indorsing the Dover scheme for the wholesale firing of Democrats. He was forced to sustain Secretary Mellon and overrule Dover, the patronage broker. There was then no longer any reason for retaining Dover as Assistant Secretary of the Treasury. His usefulness had expired, and he quit the Government service and abandoned the administration in July, 1922.

The Dover incident is significant because it represents the most important check from within the administration suffered by the inner circle in its raid upon the Government. That may account for the enmity of Daugherty for Secretary Mellon, which finally led to the use of Burns spies to watch the Secretary of the Treasury. At any rate, Mr. Mellon would not play the game, at least so far as the fiscal activities of the Treasury are concerned.

Having seen how the inner circle established itself in power within the administration, we pass now to a review of the three most challenging cases in its notorious record—Fall, Daugherty, and Forbes.

ALBERT B. FALL

When Albert B. Fall came into the Harding Cabinet as Secretary of the Interior the Nation had two great oil reserves untouched by private exploitation—Teapot Dome, Wyo., 9,481 acres, estimated to contain some 25,000,000 barrels of oil; and Elk Hills, Calif., 38,969 acres, estimated to contain at least 200,000,000 barrels. Three successive Presidents—Roosevelt, Taft, and Wilson—had set aside these reserves for the fueling of the Nation's fleet, the first line of national defense.

In May, 1921, within two months after the Harding administration came into office, Fall induced his President to transfer these great reserves from the Department of the Navy to his own department—the Interior. (Executive order, May 31, 1921.) He thereupon proceeded to dispose of the reserves to private interests on the ground that there was danger of the oil being lost through drainage. Whether such danger existed is a technical question which does not need discussion here; for the important fact, granted the danger, is that Fall did not go to Congress for funds to drill and so permit the Navy to conserve its oil for its own needs; he did not rest content with a fringe of "offset wells" around the perimeter of the reserves; instead of that he opened both reserves to private exploitation on terms so disadvantageous to the Navy that—

(a) Of the oil in Elk Hills the Navy will derive approximately 1 barrell in 12. (Statement of the Director of Geological Survey.)

(b) Of the oil in Teapot Dome the Navy will derive approximately 1 barrel in 16. (Testimony of Admiral J. K. Robison, Senate hearings, pp. 933–935.)

These are the Fall leases; they were rushed through the administration behind a screen of secrecy (Senate hearings, pp. 263–270) and they were accompanied by "loans" to Fall of $100,000 from Edward L. Doheny (Senate hearings, p. 172) and of $25,000 from Harry F. Sinclair (Senate hearings, pp. 1831–1833) within four months of his leaving office.

Fall has subsequently admitted that he lied in the first instance concerning the sources of his loans and has refused to testify further on the ground that his evidence would incriminate himself.

HARRY M. DAUGHERTY

By those who attempt an apology for Harry Daugherty it is alleged that he is the victim of sensation; that the charges against him rest upon evidence of witnesses whose past records discredit what they have to say.

It is, however, upon the testimony of no disgruntled employee but of the confidential secretary of the influential Mr. Burns that the close association of Daugherty and Jess Smith has been established:

> "Mr. Smith was a sort of second in authority to the Attorney General. * * * He had access to the files. * * * Anything he wanted he got up there." (Testimony of Mrs. W. O. Duckstein before the Senate committee, May 21, 1924.)

In the second place it is again no disgruntled employee but Jess Smith's own telegrams which prove the close association between Smith, Daugherty, Miss Roxie Stinson, and the whole clique from Washington Court House, Ohio, whose testimony is now so offensive to apologists for Mr. Harding's Cabinet. (Senate hearings, pp. 601–606.)

In the third place it has been testified by Gaston B. Means, by George Remus, and by other witnesses (Senate hearings, March 14, May 23, etc.) that into the hands of Jess Smith, "second in authority to the Attorney General," they delivered sums of money in return for an explicit promise of Daugherty's assistance in some evasion of the law. It is here that Daugherty's apologists have their first chance to raise the cry of unreliable testimony. But the fact remains, and it is nowhere challenged, that, granted these men are liars in their talk of bribes, the Attorney General of the United States lived on terms of intimacy with men who dealt in crime.

Finally, while Daugherty has been vociferous in affirmation of his innocence, he has to this day never undertaken under oath and on the witness stand to deny the specific charges brought to prove that through Jess Smith the influence of the highest legal office in the Nation was sold.

CHARLES R. FORBES

Within 60 days of his inauguration and within four weeks of the time that Teapot Dome was handed over from Secretary Denby to Secretary Fall President Harding placed in charge of the greatest single disbursing office in Washington a man whom he had met on a congressional junket to Honolulu—Charles R. Forbes.

By the organization of the Veterans' Bureau in August, 1921, under Forbes's command three Government agencies for the relief of disabled men were brought under one jurisdiction—the War Risk Insurance Bureau, part of the Public Health Service, and the Vocational Education Board—spending together a total of more than $450,000,000 annually.

Of all the events which followed a conservative Republican committee in a conservative Republican Senate reports that the record discloses "wretched incompetence, waste, and dishonesty." Two chief charges are brought against the Forbes régime:

(A) HOSPITAL CONTRACTS

The first charge concerns the award of hospital-building contracts. There was need for efficient planning and for prompt construction. With Forbes's advent political and speculative real-estate interests became active. Construction of hospitals was delayed by the desire to insure the award of construction contracts to favored contractors and by the manipulation of bids.

Thus, for example, in the case of the hospital at Northampton, Mass., all bids were twice rejected on various pretexts, to the advantage of a concern favored by Forbes, with whose agent he had had corrupt relations.

At Excelsior Springs, Mo., a hospital site appraised at $35,000 cost the Government $90,000. It was bought from E. I. Morse, a prominent Republican politician, who handled a large part of the Lowden preconvention campaign funds in Missouri in 1920. The hospital is not yet ready for patients.

In the words of General O'Ryan, counsel for the Senate committee of investigation:

> "The whole record of hospital construction throughout the country shows unreasonable delay. * * * It has been conclusively established by the testimony of witnesses, by documentary evidence, and by the corroborative effect of the numerous telltale circumstances that were brought out that fraud and corruption existed in the bureau and that Director Forbes was a leading actor in an established conspiracy to defraud the Government."

(B) MISMANAGEMENT

The second chief charge against Colonel Forbes concerns dishonesty and neglect in management. Here the clearest example is the affair at Perryville, Md., where the Veterans' Bureau had a depot for supplies.

At this depot had been assembled material of all kinds from wartime hospitals and storage depots. The Perryville station was transferred from the Public Health Service to Forbes's bureau by Executive order of President Harding. No inventory was taken. Within a few months Forbes prepared for the sale of the entire property. A secret sale agreement was made with the Thompson-Kelly Co. of Boston by which $3,000,000 of Government property brought less than $600,000, although the Public Health Service and the Veterans' Bureau had need of it. As a single instance, on the list cleared for sale as surplus the number of bed sheets was given as 2,622. Actually 84,930 bed sheets were delivered to the Thompson-Kelly Co. at 20 cents on the dollar, while other sheets bought at $1.03 were being delivered at the Perryville depot. Some of the bales of these sheets on arrival at the warehouse were run through and on the other side loaded into the waiting cars of the contractor.

In the report of the counsel for the Senate committee it is set forth that the transaction resembled "more the work of buccaneers in the looting and scuttling of a ship than the mere negligence of trusted Government officials."

This is the record of Charles R. Forbes. No steps were ever taken by any executive department of the Government to bring to justice Forbes or any of his confederates in these criminal transactions. Many months after he left the Government service a Senate select committee heard the testimony of witnesses and printed its report. Only then, after full publicity, was the Department of Justice moved to activity. On February 28, 1924, just a year after he quit office, Forbes was indicted in Chicago by a United States grand jury for accepting a bribe from an agent of Thompson & Black, a contracting firm, and for conspiracy to defraud the Government. On April 16, 1924, he was again indicted in Baltimore for conspiracy to defraud the Government in the sale of supplies at Perryville.

Under the Forbes administration, it is estimated by those associated with the Senate investigation that a total of $225,000,000 was squandered.

THE BEST MINDS

What in the meantime were the respectable members of the administration doing to prevent dishonesty, to expose dishonesty, and to punish dishonesty? Fall was under fire for the oil leases at least two years before his exposure by Senator WALSH as a bribe taker and liar. Forbes's mismanagement of the Veterans' Bureau had become notorious months before he left office and over a year before he was finally indicted. The character of Daugherty's administration of the Department of Justice had become a public scandal long before his motley collection of friends, associates, and agents were paraded before the Wheeler committee. What, then, were the respectable members of the Cabinet doing all that time? If this administration is entitled to a new lease of power, it can only be on the ground that it contains enough able and honest men to clean up the muck and prevent another raid upon the Government.

The honest men claim that they did not know what was going on. Mr. Hughes has made a public statement saying that the oil leases did not come before the Cabinet, and apparently he expects the country to be satisfied with this explanation of why Mr. Hughes, Mr. Hoover, Mr. Mellon, and others inside the Cabinet did not know as much about them as men like Senators LA FOLLETTE and WALSH outside the Cabinet. The plea that the honest men were ignorant may be true, but it does not inspire confidence in them.

In the case of Mr. Denby, who apparently was also an honest man, there is the excuse of abnormal stupidity. A man like Denby might turn over the Navy's oil reserves to a notorious anticonservationist like Fall against the advice of the chief of his Bureau of Engineering. It would mean little to him when Admiral Griffin "told him * * * that if he turned the administration over to the Interior Department we might just as well say good-by to our oil." For Denby just did not understand anything. He did not know what portion of the great Elk Hills reserve had been leased. He did not know to whom it had been leased. He did not know whether or not it had all been leased. Concerning even the broad outlines and elementary facts of a revolution in naval policy which cost the Nation some 200,000,000 barrels of oil, he testified that he would have to "consult the record and find out" (Senate hearings, p. 1284). That is Denby, who was not, to be sure, one of the best minds. The best minds, however, warned though they were in ample time by criticism in the Senate, were uninterested and uninformed.

When, finally, the whole series of scandals had been exposed without the assistance or the encouragement of any of the best minds, what did they do to show that they had learned the lesson that statesmen must be vigilant? Were they indignant at Fall, Forbes, and Daugherty? If they were, they concealed it and made no effort to convince the country that they really thought the looting of public property, the betrayal

of disabled veterans, and the corruptions of justice were serious evils. The silence which has inclosed the best minds has been eloquent, broken only by an indignant refusal on the part of Mr. Mellon to be investigated, by a keynote speech of Mr. Hughes which contained no mention of oil, of the Veterans' Bureau, or of the Department of Justice; by a speech on February 12 of Mr. Coolidge promising punishment of the guilty, followed on April 11 by a message denouncing with great violence not the grafters but the investigators of graft.

While the best minds were poised in judicial calm at the spectacle presented by their fellow Cabinet members, other minds of the administration in the Department of Justice and the Republican National Committee were preparing their reply to the exposure. The machinery of justice it must be understood was never used in all these affairs to help detect and punish graft. It was used, the best minds not preventing, to thwart investigation and punish the investigators. Thus we find that in the Daugherty impeachment proceeding in the House, the Department of Justice detectives were used to spy on Representatives WOODRUFF and KELLER, who had made the charges against Daugherty. They were used to spy on Senator LA FOLLETTE after he had attacked the Fall oil leases. They were used to burgle the Senate Office Building of papers relating to hearings then under way, and the secret codes of the Department of Justice were used to send messages to and from Edward B. McLean at Palm Beach, keeping him advised about the Senate's probable intentions of subpœnaing him. Finally, on Burns's own testimony, it is established that three agents of his bureau were sent to Montana to get something on WHEELER after Burns had been in consultation with Daugherty and George B. Lockwood, secretary of the Republican National Committee. The culminating attempt to block the pursuit of dishonesty was the frame-up of Senator WHEELER. All of this happened under a Cabinet presided over by Mr. Coolidge and comprised of the best minds.

In short, the best minds did not prevent dishonesty, they did not help to expose dishonesty, they did not severely condemn dishonesty, and they were incapable of stopping members of their administration from conspiring to obstruct investigation. And the low standard of morality which made Fall, Forbes, and Daugherty possible in 1921 prevails, in spite of the best minds, in 1924, and the same symptoms which appeared in 1921 in the Wood and Lowden campaigns have reappeared. The "Massachusetts Calvin Coolidge Finance Committee," presided over by Louis K. Liggett, has learned nothing from Newberry, from Wood, and Lowden, from the whole sorry record: "There is no limit," it says in an invitation to campaign contributors, "to the amount an individual may give to this committee. Large contributions will be so divided as to give full observance to the requirements of the statutes." Mr. LODGE in the Senate approves this letter; Mr. Coolidge by his silence does not object. Thus the cycle has gone a full turn and we are back where we started from.

If Mr. Coolidge and the best minds have learned anything, they have not revealed it.

Next week a party whose leaders in Congress have rejected the leadership of Mr. Coolidge on every major issue will offer him to the country as a man ideally fitted by character to restore confidence in the Government at Washington.

### PROHIBITION ENFORCEMENT

Mr. ASHURST. Mr. President, as a petition or memorial, I ask unanimous consent to have printed in the RECORD an article by Mrs. Kathleen Norris regarding prohibition, entitled "No compromise."

The PRESIDENT pro tempore. Without objection, it will be printed in the RECORD as requested.

The article is as follows:

[From the Philadelphia Public Ledger, April 13, 1924]

NO COMPROMISE—KATHLEEN NORRIS TALKS TO WOMEN—MAINTAINING PROHIBITION IS WAR, NOT PLEASANT AND NOT EASY, AND THERE IS ONLY ONE ANSWER TO THE QUESTION—NO COMPROMISE—AS MEN CLEARLY SEE

The mother of two boys wrote me a very forcible and impressive letter a few weeks ago. She said that her sons were 18 and 20, and that their life—the family life—was that of the usual growing American town that is almost a city; the usual tennis and boating, the usual motor car, and the usual dozen or more of club or hotel dances during the winter.

"What am I to do about prohibition and the boys?" she writes. "My husband is the best man in the world, and deep down in his heart I think he would find that he really approves of the change since our young days, the dragging of the drink evil out into the light where the youngsters can and must see it and judge it. His uncle and one of my uncles—but then who hasn't had an intemperate uncle or cousin or father? I was going to say that like almost every other family in the Union ours paid the price of alcohol in the last generation

"My husband doesn't discuss it. He knows that I would be all for absolute obedience to the law, if I had my way. Sometimes I hear his friends talking about a modified law, and sometimes I have to tell them that they may not speak contemptuously of my country in my house. But he and his friends keep a certain supply of liquor always on hand, having their cocktails and their highballs, paying their bootleggers, and he—simply doesn't discuss it.

"Meanwhile, time goes on, and my young sons see the law derided and find liquor at home and in the homes of their apparently respected and patriotic neighbors. I can't make an issue of this with my husband, can I? And I can't blame my sons for taking for granted in other women's houses the things they see in their own.

"What worries me is that I feel that we are harming the boys. I know that I am one of thousands of mothers who are faced here with an apparently insoluble problem. What are all the others doing?"

Well, dear mother of two young Americans, who may be called upon to defend that beloved flag of ours some day, I can only answer you—in the old phrase—according to my lights. And these lights have been growing strangely stronger and clearer during the troubled months of the great prohibition experiment.

I would say—no compromise.

There is no compromise in war. Men see that clearly enough. No allowance is made for the soldier who explains to his general that he did not follow orders because he did not approve of them and felt that they were pretty sure to be recalled.

And this is war; wars have been fought, and millions of lives have been lost, for far less serious and less noble causes than this.

For it is no longer merely a question of drinking or not drinking. It is a question of having a nation or not having a nation. To rob our children of alcoholic drink may or may not be wise. To rob them of honor is beyond all question an injustice to them.

Wars are not pleasant, and the conditions they impose are not easy. It was not easy for those heroic early mothers of ours to do without the tea that was so magnificently flung into Boston Harbor. It will not be easy to obey our country now, and to make real citizens, loyal and honest Americans, of this younger generation of ours.

But if we are to live as a nation it must be done.

The position of this mother who writes me and of thousands of other mothers all over the Union has become an extremely difficult one. We women have been told for hundreds of years that patriotism is a magnificent virtue. We have obediently followed in the wake of our men, sacrificing everything when need arose for our flag. Our sons, our homes, our husbands, our comfort, and our joy have all gone down before this fetish of nationalism.

For them the bands and the uniforms, the excitement and the guns, the ready phrases about national honor and the duty of an American. For them the pride, when the boys study history, and look up glowing from their books to ask questions about Washington, and the German who was George the Third, and Gettysburg, and Grant and Lee.

For us, to follow. To repeat obediently, "America needs our men; America shall have them uncomplainingly."

Now, suddenly all this is forgotten. Our country, it would appear, is a blue-nosed hypocrite, something to laugh at; her laws may be obeyed or disobeyed at will. Our children are not Americans.

Mothers, like this mother, investigate this law whose nonobservance is ruining the honesty and loyalty of the younger generation. Satisfy yourselves—it is easily done—that it was only after almost a century of debate and argument, analysis and dispute, that the eighteenth amendment was added to our glorious Constitution. There was nothing hurried or secret about it.

Satisfy yourselves of this other curious point—that two-thirds of America numerically and much more than that geographically were actually dry by popular decision when the amendment was written. Here was already an enormous majority for bone dryness, before all this dishonor and debate began.

Satisfy yourselves of the opinions of all the great constructive institutions toward the dry law—the clubs and churches, the organizations of parents and teachers, organized women everywhere, the colleges. Investigate the nearest prisons, reformatories, hospitals, alcoholic wards, insane asylums, slums, and convince yourselves just what part alcohol has played in forming and maintaining them.

Ask yourself if drink has ever made anyone wiser, happier, kinder, better. Ask yourselves—in the words of a Spanish proverb I found the other day—if water ever put a man into jail and his wife and babies into the poorhouse?

And, finally, take your stand on the question as becomes mothers and public-spirited women and American citizens. Tell your husband, your daughter, and your son that for you the question is settled. Tell the boy's friends that he is an American and will uphold the Constitution. And tell the woman who asks your daughter to a house where smuggled liquor can be found that you can not have your little girl's loyalty to the most wonderful country in the world weakened; you want still to fly that flag on February 22 and the Fourth of July; you still want to feel that all our glorious traditions are truly yours.

Call a meeting in your house of as many women as you can muster. Have some one explain to them the seriousness of the situation and

remind these same good women of their patriotism of five or six years ago, remind them of the service flags and canteens, the ignorances, and the enthusiasm. Enlist them now in a service just as serious.

It will not mean what patriotism sometimes has meant to women. It will not mean blood and danger, starvation, separation, fears, and massacres; it will not mean widowhood and ruin. It only means that a good law and a simple law, legitimately enacted, shall be held sacred.

The effect of this in one village would be tremendous. What it would mean in 100 or 1,000 American small towns, it warms one's heart to think. The path is straight before us, for what could be less complicated than being more loyal to our country?

The time has come when we must do this. The time has come when we must feel ourselves fortunate that our course is so clear. Something is the matter with America—and with the Americans. If we are to cure her we must look here first of all to this great common current of treason and contempt and disloyalty. We must steel ourselves to face the good-natured protest of the man of the house and the impatient pleading of the children. For his sake and for their sake and for America's sake we must leave the class of the unconscientious objectors and become citizens again.

Perhaps we are hardly conscious just now of what we lose when we lose our national honor. All this law breaking has crept in very quietly, fanned by jokes and cartoons and specious arguing and general indifference. For the moment we have lost sight of two important facts:

First, that alcoholic beverage is forbidden by law.

Second, that the men and women who deliberately evade their country's laws and who act and speak of her with contempt and disloyalty are traitors.

There is the whole thing in a few words. It is of no avail to argue about wetness or dryness now. That is not the question. It is stupid to discuss a "light wine and beer" law. For there is no such law. The long years of the prohibition fight were glorious years, but they are over. The fight legally is won. The question now is one of national honor and allegiance.

But perhaps before we enter upon this second phase, this inevitable time of educating our boys and girls to patriotism, it may be as well to glance back at primary causes, at the old reasons that brought the dry law into being, at the old condition that spurred the beginners of the whole movement.

If you believed, you mother of sons, that in fighting alcohol we are fighting the very foundations of incalculable misery and abuse, fighting the fight of tearful, bewildered babyhood, of girlhood and boyhood betrayed and defiled, fighting against slums and disease and crime and insanity, fighting to empty corrective institutions filled with wistful, sullen boys as good, fundamentally, as yours, and to empty houses of such unspeakable shame as is not even mentionable to ears of girls like yours, then would you fight?

Not for commercial, political reasons we do not understand, not against some other nation with cannon and bayonet, but cleanly and honestly and in all charity and loyalty and intelligence, for the flag and the country we love, for the millions of men and women who will not fight for themselves, for these dear girls and boys who must grow up in a better world than the old drinking, swearing, sodden "Saturday-night" world we knew. If you believed that you might have a hand in that, then would you sacrifice and endure and fight?

You know you would. It seems to me that this is the answer. The hip flask and the bootlegger are a compromise, and a dangerous compromise. They are compatible neither with patriotism nor with common morality. In asking husband and sons to give them up you are asking them to surrender nothing but what is harmful and shameful.

Some day, to be sure, the law may be altered. That will reopen the old prohibition problem and give every loyal American an opportunity to express himself about it to some purpose. But meanwhile—and it promises to be a long while—have we any choice?

I think not. I think the very boys and girls, once it is fairly explained to them, will see that we have not. They may at first laugh a little at mother's fanaticism, but surely we have become thin skinned if we are afraid of that. The pioneer mothers were not afraid of their children; the mothers of Revolutionary days would have known how to deal with any youth or maiden who dared pipe up for the scarlet uniform.

Explain to them your predicament, and that there will be no further compromise. You will find plenty of other influences backing you. Unexpectedly this woman and that, this man and that, will approve. They will help you to create a public feeling against the easy patriotism of the liquor-drinking neighbors, who still speak of themselves as Americans and of the Stars and Stripes as their flag.

And then when it is done, in a few months or a few years, and the lawbreakers come suddenly to their senses, you will know that you have had a hand in it—you have helped to give America back to her sons and daughters again.

(Copyright, 1924, by the McClure Newspaper Syndicate.)

COLUMBIA RIVER BRIDGE, WASHINGTON

Mr. JONES of Washington. Mr. President, I have to leave the Chamber to attend a committee meeting, and I have a little morning business to present. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 9177) granting the consent of Congress to the counties of Kittitas and Grant, in the State of Washington, to construct a bridge across the Columbia River at or near Vantage Ferry, Wash., and I ask unanimous consent for its immediate consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read as follows:

*Be it enacted, etc.*, That the consent of Congress is hereby granted to the counties of Kittitas and Grant, in the State of Washington, or their assigns, to construct, maintain, and operate a bridge and approaches thereto across the Columbia River at a point suitable to the interests of navigation, at or near Vantage Ferry, Wash., and along the route of and continuous with the North Central Highway as officially designated by the State highway commissioner of the State of Washington, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. The State of Washington, or any political subdivision or subdivisions thereof, within or adjoining which said bridge is located, may at any time acquire all right, title, and interest in said bridge and the approaches thereto constructed under the authority of this act, for the purpose of maintaining and operating such bridge as a free bridge, by the payment to the owners of the reasonable value thereof, not to exceed in any event the construction cost thereof: *Provided*, That the said State or political subdivision may operate such bridge as a toll bridge not to exceed five years from date of acquisition thereof.

SEC. 3. The right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. Petitions and memorials are in order. If there are no further petitions or memorials to present, reports of committees are in order.

RIO GRANDE BRIDGE, TEXAS

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 9361) granting the consent of Congress to the construction of a bridge across the Rio Grande.

It is very important that the bill shall pass as early as possible. I ask unanimous consent for its present consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read as follows:

*Be it enacted, etc.*, That the consent of Congress is hereby granted to C. M. Newman, his successors and assigns, to construct, maintain, and operate a bridge, and approaches thereto, across the Rio Grande, at a point suitable to the interests of navigation, at or near the point known as Alamo Alto, on the American side of the river, 1,750 feet northwest from the El Paso and Hudspeth County line, in survey No. 51, El Paso County, Tex., in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, such construction to be made only with the consent and approval of the Republic of Mexico.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

CHATTAHOOCHEE RIVER BRIDGE, ALABAMA-GEORGIA

Mr. SHEPPARD. From the Committee on Commerce I report back favorably, without amendment, the bill (H. R. 9457) granting the consent of Congress to the States of Alabama and Georgia, through their respective highway departments, to construct and maintain a bridge across the Chattahoochee River, at or near Alaga, Ala., connecting Houston County, Ala., and Early County, Ga., and I ask unanimous consent for its present consideration.

There being no objection, the bill was considered as in Committee of the Whole, and was read as follows:

*Be it enacted, etc.*, That the consent of Congress is hereby granted to the States of Alabama and Georgia, through their respective highway departments, to construct and maintain a bridge and approaches thereto across the Chattahoochee River, at a point suitable to the interests of navigation, at or near Alaga, Ala., connecting Houston County, Ala., and Early County, Ga., in accordance with the provisions

of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

TOMBIGBEE RIVER BRIDGE, MISSISSIPPI

Mr. SHEPPARD. From the Committee on Commerce I report back favorably, without amendment, the bill (H. R. 9610) granting the consent of Congress to the Board of Supervisors of Lowndes County, Miss., to construct a bridge across Tombigbee River, and I ask unanimous consent for its present consideration.

There being no objection, the bill was considered as in Committee of the Whole, and was read as follows:

*Be it enacted, etc.*, That the consent of Congress is hereby granted to the board of supervisors of Lowndes County, Miss., and their successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Tombigbee River at a point suitable to the interests of navigation, at or near Columbus, in the county of Lowndes, in the State of Mississippi, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1898) reclassifying the salaries of postmasters and employees of the Postal Service and readjusting their salaries and compensation on an equitable basis, and for other purposes.

The message also announced that the House had passed the bill (S. 3220) authorizing the health officer of the District of Columbia to issue a permit for the removal of the remains of the late George Mauger Burklin and the remains of the late Anton Lerch Burklin from Glenwood Cemetery, D. C., to Fort Lincoln, Prince Georges County, Md.

DEPUTY FISCAL AGENTS OF AGRICULTURAL DEPARTMENT

Mr. NORRIS. From the Committee on Agriculture and Forestry I report back favorably without amendment the bill (S. 3018) to authorize the designation of deputy fiscal or disbursing agents in the Department of Agriculture stationed outside of Washington, and ask unanimous consent for its present consideration.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nebraska?

Mr. ROBINSON. What is the bill? The reading of the title does not explain it.

Mr. NORRIS. I will explain it if the Senator desires. In the Forest Service there are 17 fiscal agents altogether. The bill authorizes deputy fiscal agents. We have deputies now, and it does not authorize the appointment of any new officers, but, in the absence of the fiscal agent himself, it authorizes the deputy to sign checks upon giving bond, and so forth. It is a practice they have been following, but the Comptroller General has held or has notified them that after the 1st of July he will hold that there is no authority of law for the deputies to sign checks in the absence of the fiscal agent himself. Ordinarily there are about two and a half months in the year when the fiscal agents are absent on official business and from their regular place of business.

Mr. ROBINSON. Has the comptroller heretofore approved the accounts?

Mr. NORRIS. Yes; they have been approved because that has been the practice for a great many years. He now puts them on notice that that is what he will hold, and they concluded, after investigation, that he was technically right.

Mr. ROBINSON. Is the report of the committee unanimous?

Mr. NORRIS. It is.

Mr. ROBINSON. I have no objection to the bill.

There being no objection the bill was considered as in Committee of the Whole, and was read as follows:

*Be it enacted, etc.*, That whenever the need therefor may arise, any fiscal or disbursing agent of the Department of Agriculture stationed outside of Washington, D. C., may, with the approval of the Secretary of Agriculture, authorize any qualified employee of said department to act as his deputy and to discharge all the duties by law or regulations imposed on said fiscal or disbursing agent, and the official bond given by the said fiscal or disbursing agent shall be held to cover and apply to the acts of the deputy appointed to act in his place in such cases. Such deputy shall, moreover, for the time being, be subject to all the liabilities and penalties prescribed by law for the official misconduct in like cases of the fiscal or disbursing agent, respectively, for whom he acts, and such deputy shall be required by the Secretary of Agriculture to give bond to and in such sum as the fiscal or disbursing agent may require.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

HENRY M'GUIRE

Mr. NORRIS. From the Committee on Agriculture and Forestry I report back favorably, without amendment, bill (H. R. 1306) for the relief of Henry McGuire, and I ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nebraska?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That there is authorized to be appropriated for payment by the Secretary of the Treasury to Henry McGuire, or his legal representatives, the sum of $225.23, as full compensation for 9,385 feet, board measure, of lumber which, upon dates between September 22, 1909, and October 11, 1909, and at the specific request and direction of an employee of the Forest Service, United States Department of Agriculture, was furnished to one Hiram Campbell for use in the construction of a house to replace one owned by said Hiram Campbell which was destroyed on September 19, 1909, by fire originating from brush-burning operations conducted on national forest land by employees of the Forest Service.

Mr. NORRIS. This is a case where several years ago the officials and employees in the Forestry Service were burning some brush to clear off some land on a forest reservation. The fire got away from them and burned the house of a settler. They thought they had arrangements made to let another settler near there, who had a sawmill, to supply the man whose house was burned with lumber that would be taken from the Forestry Service, but in the meantime the man with the sawmill went somewhere else. They finally concluded that the only thing to do was to submit the matter to Congress and ask that payment be made to the man for the lumber which he actually did furnish to build the house of the settler which was burned down by the employees. It amounts to only $252.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PRESIDENTIAL APPROVALS

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that the President had approved and signed the following acts:

On June 5, 1924:

S. 799. An act for the relief of F. A. Maron; and

S. 3181. An act to authorize an appropriation to enable the Director of the United States Veterans' Bureau to provide additional hospital facilities.

On June 6, 1924:

S. 112. An act providing for a comprehensive development of the park and playground system of the National Capital;

S. 1971. An act to authorize the Commissioners of the District of Columbia to accept certain land in the District of Columbia dedicated by Charles C. Glover for park purposes;

S. 1013. An act for the relief of Gordon G. MacDonald; and

S. 1330. An act for the relief of the estate of Ely N. Sonnenstrahl, deceased.

REPORTS OF COMMITTEES

Mr. HARRELD, from the Committee on Claims, to which was referred the bill (S. 854) for the relief of Margaret Richards, reported it with an amendment and submitted a report (No. 775) thereon.

Mr. SMITH, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 3327) to provide for the cooperative marketing of agricultural commodities, reported it without amendment and submitted a report (No. 776) thereon.

He also, from the Committee on Interstate Commerce, to which was referred the bill (S. 2646) to provide for the expeditious and prompt settlement, mediation, conciliation, and arbitration of disputes between carriers and their employees

and subordinate officials, and for other purposes, reported it with amendments and submitted a report (No. 779) thereon.

Mr. BRUCE, from the Committee on Claims, to which was referred the bill (S. 2293) for the relief of Lehigh Valley Railroad Co. and McAllister Lighterage Line (Inc.), reported it with amendments and submitted a report (No. 780) thereon.

Mr. SHEPPARD, from the Committee on Commerce, to which was referred the bill (S. 3398) to authorize the city of Norfolk, Va., to construct a dam from the southern and northern banks of Lafayette River to the southern and northern edges of the channel of said river, reported it with amendments and submitted a report (No. 781) thereon.

Mr. DILL, from the Committee on Public Lands and Surveys, to which was referred the bill (H. R. 5318) to authorize an exchange of lands with the State of Washington, reported it without amendment and submitted a report (No. 786) thereon.

Mr. KENDRICK, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 2844) to place the agricultural industry on a sound commercial basis, to encourage agricultural cooperative associations, and for other purposes, reported it with amendments and submitted a report (No. 787) thereon.

### LEASES UPON NAVAL OIL RESERVES

Mr. WALSH of Montana. Mr. President, from the Committee on Public Lands and Surveys I submit an interim report of its investigation into the subject of leases of naval oil reserves in pursuance of a resolution of the Senate. The report is signed by the chairman of the special committee, the Senator from North Dakota [Mr. LADD], the Senator from South Dakota [Mr. NORBECK], the Senator from Washington [Mr. JONES], the Senator from Colorado [Mr. ADAMS], the Senator from Wyoming [Mr. KENDRICK], the Senator from Washington [Mr. DILL], the Senator from Nevada [Mr. PITTMAN], and myself. Other members of the committee, I understand, have some observations to submit concerning the report.

The report as thus adopted by the committee is in substantial conformity with the draft of a report submitted by myself for approval of the committee. The committee went over the draft with some considerable care and made some changes, generally corrections of matters that had inadvertently crept into the original draft.

I will say in this connection that I prepared the report and it is an unimpassioned and impartial narrative of the proceedings before the committee and the disclosures made by the hearings. If it does not in every respect meet that idea it is because I was unable to reach it.

I wish now to move that the Senate adopt the report of the committee, but in order that Senators may have an opportunity to examine the report before a vote is had I shall ask that the motion lie on the table and shall call it up for consideration on to-morrow at some appropriate time if such occasion is presented.

The public interest manifested in the proceedings of the committee and the very great desire to learn of the conclusions arrived at, moved the committee to direct me to request that the Senate order the publication of 10,000 copies of the report. I ask unanimous consent that such order be made.

Mr. SMOOT. In order to publish the 10,000 copies, would it be within the $200 limit?

Mr. WALSH of Montana. I have not any idea.

Mr. SMOOT. It is just the report itself and not the testimony?

Mr. WALSH of Montana. Yes.

Mr. SMOOT. Then it is well within the $200 limit, so there will be no objection to it at all.

The PRESIDING OFFICER. The Chair understands the Senator offers the report, moves its adoption, and asks that the motion lie on the table.

Mr. WALSH of Montana. Yes; and at the same time I ask unanimous consent that the Senate order 10,000 copies of the report printed.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana that 10,000 copies of the report be printed? The Chair hears no objection, and it is so ordered.

Mr. SPENCER. Mr. President, in this connection I present a statement signed by the five minority members of the committee, the Senator from Utah [Mr. SMOOT], the Senator from Oregon [Mr. STANFIELD], the Senator from New Mexico [Mr. BURSUM], the Senator from Arizona [Mr. CAMERON], and myself, and ask that the statement also lie on the table and that it be printed. There is no necessity for any such number of copies, but it ought to be printed so that it will be available.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Missouri? The Chair hears none, and it is so ordered.

Mr. WALSH of Montana. I desire to make a simple statement in connection with the observations just submitted by the minority members of the committee. The statement is to the following effect:

On May 14, when the hearings were discontinued for this session, request was made, of record, that an opportunity of at least a few days be afforded in order to examine the report which the senior Senator from Montana [Mr. WALSH] indicated he intended to prepare, and that such opportunity be given before the report was submitted to the committee for final action. No such opportunity was afforded.

The report was printed and presented June 4 to the committee for immediate consideration and action. It was on that date first presented to the undersigned. It has been physically impossible to examine, in any fair or adequate manner, the statements of the report which deals with such voluminous testimony and which attempts to pass judgment on disputed questions of law, and upon controverted facts.

The report indicates that the hearings before the committee are not yet concluded, and are to be resumed in case "the authority of the committee as the representative of the Senate be vindicated" in its attempt to further interrogate Mr. H. F. Sinclair.

The statement further says:

A casual reading of the report indicates many mistakes and conclusions and inferences of fact and law which, in the judgment of the undersigned, are unwarranted by the testimony.

Mr. President, at the time I advised the committee upon conclusion of the taking of the testimony that I should make a draft of the report which I should submit to the committee, and as for its adoption the Senator from Missouri [Mr. SPENCER], a member of the committee, said that he would like to have a copy of my draft. I did not feel, in view of what had transpired before the committee, that I was called upon to submit my proposal to the Senator from Missouri any more than to any other member of the committee.

So I did not do so; but I submitted the draft to the committee, as stated in this memorandum, on the 4th day of June. The Senator from Missouri had a copy of it just as soon as any other member of the committee had. No member of the committee saw it until I submitted it to the committee. The committee then spent two days in the consideration of the report. The commitee went through it; it was read before the committee, corrections were made by the committee wherever any errors were discovered in it; conclusions of fact were discussed, and, as I have indicated heretofore, changes were made in the draft, of no great consequence, except that some conclusions were eliminated.

The Senator from Missouri unfortunately was not able to attend the meetings of the committee, nor were any of the other members whose names are subscribed to this statement commenting upon the report, save the Senator from Utah [Mr. SMOOT], who was present during a part of the first day's consideration of the report by the committee, and the Senator from Oregon [Mr. STANFIELD], who was present a part of the two days.

Mr. SPENCER. Mr. President, will the Senator allow me to ask him a question?

Mr. WALSH of Montana. Now, a general statement is made that many mistakes are found in the report that are discernible upon a casual reading.

Mr. SPENCER. The Senator will bear me out that the Senator from Missouri was there part of two days, though the Senator from Montana is quite right that unfortunately he could not attend all the sessions.

Mr. WALSH of Montana. However, the facts are as I have stated them; that the committee spent two days in going over the report and in making corrections wherever mistakes could be discovered.

In that situation of affairs, the effort to discredit the report by a general declaration that many mistakes have appeared, seems to me hardly in accordance with the practice of the Senate, to say the least. Mr. President, I shall ask consideration of this matter by the Senate to-morrow morning.

Mr. SPENCER. Mr. President, so far as the allegations of the statement are concerned, except with regard to mistakes, the Senator from Montana has substantiated them, and I thank him.

So far as the mistakes of the report are concerned, these are the facts: When the report first came into my hands, on the 4th day of June, it was a report on its face that had to do

with thousands of pages of testimony. It was physically impossible to go over that report within a day or two with any completeness or fairness. I went over it with what care I could give to it, and I found in it many mistakes both of fact and, as I thought, of law; and mistakes that were inadvertent mistakes. Some of them I called to the attention of the Senator from Montana at the first session when the committee were considering the report while I was present. Corrections of those mistakes were made. They were obviously mistakes which were inadvertent.

Further examination of the report indicates that there are precisely what this statement says, many mistakes and statements which when those who signed the statement have the opportunity will be called to the attention of the Senate in a report.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Montana?

Mr. SPENCER. I yield.

Mr. WALSH of Montana. The Senator from Missouri, of course, will have every opportunity to point out in any kind of a report which he may make any mistakes there are in this report. No one wants to deny him that opportunity.

Mr. SPENCER. The Senator from Missouri has no doubt of that right.

Mr. WALSH of Montana. And I suppose he will enjoy it and exercise it.

Mr. SPENCER. He will not enjoy it; he very much regrets it.

Mr. PITTMAN. Mr. President, the minority report in this case has been read, and therefore appears in the RECORD. It was read by the Senator from Montana [Mr. WALSH], as I understand.

Mr. SHEPPARD. I think permission was given to have the minority report printed in the RECORD.

The PRESIDING OFFICER. Such permission was granted.

Mr. PITTMAN. The majority report, which has been criticized by the minority report, contains references to the pages of the hearings which are relied on for sustaining various portions of the report. In order that the Senate may have before it to-morrow morning both the minority report and the majority report and the references to the hearings, I ask unanimous consent that the majority report may also be published in the CONGRESSIONAL RECORD.

The PRESIDING OFFICER. Without objection, consent is granted.

The report and views of the majority are as follows:

[Senate Report No. 794, Sixty-eighth Congress, first session]

LEASES UPON NAVAL OIL RESERVES

Mr. WALSH, from the Committee on Public Lands and Surveys, submitted the following report, pursuant to S. Res. 147:

The Committee on Public Lands and Surveys submits the following report on the investigation conducted by it under and by virtue of the resolution of the Senate hereinafter set out.

On April 29, 1922, the Senate adopted the following resolution:

"*Resolved*, That the Secretary of the Interior is directed to send to the Senate:

"(a) Copies of all oil leases made by the Department of the Interior within naval oil reserve No. 1, and, separately, naval oil reserve No. 2, both in the State of California, and naval oil reserve No. 3 in the State of Wyoming, showing as to each the claim upon which the lease was based or issued; the name of the lessee; the date of the lease; the area of the leased property; the amount of the rent, royalty, bonus, and all other compensation paid and to be paid to the United States.

"(b) All Executive orders and other papers in the files of the Department of the Interior and its bureaus, or copies thereof if the originals are not in the files, authorizing or regulating such leases, including correspondence or memoranda embodying or concerning all agreements, instructions, and requests by the President or the Navy Department as to the making of such leases and the terms thereof.

"(c) All correspondence, papers, and files showing and concerning the applications for such leases and the action of the Department of the Interior and its bureaus thereon and upon all the several claims upon which such leases were based or issued, all in said naval reserves.

"(d) And all contracts for drilling wells on naval oil reserves, date and terms of same, reasons therefor, and the number and date of the drilling of wells on private lands adjacent to oil reserves.

"*Resolved further*, That the Committee on Public Lands and Surveys be authorized to investigate this entire subject of leases upon naval oil reserves, with particular reference to the protection of the rights and equities of the Government of the United States and the preservation of its natural resources, and to report its findings and recommendations to the Senate."

Thereafter, on the 5th day of June, 1922, it supplemented the foregoing by the following resolution:

"*Resolved*, That Senate Resolution 282 is hereby amended by adding at the end of said resolution the following:

"That the said committee is hereby authorized to sit and perform its duties at such times and places as it deems necessary or proper and to require the attendance of witnesses by subpœna or otherwise; to require the production of books, papers, and documents; and to employ counsel, experts, and other assistants, and stenographers, at a cost not exceeding $1.25 per printed page. The chairman of the committee, or any member thereof, may administer oaths to witnesses and sign subpœnas for witnesses; and every person duly summoned before said committee, or any subcommittee thereof, who refuses or fails to obey the process of said committee or appears and refuses to answer questions pertinent to said investigation shall be punished as prescribed by law. The expenses of said investigation shall be paid from the contingent fund of the Senate on vouchers of the committee or subcommittee, signed by the chairman and approved by the Committee to Audit and Control the Contingent Expenses of the Senate."

The committee was, in form at least, authorized to continue the work devolving upon it under the foregoing, notwithstanding the expiration of the Sixty-seventh Congress, by the following resolution:

"*Resolved*, That Senate Resolution 282, agreed to April 21, 1922, and Senate Resolution 292, agreed to May 15, 1922, authorizing and directing the Committee on Public Lands and Surveys to investigate the entire subject pertaining to leases upon naval oil reserves, with particular reference to the protection of the rights and equities of the Government of the United States and the preservation of its natural resources, and to report it findings and recommendations to the Senate, and providing that the expenses of such investigation be paid from the contingent fund of the Senate, be, and the same are, continued in full force and effect until the end of the Sixty-eighth Congress.

"The committee or any subcommittee thereof is authorized to sit during the sessions or the recesses of the Senate, and after the expiration of the present Congress until the assembling of the Sixty-eighth Congress, and until otherwise ordered by the Senate."

The authority of the committee to proceed with the investigation after March 4, 1923, having been challenged (Rec. pt. 7, p. 1961), under circumstances hereinafter to be detailed, the Senate, on the 7th day of February, 1924, confirmed the authority theretofore conferred by the following resolution:

"*Resolved*, That the Secretary of the Interior is directed to send to the Senate:

"(a) Copies of all oil leases made by the Department of Interior within naval oil reserve No. 1, and, separately, naval oil reserve No. 2, both in the State of California, and naval oil reserve No. 3, in the State of Wyoming, showing as to each the claim upon which the lease was based or issued; the name of the lessee; the date of the lease; the area of the leased property; the amount of the rent, royalty, bonus, and all other compensation paid and to be paid to the United States.

"(b) All Executive orders and other papers in the files of the Department of the Interior and its bureaus, or copies thereof, if the originals are not in the files, authorizing or regulating such leases, including correspondence or memoranda embodying or concerning all agreements, instructions, and requests by the President or the Navy Department as to the making of such leases and the terms thereof.

"(c) All correspondence, papers, and files showing and concerning the applications for such leases and the action of the Department of the Interior and its bureaus therein and upon all the several claims upon which such leases were based or issued, all in said naval reserves.

"(d) And all contracts for drilling wells on naval oil reserves, date and terms of same, reasons therefor, and the number and date of the drilling of wells on private lands adjacent to oil reserves.

"*Resolved further*, That the Committee on Public Lands and Surveys be authorized to investigate this entire subject of leases upon naval oil reserves, with particular reference to the protection of the rights and equities of the Government of the United States and the preservation of its natural resources, and to ascertain what, if any, other or additional legislation may be advisable, and to report its findings and recommendations to the Senate.

"*Resolved further*, That the said committee is hereby authorized to sit and perform its duties at such times and places as it deems necessary or proper and to require the attendance of witnesses by subpœnas or otherwise; to require the production of books, papers, and documents; and to employ counsel, experts, and other assistants, and stenographers, at a cost not exceeding 25 cents per hundred words, to report such hearings. The chairman of the committee, or any member thereof, may administer oaths to witnesses and sign subpœnas for witnesses; and every person duly summoned before said committee, or any subcommittee thereof, who refuses or fails to obey the process of said committee or appears and refuses to answer questions pertinent to said investigation shall be punished as prescribed by law. The expenses of said investigation shall be paid from the contingent fund of the Senate on vouchers of the committee or subcommittee, signed

by the chairman and approved by the Committee to Audit and Control the Contingent Expenses of the Senate."

The naval reserves referred to in the resolutions are naval reserve No. 1 and naval reserve No. 2 in the State of California and naval reserve No. 3 in the State of Wyoming, popularly referred to as the Teapot Dome by reason of the local designation of the principal geological structure within the reserve, these areas embracing, respectively, naval reserve No. 1, 38,969 acres; naval reserve No. 2, 29,341 acres; and naval reserve No. 3, 9,481 acres.

During the administration of President Roosevelt, after conference with representatives of the Geological Survey, he directed that organization to institute an inquiry with a view to locating areas within the public domain believed to be rich in deposits of petroleum, having in mind the use of the same as fuel for the Navy, it having become apparent that oil was destined to become the main reliance of the navies of the world as fuel. The survey thus ordered was not completed during the term of the President who directed it, but as a result of the inquiry made, his successor, President Taft, on the 27th day of September, 1909, and July 2, 1910, issued orders withdrawing from all forms of entry the areas which subsequently became the reserves in question.

Doubt having been expressed as to the authority of the President, without specific authorization from Congress thus to withhold from disposition portions of the public lands as was the case with reference to the first order, Congress in the following year passed an act authorizing such withdrawal, and in conformity with its terms the later order of withdrawal was promulgated. The Supreme Court, however, afterwards held that the original withdrawal order was valid.

Though these lands were thus withdrawn it was not until later they were specifically set aside for the use of the Navy, President Taft designating the two California areas as naval reserves in 1912 and President Wilson the third, in Wyoming, as such in the year 1915. (Rec., pt. 5, p. 1226.)

It was not intended at any time that the store of oil thus assured should be drawn upon for current use or for use at any time when the requirements of the Navy could be met by purchases in the open market. The policy of the Government, as repeatedly expressed in official documents, contemplated the preservation of this supply for use only at some time in the more or less remote future when, by reason of the depletion of the world's supply or some other exigency like the prevalence or immediate prospect of a war, an adequate supply of oil could not or might not be procurable at a reasonable cost. (Rec., pt. 1, p. 161.)

From the time the areas in question were first withdrawn controversies have been waged between the Government on the one hand, desirous of keeping the reserves intact so far as possible, and private individuals and corporations, insisting upon rights, legal or equitable, to a portion of the lands embraced within them, or urging the wisdom, on one ground or another, of the policy of taking the oil out of the reserves, on the other hand.

While the areas in question remained a part of the open public domain they became subject to appropriation under the placer mining law, by which one who discovered mineral became entitled to a patent to a limited area embracing his discovery. Though discovery is the foundation of any such title, it was quite customary, in regions believed to be oil bearing, for the claimant or claimants to mark off the territory in which they asserted a right within the limit prescribed by the statute, recording notice of the claim pursuant to the statute of the State within which it was situated, and thereafter to prosecute the work leading to the discovery of oil. Claims of that character covered a great portion of the areas eventually set apart as naval reserves and included within the withdrawal orders. The claimants or their successors in interest insisted that it was through their efforts and expenditures that the territory came to be known as oil bearing, and that though they had not made discovery at the time the withdrawal order took effect they were entitled to consideration.

Many of these claims were unsupported by any impelling equitable considerations and others were undoubtedly fraudulent in fact. Others unquestionably had some merit. At the same time it was very generally recognized that the placer mining law was inappropriate to the disposition of oil-bearing public lands, and, accordingly, practically all lands believed to be valuable for the oil contained in them were withdrawn from entry to await the enactment of appropriate legislation by Congress. There was, of course, an insistent demand that legislation of that character should be enacted that the development of the States in which such lands were situated might not be indefinitely arrested. Efforts extending through years were made to secure legislation of that character, applicable not to the areas within the reserves but to those without. Little controversy arose concerning the general features of the legislation proposed, but its enactment was delayed for years by reason of the insistence of the claimants referred to asserting rights to lands both within and without the reserves that the so-called equitable rights should be safeguarded. The contest over this legislation continued throughout the administration of President Wilson and until the passage of what is known as the general leasing law, approved February 25, 1920.

Not a little of the testimony taken on the hearings in connection with that legislation related to the imminence of the danger of drainage of the reserves through wells on lands owned privately either within the exterior bounds of the reserves or immediately beyond them. In the course of that controversy a marked difference of opinion developed as between the Navy Department on the one hand and the Interior Department on the other, the former being charged with being unduly insistent upon disregarding the claims asserted against the Government, the latter with being unwarrantedly indulgent toward the parties asking recognition of rights claimed by them within the reserves. Generally speaking, those who were attached to and supported what has been known as the conservation policy indorsed the attitude taken by the Navy Department; those who were opposed to that policy inclined to what was understood to be the position of the Interior Department.

The act in question was by its terms made inapplicable to the naval reserves, except as therein specifically set forth. It, however, authorized the Secretary of the Interior to lease any producing wells within the reserves and further authorized the President to lease all or any part of any claim—that is, placer mining claims—within which there should be any such producing wells (Rec. pt. 3, p. 440). The history of the legislation leaves no doubt that Congress intended that the Secretary of the Interior should exercise no authority over the reserves, except as above indicated. It developed in the hearings, however, and was otherwise revealed that drainage was taking place, particularly in naval reserve No. 2 and perhaps at the eastern extremity of naval reserve No. 1, to arrest or minimize the effect of which it was desirable to clothe some one with the authority to provide for the drilling of offset or line wells or otherwise to meet the situation. It was likewise necessary, in order to carry out the policy of Congress with reference to these reserves, to authorize some one to take the oil from them whenever the contingency should arise to meet which they were created. Considering this situation, Secretary Daniels transmitted to the chairman of the House Committee on Naval Affairs an amendment to the naval appropriation bill of 1920, which with slight amendments became a part thereof as it was approved June 4 of that year (Rec. pt. 2, p. 213). The amendment in question reads as follows:

"That the Secretary of the Navy is directed to take possession of all properties within the naval petroleum reserves as are or may become subject to the control and use by the United States for naval purposes, and on which there are no pending claims or applications for permits or leases under the provisions of an act of Congress approved February 25, 1920, entitled "An act to provide for the mining of coal, phosphate, oil, oil shale, and sodium on the public domain," or pending applications for United States patents under that law; to conserve, develop, use, and operate the same in his discretion, directly or by contract, lease, or otherwise, and to use, store, exchange, or sell the oil and gas products thereof, and those from all royalty oil from lands in the naval reserves, for the benefit of the United States: *And provided further*, That rights of any claimant under said act of February 25, 1920, are not affected adversely thereby: *And provided further*, That such sums as have been or may be turned into the Treasury of the United States from royalties on lands within the naval petroleum reserves prior to July 1, 1921, not to exceed $500,000, are hereby made available for this purpose until July 1, 1922: *Provided further*, That this appropriation shall be reimbursed from the proper appropriations on account of the oil and gas products from said properties used by the United States at such rate, not in excess of the market value of the oil, as the Secretary of the Navy may direct."

The amendment as proposed gave rise to no debate in either House, though in the Senate amendments thereto were adopted on the motion of Senator SMOOT, chairman of the Committee on Public Lands and Surveys, one of which eliminated a provision under which the Secretary of the Navy would be authorized to refine the crude oil accruing to the Government. Other provisions were inserted in the original draft the purpose of which was to make clear that the Secretary of the Navy should exercise no authority whatever over portions of the reserves to which claims were asserted, the validity of which remained consequently for the determination of the Secretary of the Interior (Rec. pt. 3, p. 214). The authority to exchange was granted by reason of the fact that the use of crude oil for fuel is not economical, the ordinary fuel oil being the crude product from which has been extracted the most volatile and valuable constituents, like gasoline, kerosene, and lubricating oil. It will be noted that the Secretary was given the authority to use, store, exchange, or sell the oil and gas products of the reserve which might be secured by lease or otherwise, carrying out the authority vested in him by the act to "conserve, develop, use, and operate the same in his discretion." Note particularly that the act provided that for the purpose of accomplishing anything the Secretary was directed by the act to do, he was authorized to utilize at any time prior to July 1, 1922, any sum which had

been or might be turned into the Treasury of the United States from royalties on lands within the naval reserves accruing prior to July 1, 1921, not to exceed $500,000.

EXECUTION OF THE TEAPOT DOME LEASE

In the spring of the year 1922 rumors were current that a lease of the naval reserve No. 3 had been executed. Early in April of that year, importunate requests for information being sent to Senator KENDRICK by citizens of his State deeply interested in the future of the reserves, he caused inquiry to be made at the department without being able to secure any satisfactory answer, though his efforts continued until he introduced in the Senate on April 16, 1922, a resolution, forthwith passed, calling upon the Secretary of the Interior for information as to whether a lease of naval reserve No. 3 had been executed or whether the leasing of the same was in contemplation. Inquiry by representatives of the public press had likewise been diligently prosecuted along the same line without eliciting any definite information. On April 21, 1922, the Assistant Secretary of the Interior transmitted to the Senate in response to the resolution referred to a letter apprising it of the fact that a lease of the entire reserve had been, under date of April 7, 1922, executed to the Mammoth Oil Co. (Rec. pt. 1, p. 3.) A definite statement to the effect that the lease had been made emanated from the Interior Department, however, on April 18, and the Wall Street Journal of the 14th of the same month gave to its readers notice of the same facts. The resolution of inquiry of April 20, 1922, introduced by Senator LA FOLLETTE, followed. Pursuant to this resolution the Secretary of the Interior, under date of June 3, 1922, transmitted to the President a letter which was, by the latter, sent to the Senate, in which were set out at length the conditions deemed by him to require or justify the execution of the lease in question with a recital of some of the circumstances attending its execution and other matters believed to be important in connection with the same. (Rec., pt. 1, p. 23.) At the same time he submitted to the committee photostatic copies of a vast number of documents relating more or less directly to the subject of inquiry and asserted to be in response to one of the paragraphs of the resolution of April 29.

In the letter of Secretary Fall referred to the view is advanced with fullness of argument that the leasing of the reserve was rendered necessary by reason of the fact that it was being drained by the wells in the adjacent Salt Creek field. This contention, advanced in statements made public at or near the time information concerning the lease became rife, being stoutly controverted by public men of the State of Wyoming and others more or less qualified to speak, the committee selected and appointed two geologists to make a survey of the ground with a view to acquaint it with the facts in relation thereto and to its further information concerning geological conditions having more or less importance in connection with the execution of the lease. The reports of the geologists confirmed the view that drainage was actually taking place and that loss was being suffered not only by the actual migration of the oil but by the reduction of the gas pressure within the reserve area, affecting the amount of oil which could eventually be recovered. There seems never to have been any very sound reason for the contention that it was geologically impossible to drain the reserve, to some extent at least, through the wells in the Salt Creek field. From the beginning the relation between the Salt Creek structure and the Teapot Dome structure, if they can be considered as separate, was regarded as so intimate that in setting apart the reserve an area in what was believed to be the Salt Creek structure was included within the reserve in order to forestall any likelihood of drainage of the area of oil contained in the adjacent region which it was proposed should be preserved for the Navy (Rec. pt. 3, p. 489). Reference will hereafter be made to this subject.

THE EXECUTIVE ORDER

A study of the attendant circumstances revealed, and the hearings which were begun October 22, 1923, early disclosed, that on May 31, 1921, an order was signed by President Harding transferring the administration of the reserves from the Navy Department to the Interior Department, the order being as follows:

"EXECUTIVE ORDER

"Under the provisions of the act of Congress approved February 25, 1920 (41 Stat. 437), authorizing the Secretary of the Interior to lease producing oil wells within any naval petroleum reserve; authorizing the President to permit the drilling of additional wells or to lease the remainder or any part of a claim upon which such wells have been drilled, and under authority of the act of Congress approved June 2, 1920 (41 Stat. 912), directing the Secretary of the Navy to conserve, develop, use, and operate, directly or by contract, lease, or otherwise, unappropriated lands in naval reserves, the administration, and conservation of all oil and gas bearing lands in naval petroleum reserves Nos. 1 and 2, California, and naval petroleum reserve No. 3, in Wyoming, and naval shale reserves in Colorado and Utah are hereby committed to the Secretary of the Interior, subject to the supervision of the President, but no general policy as to drilling or reserving lands located in a naval reserve shall be changed or adopted except upon consultation and in cooperation with the Secretary or Acting Secretary of the Navy. The Secretary of the Interior is authorized and directed to perform any and all acts necessary for the protection, conservation, and administration of the said reserves, subject to the conditions and limitations contained in this order and the existing laws or such laws as may hereafter be enacted by Congress pertaining thereto.

"WARREN G. HARDING.

"THE WHITE HOUSE, *May 31, 1921.*"

Copy sent: Mr. Mendenhall, Survey. Comr. G. L. O. Director Mines. (Rec. pt. 2, p. 177.)

This order, running counter as it did to the well-understood policy of Congress as manifested in the legislation referred to, merits more than a passing notice. Its illegality ought to have been recognized by everyone concerned in its promulgation. The idea that the President may, by his fiat, transfer powers reposed in or duties imposed upon one Cabinet officer to another is intolerable and indefensible. Doubts having been expressed concerning the validity of this order in communications addressed to the President by two Senators (Rec., pt. 2, p. 265; pt. 3, p. 791; pt. 5, p. 1289), Secretary Fall undertook to justify it upon the so-called Overman Act and the acts of February 25, 1920, and June 4, 1920, above referred to, but upon the hearings which began with the examination of Secretary Fall, he admitted that by its plain language the Overman Act was restricted in its operation to legislation enacted during the war for its progress and that there was nothing in the other acts referred to which in any wise justified the order (Rec., pt. 2, p. 181). He then attempted to defend it upon some vague power springing from the presidential office and the general scheme of our Government. (Rec., pt. 2, p. 182.) No information was sought from any of the law officers of the Government on the power of the President to make this extraordinary order. It was resolved upon as early as the 1st of April, 1921.

About that time the Secretary of the Navy announced to Admiral Griffin his purpose to surrender control of the reserves. (Rec., pt. 2, p. 348.) Griffin was Chief of the Bureau of Engineering, to which had been committed the important custody of these properties. His advice as to the wisdom of making the transfer was not sought. He was told that the policy had been determined upon. None of the officers of the Navy, nor even those who, by virtue of their service, had become familiar with the subject, were consulted. Secretary Denby told the committee that he had been advised that the reserves were being drained. He was unable to recall who told him so; but maps, he said, were laid before him in connection with the imparting of the information. (Rec., pt. 2, p. 300.) He assumed full responsibility for the policy, saying that the idea originated with him and that he resolved upon the course which was followed because the Navy Department was not equipped to handle the situation, while the Department of the Interior with its Bureau of Mines and the Geological Survey was able to do so. (Rec., pt. 2, p. 284.) Prior thereto these two bureaus had worked in conjunction with the Navy Department in its handling of the reserves without friction or embarrassment. (Rec., pt. 3, p. 769.) About the time that Denby announced to Griffin his purpose he also communicated it to Assistant Secretary Roosevelt, the latter saying that the Secretary had just come from a Cabinet meeting. (Rec., pt. 2, p. 394.)

The original draft of the Executive order was made by Secretary Fall, who transmitted it to Secretary Denby with a draft of a letter to be signed by the latter and transmitted to the President explaining the occasion and necessity for the order. (Rec., pt. 2, p. 283.) Amendments to it, drafted by Admiral Griffin, intended to necessitate the sanction of the Navy Department of any lease which might be made (Rec., pt. 2, p. 349; pt. 5, p. 1287) were taken by Colonel Roosevelt to Secretary Fall, who declined to adopt them, but some alterations were made in the draft which did not materially change its significance. Colonel Roosevelt explaining to Admiral Griffin upon his return that he had done the best he could with Fall (Rec., pt. 2, p. 349; pt. 2, p. 395). The draft thus being perfected it was taken to the Executive Office by Colonel Roosevelt and subsequently signed by the President. The original draft of the letter of transmittal prepared by Fall also went to the White House unsigned (Rec., pt. 2, p. 283). Testifying before the committee Secretary Denby read a letter purporting to have been signed by him and which he said he transmitted to the President, explaining at some considerable length the reasons which made the order desirable in his opinion. In this letter it was stated that the policy represented by the order was not approved by all the officers of the Navy conversant with the subject, and that in particular Admiral Griffin was opposed to it, his views being expressed in a formal protest which the letter recited would be found accompanying it. (Rec., pt. 2, pp. 286–287.) As a matter of fact, neither the letter nor the protest of Admiral Griffin (Rec., pt. 5, p. 1288) ever was sent to the President, and the order was signed without documentary support of any kind. (Rec., pt. 2, p. 284; pt. 5, p. 1317.)

NEGOTIATIONS FOR THE TEAPOT DOME LEASE

Near the close of the year 1921, Harry F. Sinclair traveled in his private car to Three Rivers, N. Mex., a railroad station adjacent to the ranch of Secretary Fall, where he remained for some days, visits being exchanged between the family of Secretary Fall at the ranch and that of Mr. Sinclair at his private car. In the letter of Secretary Fall to the President of June 3, 1922, it is stated that Sinclair having come to see him in connection with certain leases of Indian lands in Oklahoma, and that that business being discharged, he took up with him the subject of leasing the Teapot Dome. (Rec., pt. 1, pp. 49, 50.) From Sinclair's testimony it seems quite apparent that the trip was made for the express purpose of opening up negotiations for a lease of that property. (Rec., pt. 4, p. 1086.) Such negotiations were entered upon, culminating in the lease which was signed by Secretary Fall on April 7, 1922, as heretofore stated.

While at the ranch arrangements were made for the shipment from the farm of Sinclair in the State of New Jersey to the foreman of the ranch of a blooded horse and to Secretary Fall of a few head of blooded Holstein cattle. (Rec. pt. 4, p. 1017.) These were shipped some time in February or early in March at an expense to Sinclair of $1,105. (Rec. pt. 5, p. 1362.) There was no discussion of any price to be paid for the animals, but about the 1st of May some one, believed to be the son-in-law of Fall, appeared at the office of Sinclair in New York to make payment. The auditor thereupon called up the foreman of the Sinclair ranch, from whom he procured a bill for the cattle and some hogs shipped with them amounting to $1,100, which sum was paid by the stranger. (Rec. pt. 4, p. 1021.)

The negotiations leading to the lease were conducted in secret. There was no competition. Secretary Fall stated in his letter to the President (Rec. pt. 1, p. 49) and on the witness stand that he had consulted, before executing the lease, with leading oil men, but he omitted to specify in the letter, and declined to disclose on the stand, with whom he had talked on the subject (Rec. pt. 2, p. 223). It appeared, however, that rumors of an impending lease reached a representative of the Texas Co., who sought out Secretary Fall with a view to offering a proposal, but was deterred by a rather unsatisfactory interview. (Rec. pt. 3, p. 733.) He encountered what seemed an insuperable difficulty, the nature of which requires a somewhat extended explanation.

It will be recalled that the authority of the Secretary of the Navy by the act of June 4, 1920, was not to extend to any portion of the reserves on which there should be "pending claims or applications for permits or leases under" the so-called leasing law. Now the entire naval reserve No. 3, save about 400 acres, was covered by "claims" more or less shadowy, to be sure, but claims nevertheless, evidenced by notices of placer locations on file in the appropriate local recording office. On three of these claims wells had been drilled to the first shallow Shannon sands, yielding, it was claimed at the time they were first brought in, from 3 to 8 barrels of oil per day. One of these wells was begun December 4, 1917, and reached the oil sands December 20, 1917, at a cost of $960. The second was begun December 22, 1917, and finished January 7, 1918, at a cost of $962.50. And the third was begun January, 1918, and finished January 17, 1918, at a cost of $1,176.68. (Rec. pt. 3, p. 546.) Applications had been made for leases of these wells as "producing wells" under the provisions of the act of February 25, 1920, and had been denied by Secretary of the Interior Payne on March 1, 1921, who held that the proof did not show that the wells were commercially producing wells, as he insisted the statute contemplated. (Rec. pt. 4, p. 1197.)

A motion for a rehearing was then filed and denied by Assistant Secretary Finney on April 28, 1921. Under the practice of the Department of the Interior in relation to these matters this decision was final and became a conclusive determination that the applicants were not entitled to the lease. (Rec. pt. 8, p. 2332.) Their application for a lease was undeniably an admission that they were not entitled to patents for the land for, obviously, they would not have contented themselves with a lease of one well if, under the facts of the case, they were entitled to a patent for the entire 160 acres embraced in the claim. Indisputably, they were not entitled to patents because, as heretofore stated, the right of placer mining claims depends upon a discovery within lands open to appropriation, and these lands had been withdrawn from appropriation since the year 1909. The only basis upon which a right to any of the land could be founded is a discovery; that is, a discovery of oil antedating the withdrawal order of 1909. None of the claims were so supported. The drilling of the wells referred to was carried on in defiance of the withdrawal order, the parties prosecuting it being mere trespassers. Notwithstanding the final disposition of the applications for leases referred to, the applicants filed an application for the exercise of supervisory control of the Secretary of the Interior over the officers charged with the disposition of public lands. (Rec. pt. 8, p. 2311.) Secretary Fall, in his letter to the President, treats this action seriously (Rec. pt. 1, p. 47), but Assistant Secretary Finney, intimately familiar with the practice of the department and with all of the laws in relation to the disposition of the public domain from an experience of over 20 years in the department, asserts that no such proceeding is recognized by the rules of practice of the department. (Rec. pt. 8, p. 2332.) A careful study of all the so-called claims within naval reserve No. 3 had been made by the Department of the Interior by an experienced investigator of legal attainments, who reported that they were, as obviously they were, utterly baseless. (Rec. pt. 3, p. 454.)

Under some arrangement or understanding between Sinclair and Fall the former acquired all of the so-called claims within naval reserve No. 3 (Rec. pt. 1, p. 68), which, as a condition of his securing the lease, were to be conveyed to the United States. In his consultation with the oil men he named, and with the representative of the Texas Co., Secretary Fall "particularly stressed the fact that Mr. Sinclair stated that if his proposition was considered favorably he would deliver the outstanding titles to the Government of the United States," and that if they "were not able to make better bids" than Sinclair "equitable consideration would be given to him." (Rec. pt. 1, p. 50.)

Thus even those to whom in one way or another an opportunity had come to bid, if there were any such outside of the Texas Co., were at a disadvantage in the competition.

The facts are that all of the claims were held or controlled by the Pioneer Oil Co., a subsidiary of the Midwest Co., which in turn is a subsidiary of the Standard Oil. One or more of these companies had, at least since 1919, been endeavoring to secure a lease of naval reserve No. 3, or some portion of it. They were all amply able to undertake the development of the territory and were potential competitors for the lease. Sinclair paid, or agreed to pay, to the Pioneer Oil Co. some short time before the execution of the lease a million dollars nominally for the claims so reported, as above stated, to be worthless. Though that construction of the transaction is denied by Sinclair, your committee is of the opinion that the payment was not made in fact for the transfer of the title of these claims, but to remove from the field a formidable competitor for the lease and that the true nature of the transaction was thoroughly understood by Secretary Fall.

Another feature of it may as well be told in this connection. One Leo Stack, toward the close of the year 1920, associated himself with E. L. Doheny in an effort to secure from Secretary Daniels a lease of a double row of offset wells along the boundary line between naval reserve No. 3 and the Salt Creek field. (Rec. pt. 7, p. 1980.) The effort was fruitless, and an arrangement was entered into under which the Pioneer Oil Co. became substituted for Doheny. It thereupon entered into some kind of an agreement with Stack under which he was to assist, presumably in Washington, in securing a lease of the reserve or some portion of it for the Pioneer Oil Co., Stack having been active at the Capital in some form of lobbying, in return for which service so to be rendered by Stack he was to have an interest in any lease which might be secured by the Pioneer Oil Co. (Rec. pt. 7, p. 1982.) Notwithstanding this, Stack was not called upon for assistance. The Pioneer Oil Co. entered into the agreement referred to with Sinclair and retired from the field as a suitor for the lease. (Rec. pt. 7, p. 2315.) Stack then enlisted the interest of the owners of a newspaper in Denver, Colo. (Rec., pt. 7, p. 1983), which immediately upon the execution of the lease began the publication of articles denouncing it as corrupt and contrary to public policy. (Rec., pt. 7, p. 2039.) They caused an investigation to be made in the State of New Mexico touching the matter of Fall's finances, hereafter to be referred to, and secured a report of a damaging character, detailing facts also to be referred to later. (Rec. pt. 7, p. 1976.) Stack and the newspaper proprietors entered into an agreement by which the latter acquired an interest in his claim against the Pioneer Oil Co. (Rec. pt. 7, p. 1983; pt. 8, p. 2177.) Suit was started in the State court of the State of Colorado in the name of Stack against that company and Sinclair, alleging a conspiracy against Stack.

The complaint was never filed, but summons was issued pursuant to the procedure of that State. (Rec. pt. 7, p. 1995.) After some negotiations in New York and Kansas City, Sinclair settled this suit by an agreement under which he paid $250,000 and agreed to pay $750,000 more. The attacks of the newspaper thereupon ceased. (Rec. pt. 7, p. 1984.) The proprietor of a rival newspaper, upon a claim even more shadowy, if, indeed, it can be called a claim at all, got $92,500 out of the Pioneer Oil Co. as his share of the moneys yielded up by Sinclair. (Rec. pt. 8, p. 2206.) These sums are less staggering when it is borne in mind that Sinclair testified before another committee of the Senate that he expected to make $100,000,000 from the lease, though in the hearing he expressed the view that he has erred on his estimate. (Rec. pt. 3, p. 431.)

To recur to the claims asserted to the lands within the reserve. As intimated above, there were but about 400 acres over which, by virtue of the act of June 4, 1920, the Secretary of the Navy or the Secretary of the Interior, by his delegated authority, could exercise any away. In order to carry out the plan of leasing the entire reserve it became necessary in some way to extend the field of operations open under the act referred to by the extinction of these claims. Undoubtedly the

statute contemplated that as their validity should be determined one by one before the Interior Department in favor of the Government the authority of the Secretary of the Navy over the area embraced in each should be to that extent enlarged. The alleged title was not extinguished, however, in any such way. In effect, the Secretary of the Interior compromised and settled these outstanding claims by the payment or the agreement to pay a million dollars for them. This was not done by him directly, of course, but through Sinclair, the result, so far as the Government is concerned, being exactly the same. The Government, in effect, paid a million dollars for these worthless claims; that is, Sinclair could without loss to himself have offered a bonus of a million dollars for the lease if the "claims" had been extinguished in the regular way or wholly disregarded. (Rec. pt. 2, p. 248.)

The execution of the lease without competitive bidding was effected in apparent disregard of statutes applicable to contracts let by the Navy Department enacted for the purpose of forestalling collusion with the officers of the Navy and securing to the Government the advantage of competitive bids. Consideration of that feature requires attention to the general provisions of the lease contract.

THE LEASE ANALYZED

It gave to the Mammoth Oil Co. the right to occupy the territory embraced in it for the period of 20 years and so much longer as oil should be produced from it in commercial quantities; that is, it was leased for as long as there remained within the ground oil in recoverable quantities. The lessee agreed to pay to the Government royalty depending upon the productivity of the wells ranging from 12½ per cent in the case of wells producing less than 50 barrels per day to 50 per cent in the case of wells producing more than 1,000 barrels per day. The average royalty from the operations thus far is between 16 and 17 per cent. The Government did not become entitled, however, to the royalty mentioned in the lease in kind. It sold its royalty oil by another provision to the lessee under an arrangement by which it was to receive oil certificates reciting the amount of oil sold and the value of the same, calculated on the basis of the "highest posted market price offered or paid" either "(1) in the Salt Creek oil field in Wyoming for a majority of the oil purchased in said field, or (2) in the mid-continent oil field by the Sinclair Crude Oil Purchasing Co., or (3) * * * by the Prairie Oil & Gas Co." (Rec. pt. 1, pp. 6–21.)

It might be here explained that the Sinclair Crude Oil Purchasing Co. is owned in equal undivided interests by the Sinclair Consolidated Co., controlled by Sinclair, and the Standard Oil Co., or one of its subsidiaries, and that the Prarie Oil & Gas Co. is a Standard company, and that the Midwest, as heretofore stated, a subsidiary of the Standard, controls the output of the Salt Creek field. (Rec. pt. 1, p. 227.)

The certificates above referred to might be utilized by the Government: (1) In the purchase of fuel oil from the Mammoth Oil Co. on the basis of one barrel of fuel oil for each barrel of crude oil represented by the certificate, if such oil should register 34° Baumé or higher, or 63 per cent of one barrel of fuel oil should it fall below 34° Baumé, the fuel oil to be delivered at the seaboard; (2) in the purchase from the lessee of gasoline, kerosene, lubricating oil, and other petroleum products at a price to be agreed upon between the parties; (3) the lessee might redeem in cash; (4) the Government might tender certificates in payment for oil-storage tanks to be constructed by the lessee at the direction of the Government in which to hold the fuel oil acquired by it on the surrender of the certificates to the amount of the cost of construction. (Rec. pt. 1, p. 13.)

Your committee is of the opinion in the first place that the law provides that the lease itself could not be legally executed except upon competitive bidding. Section 3709 of the Revised Statutes is as follows:

"All purchases and contracts for supplies and services in any of the departments of the Government, except for personal services, shall be made by advertisement a sufficient time previously for proposals respecting the same, when the public exigencies do not require the immediate delivery of the articles or performance of the service. When immediate delivery or performance is required by the public exigency, the articles or service required may be procured by open purchase or contract at the places and in the manner in which such articles are usually bought and sold or such service is engaged between individuals."

No such contract as that here in question was in contemplation perhaps in the enactment of this statute, but every consideration which prompted the lawmakers in framing it is here present. The instrument, while taking the form of a lease, is to all intents and purposes a contract under which Sinclair undertakes to perform certain services for the Government, namely, the extraction of the oil from the ground within the reserve. Questioned about the matter on the stand, Secretary Fall repudiated with much scorn the idea that the statute was applicable (Rec. pt. 2, p. 188), but he could assign no reason for his view except that the statute excluded from its operation personal services, which, he ventured to assert, the contract called for. Obviously, this is unsound. "Personal services" unquestionably refers to services such as are to be performed by the contractor himself. The phrase can not apply to services to be rendered by a corporation that can act only through agents, nor to a contract to be performed by anyone other than the person whose services are engaged.

The expression was used so as to permit the employment of clerks, attorneys, and other like employees without competitive bidding, but whether the statute is or is not a positive inhibition of the course taken in the letting of this all-important contract, no valid reason has been or can be assigned why in the public interest the spirit of the law should have been disregarded. No explanation whatever is found in the record for pursuing the course that was followed.

There are other like statutes which are circumvented by this contract. Following its provisions the Secretary of the Navy purchases ad libitum from the Mammoth Oil Co. fuel oil, gasoline, kerosene, lubricating oil, and other oil and gas products, paying for them with oil certificates, without going through the formality of calling for competitive bids, as seems to be required by section 3718 of the Revised Statutes, as follows:

"All provisions, clothing, hemp, and other materials of every name and nature, for the use of the Navy and the transportation thereof, when time will permit shall be furnished by contract by the lowest bidder, as follows: In the case of provisions, clothing, hemp, and other materials, the Secretary of the Navy shall advertise once a week for at least four weeks in one or more of the principal papers published in the place where such articles are to be furnished, for sealed proposals for furnishing the same, or the whole of any particular class thereof, specifying the classes of materials and referring bidders to the several chiefs of bureaus, who will furnish them with printed schedules, giving a full description of each and every article, with dates of delivery, etc. In the case of transportation of such articles, he shall advertise for a period of not less than five days. All such proposals shall be kept sealed until the day specified in such advertisement for opening the same, when they shall be opened by or under the direction of the officer making such advertisement, in the presence of at least two persons. The person offering to furnish any class of such articles, on giving satisfactory security for the performance thereof, under a forfeiture not exceeding twice the contract price in case of failure, shall receive a contract for furnishing the same."

Competitive bidding is excused in the case of certain supplies for the Navy by the provisions of section 3721 of the Revised Statutes, but not supplies of the character indicated above. These supplies are to be secured from the lessee at the market price, but it is quite likely that many corporations would be delighted to be able to secure a contract to provide the Government with all supplies needed by it at the market price. The Assistant Secretary of the Interior advised the committee that under the system of competitive bidding the Government secures a large part at least of what it requires in the nature of supplies at a price at least 10 per cent below the market. (Transcript, May 13, 1924, p. 7332.) Two other sections of the law are pertinent in this connection, section 3714 reading as follows:

"All purchases and contracts for supplies or services for the military and naval service shall be made by or under the direction of the chief officers of the Departments of War and of the Navy, respectively."

And section 3733 reading as follows:

"No contract shall be entered into for the erection, repair, or furnishing of any public building or any public improvement which shall bind the Government to pay a larger sum of money than the amount in the Treasury appropriated for the specific purpose."

The section last above quoted clearly contemplates that such public works as the steel storage tanks should be constructed only upon a contract calling for the payment of money, the amount to be appropriated by Congress for that specific purpose.

But there is another and more serious infirmity in this contract. Though the contract itself provides for the sale of the royalty oil to the lessee and the subsequent purchase from it by the Government of fuel oil and other supplies, the transaction may be viewed as an exchange, as indeed it is claimed it is, the contention being made that it is justified by the use of the word "exchange" in the act of June 4, 1920. (Rec. pt. 2, p. 210.) It may well be admitted that the act authorizes, as undoubtedly it does authorize, the exchange of crude oil for fuel oil or for oil products, but in order to justify this contract it is necessary to go further and maintain that the word "exchange" authorizes that essential part of the contract under which the oil certificates may be utilized to pay for the cost of construction of the tanks, or as it is expressed by those upholding the contract that crude oil may be exchanged for tanks. The soundness of this view may be tested by what has actually transpired in connection with the disposition of these great properties of the Government. Contemporaneously with the negotiations resulting in the leasing of the Teapot Dome, others were carried on, culminating in the contract with the Pan American Petroleum & Transport Co., of which E. L. Doheny, heretofore mentioned, is the controlling spirit, for the construction of tanks at Pearl Harbor, Hawaii, to hold 1,500,000 barrels of fuel oil, payment for the construction to be made in oil under the authority of the

statute giving to the word "exchange" the liberal construction referred to. The contract in question contemplated not only the construction of the tanks themselves but of docks and wharves at which ships loading and unloading might moor; of the installation of contrivances for loading and unloading, and for the dredging of a somewhat lengthy channel to permit ships of considerable draft to approach the tanks, all these appurtenant improvements to cost in the neighborhood of $400,000. (Rec., vol. 3, p. 559.) Furthermore, the Navy Department has elaborated a program of tank construction involving subsidiary works such as those last above referred to, the whole to cost, if paid for in cash, approximately $102,000,000, the expense to be met by the delivery of royalty oil accruing to the Government under its leases of the various oil reserves. (Rec. pt. 3, p. 638.)

Though no one having an intimate knowledge of the transaction seems to have been troubled with any doubts concerning the validity of the Executive order, some misgivings were felt in regard to stretching the word "exchange" so as to embrace transactions such as that evidenced by the lease under consideration. In the letter of Secretary Fall of June 3, 1922, to the President it is said that that subject was referred to in a casual way in a number of meetings of the Cabinet, and that the authority to enter into a contract of that character had been vindicated in an opinion of the Judge Advocate General of the Navy. (Rec. pt. 2, p. 209.) The Judge Advocate General of the Navy is a line officer. He is not a lawyer, and did not write the opinion. It was prepared by a clerk in his office who commands a salary of $2,640 a year. He ventured the opinion on the witness stand that Congress never intended to grant powers so extensive to the Secretary of the Navy (Rec. vol. 3, p. 713), but that it had actually done so, the substance of the opinion being that inasmuch as the word "exchange" was in nowise limited, the Secretary was authorized to exchange oil for anything—a battleship, ordnance, or an addition to the State, War, and Navy Building. He took no notice whatever of the provision of the statute to the effect that for the purpose, among other things, of providing storage for the oil issuing from the reserves as royalty or otherwise, prior to July 1, 1921, the Secretary of the Navy was authorized to use until July 1, 1922, not to exceed $500,000. It was contemplated that it would be necessary to provide storage for the oil accruing to the Government, and provision was made to meet the expense of such storage as well as other expenses which might be incurred by the Secretary in carrying out the act. (Rec. pt. 3, p. 782.)

Some of the strongest companies in the country declined to bid on the contract for the construction of the storage at Pearl Harbor upon the ground that the statute did not authorize payment of work of that character in oil. (Rec. vol. 8, p. 2201.) Notwithstanding their reluctance upon the advice of counsel and of an intimation to Secretary Fall that it would be wise on his part to do so, no opinion concerning the validity of such a contract was sought from the Department of Justice, nor from the Solicitor of the Interior Department, nor any of the law officers of the Government except as above stated. (Rec. pt. 8, p. 2205.)

While the terms of the lease are under consideration attention may properly be paid to one or two other features that merit it. Under the contract the Mammoth Oil Co. was required whenever the production should amount to as much as 20,000 barrels per day to construct a pipe line to connect the leased area and necessarily the adjacent Salt Creek field with a pipe line extending from the mid-continent field to the city of Chicago, owned in equal parts by the Sinclair interests and the Standard Oil, an enterprise contemplating an expenditure of approximately $15,000,000. Though the production from the reserve has never exceeded seven or eight thousand barrels daily, the construction of the pipe line by the Sinclair Crude Oil Purchasing is in progress, that company having assumed whatever obligation in that regard was due from the Mammoth Oil Co. under the lease. The daily production of the Salt Creek field may reach 175,000 barrels, but by agreement between the operators the output was limited to 40,000 barrels, that amount being all that could be handled by the local refineries.

As heretofore stated, the Standard Oil Co. controls in large part the output of the Salt Creek field. The Government was entitled to royalties from leases of areas in that field amounting to about 17,000 barrels a day. On the 20th day of December, 1922, there was awarded to the Sinclair Crude Oil Purchasing Co. upon competitive bidding a contract, under which that company became the purchaser of the Government's royalty oil. It has been heretofore stated that the Standard Oil Co. is the owner, as is Sinclair, of an undivided one-half interest in the company so securing that contract, so that both Sinclair and the Standard are vitally interested in having a pipe-line conduit for the output from the Salt Creek field not locally refined. It remains an open question as to whether the Teapot Dome lease is a factor at all in the construction of the pipe line. It is contended that in view of its construction the Government has been able to secure a much better price for the royalty oil accruing to it under its leases of areas in the Salt Creek field. For some time that oil was delivered to the Shipping Board under a provision of the act of February 25, 1920. (Rec. pt. 2, p. 229.) Upon payment by that organization into the fund created by the act of the market price, it then delivered the crude oil to which it was entitled under the contract to the Midwest Co., which in turn delivered to the Shipping Board at the seaboard an equivalent quantity of fuel oil. The contract of the Sinclair Crude Oil Purchasing Co. was let at a decided advance upon the price which the Shipping Board had theretofore paid for the same, but whether that advance is to be attributed to the prospective construction of the pipe line or not is a disputed question. A number of companies entered into the competition, offering prices in advance of that theretofore prevailing, intending to take the oil by pipe line or rail north to a connection with the Northern Pacific or the Milwaukee, and not transport it through the pipe line to the Southeast. In that connection Secretary Fall in several letters took credit to himself for having stipulated in the lease that the pipe line to be constructed should be a common carrier, entitling any producer to transport his oil through it, a perfectly futile provision inasmuch as the interstate commerce act makes such a pipe line a common carrier.

In the letter of June 3, 1922, the author asserted that there were features of the contract or considerations in it intimately connected with the national defense which he declared under no circumstances would be disclosed except by order of the President. A similar assertion was made by him on the stand, carrying an evident implication that curiosity in relation to the same necessarily indicated a deficient patriotism. The necessity for guarding military secrets was offered as a reason for not promptly disclosing the making of the lease and its essential features. (Rec. pt. 1, p. 263; pt. 8, p. 2247.)

When on the stand Admiral Robison, who succeeded Admiral Griffin and represented the Navy Department in connection with the contracts, insisted that considerations connected with the national defense were influential in the course pursued with relation to them, which he asked an opportunity to present at an executive session. (Rec. pt. 4, p. 906.) No information was conveyed to the committee which in its opinion had not in substance been made public, nor has the committee been able to appreciate how the public interest would be subserved or the common defense promoted by secrecy with reference to any feature of the contracts. (Rec. pt. 4, p. 963.)

DRAINAGE

A more detailed recital is necessary to a full understanding of the subject of drainage. The two areas, the Salt Creek field and Teapot Dome, constitute in reality but a single geological structure. Within them, at varying depths, are oil-bearing sands known in their order as the Shannon sands, the first Wall Creek sands, the second Wall Creek sands, the third Wall Creek sands, and the Lakota sands. A fold in these sands, commonly referred to as the "saddle," marks the limit of the two fields, if they may be regarded as separate. It was at one time believed and the theory was advanced that water would be found in this "saddle," so that it would be impossible for the oil to migrate from one field to the other, but this view was found to be erroneous, and, as stated above, drainage may take place from either area into the other. On this point there is no difference of opinion among the geological experts. They differ only as to the extent and seriousness of the drainage and the appropriate means of meeting the situation. As to this it is easily discernible that those wedded to the policy of keeping the oil in the ground minimize the importance and the effect of the drainage that may take place, while those who advocate or are tolerant of the policy of extracting the oil and storing it magnify the loss that has ensued or that many ensue. Generally speaking, the experts of the Geological Survey belong to the former class and those of the Bureau of Mines to the latter.

One set of experts boldly advances that any opening in what is sometimes referred to, inaccurately, as an oil pool will, in time, permit the escape of gas in such quantities as to reduce materially the yield of the entire field as it would have produced had other wells been drilled at appropriate intervals. The other set maintains that analogies drawn from the amount of water in a lake are altogether misleading, seeing that the oil which occupies the interstices in sandstone, often a very compact structure, is more or less viscous in its nature, retarding the flow, and that on the escape of the gas through a well, paraffin or asphalt carried as a base is precipitated and gums up the passage leading to the orifice, effectually shutting off eventually the exit of oil through it or the escape of gas. (Rec. pt. 12, p. 3019.) The advocates of the one theory insist, accordingly, that wells having been opened in the Salt Creek field, a wise policy requires that the oil be extracted from the naval reserve No. 3 as speedily as possible. Their antagonists maintain that the situation could be effectually met by the drilling of a line of offset wells along the narrow boundary between the naval reserve and the Salt Creek field. The conclusions of Mr. Fred G. Clapp, one of the experts employed by the committee, are believed by the committee to be a safe guide.

He estimates that the oil in naval reserve No. 3 will be somewhere between 12,000,000 and 26,000,000 barrels instead of 135,000,000, as estimated by the Bureau of Mines prior to the time the lease was executed. (Rec. pt. 3, p. 755.) It should be said in explanation that the first Wall Creek sands found to be highly productive in the Salt Creek field are barren in the Teapot Dome, a phenomenon no one seems to be able to explain.

The estimate of Mr. Clapp does not include either anything that may be yielded by the sands below the second Wall Creek sands, one of which has been penetrated at a depth of about 3,000 feet and found to be oil bearing. (Transcript, May 8, 1924, p. 7168.) There is a fault cutting the Teapot Dome transversely, the existence of which is generally recognized and which he asserts effectually shuts off all drainage from the region south thereof through the wells in the Salt Creek field to the north, 10,000,000 barrels of the 26,000,000 being south of the fault and safe. Of the 16,000,000 barrels north of the fault he estimates that of the recoverable oil, if there were no line of offset wells drilled along the boundary between the reserve and the Salt Creek field, a loss of 25 per cent might ensue, either through actual drainage or through the reduction of the gas pressure in that area; that is to say, 4,000,000 barrels of the 16,000,000 barrels therein. The total yield of the field would, accordingly, be 22,000,000 barrels, or, rather, there would remain in the ground recoverable oil to the extent of 22,000,000 barrels. As heretofore stated, the average royalty under the Mammoth lease is between 16 and 17 per cent; let us say 20 per cent for convenience of calculation, and for a like reason let the total content of the field be figured at 25,000,000 barrels instead of 26,000,000. If the Government royalty is 20 per cent it will be entitled to 5,000,000 barrels, but it is in evidence that it takes about 2 barrels of oil to pay for the construction of 1 barrel of tankage or, rather, that the tankage costs at the rate of 2 barrels of oil for each barrel of capacity in the tanks, so that the Government would have fuel oil in the tanks only to the amount of one-third of 5,000,000 or 1,666,666 barrels. The crucial inquiry accordingly is as to whether it is better for the Government to have 22,000,000 barrels of oil in the ground or 1,666,666 barrels in tanks at the seaboard. The Government actually realizes for use as fuel but 6 per cent of the total content of the reserves under the plan being followed.

THE DOHENY LEASES

The fact that drainage to an appreciable extent and, indeed, to a serious extent, was taking place in naval reserve No. 1 and naval reserve No. 2 was recognized by Secretary Daniels, who resolutely, and perhaps obdurately, resisted every suggestion of drilling within the reserves, even to protect them from drainage, until the seriousness of the situation was realized even by him. It is represented by the Bureau of Mines that the failure to drill all necessary offset wells prior to March 4, 1921, resulted in the loss to the Government of 6,800,000 barrels of royalty of the value of $8,800,000. (Rec. pt. 1, p. 56.) The accuracy of this contention is disputed, and it is conceded at the drainage which had actually taken place and the damage done in naval reserve No. 3 prior to the execution of the lease thereof was inconsequential. However, in 1920 highly productive wells were brought in in territory immediately outside the southeasternmost extremity of naval reserve No. 1, and Secretary Daniels, prior to his retirement on March 4, 1921, had called for bids for the drilling of 22 offset wells within that reserve. The proposals were not submitted, however, until after the new administration came in, and the contract was awarded to Doheny by Fall on July 12, 1921, acting under the pretended authority of the Executive order of May 31, 1921. This contract appears to have been otherwise unexceptionable. It was awarded upon open competitive bidding to the highest and best bidder.

The policy thus having been evolved of utilizing a part—and, as it transpired, the larger part—of the royalty oil accruing to the Government for the construction of tanks, bids were solicited for the construction of tanks at Pearl Harbor, as heretofore stated, payment to be made in oil. A number of companies, including the Pan American Petroleum & Transport Co., a Doheny organization, bid upon the contract, others being deterred, as heretofore stated, by doubt as to the legality of a contract of that character. Doheny submitted two bids, one of which was in strict conformity with the proposals and the other offering to do the work at a less cost, but securing to him a preference right to a lease of practically the eastern half of the reserve. (Rec. pt. 4, p. 1003.) His alternate proposal was accepted and the contract entered into accordingly under date of April 25, 1922. The negotiations for this contract were carried on simultaneously with those culminating in the lease of naval reserve No. 3. Some of the reluctance to give to the public information concerning the execution of that lease was attributed to a desire to make it and the Doheny contract above referred to public at the same time. Whether this was due to an appreciation that disapproval of the new policy might make it impracticable to complete the Doheny contract is a matter of speculation. On December 11, 1922, in the same secret manner as characterized the execution of the lease of naval reserve No. 3, a lease of the entire naval reserve No. 1 was executed to the Pan American Petroleum Co., another Doheny organization, under which it agreed to pay royalties ranging from 12½ to 35 per cent. (Rec. pt. 4, p. 1184.) A supplemental contract provided for the construction of tankage by the lessee company, to be paid for out of the royalty oil accruing under the Doheny lease, identical in its essential features in that respect with the provisions of the Sinclair lease.

Under this lease the lessee became entitled at will to drill all that portion of the reserve to which Doheny had acquired the preference right by his contract of April 25, 1922, and as well all sections adjacent to section 36, hereafter to be referred to in some detail, in the very heart of naval reserve No. 1. The remainder of the reserve—that is, the western portion—he could drill only upon request to the Navy Department, the effect of this provision being that if the department should, 25, 50, or 100 years hence, deem it advisable to take the oil out, the Doheny company or its successor must perform the task, the Government receiving only such royalty as is provided in the lease, a return that may or may not be adequate when the extraction actually takes place.

The conditions giving rise to this lease are of such supreme importance as to require detailed attention. There was here no impending loss from drainage. That situation had been taken care of by the lease of July 12, 1921, under which the 22 offset wells had been drilled, and by other leases of relatively small tracts upon which offset wells had been or would be drilled to meet operations that had been conducted or were being conducted outside the reserve and by an agreement which had been entered into with parties owning lands within the exterior boundaries of the reserve for a suspension of drilling operations to be renewed only upon six months' notice. It is frankly admitted that the lease in question was executed because the Navy Department had evolved an entirely new policy, concluding that the wiser plan would be to take the oil out of the ground and store it in tanks at the seaboard. (Rec. pt. 4, p. 928.) Carrying out this plan, which included the construction of the storage works at Pearl Harbor, it transpired that the royalty oil coming to the Government was not sufficient to meet the current expenditures incident to the prosecution of the construction program, and the Doheny lease was executed, the committee was told by Admiral Robison, in order that there might be available a more abundant quantity of royalty oil with which to meet the accruing obligations. (Rec. pt. 4, pp. 928, 972.) Two circumstances disclosed by the testimony have an important bearing upon the good faith back of the reason thus assigned:

First. During the war Robison was in command of a ship at Pensacola, Fla., of which the son of Doheny was a junior officer. The elder Doheny visited his son while the ship was at that port and in that connection he became acquainted with Robison. In the intimacy bred by this association, the naval oil reserves became the subject of conversation, in the course of which Doheny expatiated upon the unwisdom of the policy which had been pursued by Secretary Daniels with such effect that Robison, who theretofore had no connection whatever with the reserves nor any special information about oil matters, entered upon the discharge of his duties as Chief of the Bureau of Engineering with a settled conviction that the policy which had been pursued was unwise and that the oil should be taken out of the ground as speedily as possible and stored in tanks at the seaboard. (Rec. pt. 4, pp. 925, 949.)

Second. There has been no substantial production under the lease of December 11, 1922, and only three wells have been drilled within the territory covered by it, all of the production under any of the Doheny leases coming from the territory covered by the relatively small leases. The wells which are drilled penetrate the ground in the remote southeastern part of the reserve, the rich character of which was demonstrated by wells immediately beyond. The first of these leases, that of July 12, 1921, pays a royalty of 55 per cent, the average royalty under these leases covering an area of 1,108 acres, being about 28 per cent. (Rec. pt. 4, p. 1154.) In view of the lack of development of the area covered by the lease of December 11, 1922, embracing the greater portion of the reserve, it is impossible to estimate with any degree of accuracy the average royalty which would be yielded by the entire reserve under the lease. (Transcript May 8, 1924, p. 7174.)

It should be stated in this connection that neither the Secretary of the Navy (Rec. pt. 2, pp. 299, 307) nor the Assistant Secretary (Rec. pt. 2, p. 401; pt. 3, p. 419; pt. 5, p. 1300) had any part whatever in the negotiations resulting in the execution of the leases here being canvassed, or, for that matter, in those culminating in the Sinclair lease. Neither of them, when on the stand, was able to give the committee any information concerning the leases of naval reserve No. 1 or of the conditions leading up to the execution of them or of the circumstances and conditions inducing them. The Secretary had no knowledge, when on the stand, that any lease of naval reserve No. 1 had been executed, though the instrument itself bears his signature. (Rec. pt. 5, p. 1283.)

FALL'S FINANCIAL TRANSACTIONS

The taking of testimony began with the examination of Secretary Fall, who was subjected to a somewhat searching inquiry extending over a period of two days. It was disclosed in his examination that shortly after quitting the office of Secretary of the Interior on March 4, 1923, he made a trip to Europe with Sinclair as counsel for him and associates interested in securing oil concessions from the Russian Government (Rec. pt. 2, p. 271), and that he had also, after leaving office, acted in an advisory capacity for Doheny. (Rec. pt. 2, p. 274.) The circumstances of the employment of Fall for the European trip were peculiar (Rec. pt. 6, p. 1831). One J. W. Zevely, an attorney with offices in Washington, D. C., and a home on Long Island, N. Y., costing in the neighborhood of $100,000, acquired through funds loaned to him by Sinclair, had acted for some years as a kind of confidential man and attorney for Sinclair and had been associated with him as such in all of the transactions here narrated. Zevely made a trip from New York to Three Rivers, N. Mex., to convey to Fall Sinclair's desire that the late Secretary should accompany him on his Russian quest as counsel. Fall acceded and was paid $10,000 to cover his expenses on the trip. While at Three Rivers he confided to Zevely that he needed $25,000 or $30,000 for some purpose not disclosed, and on his return to New York, the fact being communicated to Sinclair, he directed that Liberty bonds or the proceeds of them to the amount of $25,000 should be loaned to Fall. They were, accordingly, sent by express, the loan being evidenced by a note to Zevely. (Rec. vol. 6, p. 1831.)

Fall left the stand without having disclosed that after his letter of June 3, 1922, had been written the whole of naval reserve No. 1 had been leased to E. L. Doheny as heretofore stated. The facts came to the attention of the committee quite accidentally upon its request of the Interior Department for maps of the reserves in question showing the leases which had been executed of the areas within them. About the same time there came to the knowledge of one of the members of the committee the fact that an enterprising newspaper had, in the summer of 1922, sent to New Mexico a reporter to investigate the alleged rise of Secretary Fall from a condition of financial embarrassment to relative affluence. The investigator came to Washington at the invitation of the committee and brought with him the report of his investigation made to his paper at the time but which, for some reason, was never published.

In consequence of information secured through him and the report, witnesses were brought before the committee from New Mexico who, with official documents, brought to light that, whereas Senator Fall, who was engaged in the ranching and cattle business, had been in straitened circumstances and had not paid his local taxes for 10 years, he had during the latter part of the year 1921 and the early part of 1922 purchased property in his neighborhood and made improvements in his holdings involving an expenditure of from $175,000 to $200,000, and that in particular he had purchased the property adjacent to his own, known as the Harris Ranch, for which, with the cattle and equipment appurtenant thereto, he had paid $91,500, the initial payment of $10,000 taking place in El Paso, Tex., having been made in bills taken by him from a tin box in which there was other currency.

This testimony was presented to the committee on the 3d day of November, 1923, at which time Fall was in New Mexico. He sent word to the committee that his son-in-law, one C. C. Chase, who was entirely familiar with his business affairs, would shortly appear and explain the transaction satisfactorily. (Rec. vol. 6, p. 1701.) Chase did not present himself, and Fall reached Washington some time after the middle of December, coming by way of Chicago, New York, and Atlantic City, explaining his delay in appearing by the representation that he was ill. On December 27 he sent a communication to the committee pleading illness as an excuse for not appearing in person, in which communication he informed the committee that the money with which he purchased the Harris Ranch had been loaned to him to the extent of $100,000 by one Edward B. McLean, of Washington, D. C., and referring to banking connections at Pueblo, Colo., intimating, without definitely asserting, that he had secured further funds to meet the additional expenditures proven to have been by him made from that source. (Rec. pt. 5, p. 1429.) Thereupon Mr. McLean, who was at that time in Palm Beach, Fla., made repeated requests to the committee to be excused from appearing as a witness on account of his ill health and illness in his family, and asserted that he had, in the latter part of November, 1921, loaned Fall $100,000. (Rec. pt. 5, p. 1453.) His testimony was taken by a member of the committee at Palm Beach on the 11th of January, 1924, when he repudiated his former statement and admitted that he had not made the loan or any loan to Fall, asserting in that connection that Fall having applied to him for a loan he gave to Fall his checks for the sum named, but that the latter a few days later returned them, saying that he had arranged to secure the money elsewhere. (Rec. pt. 6, p. 1694.) Fall, who was at that time himself in Palm Beach, a guest of McLean's, in a letter to the examining member of the committee, confirmed the testimony given by Mr. McLean. (Rec. vol. 6, p. 1699.)

Thereafter, on the 24th day of January, 1924, E. L. Doheny appeared before the committee and testified that he had, on November 30, 1921, loaned to Fall $100,000. (Rec., pt. 6, p. 1771.) Your committee ventures no opinion as to whether the transaction was in fact a loan or whether it might more appropriately be otherwise denominated. Fall and Doheny were friends, or at least acquaintances, in the mining camps of the Southwest many years ago. The latter had prospered to such an extent that he was able to say, and perhaps truthfully, that such a sum as $100,000 was in the nature of a bagatelle to him. He insisted that he let Fall have the money in consideration of old associations and commiseration for the reverses financially which had befallen his friend of other days. The money was delivered to Fall in cash by the son of Doheny, who brought it from New York, where is the main office of Doheny's companies, to Washington in a satchel, the money having been secured from the bank upon the check of the younger Doheny under an arrangement with his father. (Rec., pt. 6, p. 1779; pt. 7, p. 1923.)

It appeared that two days before the money was delivered Doheny had written a letter to Fall in which the contract for the construction of the tanks at Pearl Harbor was discussed, and Doheny signified his desire and purpose to bid on the contract. (Rec., vol. 7, p. 1914.) Doheny stated that he expected the loan to Fall would eventually be paid by legal services. (Rec., pt. 6, p. 1807.)

Though the committee refrains, as indicated, from characterizing the transactions referred to, it does not hesitate to condemn it as, in the last degree, reprehensible on the part of all concerned in it. The essentially corrupt character of a loan made under such circumstances requires no comment. It would be impossible for an officer to accept a loan of such an amount, or perhaps of any amount, under the circumstances without a sense of obligation to the lender, which, unless his character was cast in heroic mold, would be revealed in subsequent official transactions with him. Its sinister import is appreciated when it is borne in mind that, without competitive bidding, as heretofore explained, Doheny got from Fall, in the month of April following, the contract for the construction of the tanks at Pearl Harbor, and with it a preference right to a lease of a large share of naval reserve No. 1, to be followed, without competitive bidding, by a lease of the entire reserve, comprising over 30,000 acres, estimated to contain 250,000,000 barrels of oil, out of which, Doheny told the committee, he would be in bad luck if he did not make $100,000,000 profit. (Rec., vol. 4, p. 1013.) It should be added here that Fall's son-in-law, C. C. Chase, then collector of customs at the port of El Paso, Tex., did come to Washington, as Fall said he would, stopping on the way at Cleveland, Ohio, to persuade another old friend of Fall to testify before the committee to the effect that he had loaned to the latter the money with which to buy the Harris ranch, conformably to a request made in a letter by Fall to the gentleman in question, with which the latter promptly declined to comply, as he told the committee on the stand. (Rec., vol. 11, p. 2762.) It was further disclosed that on the invitation of Fall, Mr. McLean, above referred to, met him at Atlantic City, and that it was there agreed upon between them, at the instigation of Fall, that McLean and he should both advise the committee as they did, that McLean had made the loan which enabled Fall to buy the Harris ranch. (Rec., vol. 11, p. 2684.)

Having heard the testimony of Mr. Doheny concerning the alleged loan of $100,000 to Fall, the latter was again called by the committee. Pleading illness, he sent his physicians to inform the committee of his inability to attend, whereupon it sent three others of its own choice to inquire into his condition. These reporting that he was physically able to appear, he was required to attend and, appearing, challenged the right of the committee to proceed because, among other reasons assigned, its authority was derived from a Congress which had expired, and at the same time he claimed immunity from testifying upon the ground that any evidence he might give might tend to incriminate him. The confirmatory resolution of the Senate before referred to was then adopted, and upon the witness being recalled he stood upon his constitutional right and was excused.

SECTIONS 16 AND 36

In the very heart of naval reserve No. 1 is section 36, township 30 south, range 23 east. Along the northern boundary line is section 16, in the same township and range, both of which, were they nonmineral, would have passed at the time they were surveyed to the State of California by virtue of an act of Congress granting to that State for educational purposes, if nonmineral, sections 16 and 36 in each township within its boundaries. The peril of drainage of naval reserve No. 1 springs in very large part from the existence of wells on section 36, referred to, claimed by the Standard Oil Co. of California, which has extracted oil from it of the value, as reported by a representative of the Interior Department, of at least $10,000,000. If the areas mentioned were, at the time the survey of them was approved by the Department of the Interior, known or at least generally recognized to be mineral in character, they remained the property of the United States. If they were not then so known or recognized, they passed to the State of California. The survey was approved January 26, 1903. Prior thereto,

in the year 1900, it being represented to the department that lands were being appropriated in that section of California as agricultural in character when, as a matter of fact, they were valuable for the oil in them, an order was issued pursuant to the authorized practice of the Land Office withdrawing from agricultural entry very extensive areas embracing all of what afterwards became naval reserve No. 1, with a view to the classification of the same as mineral or agricultural, as the facts warranted. (Rec. pt. 5, p. 1470.)

The surveyor who undertook to lay out the township and section lines in view of the representations that had been made, gave more than ordinary attention to the character of the land. (Rec. pt. 5, p. 1470.) He noted upon his plats and reported in his field notes that section 36 was mineral in character. (Rec. pt. 5, p. 1470.) Meanwhile an agent of the department, one Ryan, was sent into the field to examine into the character of the land. On the 22d day of March, 1904, he filed a report that a considerable area theretofore withdrawn from entry, as stated, including section 36 and adjacent territory, was nonmineral in character. Whereupon, on the 5th day of April, 1904, the order of withdrawal was recalled as to the area so reported to be nonmineral. (Rec. pt. 5, p. 1517.) The State of California, apparently relying upon the return of the surveyor and the mention of the character of the land appearing on the plats prepared by him, alleging that section 36 was mineral in character, filed an application in the Land Office asking to be permitted to select other lands in lieu of said section 36, a right it was entitled to exercise under the granting act, if that section was indeed mineral in character. (Rec. pt. 5, pp. 1475–1477.) This application was denied upon the ground that the lands applied for had already been appropriated and the motion was amended so as to be directed to other tracts, section 36 as a base having been withdrawn by an amended application filed in 1905. (Rec. pt. 5, p. 1481.)

No action seems ever to have been taken on the amended application, but in the year 1908 the State, assuming to be the owner of the section, issued certificates of purchase for it to certain parties believed to represent the Standard Oil Co. of California. (Rec. pt. 5, p. 1481.) However the fact may be as to their representative capacity, their interests were shortly thereafter transferred to that company to which a deed of patent of the section was issued by the State on the 20th day of January, 1910. (Rec. pt. 5, pp. 1336, 1481.) Subsequently action was begun by the Government against the Southern Pacific Railroad Co. which had secured patents of all or nearly all the odd-numbered sections within the reserve under its grants from the Government upon its representation that the lands were nonmineral in character, to annul such patents and recover the land, the Government charging that at the time the patents were issued, or rather at the time the lands were surveyed, the lands were mineral in character and known to be such by the railroad company. (Rec. pt. 5, p. 1258.) A representative of the Government investigated the facts upon which such statements were predicated, and particularly the geological facts equally applicable to section 36. If they warranted a recovery of the lands patented to the Southern Pacific Railway Co. adjacent to section 36, they equally warranted proceedings for the recovery of section 36. An elaborate report of the facts was transmitted from the office of the chief of the field service at San Francisco to the Commissioner of the General Land Office setting out the facts and recommending that appropriate proceedings be instituted. (Rec. pt. 5, p. 1481.) Promptly the department sent directions to the local officers at Visalia, Calif., within whose district the lands in question are situated, to notify the State of California and the claimants under it to appear at a hearing ordered to determine whether the lands were, in fact, known to be mineral at the time the survey was approved. (Rec. pt. 5, p. 1482.)

The chief of the field service at San Francisco was likewise directed to attend and take charge of the hearing on the part of the Government. This order issuing under date of January 14, 1914, under the rules of the department it became the duty of the land officers at Visalia and of the chief of the field service at San Francisco to report every six months to the General Land Office the status of all proceedings of the nature of that above referred to and the progress made therein. It was the duty of an officer of the General Land Office to keep a record of such proceedings and to note thereon the status of the same, checking up every six months. Notwithstanding this, the whole affair was overlooked for a period of seven years (Rec. pt. 5, p. 1322), until, on the 2d day of February, 1921, the chief of the field service at San Francisco wrote the Commissioner of the General Land Office to the effect that the papers in the case had been accidentally found in the "closed files" where they had been inadvertently placed instead of being deposited among the "open files." Thereupon the subject was considered by the Commissioner of the General Land Office, Clay Tallman; the Secretary of the Interior, John Barton Payne, and the Assistant Secretary, E. C. Finney, with the result that instructions were issued to the local officers to proceed with the hearing as theretofore directed. (Rec. pt. 5, pp. 1324, 1488.) At the same time the Standard Oil Co. was withdrawing oil from the tract through its wells, and the entire record of the case was transmitted to the Department of Justice for consideration, with the suggestion that it might be advisable, in the interest of the Government, to secure an injunction restraining a further depletion of the property pending the determination of the question of title. (Rec. pt. 5, p. 1249.) This communication came to the Department of Justice toward the middle of the month of February, 1921, and was referred to one of the Assistant Attorneys General charged with duties in connection with the disposition of the public lands. (Rec. pt. 5, p. 1322.)

He, on March 30, 1921, submitted to his chief a memorandum reciting the salient facts and recommending the institution of proceedings for the procurement of the necessary injunction, but was directed by the Attorney General not to proceed therein until he, the Attorney General, could find an opportunity to confer with his assistant. (Rec. pt. 5, p. 1251.) At that time the demands on the Attorney General incident to his assumption of the duties of the office were heavy. It may or may not be of significance that the desire of the Attorney General in the matter was carried to his assistant by an officer or attorney of the Standard Oil. (Rec. pt. 5, p. 1251.) At this juncture the attorney for that company filed a motion before the Secretary of the Interior to dismiss the entire proceedings. This motion was argued before Secretary Fall on the 8th day of June, 1921, by the attorney for the Standard Oil, representatives of the Navy and of the Department of Justice attending upon notification by the Secretary. (Transcript, April 24, 1924, p. 6814.) Upon the conclusion of the argument for the motion, the Secretary inquired of those present whether the facts were as stated by Mr. Sutro, the attorney making the argument for the Standard Oil. The response came to the effect that the facts were substantially as represented, whereupon the Secretary announced that the motion was granted. (Transcript, April 24, 1924, p. 6842.) The facts, however, as stated by the attorney, were such only as were relevant to two legal propositions advanced by him in support of his motion: (1) That the Ryan report and the action taken by the department thereon in canceling the order of withdrawal, so far as section 36 was affected thereby, was a conclusive determination by the department that the lands were nonmineral in character; (2) that no discovery having been made within the bounds of section 36, it could not be held to be mineral in character, however persuasive might be the evidence concerning the geological conditions and the discovery of oil within the structure, but without the limits of the section in question. (Rec. pt. 5, p. 1329.)

No argument of the law was asked by the Secretary from any one representing the Government, and the committee was told by Mr. Finney (Rec. pt. 8, p. 2258), who was present and who, as above stated, is as familiar with the law in relation to the disposition of public lands as any man in America, that, in the first place, such an extraordinary exercise of the supervisory power of the Secretary is wholly unknown in the practice of the Land Department (Rec. pt. 8, p. 2261); no precedent for it was known by any one so far as the committee was able to learn; and, second, that both legal propositions upon which the argument of Mr. Sutro was founded are controverted by Mr. Finney. Your committee believe both to be unsound. (Rec. pt. 8, p. 2257.)

The inquiry into this feature of the history of the reserve developed some related facts of importance in connection with it and of very great public interest. Reference was made above to the institution of suits against the Southern Pacific Railroad Co. to cancel patents for lands adjacent to section 36 and within the exterior boundaries of the reserve. The important question in the suits named was identical with that which is determinative of title to section 36, namely, was the land in question known to be mineral in character at the time of the approval of the survey? One of these suits relative to lands west of a range line cutting the reserve near its middle (parts of secs. 17 and 19, and all of secs. 15, 21, 23, 25, 27, 29, 33, and 35, T. 30 S., R. 23 E.), was tried in the United States District Court for the Southern District of California, Judge Bean presiding, and was decided in favor of the Government (Rec. pt. 16, p. 1857). An appeal was taken to the circuit court of appeals (249 Fed. 785; Rec. pt. 5, p. 1566), where the judgment was reversed and the title of the Southern Pacific affirmed, the conclusion being reached by that tribunal that the evidence did not establish the mineral character of the land at the time of the survey.

An appeal was then taken to the Supreme Court of the United States (251 U. S. 1; Rec. pt. 5, p. 1587), where the judgment of the circuit court of appeals was reversed, the judgment of the district court affirmed, the patents were ordered canceled, and the land reverted to the United States and now forms an integral part of the reserve. In the other suit (260 Fed. 511; Rec. pt. 5, p. 1581) similar relief was sought as to three sections of land (secs. 29, 31, and 33, T. 30 S., R. 24 E.), within the reserve east of the range line, the survey of which was approved about the same time as the survey of the lands which were the subject of the other suit. (Rec. pt. 5, p. 1533.) Suit No. 2 was directed toward lands outside the reserve as well as to the three sections above mentioned, the lands outside having been

surveyed a number of years before, while those within the reserve were platted at or about the same time as the tracts involved in suit No. 1. That suit came on for hearing before Judge Bledsoe after the decision in suit No. 1 by the circuit court of appeals, but before the decision by the Supreme Court of the United States. Upon the authority of the decision of the circuit court of appeals, which was binding upon Judge Bledsoe, he decided the case tried before him against the Government, denying relief as to the three sections within the reserve as well as to the tracts without. No appeal was taken from that decision, though the time for appeal had not expired when the decision of the Supreme Court was rendered in suit No. 1, and the facts as to the tracts within the reserve involved in suit No. 2 were substantially identical with the facts upon which the Supreme Court ruled that the lands involved in suit No. 1 belonged to the United States.

The Bean decision was rendered on the 9th day of June, 1915, the circuit court of appeals decision was rendered on the 6th day of May, 1918, and the case ultimately decided by the Supreme Court on the 17th day of November, 1919. (Rec. pt. 5, p. 1587.) The Bledsoe opinion was filed on the 28th day of August, 1919 (Rec. pt. 5, p. 1581), so that there remained approximately nine months after the decision of the Supreme Court of the United States in suit No. 1 within which an appeal might have been taken by the Government from the adverse decision in suit No. 2. It is the opinion of your committee that had such an appeal been taken there would have been preserved to the United States and to the Navy these three sections believed to be of very great value. Had these three sections been so preserved and the title of the Government to section 36 been diligently asserted and maintained, the problem of drainage, so far as naval reserve No. 1 is concerned, would be relatively simple. For a more complete understanding of the matters here discussed there is appended a map of naval reserve No. 1.

NAVAL RESERVE NO. 2

Naval reserve No. 2 is a checkerboard; that is to say, every alternate section within it passed by the grant to the Southern Pacific Railway Co., patents having issued some years, if not many years, before the mineral character of the land was generally known; at least it was so held by the courts after protracted litigation. The areas, title to which had passed from the Government, were being constantly drilled, and the advisability of securing as much oil as possible as speedily as possible from the lands still held by the Government was recognized on all hands. Leases of producing wells and of claims asserted under the placer mining law, embracing areas within the sections to which the Government retained title, were freely awarded after the passage of the act of February 25, 1920, by the Wilson administration, and the policy thus inaugurated was continued under the administration of President Harding until all the lands within that reserve were leased. The following is a list of the leases awarded, with the names of the present holder and the royalty paid under each lease:

| Lease No. | Present holder | Acres | Royalty |
|---|---|---|---|
| VISALIA | | | Per cent |
| 09174(b) | Boston-Pacific Oil Co | 160 | 12½–25 |
| 09175 | do | (1) | 25 |
| 09208 | Honolulu Consolidated Oil Co | 3,057.27 | 12½–25 |
| 09233 | Union Oil Co. of California | (1) | 12½–25 |
| 09233(b) | do | 320 | 12½–25 |
| 09296(b) | General Petroleum Corporation | 80 | 12½–25 |
| 09305 | Buena Vista Oil Co | (1) | 12½–25 |
| 09312(c) | Consolidated Mutual Oil Co | 280 | 12½–25 |
| 09313(c) | United Oil Co | 80 | 12½–25 |
| 09314(b) | Caribou Oil Mining Co | 80 | 12½–25 |
| 09315(b) | Record Oil Co | 40 | 12½–25 |
| 09334(b)–010177–78–79–80 | North American Oil Consolidated. | 1,385.62 | 12½–25 |
| 09495(a) | Buena Vista Oil Co. and Union Oil Co. | 40 | 12½–25 |
| 09495(b) | Boston-Pacific Oil Co | 40 | 12½–25 |
| 010026 | Associated Oil Co | 1,080 | 12½–25 |
| 010026(a) | do | 160 | 12½–25 |
| 010037 | Murvale Oil Co | 1,281.38 | 12½–25 |
| 010092 | United Oil Co | 320 | 12½–25 |
| 010181 | North American Oil Consolidated | 320 | 12½–25 |
| N. R. 21 | Naval Reserve Oil Co | 320 | 12½–61 |
| N. R. 22 | Equitable Petroleum Co | 640 | 12½–56 |
| N. R. 23 | A. H. Heller | 480 | 25–30 |

[1] Well lease.
(Rec., vol. 4, p. 1155.)

No information has come to the committee suggestive of any impropriety in any of these leases, save as hereinafter stated.

The Honolulu company has been awarded leases within the reserve aggregating 3,057 acres. That company, some years prior to the termination of the Wilson administration, applied for patent to 17 mining claims. (Transcript, May 1, 1924, p. 7113.) This application was approved by the then Commissioner of the General Land Office, Clay Tallman, as to 13 of the claims embraced in the application and denied as to 4. (Transcript, May 1, 1924, p. 7113.) His conclusion was approved by the then Secretary of the Interior, Franklin K. Lane (Transcript, May 1, 1924, p. 7114), but before the patents were issued President Wilson directed that the case be reheard. (Transcript, May 1, 1924, p. 7115.) Testimony was again taken before the local land officers, who advised against the issuance of patents, but their decision was reversed by the Commissioner of the General Land Office, whose decision came before Secretary Payne for review. He reversed the decision of the commissioner and denied the application. (Transcript, May 1, 1924, p. 7116.) A petition for rehearing was filed agreeable to the practice of the land office, which appeal was pending when Secretary Fall took office. He filed an opinion in which he asserted that were the matter one of first impression he would grant the application for patents as ruled by the Commissioner of the General Land Office, but that he would not disturb the decision of his predecessor. He accordingly denied the petition for a rehearing, but directed that leases be granted to the Honolulu company under the provisions of the act of February 25, 1920. (Transcript, May 1, 1924, p. 7117.) The leases signed by Secretary Fall were accordingly executed. The Secretary of the Navy did not participate in the execution of these leases.

It will be recalled that the only power reposed in the Secretary of the Interior under the act referred to was to grant leases of producing wells. (Rec. pt. 2, p. 440.) The Honolulu company leases were not of that character; they were of areas. The act mentioned authorized the President, indeed, to grant leases of claims within which leases of producing wells had been awarded, but, as stated, no leases of producing wells had been made to the Honolulu company, and the leases were neither signed by President Harding nor authorized by him, so far as the record discloses. (Transcript, May 1, 1924, pp. 7120–7122.) There is no written evidence that he had any knowledge of the leases. They seem to have been awarded without any authority of law; but the members of the committee have been informed, as perhaps the fact is, that the right of possession to the lands in question having been asserted by the Honolulu company in litigation pending in the State of California, to which the Government was a party, a decree was entered adjudicating that the Honolulu company is entitled to the possession of the property under the lease mentioned.

The committee contented itself, as to the leases of the Honolulu company, with an inquiry simply into the facts of record, it being directed by a separate resolution of the Senate to prosecute a full inquiry into the circumstances attending the execution of the leases mentioned.

The utter disregard of the law with unwarranted assumption of authority on the part of the Secretary of the Interior in connection with the leases referred to was not peculiar. Throughout the transactions here reviewed a seeming contempt for the restrictions placed by Congress upon the disposition of the great properties involved and what was generally regarded as fundamentals of the law is manifested. In no particular was there a graver abuse than in the incident now to be narrated.

EMPLOYMENT OF THE MARINES

The lease of the Teapot Dome having been executed, the Mammoth Oil Co. having taken possession of the property acquired by it under its lease and having entered upon its drilling operations, parties asserting title to 160 acres within the reserve, under one of the flagrantly baseless mining claims hereinbefore referred to, entered into an operating agreement with the Mutual Oil Co., which entered upon the tract in question, set up a drilling rig, and penetrated the ground to a distance approaching the oil-bearing sands. (Rec., vol. 11, p. 2799.) In that situation Secretary Fall instigated Assistant Secretary Roosevelt, Secretary Denby then being in the Orient, to direct Major General Lejeune, commandant of the Marine Corps, to send a squad of his command from the city of Washington to naval reserve No. 3 in the State of Wyoming to eject the Mutual Oil Co. as a trespasser. (Rec., pt. 11, p. 2723.) The story was first related to the committee by the officer to whom the job was intrusted, Maj. George K. Shuler, at present treasurer of the State of New York. (Rec., pt. 4, p. 1054.) He was directed by Lejeune to see Fall for instructions. Having been told by the latter what it was he was expected to do, Fall inquired of him what he would do if an injunction issued out of the United States court for Wyoming were served upon him. Like a true soldier he answered that he would obey the instructions of his superior officer and execute his command. (Rec., vol. 4, p. 1056.) This reply commended him to the Secretary, who grew communicative and told him that he had found it difficult to persuade the President to authorize the course that was to be pursued, but he had that morning yielded. (Rec., vol. 4, p. 1055.)

Shuler proceeded to the reserve with four privates, and though there was some mild protest on the part of the officers of the State of Wyoming and naturally some reluctance exhibited on the part of the company engaged in drilling, he succeeded by a mere display of force in bringing about a suspension of the operations of the intruding company. (Rec., vol. 4, p. 1057.)

Your committee does not hesitate to denounce this proceeding as a perfectly outrageous use of the armed forces of the United States. The civil arm of the Government was unquestionably equal to the

emergency. The United States District Court for Wyoming was open to the Government. Immediately upon the institution of proceedings in ejectment against the intruders, the court would have awarded an injunction restraining them from extracting any oil from the ground until, in due course, the question of their right could be determined. What the decision must necessarily have been could not have been doubtful. The United States marshal was unquestionably able to enforce any decree which the court might render. It is perfectly obvious that the procedure followed was pursued to avoid a judicial inquiry into the validity of the Sinclair lease. If suit were filed by Sinclair, claiming the right to the possession of the property under his lease, the validity of that lease would be immediately brought into question, inasmuch as every litigant must recover upon the strength of his own title, not upon the weakness of that of his adversary. For the same reason if the intruders could be ejected from the premises and forced thus to institute suit to regain possession their title would first come into question, and, as they had none which could be sustained, the validity of the Sinclair lease would not be passed upon.

In some correspondence between the Secretary and the President on this subject (Rec. pt. 11, p. 2935) an attempt is made to defend the proceedings or to justify them upon the ground that the situation is quite like the case of one who intrudes upon a navy yard or an Army post, or even an outsider who attempts to occupy a room in the State, War, and Navy Building, but even the writer of the letter could not have been deceived by any such supposed analogy. The navy yard, for instance, is actually occupied by officers and men of the Navy and by buildings within which the operations under their direction are carried on. The department building is occupied throughout by representatives of the Government, including watchmen and caretakers. No representative of the Government, certainly no representative of either the Army or the Navy, was in actual occupancy of naval reserve No. 3, or any part of it. Except for the operations being carried on by Sinclair, it was like any similar portion of the vast public domain—unfenced, no buildings on it, nothing whatever to indicate its occupancy by the Government. In substance, the armed forces of the United States were placed at the disposal of Mr. Sinclair to avoid the embarrassment which might come to him through a lawsuit to eject trespassers upon property leased to him by the Government.

THE LEASES AS GOOD BARGAINS

A disposition is evinced in some quarters to dismiss or overlook the very suggestive circumstances shown in the hearings indicating corruption in connection with the Sinclair and Doheny leases, the flagrant disregard of the law and the unwarranted assumption of authority that attended their execution, the abandonment of the settled policy of the Government evidenced by them, to inquire as to whether they are or are not excellent bargains viewed from the standpoint of the Government. These efforts invariably arriving at or pointing to the conclusion that they are such are obviously designed to divert attention from or to overcome the effect upon the public mind of the features of the transactions above referred to.

Your committee can not believe that a lease under which the Government receives 6 per cent of the oil in the ground and the lessee gets 94 including what it receives on account of the construction of tankage can possibly be in the interest of or just to the former. Had the leases been awarded upon competitive bidding, there would have been no occasion to inquire whether they are or are not fair or just to the Government. Such a test would have conclusively established the fact. The omission to invite competition casts a suspicion on the transaction as being in the interest of the Government. Even if the law does not require that such a contract be let upon competitive bids, business prudence would dictate that such a course be followed, as it was followed in the case of some of the minor leases of areas within the two California reserves.

If the Secretary of the Interior consulted with anyone competent from experience in affairs of such magnitude to advise him concerning the terms of the lease, viewed as a business proposition, the fact was not divulged. Evidently he conceived himself quite competent unaided to negotiate with such veterans in the oil business as Sinclair and Doheny. It is true he conferred with officials of the Bureau of Mines, technical men not chosen by reason of their skill or success in business.

Not only was the Teapot Dome lease awarded to Sinclair without competition, but he paid a fabulous price to procure the elimination of a potential rival. One seeking only a fair contract from the Government does not buy off his competitors; neither does he, when he secures it ordinarily, submit to blackmail in connection with it; nor does he, while negotiations are pending, accommodate the awarding officer with loans or gifts.

It is of little consequence that the royalty mentioned in the leases is approximately or even that it may be higher than that stipulated in leases between private individuals or companies. Not to mention other considerations under the Sinclair lease, he purchases without competition the royalty oil of the Government, paying the current price. Upon competitive bidding the royalty oil accruing to the Government from leases of areas in the adjacent Salt Creek field was sold at a price greatly in excess of the current market price. Sinclair likewise secures the opportunity, should the Secretary of the Navy choose to exercise an option accorded him by the contract, to supply the Navy with oil products, of which it requires great quantities, at the market price. Considering the reasonableness of the royalties in his lease stipulated, it is just to institute a comparison with those paid to the Government under leases covering the immediately adjacent territory in the Salt Creek field. They were awarded June 15, 1921, upon competitive bidding, the royalty being fixed at either 25 per cent or 33⅓ per cent flat, the bidders offering bonuses, in one instance as high as $1,412.50 per acre and bringing the Government an aggregate above the royalty of $1,687,000 for 6,400 acres in all. (Rec., pt. 4, p. 1112.)

There were, furthermore, 22 of such leases, embracing 40 tracts of limited areas, not permitting the economies resulting from unified control and mass production capable of being exercised under the Sinclair lease. It is doubtful whether a lease of an area of proven territory equal to that covered thereby or by the Doheny lease is known in the history of oil production, and comparison with the terms of leases of relatively small tracts is likely to be deceptive.

Notwithstanding better terms can ordinarily be secured for leases of larger areas, Congress has deemed it wise to limit the acreage of oil land which may be leased to any individual or corporation at least as one transaction, fixing 4,800 acres in the case of Indian lands and 640 acres under the act of February 25, 1920.

The act of June 4, 1920, placed no limitation upon the area that might be embraced in a lease or upon the area that might be leased to a single individual, but the policy of Congress was clearly evinced in the acts referred to.

It is pertinent to remark in this connection that whatever drainage might take place from naval reserve No. 3, had it not been leased or protected by offset wells, would have swelled the production of the wells on the tracts to the north so leased. In other words, the Government would be entitled to, and would have received, a royalty of 25 or 33⅓ per cent instead of 16-odd, which it receives under the Sinclair lease. It is true that the royalty would not accrue to the benefit of the Navy but would be deposited in the fund established by the act of February 25, 1920, to be distributed as therein provided, in part to the General Treasury, the reclamation fund, and the State of Wyoming, but Congress would have full power at any time to provide that an equitable portion of the royalty paid on leases, the production of which was enhanced by drainage, should inure to the benefit of the Navy.

But the entire discussion to which reference has been made proceeds upon a false basis. It might be admitted that were the property in question owned by an individual or individuals, personally or as stockholders of a corporation, the lease would be fair. The individual owner has no object in view except to get the most money he can out of the property and to get it as soon as he can. In the course of nature he must die, and dying he may never enjoy any benefit from the property.

The Government, unlike the individual, never acquired or rather reserved the property in question with a view to make money out of it. The Government is not impelled to realize on it in anticipation of death. It was reserved with a view to its exhaustion at some time in the future when, by reason of the inability to meet the demands of the Navy from other sources, the price should soar to a prohibitive level. It is in view of that idea that the subject of the business sagacity manifested in these leases must be considered.

It is said that it is better for the Government to get even 6 per cent than to have the whole deposit lost by drainage. Quite true, but no one has ventured to say that the whole treasure would be lost. Reference has been made to the testimony of Mr. Clapp to the effect that a loss of 4,000,000 barrels of the 26,000,000 in the Teapot Dome might be anticipated. (Rec. pt. 3, p. 755.) Might not that loss be better suffered than to be content with only 1,666,666 barrels of fuel oil in tanks at the seaboard to be held there for an indefinite time and, so far as human foresight may go, may remain stored for a century? It is to be borne in mind that the storage tanks are frightfully expensive works. The money invested in them will double itself at 4 per cent compound interest, payable semiannually, three and a half times in 25 years, and in a century would reach a fabulous sum. The private owner of oil lands assumes no such burden when he disposes of his property reserving a royalty in kind. He contemplates the immediate disposition of his oil, not to hold it for perhaps a century.

It is a question of the utmost gravity whether, under the circumstances, it would not be the wiser policy to suffer some depletion of the reserves through drainage than to realize but 16 per cent of their content, two-thirds of which is paid out for containers in which to store the other one-third. That is a question of policy which should have been determined by Congress. It may be the wiser course, as advocated by Admiral Robison, to take the oil out of the ground

and store it in tanks at the seaboard where it will be available for immediate use in an emergency, but Congress is the agency to say so. Should Congress decide it to be the part of wisdom to abandon the policy of maintaining a reserve in the earth, it would then be confronted with the question as to whether the cost of constructing containers should be met through appropriations out of the General Treasury or through the utilization to that end of two-thirds of the oil that might be secured as royalty from leases of the reserves. Congress is the proper governmental agency to solve these serious problems of state, and it never delegated its duty in that regard to either Albert B. Fall or Edwin Denby, or both of them. Obviously, if either course was believed by them, or either of them, to be that which wisdom would suggest, Congress should have been appealed to for the necessary legislation. It is scarcely concealed that Congress was not asked either to make the necessary appropriation for the construction of the tanks or for authority to use the royalty oil for that purpose, because it was realized that Congress would do neither the one thing nor the other. There is disclosed some evidence of glee that Congress was outwitted in the course pursued.

Your committee is of the opinion that to utilize two-thirds of the royalty oil received by the Government from leases it may find it advisable to make of portions of the reserves is not only indefensibly wasteful but would leave it without an adequate supply of fuel oil to meet such an emergency as was contemplated in the creation of them. The policy which was followed in that regard was entered upon without any serious consideration of the question as to whether thus utilizing two-thirds of the royalty oil to pay for tankage there would be secured enough fuel oil to meet the needs of the Navy should occasion arise to resort to the reserves. No one concerned in the transaction or in the adoption of the policy pursued was able to give the committee an approximate estimate of the quantity which the reserves would produce or the quantity reasonably necessary as a reserve.

INCIDENTAL INQUIRIES

In the prosecution of the investigation with which it was charged by the Senate your committee felt called upon to follow some lines of inquiry that yielded nothing.

The rumor was current, particularly after evidence that the transactions to which attention had been given were tainted, that public officers had been concerned in dealings in the stocks of the companies to which the leases had been awarded or of companies bearing close relation to them, presumably upon information referable to official sources. Diligent inquiry into the foundation of the rumor revealed no facts of sufficient importance to report. In like manner the rumor persisted that the appointment of Secretary Fall was brought about or was made pursuant to a conspiracy which was entered into between certain prominent oil operators and others at or prior to the Republican National Convention of 1920 which, in its general scope, contemplated the exploitation of the public-land resources by those concerned in it.

The remarkable circumstances attending the promulgation of the Executive order of May 31, 1921, and the leases of the naval reserves gave color to the rumor and a searching inquiry seemed warranted. The committee was appointed to investigate and it proceeded to investigate. The evidence failed to establish the existence of any such conspiracy. It was revealed, however, that Mr. Sinclair contributed $10,000 to the campaign fund raised by the Republican National Committee in connection with the election of 1920, and that he subsequently contributed $75,000 to make up the deficit carried over that election by it (Rec. pt. 12, p. 2909); and further that E. L. Doheny contributed $75,000, as he testified, or $32,500, as testified by the chairman thereof, to the Democratic National Committee in the same contest (Rec. pt. 12, p. 3070), and that he likewise contributed $25,000 to the Republican committee. (Rec. pt. 4, p. 997.)

CONCLUSION

As the Senate has heretofore been advised, H. F. Sinclair being recalled before the committee to testify, among other things, concerning features of the transactions under investigation developed since he was last on the stand, declined to testify upon various grounds, among others, that the Senate has no power, under the Constitution, to require an unwilling witness either to attend or testify before it or any of its committees. Proceedings are now pending in the courts to secure an adjudication of the right to the immunity so claimed. Should the authority of the committee, as the representative of the Senate, be vindicated, it will desire further to interrogate Mr. Sinclair. It accordingly reports that it has not finished its labors under the resolutions of the Senate and will resume them at some appropriate and convenient season unless otherwise ordered.

It is unnecessary to say that pursuant to the directions of Congress the validity of the leases canvassed of naval reserves No. 1 and No. 3 is under inquiry by the courts in suits to recover the lands involved. The committee accordingly reserves to a later date such recommendations as it may deem advisable to make touching legislation affecting the reserves.

Respectfully submitted.

By the committee:

R. F. LADD, *Chairman.*
PETER NORBECK.
A. A. JONES.
ALVA B. ADAMS.
JOHN B. KENDRICK.

T. J. WALSH.
KEY PITTMAN.

Mr. WALSH of Montana, from the Committee on Public Lands and Surveys, submitted a report (No. 794) pursuant to sundry Senate resolutions relative to investigation of leases upon naval oil lands, which was ordered to lie on the table and to be printed; and it was also ordered that 10,000 additional copies be printed, with illustrations.

Mr. SPENCER, from the Committee on Public Lands and Surveys, submitted the views of the minority pursuant to sundry Senate resolutions relative to investigations of leases upon naval oil lands (Rept. No. 794), which was ordered to be printed in the RECORD, as follows:

The undersigned members of the Committee on Public Lands and Surveys submit to the Senate the following statement with regard to the report on the lease upon naval oil reserves as presented by the committee:

No adequate opportunity has been given them to examine the report which has been submitted. The final hearings are not yet returned from the printer.

A casual reading of the report indicates many mistakes and conclusions and inferences of facts and law which, in the judgment of the undersigned, are unwarranted by the testimony.

On May 14, when the hearings were discontinued for this session, request was made, of record, that an opportunity of at least a few days be afforded in order to examine the report which the senior Senator from Montana [Mr. WALSH] indicated he intended to prepare, and that such opportunity be given before the report was submitted to the committee for final action. No such opportunity was afforded.

The report was printed and presented June 4 to the committee for immediate consideration and action. It was on that date first presented to the undersigned. It has been physically impossible to examine, in any fair or adequate manner, the statements of the report which deals with such voluminous testimony and which attempts to pass judgment on disputed questions of law and upon controverted facts.

The report indicates that the hearings before the committee are not yet concluded, and are to be resumed in case "the authority of the committee as the representative of the Senate be vindicated" in its attempt to further interrogate Mr. H. F. Sinclair.

The undersigned will prepare and submit to the Senate such matters as may, in their judgment, have been overlooked by the report as presented, and such corrections and changes as, in their judgment, should be brought to the attention of the Senate before any final action is taken.

SELDEN P. SPENCER.
REED SMOOT.
ROBT. N. STANFIELD.
RALPH H. CAMERON.
H. O. BURSUM.

RED RIVER TOLL BRIDGE, NEAR ILLINOIS BEND, TEX.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 9517) granting the consent of Congress to the North Texas Co., of St. Jo, Tex., a corporation organized under the laws of the State of Texas, to construct a toll bridge across the Red River in the vicinity of Illinois Bend, Tex., and I submit a report thereon. I ask unanimous consent for the immediate consideration of the bill.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That the consent of Congress is hereby granted to the North Texas Co., of St. Jo, Tex., to construct a bridge across the Red River in the vicinity of Illinois Bend, Tex., under specifications complying with all laws, rules, and regulations governing such, and their successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Red River at a point suitable to the interests of navigation, at or near Illinois Bend, Tex., in the county of Montague, in the State of Texas, in accordance with the

provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

STATUE OF SEQUOYAH

Mr. MOSES. From the Committee on Printing I report back favorably without amendment House Concurrent Resolution No. 28, and I ask unanimous consent for its present consideration.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the concurrent resolution?

There being no objection, the concurrent resolution was read, considered by unanimous consent, and agreed to, as follows:

*Resolved by the House of Representatives (the Senate concurring)*, That there be printed and bound the proceedings in Congress, together with the proceedings at the unveiling in Statuary Hall, upon the acceptance of the statue of Sequoyah, presented by the State of Oklahoma, 5,000 copies, of which 1,000 shall be for the use of the Senate and 2,500 for the use of the House of Representatives, and the remaining 1,500 copies shall be for the use and distribution of the Senators and Representatives in Congress from the State of Oklahoma.

The Joint Committee on Printing is hereby authorized to have the copy prepared for the Public Printer, who shall provide suitable illustrations to be bound with the proceedings.

FORT MACARTHUR MILITARY RESERVATION, CALIF.

Mr. WADSWORTH. From the Committee on Military Affairs I report back favorably, without amendment, the bill (H. R. 6652) to authorize the city of Los Angeles, in the State of California, to construct and operate a line of railroad across the Fort MacArthur Military Reservation, in the State of California.

I ask unanimous consent for the immediate consideration of the bill. It is a very simple and unobjectionable measure.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. ROBINSON. Mr. President, I wish to ask the Senator if the bill has been submitted to the Senate committee and considered by it?

Mr. WADSWORTH. The bill came over from the House yesterday, and the individual members of the Senate committee considered it this morning. The bill has the approval of the War Department, and merely authorizes the city of Los Angeles to run a street through a portion of the military reservation.

Mr. ROBINSON. I see no objection to its present consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That the Secretary of War is hereby authorized to grant to the city of Los Angeles, in the State of California, a municipal corporation, its successors and assigns, a permit to locate, construct, maintain, and operate a line of railroad and a permit to construct and maintain a public highway across the tidelands, ceded by the State of California to the United States, fronting on the lower military reservation at Fort MacArthur, in the State of California, upon such location and under such regulations and conditions as shall be approved by the Secretary of War: *Provided*, That nothing contained in this act shall be held to authorize any infringement on the water-front rights held by the United States on this reservation.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

FEDERAL JUDICIAL DISTRICTS IN NORTH CAROLINA

Mr. OVERMAN. From the Committee on the Judiciary I report back favorably, without amendment, the bill (H. R. 9314) to amend section 98 of the Judicial Code. The bill merely provides for the holding of court in one town in my State. There is no objection to it; it is recommended by the Attorney General and by the court. I ask unanimous consent for the immediate consideration of the bill.

There being no objection, the Senate, as in the Committee of the Whole, proceeded to consider the bill, which was read as follows:

*Be it enacted, etc.*, That section 98 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, as amended, is hereby amended to read as follows:

"SEC. 98. The State of North Carolina is divided into two districts, to be known as the eastern and western districts of North Carolina. The eastern district shall include the territory embraced on the 1st day of July, 1910, in the counties of Beaufort, Bertie, Bladen, Brunswick, Camden, Chatham, Cumberland, Currituck, Craven, Columbus, Chowan, Carteret, Dare, Duplin, Durham, Edgecombe, Franklin, Gates, Granville, Greene, Halifax, Harnett, Hertford, Hyde, Johnston, Jones, Lenoir, Lee, Martin, Moore, Nash, New Hanover, Northampton, Onslow, Pamlico, Pasquotank, Pender, Perquimans, Person, Pitt, Robeson, Richmond, Sampson, Scotland, Tyrrell, Vance, Wake, Warren, Washington, Wayne, and Wilson. Terms of the district court for the eastern district shall be held at Fayetteville on the Monday before the last Mondays in March and September; at Wilson on the first Mondays in April and October; at Elizabeth City on the second Mondays in April and October; at Washington on the third Mondays in April and October; at Newbern on the fourth Mondays in April and October; at Wilmington on the second Monday after the fourth Mondays in April and October; and at Raleigh on the fourth Monday after the fourth Mondays in April and October; and in addition for the trial of civil cases on the first Mondays in March and September: *Provided*, That the city of Fayetteville and the city of Wilson shall each provide and furnish at its own expense a suitable and convenient place for holding the district court at Fayetteville and at Wilson until a courthouse shall be constructed by the United States. The clerk of the court for the eastern district shall maintain an office in charge of himself or a deputy at Raleigh, at Wilmington, at Newbern, at Elizabeth City, at Washington, at Fayetteville, and at Wilson, which shall be kept open at all times for the transaction of the business of the court.

"The western district shall include the territory embraced on the 1st day of July, 1910, in the counties of Alamance, Alexander, Ashe, Alleghany, Anson, Buncombe, Burke, Caswell, Cabarrus, Catawba, Cleveland, Caldwell, Clay, Cherokee, Davidson, Davie, Forsyth, Guilford, Gaston, Graham, Henderson, Haywood, Iredell, Jackson, Lincoln, Montgomery, Mecklenburg, Mitchell, McDowell, Madison, Macon, Orange, Polk, Randolph, Rockingham, Rowan, Rutherford, Stanly, Stokes, Surry, Swain, Transylvania, Union, Wilkes, Watauga, Yadkin, and Yancey. Terms of the district court for the western district shall be held in Greensboro on the first Mondays in June and December; at Statesville on the third Mondays in April and October; at Salisbury on the fourth Mondays in April and October; at Asheville on the first Mondays in May and November; at Charlotte on the first Mondays in April and October; and at Wilkesboro on the fourth Mondays in May and November. The clerk of the court for the western district shall maintain an office in charge of himself or a deputy at Greensboro, at Asheville, at Statesville, and at Wilkesboro, which shall be kept open at all times for the transaction of the business of the court."

SEC. 2 That the act entitled "An act providing for the establishment of two additional terms of the District Court for the Eastern District of North Carolina at Raleigh, N. C.," approved April 27, 1916, is hereby repealed.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. SMOOT. Mr. President, we are on the order of business of reports of committees now. Let us have the regular order.

CHARLES T. NORMAN

Mr. BAYARD. From the Committee on Claims I report back favorably, without amendment, the bill (H. R. 1830) for the relief of Charles T. Norman, and I submit a report (No. 778) thereon. I ask unanimous consent for the immediate consideration of the bill.

Mr. SMOOT. Let the bill be read. We do not know what it is.

The PRESIDING OFFICER. The Secretary will read the bill.

The bill was read, as follows:

*Be it enacted, etc.*, That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Charles T. Norman, of Richmond, Va., the sum of $882.24, the same being a refund of income tax erroneously collected.

Mr. BAYARD. Mr. President, may I say a word of explanation of the bill to the Senator from Utah?

Mr. SMOOT. I shall be glad to hear it.

Mr. BAYARD. The facts are these: This man paid his Federal income tax for the years 1916 and up to 1922, but in spite of protests and requests he could get no adjudication of his tax returns until 1922. Then it was found that he had made an error in the amount, as appears in the papers, consisting of an overpayment to the Government; but inasmuch as the four-year period of the statute of limitations had expired, the Secretary said he could not give him any remedy.

In his letter, however, the Secretary says:

While the department is on record as opposing any extension of the statute of limitations, this case seems to be so unusual and the equity so strongly in favor of the taxpayer that the department feels

that an exception should be made in this case and the pending bill approved.

It is merely to pay back to him what he overpaid to the Government. The bill passed the House unanimously.

Mr. SMOOT. In the first place, I think the bill ought to have been considered and reported by the Committee on Finance. As the Senator will remember, in connection with the revenue bill which has recently been passed the question involved in this bill came up because of several amendments which were offered to the bill to take care of cases similar to this, but the Senate almost unanimously objected to such amendments. I do not know how far this is going or where it is going to lead. I am afraid there will be no end to it at all.

Mr. UNDERWOOD. Will the Senator allow me to ask him a question?

Mr. SMOOT. Yes.

Mr. UNDERWOOD. I merely wish to find out for information the attitude of the other side of the Chamber as to legislation of this character. The Senator represents his side of the Chamber on questions affecting the finances of the Government. Here is a case where a taxpayer has made a mistake and has paid too much money to the Government. He makes protest; the Government admits that he overpaid his taxes; the Government has the money and recommends that he be paid back the taxes which he overpaid. There is no issue of fact. It is a small amount, but no matter how much it might take I assume the Government of the United States is not going to occupy the position that it will not refund money which has been paid in error by a citizen and, at the same time, make the citizen pay money if the error is in favor of the Government.

Mr. BAYARD. Not only that, but, if the Senator from Alabama will permit me to say a word further, this man tried to discover the error, but the Government would not assist him until after the period of the statute had run against him.

Mr. SMOOT. I do not understand the report in the case to be as the Senator just stated it. If the Senator will let the bill go over for the present or withdraw it, I should like to read the report.

Mr. BAYARD. The bill is not on the calendar, if the Senator please. I have asked that it may be considered by unanimous consent.

Mr. SMOOT. I know that.

Mr. BAYARD. If it goes to the calendar, I am afraid we will never get to it to-night. It is a House bill, not a Senate bill.

Mr. SMOOT. But the Senator can bring it up later and in the meantime file the report. If the report is all right, I shall not object.

Mr. SWANSON. The committee has reported in favor of it——

The PRESIDING OFFICER. Objection is made.

Mr. SHIPSTEAD. Mr. President——

The PRESIDING OFFICER. The Senator from Minnesota.

Mr. SWANSON. The department itself recommends that this money be repaid to the taxpayer, because the Government itself found out in 1922 that he had overpaid his taxes.

The PRESIDING OFFICER. The Senator from Minnesota has the floor.

Mr. SHIPSTEAD. I yield to the Senator from Virginia.

Mr. SWANSON. The Government itself found out in 1922 that this money was paid in error. The department is anxious to refund it to the taxpayer. The statute of limitations was allowed to run on account of the fault of the Government in not auditing the taxpayers' accounts. If that had been done the mistake could have been found earlier. The department will be very glad to refund the amount on account of the fault being theirs.

Mr. GLASS. Mr. President, whether it was the Government's fault or not, the Government has money that it has no business with. It resolves itself into a question of plain, common honesty upon the part of the Government of the United States. That is all there is to it.

Mr. SMOOT. Yes, if that is the case; but I notice in the report——

Mr. GLASS. To refuse to refund this money would be a species of immorality.

Mr. SMOOT. Nobody is opposing anything that is right, and I do not intend to do so myself, but in the report this statement is made:

| | |
|---|---|
| Gross income | $43,600.00 |
| General deductions | 1,252.00 |
| Total net income | 42,348.00 |
| Exemption | $4,000.00 |
| Income subject to normal tax | 38,348.00 |
| Normal tax | 766.96 |
| Additional tax | 246.96 |
| Total tax liability | 1,013.92 |
| Tax previously assessed | 882.44 |
| Further tax due | 131.48 |

Mr. BAYARD. The Senator is merely reading a part of the report.

Mr. SMOOT. I am reading a statement made in the report. If the statement is not correct, and that does not cover it all, I have no objection.

Mr. GLASS. The Treasury Department has examined the proposition, and the Secretary of the Treasury has certified that this money is due this man, and does not belong to the Government.

Mr. SMOOT. Well, Mr. President, we will see what the report says about it.

The PRESIDING OFFICER. Does the Senator from Utah object?

Mr. SMOOT. Mr. President, just as soon as I can find out whether the amount is $882.24 or $131.48——

Mr. SWANSON. Read the letter of the Secretary of the Treasury.

The PRESIDING OFFICER. Objection is made.

Mr. BAYARD subsequently said: Mr. President, a moment ago the senior Senator from Utah [Mr. SMOOT] objected and then withheld his objection until he could examine the report submitted with House bill 1830. The Senator from Utah has since withdrawn his objection, and I desire to ask for the present consideration of the bill.

The PRESIDENT pro tempore. The Senator from Delaware asks unanimous consent for the present consideration of House bill 1830. Is there objection?

Mr. SMOOT. I have no objection to the consideration of the bill.

There being no objection, the Senate, as Committee of the Whole, proceeded to consider the bill (H. R. 1830) for the relief of Charles T. Norman.

Mr. SMOOT. Mr. President, I simply want to say that in one place it is stated that there is $131 and some odd cents due, and the report from the Treasury Department shows that the amount due is $882.24. I am quite sure that the report of the Treasury Department is right, and therefore I shall not object.

Mr. BAYARD. Undoubtedly.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

## GOVERNMENT OF NORWAY

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent for the immediate consideration of Senate bill 2718, Order of Business 594.

The PRESIDING OFFICER. The Chair lays before the Senate a bill from the House of Representatives dealing with the same subject.

The bill (H. R. 7558), to authorize the payment of an indemnity to the Government of Norway on account of losses sustained by the owners of the Norwegian steamship *Hassel* as the result of a collision between that steamship and the American steamship *Ausable*, was read twice by its title.

Mr. SHIPSTEAD. I move that the House bill be substituted for Senate bill 2718, Order of Business 594, and that it be given immediate consideration.

The PRESIDING OFFICER. Is there objection?

Mr. SMOOT. What is the request?

The PRESIDING OFFICER. To substitute a House bill for a Senate bill and give it immediate consideration.

Mr. ROBINSON. Mr. President, I understand that the bill is to reimburse the Norwegian Government for damages done to a ship by a vessel operated under the control of the United States Government?

Mr. LODGE. Yes; a transport.

Mr. ROBINSON. The facts are that the Norwegian vessel injured was at anchor in a French port, and the American vessel, by reason of some failure on the part of its steering machinery to function properly, struck the Norwegian vessel amidships and damaged it in a very large sum. An action for libel was brought in the court of admiralty, and was dismissed at the instance of the Department of Justice on some more or less technical ground.

There appears to be in the facts submitted by the State Department no reason why the bill should not pass. The amount

of the claim carried in the bill is very much less than the facts seem to justify in a claim for damages. I think the request of the Senator from Minnesota should be granted.

The PRESIDING OFFICER. Is there objection?

Mr. FLETCHER. Mr. President, I should like to inquire just what order we are under. Are we taking up the calendar, or just taking up bills as requested by various Senators?

The PRESIDING OFFICER. We are still on reports of committees, the morning hour having been extended one hour.

Mr. FLETCHER. This is not a report of a committee.

Mr. LODGE. This comes up under the order.

Mr. FLETCHER. Is it reported by the committee?

Mr. LODGE. No; it is called up. It came in yesterday. An identical bill came over from the House which has not yet gone on the calendar, and the Senator from Minnesota moves to substitute it for the Senate bill. It is an important bill and ought to be passed.

Mr. SHIELDS. Mr. President, I wish to ask the chairman of the committee in charge of the bill——

Mr. LODGE. The Senator from Minnesota [Mr. SHIPSTEAD] is in charge of the bill.

Mr. SHIELDS. I wish to ask the chairman of the committee, the Senator from Massachusetts, a question. This is a claim of the Norwegian Government against the United States of America, is it not?

Mr. LODGE. Yes. It is one of those claims—and it is undoubtedly a good one—where payment is made as an act of comity and good faith, without admitting any legal wrong. They are frequently made in that way as an act of comity to a friendly government.

Mr. SHIELDS. Is it not a fact that several citizens of the United States have claims of somewhat the same nature against the Norwegian Government?

Mr. LODGE. Those were all settled by the claims convention.

Mr. SHIELDS. No; I will refresh the Senator's recollection. There is a claim of a Mr. Jones.

Mr. LODGE. That is the claim of a constituent of the Senator from New Hampshire [Mr. MOSES]. That is a question of money deposited in insurance, as I understand.

Mr. SHIELDS. Still, it is a claim of a citizen of the United States against the Norwegian Government.

Mr. MOSES. Mr. President, that does not change the fact that the Norwegian Government, by its interference in court proceedings, has prevented my constituent for some three years from getting the money due him. If this disclosure will cause them to "come through," it will be worth while; and I think, Mr. President, in order to induce some kind of action, that I shall have to object.

Mr. SHIELDS. That is exactly what I wish to do—to object to the consideration of this claim until Norway does equity to the citizens of the United States in similar claims.

Mr. SHIPSTEAD. Mr. President——

The PRESIDING OFFICER. Objection is made, and the bill will go to the calendar.

Mr. SHIPSTEAD. If I still have the floor, I simply want to make this statement:

I asked unanimous consent for the immediate consideration of this bill at the request of Mr. Porter, of the State Department. I thought the Senate ought to be informed of that fact. Mr. Porter informed me last night that the State Department are very anxious that this bill be passed, because if the matter goes to The Hague they are quite confident that it will cost the American Government at least $100,000 more. The State Department consider that they made a very good settlement, and it is simply on that account that I asked for immediate consideration; and if I am not out of order I will now move consideration of the bill.

Mr. MOSES. That can not be done.

The PRESIDENT pro tempore. The Chair is of opinion that the Senator has the right to move to take up the bill.

Mr. SMOOT. Mr. President, by unanimous consent the morning hour was extended for one hour.

The PRESIDENT pro tempore. The Chair understands that the morning hour was extended one hour. It is, however, in order to move to take up any bill after 1 o'clock.

Mr. LODGE. The point is that morning business is not concluded. Of course, when we have concluded morning business, the motion will be in order.

Mr. FLETCHER. I understand that the Chair holds the motion to be in order. If it is in order, the Senator can make his motion.

Mr. LODGE. The morning business has not yet been closed, as I understand.

Mr. FLETCHER. The Chair holds it is in order.

Mr. NORRIS. I hope, even if the Chair holds that the motion can be made, that the Senator will let us finish the routine morning business. We have been trying for three hours to do that.

Mr. SHIPSTEAD. Very well.

Mr. NORRIS. Senators will all have an opportunity to present other matters afterwards, but this is the last morning hour we shall have. I am waiting patiently until the Chair gets down to Senate resolutions, because I have one which, as I said before, will have to be referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. ROBINSON. I call for the regular order.

### AMENDMENT OF NATIONAL PROHIBITION ACT

Mr. STERLING. From the Committee on the Judiciary I report back favorably, without amendment, House bill 6645, to amend the national prohibition act, to provide for a bureau of prohibition in the Treasury Department, and to define its powers and duties. I desire to give notice that at the earliest opportunity I shall ask for the consideration of the bill.

Mr. BAYARD. Mr. President, what is the request?

Mr. ROBINSON. Mr. President——

The PRESIDENT pro tempore. The Senator from South Dakota simply reports the bill, and gives notice that at the first opportunity he will ask for its consideration.

### WILLIAM H. NELSON

Mr. GEORGE. From the Committee on Military Affairs I report back favorably, without amendment, House bill 6972, for the relief of William H. Nelson, and I call the attention of the senior Senator from Tennessee [Mr. SHIELDS] to it.

Mr. SHIELDS. Mr. President, this is a matter that I think will not provoke debate. It will take very little time to dispose of the bill, and I ask unanimous consent for its immediate consideration.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

### EMPLOYEES OF THE BUREAU OF PRINTING AND ENGRAVING

Mr. CARAWAY. From the Committee on the Judiciary I report back favorably, without amendment, Senate bill 3221, for the relief of employees of the Bureau of Printing and Engraving who were removed by Executive order of the President, dated March 31, 1922. I ask unanimous consent for the immediate consideration of the bill.

Mr. SMOOT. Let it be read.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That the Secretary of the Treasury be, and is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the employees who were removed from the Bureau of Engraving and Printing by Executive order of the President, dated March 31, 1922, the salaries they were receiving at the time of their removal until the date of their restoration to their former positions in the Bureau of Engraving and Printing, less any earnings they may have made by other employment during that time.

That the legal heirs of those who died after their removal shall receive a sum equivalent to their salaries from the time of their removal to the date of their death, less amount of earnings during that time.

That to those who were not restored to their employment a salary shall be paid equivalent to the one they were receiving at the date of their discharge by Executive order, up to the 31st day of March, 1924, less any earnings they may have had by reason of other employment.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

### ST. MARYS RIVER BRIDGE

The PRESIDENT pro tempore. The Chair lays before the Senate a bill from the House of Representatives.

The bill (H. R. 9434) granting the consent of Congress to the States of Georgia and Florida, through their respective highway departments, to construct a bridge across the St. Marys River, was read twice by its title.

Mr. GEORGE. Mr. President, a bill identical in form was passed by the Senate yesterday. I ask for the immediate consideration of the House bill. It is merely a bridge bill.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had passed Senate bills of the following titles:

S. 1376. An act to provide for the equitable distribution of captured war devices and trophies to the States and Territories of the United States and to the District of Columbia; and

S. 3434. An act for the protection of the northern Pacific halibut fishery.

The message also announced that the House had passed the joint resolution (S. J. Res. 107) declaring agriculture to be the basic industry of the country, and for other purposes, with amendments, in which it requested the concurrence of the Senate.

The message further announced that the House had passed a bill (H. R. 1468) to increase the salary of the warden of the United States penitentiary at McNeil Island, Wash., in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message also announced that the Speaker of the House had signed enrolled bills of the following titles, and they were thereupon signed by the President pro tempore:

S. 966. An act for the continuance of construction work on the San Carlos Federal irrigation project in Arizona, and for other purposes;

H. R. 192. An act to provide for a girls' dormitory at the Fort Lapwai Sanatorium, Lapwai, Idaho;

H. R. 1438. An act for the relief of D. H. MacAdam;

H. R. 2123. An act for the relief of the Thompson-Vache Boat Co., of Bonnots Mill, Mo.;

H. R. 2647. An act for the relief of Lena Garagnon Owens;

H. R. 2821. An act authorizing the erection of a sanitary fireproof hospital at the National Home for Disabled Volunteer Soldiers at Santa Monica, Calif.;

H. R. 4012. An act to reimburse William H. Flagg and others for property destroyed by mail airplane *No. 73*, operated by the Post Office Department;

H. R. 4442. An act to extend the insurance and collect-on-delivery service to third-class mail, and for other purposes;

H. R. 5541. An act for the relief of Hubert Reynolds; and

H. R. 8237. An act for the relief of Bruusgaard Kiosteruds Dampskibs Aktieselskab, a Norwegian corporation of Drammen, Norway.

TRICOUNTY IRRIGATION PROJECT, NEBRASKA

Mr. NORRIS. Mr. President, I present a Senate resolution and ask that it be read by the Secretary for the information of the Senate, and then that it be referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

The PRESIDENT pro tempore. The resolution will be read.

The resolution (S. Res. 251) was read and referred to the Committee to Audit and Control the Contingent Expenses of the Senate, as follows:

Whereas in the Sixty-seventh Congress a Senate joint resolution (S. J. Res. 215) was approved September 22, 1922, as follows:

"*Resolved, etc.*, That the Secretary of the Interior, upon the payment to him in advance of the necessary funds to defray the expenses thereof, be, and he is hereby, authorized to make an additional investigation of the tricounty project in Nebraska, comprising the counties of Gosper, Phelps, and Kearney in said State, and to extend said investigation into Adams County, Nebr., with a view of ascertaining whether it is practicable to convey for irrigation purposes flood waters from the Platte River onto lands in said counties"; and

Whereas in accordance with such resolution a survey of said tricounty project in Nebraska has been made by the Bureau of Reclamation, and the expenses of such survey and investigation, amounting to more than $15,000, have been paid for by the State of Nebraska and the citizens living in the vicinity of said project: Now, therefore, be it

*Resolved*, That the Committee on Irrigation and Reclamation be authorized to appoint a subcommittee to visit the tricounty project in Nebraska during the recess of Congress and report to the full committee on the practicability of said project and the advisability of installing the same. There is hereby appropriated out of the contingent fund of the Senate the sum of $300 for the purpose of defraying the expenses of said investigation.

SHIPMENTS AND SALES OF COTTON

Mr. SMITH submitted the following resolution (S. Res. 252), which was read, considered by unanimous consent, and agreed to,

*Resolved*, That for the purpose of providing the Congress with information to serve as a basis for such legislation as may in its opinion be found necessary for the regulation of the shipment or sale of cotton in interstate and foreign commerce, the Federal Trade Commission is authorized and directed to investigate (in pursuance of the powers conferred upon it by subdivision (d) of section 6 of the act entitled "An act to create a Federal Trade Commission, to define its powers and duties, and for other purposes," approved September 26, 1914, as amended, and in pursuance of any other power conferred upon it by such act) the facts relating to alleged shipments and sales in interstate or foreign commerce by cotton factors or shippers of cotton held by them as security for advances, or otherwise, and to report to the Senate, not later than December 1, 1924, its findings thereon together with such recommendations as it may deem advisable.

MRS. EMMA B. WOODS

Mr. WARREN submitted the following resolution (S. Res. 250) which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the Secretary of the Senate is authorized and directed to pay out of the contingent fund of the Senate the sum of $6,000 to Mrs. Emma B. Woods, widow of the late Elliott Woods, Architect of the Capitol, said sum being the amount of one year's salary received by him at the time of his death.

PURCHASE OF TEXTILE CLOTH FROM FOREIGN CONCERNS

Mr. WALSH of Massachusetts. I present a letter in the nature of a memorial from the Textile Council of Fall River, Mass., protesting against the purchase by the Shipping Board of cotton goods and other textile fabrics from foreign countries. I ask unanimous consent that the communication may be referred to the Committee on Commerce and be printed in the RECORD.

There being no objection, the communication was referred to the Committee on Commerce and ordered to be printed in the RECORD, as follows:

FALL RIVER TEXTILE COUNCIL,
*Fall River, Mass., June 2, 1924.*

Hon. DAVID I. WALSH,
*Washington, D. C.*

MY DEAR SENATOR: I am instructed to call to your attention by the Fall River Textile Council a report of recent date in the daily press to the effect that the United States Shipping Board has bought abroad outfits of cotton goods and other textile fabrics for American ships, amounting in the aggregate to hundreds of thousands of dollars; when such goods can be supplied by New England cotton mills.

We, the members of the above-named council, protest against and condemn such action by the United States Shipping Board, when many of our cotton mills are and have been closed down completely for several months, and mills that are running doing but a few days per week, and thousands of our operatives out of employment.

We believe that all such contracts of this nature for outfitting American ships at all times, and particularly under present conditions, should be made in this country and confined to goods manufactured in the cotton mills of this country. We therefore respectfully request your assistance in preventing in future the awarding of such contracts by the Shipping Board to other than American manufacturers. Any assistance you can render will be fully appreciated.

Yours very truly,

JAMES TANSEY, *President.*
THOMAS GOODWIN, *Secretary.*

PURCHASES BY THE GOVERNMENT OF FOREIGN GOODS

Mr. WALSH of Massachusetts. I present a letter in the nature of a memorial from the Marsh Corner Community Men's Club, of Methuen, Mass., protesting against the recent awarding of a contract for Army cloth to a foreign concern. I ask unanimous consent that the communication may be referred to the Committee on Military Affairs and printed in the RECORD.

There being no objection, the communication was referred to the Committee on Military Affairs and ordered to be printed in the RECORD, as follows:

METHUEN, MASS., *June 4, 1924.*

Hon. DAVID I. WALSH.

DEAR SIR: At the regular meeting of the Marsh Corner Community Men's Club the members unanimously voted to protest the recent awarding of a contract for Army cloth to a foreign concern, as an injustice to the people of this country, when an award to a concern in this country would have been of such great benefit to a large number of people, especially during a time when there is so much part-

time employment and so many of our citizens are without employment of any kind.

If the newspapers of our country keep us informed correctly, it would seem that a further injustice had been done us in making the award as they did, as the process of manufacture was different than the specifications called for, while the concerns of our country quoted their prices per Government specifications.

We hope that you will be able to protest this award strongly enough that the citizens of the United States may benefit through your action.

Furthermore we feel that the power in the present Government is allowing too much foreign-made goods to come in to the detriment of business and the welfare of its citizens.

Hoping that you can do something to help out conditions in New England, we remain

Respectfully yours,

MARBLE CORNER COMMUNITY MEN'S CLUB,
Per JAS. H. HAZLEHURST, *Secretary.*

SALE OF CARLISLE BARRACKS RESERVATION

Mr. WADSWORTH. Mr. President, I submit a favorable report from the Committee on Military Affairs on House bill 7731, authorizing the Secretary of War to sell a portion of the Carlisle Barracks Reservation.

I am about to ask consent for the immediate consideration of this bill, and in doing so I remind the Senate that the Senate already has passed a bill covering exactly the same topic. This is a House bill which has crossed the Senate bill in the process of legislation.

Mr. ROBINSON. Mr. President, when did the Senate bill pass?

Mr. WADSWORTH. I do not know exactly, but several days ago.

Mr. ROBINSON. Did the bill pass before the bill passed the body at the other end of the Capitol? I ask the Secretary to read the indorsement.

The READING CLERK. The bill passed the House June 4, 1924.

Mr. ROBINSON. Evidently the House bill passed after the Senate bill had passed this body.

Mr. WADSWORTH. I think the House bill was reported by the House Committee on Military Affairs to the House quite a time ago.

Mr. ROBINSON. I am curious to know why they did not pursue the course that we usually pursue here. When an identical House bill is on our calendar and a Senate bill is favorably reported, we take up the House bill and pass it and indefinitely postpone our own bill. I shall not object to the request of the Senator from New York.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from New York?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.,* That the transfer from the Department of the Interior to the War Department of the control and jurisdiction over the parcels known as farm No. 1, farm No. 2, and the Sanno tract, now constituting a part of the Government reservation at Carlisle Barracks, Pa., is ratified and confirmed.

SEC. 2. The Secretary the War is authorized to sell at public sale, upon terms and conditions deemed advisable by him, the land lying north of the Carlisle-Harrisburg Highway, being part of the tract of land known as farm No. 2, constituting a part of the Carlisle Barracks Reservation, the land to be sold as a whole or in parcels as the Secretary of War may determine, and to execute and deliver in the name of the United States and in its behalf any and all deeds or other instruments necessary to effect such sale.

SEC. 3. The Secretary of War is authorized to acquire by negotiation or appropriate condemnation proceedings additional land needed at the post of Carlisle Barracks for the use of the Medical Field Service School, to wit: The so-called Alexander tract, being a triangular parcel of ground lying to the southeastward of the original reservation and between said original reservation, the said farm No. 1, and the Cumberland Valley Railway, comprising 19.6 acres, more or less; and the so-called Henderson tract, being an irregular parcel of ground lying northwestward of the original reservation and the said farm No. 1, and southeastward of the Carlisle-Harrisburg Highway, comprising 34 acres, more or less: *Provided,* That the proceeds realized from the sale authorized by section 2 of this act of the part of farm No. 2 therein described may be applied toward the acquisition of the said Alexander and Henderson tracts: *And provided further,* That any residue of the proceeds of the said sale not required to pay for the acquisition of the said tracts under the provisions of this act shall be deposited in the Treasury as miscellaneous receipts.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

OHIO RIVER BRIDGES

Mr. LADD. Mr. President, I report favorably from the Committee on Commerce House bill 9345, granting the consent of Congress for the construction of a bridge across the Ohio River between Vanderburgh County, Ind., and Henderson County, Ky., and I ask for its immediate consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.,* That the consent of Congress is hereby granted to the Commonwealth of Kentucky and the State of Indiana, by and through their respective highway commissions or such other agencies as may be selected, to construct, maintain, and operate a bridge and approaches thereto across the Ohio River at a point suitable to the interests of navigation between the county of Henderson, Ky., and the county of Vanderburgh, Ind., in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. LADD. Mr. President, I also report favorably from the Committee on Commerce House bill 9402, granting the consent of Congress to the Fullerton & Portsmouth Bridge Co. to construct a bridge across the Ohio River to connect the city of Portsmouth, Ohio, and the village of Fullerton, Ky. I ask for the immediate consideration of this bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.,* That the consent of Congress is hereby granted to the Fullerton & Portsmouth Bridge Co., a corporation organized and existing under the laws of the State of Kentucky, its successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Ohio River, at a point suitable to the interests of navigation, to a point in Greenup County, Ky., near the village of Fullerton, from a point near the central portion of the city of Portsmouth, county of Scioto, in the State of Ohio, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

INVESTIGATION OF NORTHERN PACIFIC LAND GRANTS (S. DOC. NO. 143)

The PRESIDING OFFICER (Mr. JONES of Washington in the chair) laid before the Senate a communication from the President of the United States, transmitting a supplemental estimate of appropriation for the Interior Department, fiscal year 1925, to provide for the expenses of the joint committee of Congress created by House Joint Resolution 237, to make investigation of the land grants of the Northern Pacific Railroad Co. and its successor, the Northern Pacific Railway Co., etc., approved June 5, 1924, in amount $50,000, which, with the accompanying papers, was referred to the Committee on Appropriations and ordered to be printed.

SYSTEM OF REFORESTATION

Mr. McNARY. Mr. President, I move that the Senate proceed to the consideration of Senate bill 1182, to provide for the protection of forest lands, for the reforestation of denuded areas, for the extension of national forests, and for other purposes, in order to promote the continuous production of timber on lands chiefly suitable therefor.

Mr. ROBINSON. Mr. President, in so far as I am familiar with the provisions of this bill, I know that it deserves approval. I think the Senator from Oregon should make a statement explanatory of the bill in order that the Senate may become acquainted with its purposes and effects. There appears to be no report accompanying the bill.

Mr. McNARY. There is a very large report, covering about 40 pages.

I have prepared some remarks covering the purposes of the bill. Preliminary thereto I will state that this bill is intended to fashion a plan for a system of reforestation. The bill passed the House almost unanimously. It is the product of a long study and survey made by a special committee on reforestation appointed last year. The favorable report was also supplemented by the Committee on Agriculture and Forestry,

and I do not know of any bill on the calendar equal to this one in importance in defining a comprehensive plan for the reforestation of our denuded lands and the protection of our virgin forests.

I move that we proceed to the consideration of the bill.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That the Secretary of Agriculture is hereby authorized and directed, in cooperation with appropriate officials of the various States or other suitable agencies, to recommend for each forest region of the United States such systems of forest-fire prevention and suppression as will adequately protect the timbered and cut-over lands therein, with a view to the protection of forest and water resources and the continuous production of timber on lands chiefly suitable therefor.

SEC. 2. That if the Secretary of Agriculture shall find that the system and practice of forest-fire prevention and suppression provided by any State substantially promotes the objects described in the foregoing section, he is hereby authorized and directed, under such conditions as he may determine to be fair and equitable in each State, to cooperate with appropriate officials of such State, and through them with private and other agencies therein, in the protection of timbered and forest-producing lands from fire. In no case other than for preliminary investigations shall the amount expended by the Federal Government in any State during any fiscal year under this section exceed the amount expended by the State for the same purpose during the same fiscal year, including the expenditures of forest owners or operators which are required by State law or which are made in pursuance of the forest-protection system of the State under State supervision and for which in all cases the State renders satisfactory accounting. In the cooperation extended to the several States due consideration shall be given to the protection of watersheds of navigable streams, but such cooperation may, in the discretion of the Secretary of Agriculture, be extended to any timbered or forest-producing lands within the cooperating States.

SEC. 3. That the Secretary of Agriculture shall expend such portions of the appropriations authorized herein as he deems advisable to study the effects of tax laws, methods, and practices upon forest perpetuation, to cooperate with appropriate officials of the various States or other suitable agencies in such investigations and in devising tax laws designed to encourage the conservation and growing of timber, and to investigate and promote practical methods of insuring standing timber on growing forests from losses by fire and other causes. There is hereby authorized to be appropriated annually, out of any money in the Treasury not otherwise appropriated, $2,500,000 to enable the Secretary of Agriculture to carry out the provisions of sections 1, 2, and 3 of this act.

SEC. 4. That the Secretary of Agriculture is hereby authorized and directed to cooperate with the various States in the procurement, production, and distribution of forest-tree seeds and plants, for the purpose of establishing forests upon denuded or nonforested lands within such cooperating States, under such conditions and requirements as he may prescribe, to the end that forest-tree seeds or plants so procured, produced, or distributed shall be used effectively for planting denuded or nonforested lands in the cooperating States and growing timber thereon: *Provided*, That the amount expended by the Federal Government in cooperation with any State during any fiscal year for such purposes shall not exceed the amount expended by the State for the same purposes during the same fiscal year. There is hereby authorized to be appropriated annually, out of any money in the Treasury not otherwise appropriated, $100,000 to enable the Secretary of Agriculture to carry out the provisions of this section.

SEC. 5. That the Secretary of Agriculture is hereby authorized and directed, in cooperation with appropriate officials of the various States or, in his discretion, with other suitable agencies, to advise and assist the owners of farms or of lands suitable chiefly for timber production, in establishing, improving, and renewing wood lots, shelter belts, windbreaks, and other valuable forest growth, and in growing and renewing useful timber crops: *Provided*, That except for preliminary investigations, the amount expended by the Federal Government under this section in cooperation with any State or other cooperating agency during any fiscal year shall not exceed the amount expended by the State or other cooperating agency for the same purpose during the same fiscal year. There is hereby authorized to be appropriated annually, out of any money in the Treasury not otherwise appropriated, $100,000 to enable the Secretary of Agriculture to carry out the provisions of this section.

SEC. 6. That section 6 of the act of March 1, 1911 (36 Stat. p. 961), is hereby amended to authorize and direct the Secretary of Agriculture to examine, locate, and recommend for purchase such forested, cut-over, or denuded lands within the watersheds of navigable streams as in his judgment may be necessary to the regulation of the flow of navigable streams or for the production of timber and to report to the National Forest Reservation Commission the results of such examination; but before any lands are purchased by the commission said lands shall be examined by competent examiners employed by the Secretary of Agriculture, and a report made to him showing that the control of such lands by the Federal Government will promote or protect the navigation of streams or will promote the production of timber thereon.

SEC. 7. That to enable owners of lands chiefly valuable for the growing of timber crops to donate or devise such lands to the United States in order to assure future timber supplies for the agricultural and other industries of the State or for other national forest purposes, the Secretary of Agriculture is hereby authorized, in his discretion, to accept on behalf of the United States title to any such land so donated or devised, subject to such reservations by the donor of the present stand of merchantable timber or of mineral, grazing, or other rights as the Secretary of Agriculture may find to be reasonable and not detrimental to the purposes of this section, and to pay out of any moneys appropriated for the general expenses of the Forest Service the cost of recording deeds or other expenses incident to the examination and acceptance of title. Any lands to which title is so accepted shall be in units of such size or so located as to be capable of economical administration as national forests either separately or jointly with other lands acquired under this section or jointly with an existing national forest. All lands to which title is accepted under this section shall, upon acceptance of title, become national forest lands, subject to all laws applicable to lands acquired under the act of March 1, 1911 (36 Stat. p. 961), and amendments thereto. In the sale of timber from national forest lands acquired under this section preference shall be given to applicants who will furnish the products desired therefrom to meet the necessities of citizens of the United States engaged in agriculture in the State in which such national forest is situated.

SEC. 8. That the Secretary of Agriculture is hereby authorized to ascertain and determine the location of public lands chiefly valuable for stream-flow protection or for timber production which can be economically administered as parts of national forests and to report his findings to the National Forest Reservation Commission established under the act of March 1, 1911 (36 Stat., p. 961), and if the commission shall determine that the administration of said lands by the Federal Government will protect the flow of streams used for navigation or for irrigation or will promote a future timber supply, the President is hereby authorized, in his discretion, to add said lands to existing national forests, thereby making them subject to all laws and regulations applicable to national forests.

SEC. 9. That the President, in his discretion, is hereby authorized to establish as national forests, or parts thereof, any lands within the boundaries of Government reservations other than national parks, national monuments, and Indian reservations, which, in the opinion of the Secretary of the department now administering the area and the Secretary of Agriculture, are suitable for the production of timber, to be administered by the Secretary of Agriculture under such rules and regulations and in accordance with such general plans as may be jointly approved by the Secretary of Agriculture and the Secretary formerly administering the area, for the use and occupation of such lands and for the sale of products therefrom. That where such national forest is established on lands previously reserved for the Army or Navy for purposes of national defense the land shall remain subject to the unhampered use of the War or Navy Department for said purposes and nothing in this section shall be construed to relinquish the authority over such lands for purposes of national defense now vested in the department for which the lands were formerly reserved. Any money available for the maintenance, improvement, protection, construction of highways, and general administration of the national forests shall be available for expenditure on the national forests created under this section. All receipts from the sale of products from or for the use of lands in such national forests shall be covered into the Treasury as miscellaneous receipts, forest reserve fund, and shall be disposed of in like manner as the receipts from other national forests as provided by existing law. Any person who shall violate any rule or regulation promulgated under this section shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not more than $500 or imprisoned for not more than one year, or both.

Mr. McNARY. Mr. President, on the 22d of January, 1923, agreeable to Senate Resolution 308, a select committee on reforestation was appointed to investigate problems relating to reforestation, with a view to establishing a comprehensive national policy for lands chiefly suited to timber production, in order to secure a perpetual supply of timber for the use and necessities of the citizens of the United States.

The committee made a nation-wide survey of the situation, holding 24 hearings in 16 States and the District of Columbia. Beyond that, it went out into the forests and investigated logging operations, observed forest practices, and studied the various physical aspects of the problem.

On the 10th day of January of the present year the committee submitted its report and proposed legislation which is em-

bodied in Senate bill 1182. Thereafter the report was referred to the Committee on Agriculture and Forestry, which has general jurisdiction over the subject matter, and on the calendar day of April 15, 1924, this committee reported favorably Senate bill 1182 and recommended that it do pass.

The report of the select committee is as brief a one as could be expected from the magnitude of the subject, though perhaps too comprehensive to permit of careful study by the Members of this body who are abundantly engrossed by public service and who realize the necessity of studying a wide range of public questions. Mr. President, in view of this situation, I shall attempt briefly to review the subject matter and present some of the main features of the proposed legislation.

It is estimated that within the States of the Union originally there were in excess of 800,000,000 acres of forested land, but, by reason of the demands for cultivated areas and the expansion of settlement, this area has been reduced to 138,000,000 acres of virgin forest. Of the original stand, about 250,000,000 acres have been cut over and now are covered with second-growth stumpage in various stages of a complete stand, and about 81,000,000 acres consist of logged-off and denuded land. Roughly, this resource has been reduced about 40 per cent of its original stand in quantity, and even greater reduction must be made in considering the factor of quality on account of the considerable percentage of second growth. One of the most important features of the situation is the unfortunate geographical distribution of the remaining stand of timber. Only one-fourth of the forest land lies east of the Great Plains, wherein live the great population of America, while three-fourths of the forested area lies west and, on account thereof, involves heavy costs in transportation to reach the primary markets of consumption. The movement of lumber in 1920 exceeded 1,600,000 carloads, and cost in freight and charters over $250,000,000. Thirty-four per cent of the lumber manufactured during that year was cut in the Southern States, and 31 per cent in the far Pacific Coast States, making the average carload haul 45 miles. To a considerable extent increasing transportation costs underlie the rise in transportation prices, each increase in freight tending to carry with it added cost in retail distribution. The price paid by the consumer of construction lumber has doubled within the last decade; indeed, the freight itself is even more than the delivered price of the finished product of lumber a quarter of a century ago.

The annual draft upon the American forests is tremendous; approximately 10,000,000 acres of forest land are cut over each year, about half of which is virgin stumpage and half is second growth. America has an amazing appetite for wood.

We use two-fifths of the total world consumption. Our annual ration is about 60,000,000,000 board feet, of which 53,000,000,000 are utilized and 7,000,000,000 feet are destroyed by fire, insects, and disease. The committee, from a careful study of the most reliable data available, reported that the remaining saw timber of softwood species is disappearing approximately eight times as fast as it is being replaced by new growth, and that our hardwood saw timber is disappearing approximately three and one-half times as fast as it is being replaced. In other words, Mr. President, our timber resources are being consumed about five times faster than they are being replaced by nature. If this depletion continues, any normal imagination can approximate the time when we shall experience a complete exhaustion of our timberlands.

It may be profitless to attempt to make any estimate of the amount of wood which will be needed by this country in the future, but it is hardly likely that the annual consumption will grow less, even though substitutes for wood are coming more and more into use. While wood is being replaced by other materials in one field or another, new uses for wood constantly arise in other fields. The growth in population and industrial progress will fully absorb the vacuum made by the use of wood substitutes. Not only is there an increasing use for pulp wood for paper products of various kinds, but also for fiber containers, wallboard, and now even for making actual artificial board. The chemical use of wood for making various by-products is still in its infancy. The next few years may see the forest products used in form and for purposes now beyond the thought of man. The demands made upon the forests for commercial purposes can well be cared for by a wise policy of reforestation, but the assaults by fire are wasteful and to a large degree preventable. During 1922 there occurred approximately 50,000 forest fires, burning over a total of 8,000,000 acres of forest lands and causing a damage of $17,000,000. Not only is this destructive force assisting in the depletion of the forests, but it is an ugly feature which deters landowners from undertaking commercial reforestation.

The foremost need in the forest policy is an adequate fire protection. This can be brought about by a more generous participation by the Federal Government in cooperation with the States and private agencies. For the fiscal year 1923 the Government appropriated $400,000 to be expended for fire protection under the Weeks law. The 27 States cooperating with the Government expended $1,800,000, while the private agencies expended approximately $1,000,000. The area receiving protection consisted of 170,000,000 acres, the average expenditure being 2½ cents per acre. Col. W. B. Greeley, Chief Forester, stated in substance that to protect all the private forest lands effectively would require an annual expenditure of 3 cents per acre, and this would involve extending protection over 150,000,000 acres which now receive no protection and would require a total expenditure from all sources of approximately $9,000,000, which is a little more than three times the sum now available. By many it is thought the Government should recognize it has a real obligation in this matter, and that its contribution would be reflected in a vast commercial saving. The committee was advised by many students of the subject that a fair assumption of the cost for fire protection would be about one-fourth for the Federal Government, an equal liability by the States, and the remaining one-half to the owners of the forest lands. This assumption is carried out in section 3 of the proposed bill, where $2,500,000 is authorized to be appropriated annually. However, it is thought at the present time that not more than $1,000,000 should be made available, because many States and private agencies have not been brought to the point of cooperation. However, it is believed that ultimately, when complete coordination has been effected, that the authorized sum could be used in a 100 per cent effort toward fire detection and suppression.

Further, Mr. President, the burdensome effect of annual taxes is commonly cited by forest owners as an insurmountable handicap to the growing of timber. The investigation conducted by the committee disclosed a great diversity in the plan of taxation of merchantable timber and cut-over lands. In most regions the exhaustion of merchantable timber has resulted in taxes upon cut-over lands so heavy as to preclude private timber growing. We realize this is a problem which can not be immediately solved, but we believe it wise that there should be a legislative direction authorizing the Secretary of Agriculture to study the effect of tax laws, methods, and practices upon forest perpetuation in cooperation with appropriate officials of the various States and other suitable agencies. Within the last decade 10 States have enacted forest tax laws, which usually embody the principle of a low annual tax upon the lumber combined with a yield tax upon the timber at the time of the harvest. These laws have been based upon dedication of land for the growing of timber, while in one or two States good progress is being made in applying such special tax provisions to forest property. The aggregate results are still inconclusive.

Another proposal is the forest growing land to be taxed on the market value of the land alone, exempting the growing timber from current taxation, but levying thereon, at the time of cutting, such yield taxes as may be in accord with the tax paid by other commercial undertakings. This scheme provides current revenue from public forest lands while treating the growth of wood as a crop.

In some States constitutional limitations prevent the adoption of these changes in taxation of forest lands, but we think the whole subject is so vital to the replacement of the forest that some Federal agency should be clothed with power to give it that study to which it is entitled by reason of its tremendous importance.

Mr. President, this bill is the product of a slow evolution in legislation appertaining to reforestation and its kindred problems and will require modifications from time to time as the subject is more thoroughly understood from the enlightenment of experience. Students of the subject are in accord that too great a delay has been indulged in the commencement of some plan national in its scope, such as that embodied in the measure in question. This bill is similar in many of its provisions to that introduced in the Sixty-seventh Congress by Representative CLARKE of New York (H. R. 14241), and to that introduced in the Sixty-seventh Congress by Representative SNELL, of New York (H. R. 129). The titles of these bills indicate that the chief purpose to be accomplished is to assure the continuous production of timber on lands chiefly suitable therefor, in order to meet the problem which confronts the Nation through the rapid depletion of its supply of virgin timber.

Section 1 of S. 1182 directly authorizes the Secretary of Agriculture to recommend for each forest region of the United States, on the basis of cooperative work with appropriate officials of the various States or other suitable agencies, such systems of forest-fire prevention and suppression as will protect adequately the timbered and cut-over lands therein, with a view to the protection of the forest and water resources and the continuous production of timber on lands chiefly adapted to that purpose.

Section 2 authorizes and directs the Secretary to cooperate with the several States in the protection of timbered and forest-producing lands from fire under certain restrictions. The restrictions are: (1) That the Secretary must first have found that the system and practice of forest-fire prevention and suppression provided by any State substantially promotes the objects mentioned in section 1, namely, the protection of forest and water resources and the continuous production of timber on lands chiefly suitable therefor; (2) the maximum expenditure by the Federal Government, other than for preliminary investigations, must not exceed the amount expended by the State for the same purpose during the same fiscal year; and (3) in computing the State expenditures those of forest owners or operators which are required by State law or which are made in pursuance of the forest-protection system of the State may be included if that system is under State supervision and if the State renders a satisfactory accounting for these expenditures.

Section 3 proposes a comprehensive investigation of forest taxation. An adjustment of the methods of taxing forest land to the long-time nature of their crops is probably only second in importance to their protection from fire as a means of encouraging private timber growing. Legislation to this end is necessarily a State function, but a thorough study of the subject by Federal agencies and cooperation with the States in the discussion and dissemination of its findings will undoubtedly be fruitful in securing progress in this direction.

In this section there is authorized to be appropriated annually, out of any money in the Treasury not otherwise appropriated, $2,500,000, to enable the Secretary of Agriculture to carry out the provisions of sections 1, 2, and 3 of the act. This appropriation will not be needed in full at once, but is regarded as the ultimate Federal expenditure which the national interests at stake clearly justify. This is predicated upon the assumption of at least an equal share of the cost by the cooperating States and upon private expenditures under the joint plan, which may offset those of all public agencies combined.

Section 4 contemplates Federal cooperation with the States in providing and distributing forest-planting material. The United States contains over 81,000,000 acres of denuded and barren land, formerly forested, most of which will have to be planted if productive forests are to be restored thereon. The present scale of forest planting, however, is wholly inadequate, amounting to only 36,000 acres a year. This is indeed a pitiful showing in contrast, for example, with the more than 300,000 acres planted annually in Japan. A lack of cheap planting stock of the right species is a primary cause of the negligible amount of forest planting now being done. The plan proposed in the bill will initiate a remedy for this situation which will benefit primarily the farmers of the country, many of whom should be encouraged to plant timber upon inferior or worn-out soils as a valuable aid in diversified and profitable farming. Timber is a farm crop for which there will never be a glutted market.

Section 5 of the bill is also designed primarily to aid farm owners through the inculcation and demonstration of practicable methods of growing timber. This will include shelter belts, windbreaks, wood produced for home use, and wood lots furnishing a commercial crop. The fund proposed may be utilized either through the extension organization of the Department of Agriculture or through other forms of cooperation with suitable State agencies.

One-third of the forest land in the United States is in farm holdings. The development of timber growing as a farm activity will not only be of great benefit to American agriculture in utilizing profitably what would otherwise be idle or largely idle land, but will be a potent factor in supplying the national requirements for forest products.

Section 6 of the bill proposes to broaden the terms of the act of March 1, 1911, which authorizes the purchase of land for the creation of additional national forests. The present law limits such purchases to land on the headwaters of navigable streams where the maintenance of a forest cover exerts a clearly demonstrable benefit upon the navigability of the rivers which have their sources therein. Such purchases unquestionaly should be continued. But there is also an urgent need for extending the national forests to include seriously denuded land which will never be reforested save through public ownership and which lies on the lower reaches of navigable streams where it may have no clearly demonstrable relationship to navigation.

There are enormous areas of such land, particularly in the Lake States and the southern-pine region, whose restoration to productive forests is essential to our national economy. The establishment of even limited national forests in these denuded belts would serve as demonstration centers, greatly aiding reforestation in the surrounding regions.

The bill proposes to initiate this policy by modifying the provisions of the Weeks law so as to permit the acquisition of lands of this character. At the same time it retains the requirement that all lands purchased must be within the watersheds of navigable rivers, in harmony with the general constitutional theory upon which the Weeks law was passed. I regard this as a most essential expansion in our national policy of public-forest administration.

Section 7 of the bill proposes to supplement the purchase of forest lands by authority to accept gifts or bequests of land adapted to national-forest purposes, subject to equitable reservations. Certain offers of this nature have already been made, but their acceptance has required special legislation. It is probable that considerable bodies of potential forest land or land containing small trees may be offered to the Government from time to time. It would be desirable to authorize the Secretary of Agriculture, by general legislation, to enlarge the national forests by this means to the extent that the offered lands can be economically and effectively administered.

Section 8 of the bill provides for an extension of the national forests, which the Secretary of Agriculture has repeatedly urged in his annual reports and on other occasions. The unreserved public domain contains several million acres of land, unentered and unappropriated, which is adapted primarily to the production of timber or the protection of watersheds. The Federal Government owns this land and is responsible for its wise use in the public interest, but hitherto has not even provided adequate protection for its existing timber from destruction by fire. In seven of the States containing the principal areas of public land of this character no additions thereof to the national forests can be made without special sanction by Congress. This is an inadequate and piecemeal method of dealing with an important and urgent situation. While attempting to encourage the protection and growing of timber by private owners of land, and while proposing to enlarge the national forests by purchase, it is certainly incumbent upon the Federal Government to take adequate care of the lands adapted to timber production which it already owns. The proposed section of the bill would accomplish this as to the unreserved public domain by authorizing the appropriate executive agencies, after due study and classification of the areas concerned, to place within the national forests public lands chiefly valuable for stream-flow protection or for timber production.

Section 9 of the bill deals with a somewhat similar situation existing on considerable portions of our military reservations and possibly on other reservations coming within its terms. The military reservations contain probably 600,000 acres of land that is adapted primarily to the production of timber. Many of these areas are not intensively used for military purposes, and some of them, in line with the contraction of the Military Establishment, are not now used at all. The Secretary of War concurs that it would be in the public interest to have the portions of all military reservations adapted primarily for timber production administered as national forests for that purpose, the right of the War Department being retained to make any use of such reservations for military purposes that may be necessary either now or as future exigencies in the national defense may require.

Mr. President, this is a brief dissection of the act and indicates the general purposes of the measure. Everyone conversant with the problem attempted in part to be solved by this legislation will admit there must be laws, there must be education, and there must be public agitation if we are to save our forests, which are now rapidly disappearing, and all efforts must be coordinated in one consistent and persistent forest policy unless we are to incur the disaster of the prodigal for squandering our most cherished national possession and valuable national resource.

Mr. ROBINSON. Mr. President, the Senator from Oregon has made a very careful survey of the bill, but, on account of the confusion which invariably prevails in the Senate when the end of a session is approaching and which, unfortunately, too often characterizes our proceedings under normal conditions, it has been difficult to hear his statement. I am impressed with

the fact, however, that the bill has received very careful consideration and that it is well thought out. Let me ask the Senator from Oregon what is expected to be the total cost of the administration of this measure should it become a law?

Mr. McNARY. Mr. President, the bill does not make any governmental funds immediately available, but it authorizes——

Mr. ROBINSON. I am not so much concerned in that as to have the Senate informed as to just what additional tax is contemplated.

Mr. McNARY. I was going to complete the statement. The bill does authorize ultimately the Government to expend $2,500,000 annually in cooperation with the States and other agencies in the protection from and prevention of fires. An expenditure of $100,000 is authorized in the distribution of nursery stock, and of $100,000 in aid of farmers in selecting trees suitable for the purpose of windbreaks, hedges, and wood lots; but there is no appropriation carried in the bill. It merely outlines a national plan toward which we may build in the future, if we wish to preserve our forests.

Mr. ROBINSON. As I read the bill, it contemplates that the Federal funds shall be supplemented by at least equivalent funds contributed on the part of the States?

Mr. McNARY. Yes.

Mr. ROBINSON. So that ultimately all told $6,000,000 a year will be expended for purposes of fire prevention, forest conservation, and reforestation?

Mr. McNARY. There will be more than that expended, I will say to the Senator from Arkansas, based upon the theory that the Government shall pay one-fourth, the States one-fourth, and the owners of property two-fourths or one-half. It was stated, although perhaps the Senator did not hear the statement I made, that Mr. Greeley contends and has told the committee that if all of the forest area shall receive adequate protection from fire it will cost about $9,000,000 annually.

Mr. ROBINSON. What is the average annual loss occasioned by forest fires?

Mr. McNARY. It is from $7,000,000 to $8,000,000, and has gone as high as $10,000,000.

Mr. ROBINSON. Mr. President, the Senate has not had an opportunity of considering the details of the bill very thoroughly, but, as I previously stated, I think they are pretty well worked out, and I give the measure my support.

Mr. FLETCHER. Mr. President, the Senate has taken up Senate bill No. 1182. I inquire of the Senator from Oregon if House bill 4830 is not identical with the Senate bill, and whether he would not think it advisable to move that the Senate proceed to the consideration of the House bill?

Mr. McNARY. I will state to the Senator from Florida that I was just about to make that motion when he received the recognition of the Chair. I propose to make that motion.

Mr. FLETCHER. The Senator proposes to move that the Senate shall proceed to the consideration of the House bill in place of the Senate bill now under consideration?

Mr. McNARY. Yes.

Mr. FLETCHER. Then we may indefinitely postpone the Senate bill.

Mr. McNARY. Yes.

Mr. ROBINSON. In what respect, if any, does the House bill differ from the Senate bill?

Mr. McNARY. I will say to the Senator from Arkansas that the House bill differs from the Senate bill in very minor particulars. Under the Senate bill nursery stock is required to be furnished to all who wish to reforest, while that is limited in the House bill to farmers' wood lots. That is one particular of difference between the two bills.

Mr. SHEPPARD. Mr. President, I desire to ask the Senator from Oregon a question. I desire to move to strike out section 7 of the bill. Will that motion be in order after the Senator from Oregon shall have moved to substitute the House bill for the Senate bill and the motion shall have been agreed to?

Mr. McNARY. Mr. President, I move that the House bill——

Mr. SHEPPARD. I wish to move an amendment, and I do not want my rights to be precluded.

The PRESIDENT pro tempore. The Senator from Texas has asked the Senator from Oregon a question.

Mr. McNARY. I am sorry I did not catch the question.

Mr. SHEPPARD. I wish to move an amendment to this bill at the proper time.

Mr. McNARY. Yes; but I think the Senator had better allow the parliamentary status first to be determined, if he will.

Mr. SHEPPARD. Very well.

Mr. McNARY. I move that House bill 4830 be substituted for the Senate bill, and that the Senate bill 1182 be indefinitely postponed.

Mr. ROBINSON. It is in order, of course, to perfect the proposed substitute. The Senator from Texas desires to offer an amendment to the proposed substitute.

The PRESIDENT pro tempore. Undoubtedly he will have that right. The question is on the motion of the Senator from Oregon that the Senate proceed to the consideration of House bill 4830, being Calendar No. 812.

The motion was agreed to, and the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 4830) to provide for the protection of forest lands, for the reforestation of denuded areas, for the extension of national forests, and for other purposes, in order to promote the continuous production of timber on lands chiefly suitable therefor.

The PRESIDENT pro tempore. The Senator from Oregon now moves that Senate bill 1182 be indefinitely postponed.

Mr. SHEPPARD. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Texas will state his parliamentary inquiry.

Mr. SHEPPARD. Is it in order to move the indefinite postponement of the Senate bill until we have acted on the House bill?

The PRESIDENT pro tempore. Unquestionably. The Senate can postpone the Senate bill indefinitely whenever it desires so to do.

Mr. SHEPPARD. Very well; I have no objection.

The PRESIDENT pro tempore. The question is on the motion of the Senator from Oregon that the Senate bill 1182 be indefinitely postponed.

The motion was agreed to.

Mr. SHEPPARD. Mr. President, I move to strike out section 7. I do not believe that section 7 is essential to the general policy of the measure. Section 7 enables landowners to donate lands to the Federal Government and thereby escape local taxation, to deprive local jurisdictions of large sources of revenue; and those lands may afterwards be converted into national forests. This is not primarily a national forest bill, but a bill putting into effect a general policy of forest conservation.

In this connection I desire to read a letter from Representative Box, of my State, who represents a section of Texas in which there are wide stretches of cut-over land, land from which the timber has been largely denuded. Many counties are dependent on such lands for taxation to support the local government in large degree. Representative Box says:

> As I construe section 7, it will permit large landowners to convey their cut-over lands to the Federal Government, withholding for 20 years all beneficial interests in the land and escaping much, if not practically all, the burden of taxation. When I first discovered the provisions of section 7 I wrote to every commissioners' court of my district, stating its terms and soliciting an expression of their views. I had not had time to hear from them when the bill was again taken up on the next—last—calendar Wednesday, but being confirmed in that view, I made the fight. The courts had already begun to act, though I had not been advised of their action until the next day.
>
> The court of Jefferson County, according to press reports, were unanimous in opposition to the provisions of section 7. The judge and four commissioners of Shelby County took the same action. The county judge of Cherokee County, without advising me whether the commissioners agree with him, wrote me an emphatic protest against the proposition. The county judge of San Augustine County writes me that it will ruin his county. The county judge of Newton County advises that more than four-fifths of that county's lands and land valuation would be included.

I desire to call the attention of the Senate to a letter from Hon. L. E. King, a prominent attorney of Hemphill, Tex. Speaking of the effect of the bill in his county, Sabine County, Tex., he says:

> In this Sabine County, Tex., something like 100,000 or more acres of land are cut over, and to take this land from under taxation for 20 years will doubly burden the small landowners and farmers of this county in order to raise the required amount of taxes to support and maintain our county government. There are already outstanding bond issues against the properties of this county to the sum of about $800,000 or more for road purposes. They have already been levied and approved, and are operative as against the properties of these east Texas corporation lands as well as the lands of others. To pass this legislation into law, it seems to me, would greatly impair the rights of the small farmers and landowners of this section, and would mean almost bankruptcy to this section on account of most of the cut-over lands of this State being located and situated in the eastern part of the State.

I think the same situation prevails in a number of other States.

Mr. McNARY. Mr. President, will the Senator yield at that point?

Mr. SHEPPARD. I yield.

Mr. McNARY. Doubtless those letters were all written prior to the passage of this bill in the House. That very situation has been corrected by the proviso in section 7. Let me read it to the Senator:

*Provided*, That all property, rights, easements, and benefits authorized by this section to be retained by or reserved to owners of lands donated or devised to the United States shall be subject to the tax laws of the States where such lands are located.

That part of the bill was changed in the House to meet that very situation. I will state to the Senator from Texas that his position would be well taken if it had not been for the proviso which I have just read that has been placed in the bill by the House, and which takes care of all objection on that source.

Mr. TRAMMELL. Mr. President, will the Senator yield in order that I may propound a question to the Senator from Oregon, the chairman of the committee?

Mr. SHEPPARD. I yield.

Mr. TRAMMELL. I should like to ask the chairman of the committee if this provision in regard to taxes applies permanently or whether it applies only for the period of time for which the title is retained?

Mr. McNARY. That is all.

Mr. TRAMMELL. Do the provisions of this section mean that the title is surrendered on the part of the owner to the State for a period not exceeding 20 years, and then that the property may revert back to the owner?

Mr. McNARY. No; the reservation ends or terminates in 20 years, during which time the lands are subject to local taxation.

Mr. TRAMMELL. After a period of 20 years, then, the lands belong absolutely to the Government, as I understand. Is that the purport of the provision?

Mr. McNARY. That is correct.

Mr. SHEPPARD. Mr. President, the title may pass at once to the United States Government. I do not know of any situation in the United States where lands of the United States are subjected to State taxation, and I do not believe that a provision of this kind is constitutional, that the United States can subject its lands to taxation by the States. Therefore I think this section ought to go out. It is not essential to the bill. It is really a national forest section. If we are going into the matter of creating new national forests, let us do that in a separate bill.

Mr. FLETCHER. It is quite an important section of the bill, I think. If you are going to take care of your timber supply, you will have to look after these lands that are not suited for agriculture, and that will produce timber, but are good for nothing else. They are passed upon by the department after examination and they are found unsuited for anything else, but will produce timber; and nobody is compelled to make any gift or deed. It is only these lands that people are willing shall go to producing timber and for which they have no other use. They reserve all the mineral rights and all the timber on the land for 20 years and everything else on the land when they convey it to the Government, and it is not Government land; it is privately owned land that has been cut over, land from which the timber has been cut off. It will produce timber. It is good for nothing else.

I will say to the Senator that we found in our investigation that there are millions of acres of those lands in this country that to-day are not paying one cent of taxes, and will not pay taxes. The people will not pay taxes on them. They go off the tax books.

Mr. SHEPPARD. These lands are paying taxes in my State. They are largely owned by great corporations.

Mr. FLETCHER. If they are not valuable or good for any use, they will go off the tax books. They are doing it in every State, and they are not paying taxes now.

Mr. SHEPPARD. Great corporations are paying taxes on them in my State. They will cede these lands to the Government in order to escape taxation. Counties will suffer seriously.

Mr. FLETCHER. May I interrupt the Senator further to observe that these lands where the timber has been cut off are not suited for anything else. The private owners are refusing, in State after State all over this country, to pay taxes on them. They are going back to the State, off the tax rolls, and are not helping at all in the revenues of the State now. This proposition will enable those lands to be taken over by the Government, and then the Government will undertake to produce timber on these lands, and the forest products will be disposed of as they are in the case of national forests and in other instances, and the people will get benefits out of them.

Mr. SHEPPARD. The lands to which I refer have a distinct value. They are valuable for agricultural purposes, and under section 7 they may be donated in fee to the United States Government. If that is done, large amounts that are now being received by the counties by way of local taxation will be lost, and the counties and the small landowners will suffer.

Besides, this bill provides that the United States Government, in cooperation with the landowners, may teach them how to conserve their own forest lands. It is not necessary for the United States to take over the lands and own the lands in fee in order to develop a successful forest policy. It seems to me to be a very dangerous section, and I want to protest against it, and to warn the Senate that in my judgment a very great injustice is being imposed upon a large section of the country.

Mr. BROUSSARD. Mr. President, I should like to call the attention of the chairman of the committee to the provision which he read a while ago:

That all property, rights, easements, and benefits authorized by this section to be retained by or reserved to owners of lands donated or devised to the United States shall be subject to the tax laws of the States where such lands are located.

Who is to pay those taxes? If the title goes to the United States, is it expected that the United States Government will go into the counties and pay those taxes?

Mr. McNARY. Oh, no.

Mr. BROUSSARD. By whom is it proposed that they shall be paid?

Mr. McNARY. When land becomes part of a Government reservation or a national forest it is not subject to local taxation. That is a condition that prevails in 17 of the western States where there are large areas of the public domain. It is not essential to have this matter in the bill as a matter of national reforestation policy. I will concede that.

Mr. BROUSSARD. I am just trying to find out the meaning of this provision.

Mr. McNARY. But the lands suitable for reforestation can be turned over to the Government, with certain mineral reservations, for 20 years. During the period of these proprietary reservations the local government would receive the taxes upon the lands. After the Government acquired the title to the lands in fee simple they would be in just the same untaxable condition as the lands in the public domain and in the national forests in the West.

Mr. BROUSSARD. There is no similarity at all between these lands and the lands in the West. There is not an acre of public land in my State. If any public improvement has been voted by the people there and bonds have been issued predicated upon the assessment of these lands, if they are turned over by an owner who does not care to meet an obligation there, the State loses its right of enforcing the payment of taxes by the sale of the lands and their acquisition by the State; so that the case is not similar to one where lands have never been divested from the United States Government.

Mr. McNARY. It is similar, I will say to the Senator, only as a matter of analogy, as showing where the title rests when taxes are payable and when they are not; that is all.

Mr. BROUSSARD. Of course, where bonds have been issued in a certain drainage district or a school district or a road district predicated upon the assessment value of all properties within that district, under the existing law if taxes are not paid upon these lands they are sold, and the State acquires them, and subsequently other people come and take them up. If, however, one of these parties wants to give up this land, having cut all the timber off of the land, and does not care for the land, he just dodges the payment of that tax and deprives the State or the county or the district of the right of coming back upon this property, because the assessor can not come back on the United States Government for the payment of the tax.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment proposed by the Senator from Texas [Mr. SHEPPARD].

Upon a division, the amendment was rejected.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

## MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had agreed to the amendments of the Senate Nos. 1 to 5, and also to the amendment to the title to the bill (H. R. 7996) to regulate and fix

rates of pay for employees and officers of the Government Printing Office, and that the House had agreed to the amendment of the Senate No. 6, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H. R. 4835) to pay tuition of Indian children in public schools.

The message further announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 9559) making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1924, and prior fiscal years, to provide supplemental appropriations for the fiscal year ending June 30, 1925, and for other purposes; requested a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. MADDEN, Mr. ANTHONY, and Mr. BYRNS of Tennessee were appointed managers on the part of the House at the conference.

The message also announced that the House had passed the joint resolution (S. J. Res. 127) to provide that the powers and duties conferred upon the Governor of Alaska under existing law for the protection of wild-game animals and wild birds in Alaska be transferred to and be exercised by the Secretary of Agriculture.

The message further announced that the House had adopted the following concurrent resolution (H. Con. Res. 29), in which it requested the concurrence of the Senate:

*Resolved by the House of Representatives (the Senate concurring)*, That the action of the Speaker of the House of Representatives and of the President pro tempore of the Senate in signing the enrolled bill (H. R. 5325) conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment in any claims which the Choctaw and Chickasaw Indians may have against the United States, and for other purposes, be rescinded, and that in the enrollment of said bill the following amendment be made, viz: In section 2, after the word "Interior," in the proviso, insert the following: "with such additional reasonable and necessary expenses for said tribal attorneys to be approved and paid from the funds of the respective tribes under the direction of the Secretary of the Interior, as may be required for the proper conduct of such litigation."

The message also announced that the House had passed bills of the following titles, in which it requested the concurrence of the Senate:

H. R. 9111. An act directing the remission of customs duties on certain property of the United States imported by the War Department; and

H. R. 9612. An act granting the consent of Congress to the State of Georgia, through its highway department, to construct a bridge across the Oconee River.

## ENROLLED BILLS SIGNED

The message further announced that the Speaker of the House had signed enrolled bills of the following titles, and they were thereupon signed by the President pro tempore:

H. R. 2126. An act for the relief of C. C. Carson; and

H. R. 4526. An act to incorporate the United States blind veterans of the World War.

## HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated below:

H. R. 9111. An act directing the remission of customs duties on certain property of the United States imported by the War Department; to the Committee on Finance.

H. R. 9612. An act granting the consent of Congress to the State of Georgia, through its highway department, to construct a bridge across the Oconee River; to the Committee on Commerce.

## CLAIMS OF CHOCTAW AND CHICKASAW INDIANS

The PRESIDENT pro tempore. The Chair lays before the Senate a concurrent resolution from the House of Representatives which will be read.

The principal clerk read the concurrent resolution (H. Con. Res. 29), as follows:

*Resolved by the House of Representatives (the Senate concurring)*, That the action of the Speaker of the House of Representatives and of the President pro tempore of the Senate in signing the enrolled bill (H. R. 5325) conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment in any claims which the Choctaw and Chickasaw Indians may have against the United States, and for other purposes, be rescinded and that in the enrollment of said bill the following amendment be made, viz: In section 2, after the word "Interior" in the proviso, insert the following: "with such additional reasonable and necessary expenses for said tribal attorneys to be approved and paid from the funds of the respective tribes under the direction of the Secretary of the Interior, as may be required for the proper conduct of such litigation."

Mr. ROBINSON. Mr. President, the Senator from Oklahoma [Mr. HARRELD] and the Senator from Kansas [Mr. CURTIS], who are familiar with this matter, are both absent from the Chamber. The Senator from Kansas has entered the Chamber now. This concurrent resolution is for the purpose of correcting an error in enrolling a bill, and I ask unanimous consent that it be concurred in.

Mr. CURTIS. It should be concurred in.

The PRESIDENT pro tempore. The question is on concurring in the concurrent resolution.

The concurrent resolution was concurred in.

## DEFICIENCY APPROPRIATIONS

Mr. WARREN. Mr. President, I ask that the Chair lay before the Senate the action of the House on the second deficiency appropriation bill.

The PRESIDENT pro tempore laid before the Senate the action of the House of Representatives, disagreeing to the amendments of the Senate to the bill (H. R. 9559) making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1924, and prior fiscal years, to provide supplemental appropriations for the fiscal year ending June 30, 1925, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. WARREN. I move that the Senate insist upon its amendments and agree to the request of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the President pro tempore appointed Mr. WARREN, Mr. CURTIS, Mr. JONES of Washington, Mr. OVERMAN, and Mr. HARRIS conferees on the part of the Senate.

## LEGISLATIVE APPROPRIATIONS

Mr. WARREN submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9429) making appropriations for the legislative branch of the Government for the fiscal year ending June 30, 1925, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 14, 15, 16, 17, 19, 20, 21, 22, 23, and 26; and agree to the same.

Amendment numbered 13: That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment as follows: In lieu of the sum proposed, insert: "$150,000"; and the Senate agree to the same.

The committee of conference have not agreed on amendments numbered 18, 24, and 25.

F. E. WARREN,
REED SMOOT,
*Managers on the part of the Senate.*

L. J. DICKINSON,
WM. S. VARE,
C. D. CARTER,
*Managers on the part of the House.*

The report was agreed to.

## TUITION OF INDIAN CHILDREN IN PUBLIC SCHOOLS—CONFERENCE REPORT

Mr. LA FOLLETTE obtained the floor.

Mr. HARRELD. Mr. President, will the Senator yield to me to present a conference report?

Mr. LA FOLLETTE. I yield.

Mr. HARRELD. I present the conference report on House bill 4835, and while I do not want to trench on the Senator's time, I should be glad if the report could be considered at this time. It will take only a minute.

The PRESIDENT pro tempore. The Senator from Oklahoma presents a conference report which will be read.

The report was read, as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 4835) to pay tuition of Indian children in public schools, hav-

ing met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments.

J. W. HARRELD,
JOHN B. KENDRICK,
CHARLES CURTIS,
*Managers on the part of the Senate.*

HOMER P. SNYDER,
FREDK. W. DALLINGER,
CARL HAYDEN,
*Managers on the part of the House.*

The PRESIDENT pro tempore. The question is upon agreeing to the conference report.

The report was agreed to.

Mr. HARRELD. I thank the Senator from Wisconsin.

INVESTIGATION OF PRESIDENTIAL CAMPAIGN EXPENDITURES

Mr. LA FOLLETTE. Mr. President, on yesterday I offered a resolution for the appointment of a committee authorized to investigate campaign expenditures. I did not conceive that any Senator upon this floor could have an objection to the proposed resolution. It was requested that it be sent to the Committee to Audit and Control the Contingent Expenses of the Senate, because that is required; but, as is well known, that is in large measure a pro forma proceeding, and I anticipated that there could not be any hesitation on the part of the committee in reporting the resolution immediately in order that it might be laid before the Senate. I am advised, however, that there has been a meeting of the committee, and that some sort of reason was presented in the committee for a postponement of consideration and report upon the resolution.

I do not think that the Committee to Audit and Control the Contingent Expenses of the Senate is in control of the policies of the Senate. I believe that Senators very generally would be in favor of the policy of establishing a committee authorized to make rigid and thorough investigation of all campaign expenditures during the progress of the campaign.

Mr. McKELLAR. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Tennessee?

Mr. LA FOLLETTE. I yield.

Mr. McKELLAR. I will be glad to state to the Senator precisely what occurred in the Committee to Audit and Control the Contingent Expenses of the Senate to-day.

A meeting was held, at which the chairman of the committee, the Senator from New Hampshire [Mr. KEYES], the Senator from Rhode Island [Mr. GERRY] and myself were present. Among the resolutions considered was the resolution offered by the Senator from Wisconsin.

A resolution in language exactly the same as or similar to that of the Senator's resolution was reported four years ago and passed by the Senate. The committee appointed under that resolution was known as the Kenyon committee, as the Senator will recall.

Upon the consideration of the resolution to-day in the committee I moved that the resolution be reported favorably, which motion was put, and the Senator from Rhode Island [Mr. GERRY] and I voted for it, and the Senator from New Hampshire [Mr. KEYES], who said that he held the proxy of the Senator from Ohio [Mr. FESS], voted against it, but the Senator from New Hampshire did say that he would look into it further and consider whether or not it should be finally reported.

In justice to myself, and especially in view of the fact that I have uniformly been for the curtailment and publicity of election expenses, I feel that I should make this statement to the Senate.

Mr. REED of Missouri. Mr. President——

Mr. LA FOLLETTE. I yield.

Mr. REED of Missouri. Will the Senator permit me to inquire of the Senator from Tennessee whether the Senator from New Hampshire will be able to determine the question before the next election?

Mr. McKELLAR. I do not know. I can not fathom the purpose. I see no reason myself why the resolution should not be at once reported. It is not the function of the Committee to Audit and Control the Contingent Expenses of the Senate, as I understand the functions of that committee, to do otherwise than to say whether or not there is money enough with which to carry on the investigation.

Mr. LA FOLLETTE. Exactly.

Mr. McKELLAR. I have served on that committee for a number of years, ever since I have been in the Senate. I have uniformly taken the position I have stated, and until this year I believe that has been the uniform policy of that committee.

Mr. LA FOLLETTE. Mr. President, that is precisely my view. It is not the province of this committee to determine the policy the Senate shall adopt with reference to any of the matters referred to it, but it is the policy of that committee to safeguard the expenditures of the Senate which any proposition coming before it authorizes to be made from the contingent fund.

In view of the fact that the hour of final adjournment has been fixed, I am compelled to move at this time to discharge the Committee to Audit and Control the Contingent Expenses of the Senate from further consideration of the resolution to which I have referred.

I well understand that that motion can not be put to the Senate until another day has passed. Just whether that be a legislative day or a calendar day at this moment I am unable to say; but in order to provide against any technical construction of the rule in that respect I am going to say to all Senators who are interested in the passage of a resolution at this time such as I have introduced, that we should take an adjournment and not a recess to-night to make certain that we shall have an opportunity for the consideration of the motion I have just made.

Mr. LODGE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Massachusetts?

Mr. LA FOLLETTE. Certainly.

Mr. LODGE. On that point, of course, to-day is a new day, and the motion to discharge will come to-morrow, if we adjourn to-day.

Mr. LA FOLLETTE. Is it the understanding of the Senator that it will come up to-morrow if we take a recess?

Mr. LODGE. No. It has to be another legislative day.

Mr. LA FOLLETTE. I was apprehensive that was the construction which would be put upon the rule, and for that reason I make the suggestion to Senators who are friendly to the passage of this resolution that they should stand for an adjournment and not a recess. I do not know what the plans are of those who direct the movement of legislative business, as to whether they propose that we shall have a recess to-night or shall have an adjournment, and I just forestall that by the suggestion that we have an adjournment instead of a recess, no matter what the plan is.

Mr. LODGE. In connection with what the Senator from Tennessee has said, there has been a good deal of discussion here at times as to the right of the Committee to Audit and Control the Contingent Expenses of the Senate, whether they could make any change in the text of a resolution referred to them, or whether their sole duty was to declare whether the contingent fund of the Senate was sufficient to supply the needs under the resolution. I have been looking the matter up, and I can not find that there is any restriction on the amending power of that committee. Perhaps the Senator from Tennessee knows of some. They have frequently made amendments.

Mr. McKELLAR. That is true.

Mr. LODGE. Frequently I have seen them made, and I have had doubt about their authority.

Mr. McKELLAR. I have never believed that the committee had the right to make amendments, but it has exercised the right frequently of late.

Mr. LODGE. It was just the same, I think, in the last Congress. That led me to look it up. But I can not find any restriction, either in the statute under which this committee really exists or in the rule restricting the power of the committee, whatever the committee has, to amend. That is merely a question about the power of the committee.

Mr. McKELLAR. If the Senator from Wisconsin will permit me just a moment, I think the answer to the suggestion is this, that all of the measures which are first referred to the Committee to Audit and Control the Contingent Expenses of the Senate in their very nature have to go to other committees, which fix their wording, and recommend their passage by the Senate or their rejection by the Senate. Therefore it would seem beyond doubt that the only power the Committee to Audit and Control the Contingent Expenses of the Senate has is to say whether or not there is enough money in the coffers of the Senate to pay for the investigation, and that is what is undertaken in the resolution. That has been my uniform belief all the time. I do not think there are any decisions on the matter.

Mr. LA FOLLETTE. Mr. President, it may be that the chairman and majority members of that committee purpose to prosecute some investigation with respect to the resolution, and to call another meeting of the committee during the pres-

ent legislative day, and to report the resolution so that it will be in order to take it up during this present legislative day by unanimous consent, or to take it up of right, if recognition were accorded for that purpose, to-morrow, assuming that to-morrow would be another legislative day. But I am not advised about that, and I consider this resolution so tremendously important to the electorate of this country that I can not assume anything with respect to it, and must protect the resolution. It is for that reason that I offer this motion at this time.

All of us well understand what has happened in our elections. I think the voters of the country well understand. Beginning about 1896, the corrupt expenditure of money in campaigns has grown as a tremendous evil, which menaces the very principle that should govern in our elections, and which, after all, is the very foundation of democracy.

Campaign expenditures have gone into the millions. We have had some revelations made to us during the investigations the Senate has been making in the present session, showing the appalling and indefensible growth of this enormously criminal expenditure, and the hold that those who are seeking to grasp undue power in our Government obtain through such expenditures. So, I think, it behooves each branch of Congress, the Federal Government itself, Mr. President, to lend all its power to safeguarding our elections. That is the very soul of democracy.

In order that this resolution which I introduced yesterday shall not be permitted to miscarry, I have entered this motion, and I hope that the following day—and I speak especially with reference to adjournment—will be such that the motion which I enter now will of right be heard, and that it shall not be within the province of any two or three Senators to say that we shall be denied the right to safeguard our elections at this time.

Several Senators addressed the Chair.

Mr. LA FOLLETTE. Mr. President, I have another matter to present, if Senators will bear with me for just a moment.

The PRESIDENT pro tempore. The Senator from Wisconsin will proceed.

### RELIEF OF DISTRESS IN GERMANY

Mr. LA FOLLETTE. Mr. President, on June 3 I entered a motion for the discharge of the Committee on Foreign Relations from further consideration of House Joint Resolution 180. That resolution provides for relief to the distressed and starving women and children of Germany. Now, I ask for a vote upon that resolution.

The PRESIDENT pro tempore. The question is upon agreeing to the motion made by the Senator from Wisconsin.

Mr. LA FOLLETTE. The resolution is to discharge the Committee on Foreign Relations from the further consideration of House Joint Resolution 180, known as the Fish resolution, which provides for the expenditure of $10,000,000 for the feeding and care of the women and children of Germany.

If that motion is carried, I desire to move and shall move to lay before the Senate for present consideration the joint resolution. I say now that I know the stress of business here and the desire of Senators to pass many measures of importance to them and their districts, and I do not purpose with a matter of this sort to intervene with an extended debate taking up the time of the Senate, so far as I am concerned myself, although I am prepared to discuss it. I have been on the ground, and I know something about the conditions, and yet I shall be entirely content if we can be accorded a vote upon the joint resolution.

Mr. LODGE. Mr. President, the joint resolution for the giving of $10,000,000 to Germany, the amendment to that resolution offered by the Senator from Oregon [Mr. STANFIELD] to make a similar but not so large a gift to Greece and Armenia, and the bill introduced by the Senator from Nebraska [Mr. HOWELL] proposing $25,000,000 to be lent to Germany have all been before the Committee on Foreign Relations. They came in just at the end of March, and they have been taken up repeatedly by the committee, have been thoroughly discussed, hearings have been held, witnesses have been heard, including among others, General Allen, and the matter has been very thoroughly examined and considered by the committee. I need hardly say that it is in no sense a party question. After full discussion about three days ago a vote was taken in the committee on the proposed gift to Germany, which was defeated, 11 to 6, and a vote was taken on the proposition of a loan to Germany, which was defeated, 11 to 5.

We have gone into the matter with great thoroughness. It presents many difficult questions. First is the question of the constitutionality of such gifts, which is a very important question. Second is the question of the policy of entering upon a system of relief loans to other countries, loans not asked for, but proposed for the relief of certain portions of the population of Germany, children and women who are alleged to be suffering more than anybody else. The actual conditions as presented to the committee, and there was a mass of testimony about it, were considered. The question of the relief furnished so far by the Germans themselves was also considered.

Then we were presented, through the amendment offered by the Senator from Oregon, with the question of other gifts or loans for purposes of relief. One of them was for the relief of the people of Greece. The case of Greece is a very appealing one. It has rather more than the usual appeal which children, ill fed or starving, or women, ill fed or starving, have for every right-thinking and right-feeling man or woman. There is a special feature about the situation of Greece. Greece is a very small country. It has an area of about 24,000 square miles and a population at the latest estimate of 4,500,000, and of that number 1,300,000, or 28 per cent, are refugees.

Greece can barely support her own people. In fact there is a constant emigration from Greece. There have been forced upon her these 1,300,000 refugees, chiefly from Smyrna, who have been driven out of Turkey in Asia and forced to take refuge in a country of their racial origin, the country which I am sure appeals, by its extraordinary history, to everybody. It is not the fault of Greece. They have not failed in supporting their own people, but it is a tremendous burden to put upon such a small country to care for such a vast number of refugees. Much has been done by other countries through private charities. In the resolution of the Senator from Oregon is also included the case of Armenia. I merely mention this because if we take up the matter for consideration the other appeals, equally or perhaps more moving, must also be considered.

Mr. President, I have only to say in conclusion, for I do not desire to protract the discussion at this point at all, that I think the committee has done its full duty. There was, as I have said, no party feeling in it whatever; there could be none.

I hope that the Senate will have sufficient confidence in the committee and its labors and its work not to reopen the question here at a time when it would lead to a very long discussion. Inevitably the question is a very complicated one, and I doubt very much whether we could get any satisfactory results, though we might. But it would certainly lead to a very great deal of debate. I shall be very sorry, as the Senator from Wisconsin himself has said, to interfere with the work, the bills and measures which other Senators desire to have considered, and to dispose of which they have been waiting and necessarily forced to wait for these later hours. Therefore, I hope the Senate will not decide to discharge the committee.

Mr. HARRIS. Mr. President, I received some weeks ago a letter from an able lawyer of my State, and a man of the highest character, who had been traveling for some time in Germany. He knew conditions there and protested against our country appropriating $10,000,000, which belonged to all our people, to Germany when the suffering in that country had been so exaggerated. He said there was just as much suffering in Georgia and other parts of the United States.

The people in the Northwest are suffering, as are the people in my State and other sections of the South. In one-third of the State of Georgia the farmers are in a worse condition than anywhere in the country, except in the Northwest.

In 1914 the South could not export her cotton on account of the war, and cotton went down to 4 and 5 cents a pound, less than the cost of production. Our people suffered financially as much as Belgium, though we had not entered the war. The South could not finance the cotton crop and Europe could not buy. Our Senators and Representatives appealed to Congress, not for charity, as this bill provides, but for Government loans on cotton, and you turned a deaf ear to our appeals. Only two Senators on the Republican side of the Chamber voted with us. Even some Senators on this side voted against us. How inconsistent it is that the very Senators who voted against giving relief to their distressed fellow countrymen are now urging this gift to a country which does not need help half as much as the cotton producers of the South.

The junior Senator from Nebraska [Mr. HOWELL] on yesterday offered an amendment to let Germany have $25,000,000, which they had not even asked for, and he urged this appropriation, stating that though they had not asked for the money they were not compelled to take it.

The Dawes report, issued since this bill was introduced, proves conclusively that Germany can take care of her own people if they would only half try. I can not understand how Senators will vote away millions of the people's money to a country which is not one-fourth as heavily burdened with taxation as our own.

Aside from the doubtful constitutionality of the bill to appropriate $10,000,000 for the purchase of food supplies for destitute women and children in Germany, the principle involved is, to my mind, radically wrong, and the passage of the measure by Congress would establish a most unfortunate precedent.

Heretofore relief by direct appropriation of Congress, even in our own country, has, with a few exceptions, been limited to cases of sudden and terrible suffering or threatened starvation resulting from earthquakes, storms, fires, and floods, and has been continued only until the local government and local machinery could be reestablished and the necessary outside aid furnished through the American Red Cross and other charitable and relief societies and associations. Even in such disasters appropriations by Congress have, as a rule, been restricted to sums needed to replenish Army and Navy food and other supplies issued to the destitute and starving citizen and to pay transportation and other incidental expenses.

If I remember rightly, the German relief measure was one of the first bills introduced in this Congress. It is now six months since we met here, or since this bill was first introduced, so it can not be claimed that the money is needed to provide relief from a sudden disaster, such as an earthquake, a fire, storm, or flood, neither can it be claimed that there has not been time for the German governments, general and local, to act or for relief societies to appeal to the people for contributions. As a matter of fact, we know that relief societies have been organized throughout this country; they have been and are still most active, and I am glad to say they have been most successful in their endeavors to help the suffering people in Germany, in spite of the setback resulting from the stupid insults of Germans to the memory of the late lamented Mr. Wilson, our distinguished and beloved ex-President.

In addition to the unpardonable blunder in failing to fly their flag at half-mast over the German Embassy building here in Washington, the home of Mr. Wilson, until forced to do so by denunciations and threats of an outraged and indignant public, the German newspapers launched vicious attacks upon the man whose death had cast a gloom over this great country and the world and at a time when patriotic American citizens, irrespective of party affiliations, were paying tribute to the memory of the deceased, one of our ablest and greatest statesmen.

In striking contrast to the stupid and reprehensible conduct of these German officials, newswriters, and editors, the bereaved widow of our great ex-President, Mr. Wilson, contributed money and addressed an open letter to General Allen, the head of the German relief society in America, saying that she hoped the unfortunate flag incident would not deter our people from contributing to the support of the destitute German women and children. I am glad that this has been the spirit of our people in every section.

I have said that American relief societies have been most energetic and successful in their efforts; but what has been done by the German Government, which is directly responsible for the present situation in Germany and the world? It is well known that they deliberately brought about the depreciation of their currency and partial stagnation of German industries in their efforts to escape payment of reparations to France and Belgium and to wipe out their domestic or internal debt as well as their debt to citizens of England and America payable in German marks. And I might add that their efforts so far have been crowned with success; but it is hoped that the report and recommendations of the commission of experts with General Dawes, a fearless American, as chairman, will make the German Government and the German people realize that they will not wholly escape punishment for the untold misery and suffering they brought upon the civilized world.

It is true the German Government has made some payments to our allies, but it is also true that they have received from America and England through loans, payable in worthless marks, and contributions more money than they have paid toward reparations, including deliveries in kind.

It is not claimed by the advocates of this bill that there is an actual shortage of food in Germany; in fact, it is admitted, even by the Germans themselves that they have had a good harvest. They say that while food is abundant in Germany the mass of the people, due to the collapse of the mark, are not able to purchase it. It is also admitted that the "upper classes" still lead "a life of greatest luxury," to quote from a recent article by one of the best-known German writers (Maximilian Harden). The papers of the world for the past few months have frequently commented upon the lavish expenditures of German travelers in Nice and other European pleasure resorts. If the German Government would make these idle rich and the German industrialists and profiteers pay a reasonable property and income tax, and would compel them to bring back to Germany the billions they have safely stowed away in American, English, and other foreign banks and safe-deposit vaults, there would be no need to appeal to the American Congress for appropriation or the American public for contributions.

The tax rate of Germany, compared with the United States and other countries, is so low as to be ludicrous, in fact, it may be said that Germany is virtually a tax-free nation. Yet we are asked to appropriate $10,000,000 as a gift to the Germans and tax all our people to pay it when our people are already so heavily burdened with taxes they can hardly bear it. This condition of affairs in Germany was so apparent to the commission of experts, of which General Dawes was chairman, that the commission found the whole question of reestablishment of the credit of Germany and the payment of reparations could be readily settled by compelling Germany to make her tax rate comparable with that of England, Belgium, France, or Italy, and I am glad to say that newspaper reports indicate that this will be done.

Mr. President, the industries of Germany are not disorganized, neither is the machinery nor equipment disabled or obsolete. In order to diminish or hold down the apparent profit of the Government-owned railroads, a part of which might be made available for the reparations account, huge sums have been expended in the construction and repair of tracks and rolling stock. It is said that since the war Germany has built more new locomotives than there are locomotives, new and old, in France. This is a record that must make our railway magnates green with envy, for it is well known that many of them have adopted similar tactics on a smaller scale to keep down their apparent profits, and thus escape refundment of excess profits to the Government or to claim reimbursement under the Esch-Cummins law, when the apparent earnings fall below 6 per cent.

The industrial barons of Germany, following the lead of their Government, and for a similar purpose, have installed the most modern machinery in their factories, mills, and mines, and if the German Government and the predatory industrialists so willed every idle plant could be put in operation again within less than a week. With up-to-date and new equipment in their industrial establishments, with unsurpassed transportation facilities, and with cheap labor they are in a position to flood the markets of the world with "made-in-Germany" goods, and within five years Germany will be our greatest competitor in world commerce. Germany, however, considers it more important for the time being to make the treaty of Versailles, which her representatives signed, a "scrap of paper" than to reestablish her trade and commerce, feeling assured the latter can be accomplished without delay when she frees herself from the financial obligation resulting from her defeat on the field of battle.

Mr. President, Germany alone is responsible for her unemployment, such as it is, and I am assured that it is not serious. The number of unemployed in Germany is small in comparison with the number in Great Britain, where one-sixth of the men are without work, yet Great Britain has made no appeals for help from foreign citizens or foreign governments. The difference is, Great Britain is willing to tax her industries and capitalists and Germany will not, or has not since the war.

The advocates of this bill say that the collapse of the German mark has made it impossible for the masses to buy food, of which there is, as I have shown, an ample supply in Germany itself. Mr. President, there may be Members of this body sufficiently credulous to believe this story, but I am not one of them. I spent several weeks in Germany less than two years ago, and have some personal knowledge of conditions there. President Hibben, of Princeton University, and other distinguished and fair-minded Americans, who have recently returned from visits to Germany, report that they observed no indications of destitution or starvation in that country. No doubt the collapse of the mark has been a serious inconvenience to the people of Germany, but the old mark is still in circulation together with a new currency, the unit of which is called the renten mark. With any kind of medium of exchange is it probable that women and children will starve when there is food in the market for sale? I doubt, Mr. President, if many of the advocates of this measure honestly believe that the women and children of Germany are destitute or hungry.

The real purpose of this bill is made apparent by a study of the census reports, from which it will be seen that at least

4,500,000 of our men and women of voting age are German born or of German parentage, and there are millions more whose grandparents were born in Germany.

Most of these voters converse in German, they get their news from papers printed in German, they think in German; in fact, many of them are still German to the core.

These German voters have openly threatened to prevent the reelection of any man in public office who fails to show sympathy for their fatherland, and it is not improbable that they have spotters here to-day to report the names of Senators to add to their black list.

Mr. President, I resent their attitude and condemn their methods, nevertheless I would gladly support the bill if I felt that conditions justified favorable action by the Congress, but I am not willing to appropriate the people's money to buy German votes.

Mr. President, there are other countries in Europe sorely in need of outside aid, though they are not represented in such overwhelming numbers at our polls.

The distinguished Senator from Utah [Mr. KING] has told us that fully 2,000,000 Russian men, women, and children are facing starvation or death from exposure. I myself witnessed the distressing conditions in Hungary in 1922, and I am informed there has been little improvement since that time.

When I was in Budapest there were in that city 200,000 Russian refugees dependent upon charity for their daily bread.

But the country that appeals to my sympathy, Mr. President, is the new-born Republic of Greece, our ally in the World War, and our good friend always.

There has not been in all history a more cruel or inhuman act by a nation calling itself civilized than the sudden expulsion from Turkey of the millions of Christian inhabitants, most of them of Greek descent. Following their crushing defeat of the Greek Army in September, 1922, the Turks sent all able-bodied men and half-grown boys into the interior of the Anatolia in a state of virtual slavery to work, and few of them have been heard from since. The old men and the women and children were driven at the point of the bayonet across the frontier or to the seaports. Those too sick or too weak to continue the harrowing march were left by the wayside to die, if, indeed, an end was not put to their suffering by the rifles or sabers of the cruel Turkish soldiers.

Thousands were actually driven into the sea and thousands more threw themselves into the water to escape by drowning an intolerable existence as mistresses or slaves to the inhuman Turks.

But for the assistance and the remonstrance of our representatives on the spot and of the representatives of other civilized nations few of the helpless Greeks and Armenians herded together like cattle on the beach at Smyrna would have escaped death or a life worse than death.

After weeks, and months in some cases, of untold suffering and privation about 1,200,000 emaciated and miserable refugees found themselves in Greece without food or money; in fact, with nothing except the rags on their backs. About 10 per cent of the refugees were Armenians, Hebrews, Assyrians, and Circassians, "having no claim upon Greece except the claim of human beings denied shelter elsewhere," to quote from a report of our adviser to the Greek Government.

Greece, a little nation of something over 5,000,000 inhabitants, impoverished and prostrate after the Smyrna debacle had these helpless and starving refugees, equal in numbers to one-fourth of her population, thrust upon her to support. This Congress made no appropriation to help these distressed people. Relief societies and association from all the civilized world, however, rushed to her assistance. It is said that for five months in 1922 and 1923 the American Red Cross alone cared for 868,000 refugees, and the Near East Relief for thousands of others.

For reasons, which I will not here discuss, the American Red Cross withdrew from Greece the 1st of last July. The Greek Government, assisted by the Near East Relief and other similar societies and associations, have done all that is humanly possible with the funds available. Notwithstanding their efforts, I find from a recent report that there are still no fewer than 500,000 refugees, who are homeless, without adequate food and clothing, and an easy prey to hunger, exposure, and disease.

Mr. President, while we are considering appropriations for the purchase of food supplies for destitute women and children, let us not forget the unfortunate Christian refugees in Greece. There is more suffering to-day among the Jews in Poland and Russia than there is in Germany, but no one is asking us to appropriate money to help them. If we appropriate the people's money to help the starving, it is our duty to help all those in the greatest distress. I am opposed to charity just to get votes.

Let us not forget our own people who are in distress. In my own State one-sixth of the people on the farms have left their homes because of crop failures and financial distress. Thousands of farmers of my State have lost their farms in recent years through no fault of their own. They have worked as hard as anyone ever worked. The same condition exists among the farmers in the Northwest. Let us not forget the burden of taxation borne by our people. It is most commendable for those who have means to contribute liberally to the destitute of Germany and other parts of the world, but, as Representatives in Congress we have no right in my humble judgment to vote to give to the Germans $10,000,000 of the money belonging to all our people. No one sympathizes with those in distress more than I do, but my first duty is to the people I serve.

Mr. COPELAND. Mr. President, I am sorry at this late day in the session to take any of the time of the Senate, but I do feel we should provide this money. The chief argument raised against the measure, apparently, is that such action would be unconstitutional; that we have no right to use the money of our taxpayers for this particular purpose.

I notice, however, that it has been the custom of the Congress for more than 100 years to do things of this sort. In 1812—and that was a long time ago—the Congress voted $50,000 for the relief of the people in Venezuela who had suffered from an earthquake. That bill was fought through the Senate by Senator Bayard. I do not know which particular grandfather he was of our present colleague from Delaware, but he was the father of the idea in the Senate.

There was also a debate in the House of Representatives. The constitutional question was not raised, but I also notice that there was quite a colloquy between Mr. Calhoun and Mr. John Randolph. It may be interesting to Senators to note that in that day, too, there was disorder in the two Chambers. Mr. Randolph made a number of observations on the impatience with which gentlemen of the minority were listened to in the House of Representatives and the frequent interruptions they were in the habit of meeting with. It is encouraging to us to know that we are apparently no worse than were our ancestors.

I wish, however, to raise this question: Of course, it seems more or less absurd for me to discuss a constitutional question, but I wish to suggest that under the general-welfare clause of the Constitution Congress has power to provide for the common defense and general welfare.

In that connection I desire merely to make one medical observation. There is much undernourishment among the children of Germany. I know that from personal observation. I have seen children over there over 10 years of age who had not cut a tooth; children are also born without finger nails because of the poor nourishment of their mothers. Undernourishment of that sort means rickets; it means tuberculosis.

The germs of disease do not recognize national boundaries. We have made a great fight in the United States against tuberculosis, but if we permit the conditions to continue in Germany which are now in existence there it will mean an increase of tuberculosis over there. If the children of Germany contract tuberculosis, the children of America will be afflicted with tuberculosis. No matter how much we restrict immigration, some persons are coming in from abroad.

I have gone down on the lower East Side of New York and have seen tubercular children who have come into the country within a few months. In one school on the lower East Side of New York I found 11 children in one room who had tuberculosis, and 9 of them had just landed in this country. So long as there is any tuberculosis in the world, the children of America are in danger.

So not alone for humanitarian reasons, but in order that our own citizens may be protected, I think this money should be voted for this purpose. I trust Congress will see fit to do this humane thing, to do the thing not alone because it is humane, but, if we have to regard it for mere selfish reasons to do it, because by taking care of the children of Germany we shall be taking care of our own children.

Mr. BAYARD. Mr. President, let me ask the Senator from New York a question. He has suggested that it is the duty of the American people to send money abroad in order to forfend disease coming into this country. Where is the limit to be placed?

Mr. COPELAND. Mr. President, I would not place any limit on that subject. If the countries of the world would unite to wipe out infectious disease in certain sections of Europe, some forms of infectious disease would be wiped out forever. I do not think any finer investment could be made, and, for my part,

I would not place any limit if it had to do with the protection of our own citizens.

Mr. BAYARD. All over the world?

Mr. COPELAND. Wherever there is an infectious disease it is liable to come to our country; and while I am not prepared to say I would go to the uttermost parts of the world, I do say that I would go to Germany just now and wipe out this particular disease, if possible.

Mr. BAYARD. Why does the Senator go to Germany alone? Every nation under heaven has more or less disease.

Mr. COPELAND. If the Senator will bring in a bill applying to some other section of the world I shall be very glad to help him, but the particular country before us now is Germany.

Mr. BAYARD. I am raising the question of principle.

Mr. LENROOT. Mr. President, I shall take only a moment. I hope this motion will prevail. The motion is to discharge the Committee on Foreign Relations from the consideration of a joint resolution that has passed the House by an overwhelming majority.

It has been correctly stated that the Committee on Foreign Relations gave consideration to this joint resolution and voted down by a vote of 10 to 6 a favorable recommendation upon the measure in question, which is a gift, and by a vote of 10 to 5 an amendment making a loan of $10,000,000 to Germany.

I was not present during the hearings before the committee, as they occurred during my illness, but I am quite familiar with the testimony that was taken in the House. I may say that the testimony taken before the Senate committee was never printed. I shall have a word to say about that testimony; but before doing so I want to say a word with reference to the question of constitutionality that is now being raised by some Senators upon this floor, and I want to suggest that it is rather late in the day for some of those Senators to raise that question when some of them have voted repeatedly for legislation of exactly this character.

Mr. President, if this measure is unconstitutional, the gift of $20,000,000 or $24,000,000 to Russia was unconstitutional. If this measure is unconstitutional, the aid we have given in the Mississippi Valley, because of the great flood there, is likewise unconstitutional.

Mr. WILLIS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Ohio?

Mr. LENROOT. I yield.

Mr. WILLIS. Does not the Senator recognize a vast difference between aid to our own people in our own country, because of a disaster in this country, and aid to a foreign country where there is no famine?

Mr. LENROOT. Mr. President, with reference to that, you must still find authority in the Constitution for a gift; and if you find authority in the Constitution for a gift you will not find anything that confines it to our own people.

Mr. President, I do not think the Senator from Ohio was here, but I am quite certain that the distinguished chairman of the Foreign Relations Committee did vote for the $20,000,000 gift to Russia; and not only was Russia assisted by this Government but other countries of Europe were assisted immediately following the war.

Mr. LA FOLLETTE. To the extent of $100,000,000.

Mr. LENROOT. To the extent of something like $100,000,000. It is all in the testimony.

Mr. REED of Missouri. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Missouri?

Mr. LENROOT. I do.

Mr. REED of Missouri. I think this Government appropriated money for the relief of China at one time; and after the war was over a large part of the money that had been in some way allocated or set aside to Poland was, in fact, used to feed the civilian population, and that at a time when Poland was carrying on a war with Russia. Whether it is constitutional or not, it is perfectly plain that it always has been construed that these benefactions can be made. If we brought it down to the cold letter of the Constitution, I do not know what the courts might say, but we have been doing it for a good many years.

Mr. LENROOT. Mr. President, all I care to say upon that question is that apparently it did not occur to some Senators who are now urging the unconstitutionality of this measure, upon previous occasions where the like objection could be raised, that the measure was unconstitutional. However, it will be their privilege, of course, to vote against the measure now in question if they think it is unconstitutional.

Upon the merits of the matter, Mr. President, I want to state just this with reference to the action of the Committee on Foreign Relations:

At the same time that this measure was voted down the committee ordered a favorable report upon a resolution or bill providing for participation by the United States in an international exposition to be held in Spain and authorized for that purpose an appropriation of $700,000. There could be only one purpose in that appropriation, and that was, as was frankly stated, the cultivation of good will and friendly relations between the nations who will participate in that exposition. Placed upon that ground alone, I know of no better investment that the United States could make at this particular time than the investment of $10,000,000 to relieve the suffering, undernourished children of Germany. Placed upon the ground of cold dollars and cents alone I know of no better investment than that, because the time is coming when Germany is again going to assume an economic position in the world, and I say this amount would be returned manifold based upon that consideration alone. However, I base my support of this measure upon a much higher consideration than that, and that is the condition of the children of Germany; and it has not improved very materially since the testimony was taken before the House committee.

Secretary Hoover appeared before that committee, and I want to read just a paragraph or two of his testimony. He was asked this question:

> Would it be asking too much for you to say how you feel in reference to this bill?

He said:

> I can only feel one way about children. I have engaged a very large part of my time and energies for 10 years in remedy of famine and poverty among European children as well as in major questions of food supply to some 23 different nations in Europe. I have felt that in the larger view the real hope of recovery in the world and rehabilitation of Europe lies in sustaining the children; that it is of primary importance that we should contribute, where solution can not be found otherwise, to maintain the health and welfare of their children. With a record of having engaged in the relief of somewhere upward of 20,000,000 children in these 23 different countries in Europe, I could not oppose but must support provision against the undernourishment of children anywhere. I can argue very heartily on the failures of adults and the misdoings and misdeeds of the governments that bring these situations about, but I can not apply those arguments against children. Our one hope is that the next generation will be better than this one, and there is no hope if they are to be stunted and degenerate from undernourishment. I recognize the many arguments that may be brought against charitable action either by private agencies or by our Government, but I refuse to apply these arguments to children.

Mr. President, it has been said many times upon this floor, and no doubt will be said many times in the future, that there is no hope for peace in Europe—and we are directly affected by peace in Europe—unless and until the peoples of Europe shall change the policies which they have been pursuing in the past.

The only relief for conditions in Europe is the substitution, for the present feelings of hatred and bitterness between the different nations there, of feelings of friendship and of good will, and I know of no better example the United States could set, I know of nothing better calculated to bring about that change of opinion that must come some day in Europe, than to have the United States say to the people of Germany that we, out of our abundance, will see to it, in so far as we can, in so far as their own resources do not permit, that their children shall be nourished, and shall furnish a citizenship in the next generation that will help bring about that condition in Europe which must come sooner or later.

Mr. WILLIS. Mr. President——

Mr. LENROOT. I yield.

Mr. WILLIS. I desire to ask the Senator a question. I am curious to know where the Senator would draw the line. The argument he makes for children is, of course, appealing. Where would he draw the line? Here on my desk, and in the records of the committee, are requests for relief for children of Greece, the children of Armenia, and the children of Albania. Here I have letters from people who are in those countries, and who have been in Germany, and who advise me that there is as much need, if not greater need, for the Armenian children and the Greek children and the Albanian children and others, than there is in the case referred to by the Senator. Where would he draw the line in this beneficence now proposed?

Mr. LENROOT. Mr. President, in reply to the Senator, I will say that, as far as Greece is concerned, if a measure were

introduced in this body for the relief of the refugees there, I should be glad to support it, and I should like to see every Senator support it, because there is a condition there which I think does call for relief. But that condition should not be urged as against this propositon now pending in the Senate.

Mr. SWANSON. Mr. President, the Dawes report, which was very carefully drawn after very thorough investigation, states that the nationals of Germany have money invested in foreign countries to the extent of $1,687,000,000. That belongs to the people of Germany, and is deposited in foreign countries. Does the Senator suppose that those people in Germany, with that vast amount of money in foreign countries, would let those children suffer for the lack of $10,000,000 proposed to be given? Is not that a reflection on those people themselves?

Mr. LENROOT. Mr. President, it is not a theory as to their suffering there. If the Senator will read this document of the investigation made by most impartial organizations—Columbia University and others—and our own official reports he will see that the fact is, whatever the cause be, that the children of Germany are suffering from undernourishment; that the fact is, whatever the cause may be, that the German Government has not the resources to remedy the situation.

Mr. SWANSON. If the Senator will permit me, I read that evidence of undernourishment on account of lack of butter and lack of milk and other things. There is also a great deal of undernourishment in this country. But I have not yet had it explained to me why there is any obligation on the people of the United States to be taxed to furnish $10,000,000 for the children and people in Germany when the nationals of Germany have about $1,687,000,000 in cash deposited in foreign countries.

Mr. LENROOT. Does the Senator know that the German Government can reach that money?

Mr. SWANSON. Whether the German Government can reach it or not, I believe the German people are a kindly people, and I do not believe the people of Germany who own that money would permit a condition which the Senator would have the Senate believe exists there when they have in America nearly $700,000,000 on deposit.

Mr. LENROOT. Does the Senator deny the condition?

Mr. SWANSON. I do; I was there last year myself.

Mr. LENROOT. Then the Senator denies the authenticity of our own Government reports. The Senator then denies the authenticity of the reports of the various commissions that have investigated the conditions.

Mr. SWANSON. I say that the suffering there is not what it was four or five years ago. The only change is that they have improved conditions there. I spent three weeks there last year, and there were good crops, and there was no starving and no undernourishment to any marked degree. There is suffering all over the world, and there will be suffering until the losses of the world are made up. Suffering? There is suffering in North Dakota and in South Dakota and all over America, which must pay the expenses of the war which Germany brought on. I see no obligations on us, and the committee felt there was no obligation, to send $10,000,000 to Germany, when they have a billion seven hundred million dollars invested in foreign countries.

Mr. LENROOT. I want to ask the Senator whether he voted for the Russian gift.

Mr. SWANSON. I can not recall, but if I did, I was willing to do it. There were thousands upon thousands of poor, starving people, suffering on account of a famine and a drought, going hungry. I would not let a constitutional question stand between poverty and distress like that, and an amelioration of the condition. But in this case the people in Germany have a billion seven hundred million dollars in foreign countries, and they are not asking for money. The conditions have improved. The only change is that an election is now approaching. The war has been over five years, and the clamor and demand for this money did not come until this last year, just prior to an election.

Mr. LENROOT. I would like to ask the Senator from Virginia this. Suppose our Mr. Rockefeller and our Mr. Morgan, and a dozen others of our millionaires, had a billion dollars invested in foreign countries, and our children were starving; what would the Senator do about it?

Mr. SWANSON. I would tax them, as Germany could tax its nationals.

Mr. LENROOT. How are they to get the money, if it is not there?

Mr. SWANSON. I would put the power of taxation on them.

Mr. LENROOT. And how are they going to compel them?

Mr. SWANSON. They have money there that can be taxed.

Mr. LENROOT. The money is not there.

Mr. SWANSON. They do not pay the taxes France pays. They do not pay the taxes America pays. I can not understand why this thing should be brought here. Serbia has more distress than all the other nations combined, but she is a proud nation and is not coming here begging for money.

Mr. LENROOT. Serbia?

Mr. SWANSON. Yes; Serbia. She was overrun two or three times. Poland is suffering. Russia, our ally, is suffering.

Mr. LENROOT. We have helped them.

Mr. SWANSON. France is suffering. France is staggering under a debt of $8,000,000,000, but she stands up courageously and meets her burdens.

The German Government has not asked for this. No association in Germany has asked for it. It has been asked for mostly by people in America, who are demanding this, and most of the clamor for it has come in the last six months.

They have been in a bad condition four years, it is said, and why did not this demand come three or four years ago? The condition was worse. The distress was worse. The Committee on Foreign Relations felt that there was no obligation to do this, with the Dawes report before us. The Dawes report says there is no occasion for this on the part of this Government.

The first effort to raise money was through private subscriptions, but the fund they wanted to raise was not all paid in, and what right have we to make up by the taxing power what the people would not voluntarily give? If we are going to do this, we ought to give money to Greece, we ought to give money to relieve the conditions in Serbia, we ought to give money to Poland, we ought to give money to Hungary, and we ought to alleviate distress all over the world. If we are to embark on this mission of mercy and help, the thing is to do it broadly, not through partisanship, not with any prejudice for or against any nation. If this passes, I will vote to give money to Greece. I voted against that, and I voted against giving money to the Armenians, because I say the time has come for America to cease this giving, except in great emergencies, except in cases of great distress.

Mr. LENROOT. Mr. President, the Senator said that Germany has not asked it. Of course, Germany has not asked this Government or any other government for charity. Germany, however, did endeavor to secure a loan from private sources for the sole purpose of feeding these children. Our Government consented that such a loan should have priority over any claim we might have against Germany. I understand that Great Britain likewise consented, but I understand that France objected, and hence Germany was unable to secure a loan upon a business basis for the very purpose of feeding her children.

It is not to the discredit of Germany, but to the credit of Germany, that she has not asked us for a loan, that she has not asked us for charity. She has nothing to offer as security, under the present conditions, for a loan. The Senator well knows that.

So far as the Dawes report is concerned, I am as hopeful as is the Senator from Virginia that the Dawes report offers an ultimate solution for a betterment of conditions in Germany, but until the Dawes report is ratified, until the Dawes report is put into operation, the children of Germany might starve to death.

Mr. FESS. Mr. President, will the Senator yield?

Mr. LENROOT. I yield.

Mr. FESS. If the Senator would permit, I voted against the $20,000,000 fund for Russia. I voted against it after the House refused to accept the amendment to limit the relief to the Volga region, but opened it up for all Russia. But when we had that question up we went into the question of this Government giving such relief. I found that we had done it for Venezuela in 1812, recommended by James Madison, who was the father of the Constitution and knew what the Constitution was. We did it in the case of India, in the case of China, in the case of Ireland, in the case of Messina, in the case of Martinique, and I can note 12 different occasions when we made the contribution to foreign countries. We have passed at least 70 resolutions in our history making contributions to foreign and to our own people.

Mr. WILLIS. Mr. President, I desire to ask my colleague a question.

Mr. LENROOT. I yield to the Senator for that purpose.

Mr. WILLIS. Will my colleague state whether or not, in the various cases he has enumerated, the contributions were made because of some famine or disaster, earthquake or flood? Was it not in every case due to some terrific visitation of that kind?

Mr. FESS. In Venezuela and Martinique it was the earthquake. In Ireland it was famine. In China it was also famine. However, here is a case where the relief is asked for children, and most of the children have been born since the close of the war. It is in the interest not only of relief from starvation, but is against the spread of disease, and it seems to me that if we ever had an open way to give relief, this is a case where we ought to do it, and while I voted against the gift to Russia because they would not accept the amendment limiting it to the starving regions, I feel that this is a case which ought to appeal to the Congress, and I intend to vote for the measure.

Mr. LENROOT. Mr. President, I thank the Senator, and in concluding I want to make just one observation with reference to the suggestion of my good friend the senior Senator from Ohio [Mr. WILLIS], that is to say, that it makes very little difference to the starving children whether their condition is due to earthquake, or whether it be due to fire, or whether it be due to famine, or to some other cause. The unquestioned fact is that the condition is there, and if the children are to be saved, there is just as much reason for our interposition as if there had been earthquake, or fire, or famine.

Mr. WALSH of Massachusetts. Mr. President, I should like to grant this financial aid to the children of Germany, and I should so vote if I were absolutely convinced that conditions in Germany were such that immediate relief is necessary and could not be obtained in Germany. But has this been demonstrated? That relief of a private character should be given by Americans is evident; but only extreme conditions, unquestionably admitted, can justify public charity that taxes all.

Many petitions have been presented indicating that the condition is most distressing, is painfully sad. On the other hand, I have petitions indicating that conditions are not as bad as pictured. Before we tax our people we ought to have no division of opinion as to conditions of poverty and suffering in Germany, and I hoped we would get from the committee some information as to the actual conditions. If proof was here that poverty, misery, suffering, and starvation stalks in Germany, I think I would lean backward to give aid because of the late unpleasant relations existing between this country and Germany. It would be an opportunity for us to show a fine spirit of magnanimity and Christian charity.

In the face of conditions of suffering and want here in America, what am I going to do and how am I going to answer to my countrymen if I vote in favor of this resolution? Let me read from an article published on June 4, 1924, in reference to conditions of misery and poverty and suffering in America, in my own State, in the city of Fall River, and the situation in Fall River is typical of conditions in other cities in the country. I read from an article by William Robinson, a well-known newspaper man and who has published two books on the World War. His article is published in the New Republic of Wednesday, June 4, 1924, and it is entitled "Fall River: A dying industry." From that article I quote as follows:

> Her scores of mills gave employment to more than half a hundred thousand people, and more than double that number of individuals looked to her busy spindles and looms for their daily bread. Her mills poured millions of dollars into the pockets of families connected with the industry. They produced over 2,000 miles of cotton cloth every day, and they brought from Europe and Canada many thousands of immigrants seeking opportunity and treasure on the golden shore of the Western Hemisphere.
>
> But having risen to such dizzying heights in the nineteenth century, she was, during the twentieth, to fathom depths of depression such as she had never known. To-day Fall River is a city of misery, want, unemployment, hunger, and hopelessness. The cloud that shadows her seems to have no silver lining, and she lies almost dormant, while stark want stalks her streets and her workers wonder what the end is to be, hanging on desperately—God knows how—waiting for they know not what.
>
> There are 111 mills in Fall River. Not a dozen of them are running full time. Of the 131,000 persons living in that city about 100,000 are dependent for a living upon wages paid by the mills. It is impossible to determine exactly how many are out of work there. Some mills are managing to use their employees a few days a month; others a day now and then. Certain it is, however, that very recently, when one mill opened to make yarns for automobile tires, the crowd outside its gates seeking employment became so turbulent in voicing its demand that it was necessary to call out the police reserves to control the situation.
>
> Estimates upon the number of unemployed which are given the visitor vary from 30,000 to 70,000, depending upon the source of the information. But whatever the true figures are the fact remains that Fall River has in 1924 appropriated $243,000 for the relief of the needy within her gates, which is in addition to a surplus of $16,000 carried over from last year's appropriation. And though many additional thousands will be spent by individuals and private charitable organizations, the mayor of the city within the past two weeks has asked the Massachusetts Legislature for authority to borrow $500,000 above the city's debt limit to care for the needy unemployed, who, according to the mill owners, can not expect much improvement until after the next cotton crop is harvested. So Fall River expects to spend more than three-quarters of a million dollars of the taxpayers' money for the relief of its poor this year. * * *
>
> Evidence of unemployment, of the discontent born of idleness and consequent want, of the gloom that hangs like a pall over the city, is everywhere. It is a city of grim and silent mill executives, of lounging men, and unoccupied girls aimlessly walking the streets. It is obviously to the visitor a city of discouraged merchants, whose business is at a comparative standstill, and who are so burdened with unpaid accounts that they have in most cases been forced to stop giving credit to unemployed mill workers.

Mr. President, that picture of Fall River is applicable to many industrial localities in this country. We have been sitting here talking about prosperity, indifferent to the happiness and welfare of our own people; Mr. President, the distress amongst our people in this country was never more appalling than it is to-day. From every section of the country information is at hand indicating a like situation to that which the writer has described in Fall River. It is true of parts of New Hampshire, of Maine, of North Carolina, of South Carolina, of the West. It is true of the boot-and-shoe industry, as well as the cotton-mill industry. It is true of the steel industry. It is true of the metal trades, the wool and the clothing industry, the wholesale and retail business.

In view of this situation, without positive evidence of greater want, and of greater need, and of greater suffering, and of greater poverty than here in America, I can not vote, much as my heart urges me, for the relief of the poor people of Germany. I should like, for the sake of cultivating friendliness, to show our magnimenital, to show a spirit of forgetfulness, to vote this relief. I would go a long ways further than for any other country to appropriate this money for the German people if I were convinced that a situation honestly and really and truly existed there that required relief, but in the absence of information from the committee, in the absence even of a minority report, in the absence of some facts from those who have heard the evidence and who can describe the situation as desperate and that there is need of immediate aid, and further, in view of the situation in our own country, in view of the fact that cities in my own State have appropriated for one community alone nearly one-tenth of what is asked in the joint resolution. I can not, much as I would like to do so, vote for the appropriation.

Mr. SHEPPARD. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Massachusetts yield to the Senator from Texas?

Mr. WALSH of Massachusetts. I yield.

Mr. SHEPPARD. I wish to make a suggestion to the Senator before he takes his seat. If the situation is not found to exist as described in the joint resolution, then no money is to be expended.

Mr. WALSH of Massachusetts. Who is to determine what the situation is?

Mr. SHEPPARD. The President.

Mr. WALSH of Massachusetts. That is true.

Mr. SHEPPARD. Ten million dollars or so much thereof as may be necessary are appropriated, and the fundamental condition is that it must be used to aid starving women and children. Therefore, if there are found to be no starving women and children, no money is to be expended.

Mr. WALSH of Massachusetts. But the appropriation of it by us is evidence that we think after investigation that extreme conditions exist. What I am asking is that the committee that has the evidence shall make a report to show what they think the condition really is. Evidently, they do not find that extreme need and suffering that warrants not giving generously by our people but taxing our people.

In addition to the reasons above indicated, I have the opinion of the Massachusetts State Legislature, which has passed unanimously a resolution in opposition to this measure, which has been presented to the Senate.

Mr. SHEPPARD. The joint resolution authorizes an appropriation of only so much as may be necessary. No definite appropriation is made in this resolution. The appropriation will be made when the extent of the distress is determined.

Mr. STERLING. Mr. President, I have been somewhat perplexed over the question of granting $10,000,000 for the relief of German children in Germany. I sometimes think that it is a conflict between intense sympathy on the one hand for needy or suffering children and the dictates of judgment on the other hand. I was in Germany in company for a part of the time with the Senator from Virginia [Mr. SWANSON] last summer, and I corroborate the statements he has made in regard to the crops grown in Germany during the last year. On the 1st of February last, in the Senate, I had the honor of making a few remarks upon an agricultural relief bill then before the Senate. I adverted to this subject because I thought it pertinent to the question of relieving the farmers to some extent by affording them a higher price for their products which might be bought from an appropriation made for this very purpose. In the course of examining the question I had found some statistics in regard to the German crop yield during the year, and I quoted these figures and made the following statement:

Germany comes now with a crop of wheat for the year 1923 amounting to 103,604,000 bushels, with the largest crop of rye since 1913, amounting to 282,452,600 bushels, and oats amounting to 411,676,000 bushels, the largest crop since 1913. When I read these figures I think well might Maximilian Harden, the German editor, say:

"Why should America help? Germany is literally crammed with food. Half of last year's harvest is still untouched, and the reason people in the towns are starving is because the farmers and the landlords are deliberately keeping back the foodstuffs. If I were Mr. Hoover, I would not send a single bushel of grain until the stocks in Germany were consumed."

I can offer out of my own experience some corroborative testimony. During the late summer, just as the harvest was finished, I was privileged to traverse Germany almost from one end to the other, from north to southwest, and on every hand were the evidences of abundant crops of small grain. The potato crop, said then to be hardly fair, amounted to 1,200,000,000 tons.

It is well to observe that Maximilian Harden's advice to Mr. Hoover is not to send a single bushel of grain until existing stocks in Germany are consumed.

Mr. McKELLAR. Mr. President——

Mr. STERLING. I yield to the Senator from Tennessee.

Mr. McKELLAR. I judge that Mr. Harden, in referring to Mr. Hoover, means the American Government. I never heard of Mr. Hoover giving aid to those people personally, so I assume from the context that what he is referring to is that Mr. Hoover and the American Government are one and the same.

Mr. STERLING. I think it bears that interpretation, I will say to the Senator from Tennessee.

He does not advise against the sending of other foodstuffs. He must know that among the workers, among the professional classes, as well as among the aged and infirm, there are many thousands who are without sufficient food and are undernourished; all because the currency, the only currency they have, is worthless.

That was the only currency Germany had at the time of Maximilian Harden's editorial, but there is a different currency now, and there is hardly the same excuse for asking or giving relief there was then when it took many millions of marks to buy an American dollar, for such was the conditions of things at that time.

I want to read from a letter recently received, dated May 16, at Berlin, Germany. It is from a Government official, an attaché of the Customs Service, and is written to another attaché in that service who had been in Germany, but is at present here in Washington.

Mr. LA FOLLETTE. Is he an American attaché?

Mr. STERLING. Yes; he is an American attaché. Speaking of the very high prices for food, for railroad fare, for rents, and so on, covering the necessities of life, he goes on to say:

Restaurant prices are far above what one would have to pay at home for the same food, all over the country, and the theater and opera prices are so high now that I never think of going any more. Recently I had afternoon tea at the Kaiserhof, and for a very poor cup of tea and a very small piece of cake I had to pay 3.50 gold marks, about 80 cents. The cost to the hotel could not have been more than about 20 pfennig. At the theaters it is not at all unusual to charge 40 gold marks for a reasonably good place; thing of it, $10. In spite of these exorbitant prices—

And to this part of the letter I wish to call particular attention—

all hotels, restaurants, theaters, cafés, and other places of amusement are crowded as never before, and all with nothing but Germans. There is a large amount of suffering and poverty in Germany among the working classes, but the industrialists are apparently earning, or, rather, making more money than ever before at the expense of those whom they employ. Nothing seems to be too good for them and nothing too expensive. In any German city it is almost impossible to secure a room in any good hotel, the most expensive least of all, unless previously engaged, and the trains are crowded. One can have no sympathy with the Germans. One sees and feels they should be made to pay every last cent, but, unfortunately, the poor, whom one seldom, if ever, sees, would be the sufferers. Such is the present life in this country.

And so on. So, Mr. President, under conditions like these, showing that Germany is in a position to take care of her own, I do not feel that I can support the proposal to appropriate $10,000,000 for the purpose of feeding the German children. I can not help but think that the German people, those who control the country and who determine the policies and the destinies of the country, will themselves come to their senses and appreciate the needs and the sufferings of the children of the poorer classes and make provision for them. This country should not under the circumstances be asked to grant this proposed relief. My judgment is that there is not now nearly the suffering in Germany among the children that there was in the summer of 1923.

Mr. FLETCHER. Mr. President, I realize that we all want to proceed with business as rapidly as possible. It is unfortunate that action on this matter should only be broached at the eleventh hour of the session. I can not see anything that will be gained by discharging the committee from the consideration of the joint resolution.

Mr. LA FOLLETTE. Mr. President——

The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from Florida yield to the Senator from Wisconsin?

Mr. FLETCHER. I yield to the Senator.

Mr. LA FOLLETTE. If the Senator will permit me, I desire to say that just as soon as the Committee on Foreign Relations had acted upon this measure I entered a motion to discharge the committee. Under the rules of the Senate that motion must lie over for one day. No legislative day was accorded to us until to-day. So I have been just as prompt with the motion to discharge the committee as it was possible for me to be under the rules. Therefore I do not wish even inferentially to be put in a position where there might be inferred a criticism of delay in this important matter.

Mr. FLETCHER. In so far as the Senator from Wisconsin is concerned, I was about to say that I attach no sort of criticism, even apparent, to the Senator, because his action has been taken as promptly as he could have taken it so far as moving to discharge the committee was concerned, but the circumstances have been such that although the joint resolution was introduced in the other body early in the session it never reached a stage when action of this kind might be taken until we are about to adjourn. I voted with the Senator from Wisconsin the other day not to adjourn until we could attend to some of these important matters. I say under the circumstances, however, Mr. President, that I can not see anything that will be gained by discharging the committee and bringing the resolution before the Senate, because the resolution would be debated.

I myself would expect to take up some little time in discussing it, for it is a very important matter. It is a question of disposing of $10,000,000 of the taxpayers' money, and it could not be expected to pass without any discussion. We have not the time to discuss it. In the first place, there are other things that are pressing. Then we are bound to adjourn to-morrow evening at 7 o'clock. If the motion to discharge the committee should prevail, the whole time would be taken up until 7 o'clock to-morrow afternoon in discussing the resolution, and we should then adjourn without taking any action on it. For that reason, it seems to me, the action proposed would result in no good, even if the motion to discharge the committee should be carried. So I shall have to vote against discharging the committee.

With reference to the merits of the case, I am inclined to agree with the view which has been expressed by the Senator from Massachusetts that this whole question should remain further with the committee, because we have not some information which we ought to have. There are some questions of fact that are very gravely disputed on both sides—for instance, as to whether there is such a condition existing as would call for any charity on the part of any other Government.

It is reported in the newspapers that every resort in Europe is filled with rich Germans enjoying themselves and indulging in the greatest kind of luxury. Whether that is true or not,

I am not prepared to say, but that is the report. The Senator from Virginia [Mr. SWANSON] has mentioned the enormous amount of German capital in foreign countries. We know perfectly well that they converted the worthless marks into gold and very largely deposited that gold in other countries.

Those are questions that I would rather have the committee consider a little further and give us some definite conclusions about them.

Then, there is the propaganda for the measure. The mainspring of propaganda is money. Propaganda costs money. We have some idea of the extent of the propaganda that has been inaugurated in support of this legislation. It has spread all over the country. Every Senator's mail has been flooded with it. Newspapers and every other means of influencing opinion by propaganda have been resorted to in support of this joint resolution. It has cost, I venture to say, over $10,000,000 to carry on that propaganda, an amount greater than this joint resolution would provide. That is a matter that might be considered further by the committee.

I hold in my hand the National Review of March, 1924. In it is a statement signed by "Berliner," who says he spent 1923 in various portions of Germany. I will read just one extract from it. It is a very interesting article, and if the joint resolution shall be considered, I will quote further from it:

> There is no real poverty in Germany. There is, on the contrary, evidence of great riches and a widespread general affluence, and therefore I do not hesitate to contend that a nation which can in four short years create a mercantile marine, heavily subsidize its industries and trade and generally bring them to such a high pitch of perfection, use enormous quantities of food grain for beer, spend vast sums on mere luxuries, keep its deposed rulers, princes, and princelings in a most lavish state of luxury, and can generally raise the standard of living of the whole people, should be able to support its own poor without mendacious appeals to foreign charity.

Mr. President, I feel that we ought not to grant this relief.

Mr. HEFLIN. Mr. President, if I believed that the children of Germany were really starving and that there was no other way to provide for them, I should be willing to vote for a proposal such as this, even with the meager information that we have on the subject. I sympathize with anyone in distress, especially children, and I would not let anything stand between me and my duty to the children of any country who were in distress. If this country had the means by which they could be relieved, I would be glad to go to their rescue; but I do not believe that the picture which has been painted pretending to portray conditions in Germany; I do not believe that any such distress exists in Germany as has been portrayed.

Of course, there is some distress in Germany; but there is also distress in the United States. The Senator from Massachusetts [Mr. WALSH] has called our attention to an appalling situation in his section of the country. The Senator from North Dakota [Mr. FRAZIER] this morning told us of the awful conditions in the Northwest. The effort has been made here to secure legislation for the oppressed farmers of America, but this Republican Congress will adjourn to-morrow without having taken any action in their behalf. This Hall will be closed; the other Chamber will be shut up; the Congress will have gone and nothing done to relieve the farmers of the United States.

Laboring men and women are being thrown out of employment; they are walking the streets in many of our cities with nothing to do. They are going to be objects of charity, Mr. President, right here in the homeland. I can not understand that idea of charity that some Senators seem to entertain of going across the sea and helping the people in another country and forgetting the people in distress at their own doors.

We are taught, Mr. President, by the Good Book that charity should begin at home. I think that that is sound doctrine and needs to be applied just now by the Congress of the United States.

We can not provide money to relieve the stricken farmers of the West. Wall Street can get every dollar she wants for speculation purposes. Your Federal Reserve system, we are told under the present control, sends all the money that is needed to Wall Street, but you are not sending it to the West. You are not providing for carrying those people until they can get on their feet. You are not helping them to pay the mortgages on their farms, or helping them to regain ownership of their household effects free of incumbrance.

Mr. President, I have heard testimony here at the Capitol to the effect that four-fifths of the farmers of the West are mortgaged. Four-fifths of their farms are mortgaged, their homes are mortgaged, and when they go to make a crop they must mortgage their household effects and their personal property.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield to the Senator.

Mr. LENROOT. I should like to ask the Senator if he is aware that if this joint resolution passes every dollar of the $10,000,000 must be used in this country for the purchase of farm products, and that the preference in purchase shall be given to farmers and cooperative farm organizations?

Mr. HEFLIN. Yes.

Mr. President, when I want to aid the farmers of the United States I want it done in the open, and I am strongly for aiding them. Nobody should hide behind a subterfuge of seeking to do something for a foreign power to take money out of the Treasury of the United States unless he is justified by the facts in the case. Senators on the other side can not now hide the miserable record that they have made. Talk about sending $10,000,000 to children in distress over in Germany! The facts do not bear out the contention made here. The Senator from Florida [Mr. FLETCHER] read an article here a moment ago from a great magazine saying that no such distress existed in Germany—that the story of the starvation of children was not true; but here Senators come in the closing hours of this session with a proposition for appropriating $10,000,000 for Germany out of the pockets of the taxpayers of America. They are exceedingly liberal with other people's money.

We had an old negro in court down in my State a few years ago, and he heard the judge sentencing quite a list of fellows who had been convicted. The judge said, in one instance, "I will give you 1 year in the penitentiary," and in another, "I will give you 2 years," and in another one 4 years, and in another one 6, and in another one 8, and finally in another one 10. Old Uncle Rufus was sitting there looking on. He got off on a six-months sentence. Some one said, "Uncle Rufus, what do you think of this judge?" Uncle Rufus said, "I don't know very much about him; but," he said, "he sho' is very liberal with other people's time." [Laughter.] So just before an election you seem to get mighty liberal with other people's money.

Oh, Mr. President, there are some curious things going on around here. [Laughter.] Why, I even made the junior Senator from Wisconsin [Mr. LENROOT] smile very blandly at that. He knows that is so.

Mr. President, in discussing the dreadful deflation policy of the Republican Party I used the argument that the German farmers had paid off their farm mortgages and their lands were free from incumbrance. I make the assertion this afternoon, without the fear of successful contradiction, that no country on earth is as free from mortgages on its farming class as is Germany to-day. Let any Senator dispute that if he can. Then do you tell me, with a whole population of farmers scattered throughout the German Empire in such a condition as that, that there is squalor and want to such an extent that we are called upon to appropriate $10,000,000 as a gift to them? Why did not the Senators who are so much exercised just now fight out this thing and discuss it in the open and bring it out here without waiting until Congress is ready to let the gavel fall at the final adjournment time?

Mr. President, we have many serious problems in our country, and conditions are growing worse day by day. Take the South, for instance: The boll weevil is destroying cotton by the millions of bales. The weevil is making it almost impossible for us to produce cotton in abundance. We plant crop after crop and fail. Farmers who used to make 10 bales of cotton to the plow now make 1 and 2 and sometimes they do not get any. Sometimes they fail utterly. We have a great deal of negro labor down there. In many instances the white farmer supplies the negro laborer and his family. He goes out and tries to make a crop of cotton. The boll weevil eats it up. What happens? The negro tenant can not pay the white farmer who supplied him, the white farmer can not pay the merchant, the merchant can not pay the banker; and there is distress with the tenant, with the landlord, with the merchant, and with the banker; and then what have you? You have these negroes, by the hundreds, who can not make a living under boll-weevil conditions, going North to find employment in your industrial centers.

These people need help, but we have not asked you to appropriate millions of the people's money to give it to them. I submit, however, that if you are going into the Public Treasury to take out the taxpayers' money and use it as a gift just before an election, you certainly ought to give it to

our own people, who are good citizens and are supporting the Constitution and the institutions of the United States.

Mr. President, I remember a witness who testified before the Committee on Agriculture and Forestry probably a year or a year and a half ago. He told us of the awful conditions that they had in the West, and with tears in his eyes and his voice trembling as he talked, he said: "Men, I fear that you can not understand just how deplorable the situation is with us. We are in an awful fix."

You have that condition right here in your own country. You have the whole great west of the United States, which ought to be one of the most prosperous sections of the globe, suffering; some of its people starving, almost. Men are having the accumulations of a lifetime swept away under the mistaken policies of the Republican Party. That is the cause of it. Of course that is true. The Senator from North Dakota [Mr. FRAZIER], in his very timely speech this morning, said that five years ago the farmers of the West owned their farms free from encumbrance. I submit to the Senate and to the country that a dreadful condition confronts us now. In five years' time the farmers who were princes in the kingdom of agriculture have become peasants upon farms that do not now belong to them. Where are those farms? Mortgaged. The able Senator from North Dakota tells us that many of them are lost to the farmers; they are gone.

Mr. President, something ought to be done to relieve these people. We ought to be giving consideration to them. They are upstanding American citizens. When the tocsin of war was sounded their boys came to the front, shouldered their guns, followed the flag 3,000 miles to the battle line in France, broke the German line, brought victory to our flag, and saved the liberty of the world; and you are not doing one single thing for them. Now Senators rise up in the closing hours of Congress and just want to lop off $10,000,000 all at once; for what? For the starving children of Germany.

Some Senators rise and read articles here saying that the children of Germany are not starving; that they are not in distress, as it is claimed here that they are. What are we doing here? I am not representing myself. I am representing the people who honored me with a seat in this body, and who trusted me to safeguard their interests, and to support the institutions of my country. I have not the right, because two or three men get up here and advocate my doing so, to vote $10,000,000 to satisfy some propaganda that is gotten up by somebody who doubtless is being paid a good deal of money out of the funds that will be raised.

You know, Mr. President, there are a great many propagandas going on in this country. They will raise a committee, and the propagandist starts on his journey. He gets him up a little pamphlet, and he knows how tender the American heart is. He knows how sympathetic we are. He knows how liberal we are, and he gets up a very pathetic story to tell, and he draws a very pathetic picture to show us, and he comes to Washington.

Mr. JOHNSON of Minnesota. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield.

Mr. JOHNSON of Minnesota. General Allen appeared before the Foreign Relations Committee and told the committee about the conditions in Germany at the same time that I was there; and I wonder if anybody has been before the committee who has tried to contradict the statement of General Allen?

Mr. HEFLIN. I was just talking to a Senator—he is in the Chamber now—who was over there last year, and he told me that he saw nothing to indicate starvation anywhere, and he was in Germany for a month.

Mr. JOHNSON of Minnesota. Will the Senator yield again?

Mr. HEFLIN. Certainly.

Mr. JOHNSON of Minnesota. A very prominent man in my State spent several weeks in Germany, and I have read his report, and I know that he is telling the truth about conditions, because during the World War he was a high officer, and I know that he would not go over to Germany now and come back and tell anything contrary to the truth. Of course, some of these gentlemen who were over there probably stayed at one of the high-toned hotels and associated with men high up in office—rich men. They probably did not have the time to look in the gutters and see the condition of the sick children. The Swedish minister saw me here in the Capitol a few weeks ago. He came directly from Germany, and he told me about the places where the children were sleeping and eating, and told me about the stuff that they had to eat three times a day, and I believe it was boiled cabbage alone. I believe that man told the story correctly.

Mr. HEFLIN. I am satisfied that there is some distress in Germany. I do not believe there is half the distress there that there is in the United States, however.

Mr. CARAWAY. Mr. President——

Mr. HEFLIN. I will yield to the Senator in a moment. In the South the farmers are far from being in a comfortable condition.

Mr. JOHNSON of Minnesota. I know that. We raise 20,000,000 bushels of potatoes in the Red River Valley alone. In 1922 we would have been glad if we could have been in a position to dig them and let the German people have them.

Mr. HEFLIN. I am sure of that.

Mr. JOHNSON of Minnesota. Yes; and there is a surplus of wheat in this country that we would be willing to give them for nothing, because we do not get anything at all for it.

Mr. HEFLIN. I am satisfied of that.

Mr. JOHNSON of Minnesota. We would be willing to do that, if you would provide the money for its shipment over there on the railways and on the steamboats.

Mr. HEFLIN. We will provide it after the 4th of next March. [Laughter.]

I now yield to my friend from Arkansas.

Mr. CARAWAY. The thing I was just getting ready to ask was this: The Senator from Minnesota suggested that possibly these Senators stayed with rich people in Germany. If there are rich people in Germany who are able to feed people on such fine food, why do they not lay the hand of the law on those rich people and make them feed the poor?

Mr. HEFLIN. Of course. My friend from Arkansas has hit the bull's-eye, as he generally does. He says that these rich people are there to whom the able Senator from Minnesota refers, and why not have the Government of Germany say to them: "You have the wealth of the country. We are not going to permit these people to starve."

Mr. JOHNSON of Minnesota. I want to answer that.

Mr. HEFLIN. Say to them, "We are going to tax you and appropriate money to relieve this distressing condition," just as the Government of the United States did when the earthquake did so much damage and injured so many people at San Francisco a few years ago.

Mr. JOHNSON of Minnesota. I would like to answer the Senator from Arkansas. That question was brought up in the committee while I was there, and General Allen and other people there said that this prominent German Rockefeller—they have been calling him that. What is his name? I can not remember.

Mr. CARAWAY. Stinnes.

Mr. JOHNSON of Minnesota. Yes, Stinnes, who died only a few months ago; that he was doing everything in his power to try to help the poor people of Germany, and there is no question about that at all. But there are some people who are nicely dressed, who are well fed. They are not doing anything. They are drones upon society, and I am ashamed to say that we have too dog-gone many in this country of the same kind.

Mr. CARAWAY. The Senator said that Hugo Stinnes was doing all he could to help the poor. When the war was over he was a man of moderate means. When he died, five years later, he was one of the richest men in the world. He evidently had done very much for the poor.

Mr. JOHNSON of Minnesota. I do not take any sides for him in any way. Probably he was in a position. But I do not think it is fair for two prominent lawyers to jump on one farmer here at the same time. [Laughter.]

I want to add one more thing, Mr. President. Yesterday the question was brought up in this Chamber about some one being a lawyer and not a scholar, and then there was another who was a scholar and not a lawyer. I am neither a scholar nor a lawyer, but I thank God I have common sense.

Mr. CARAWAY. May I suggest, in connection with the Senator's statement that two lawyers were jumping on one farmer, that I have not seen the farmer. This gentleman here is an officeholder.

Mr. HEFLIN. The Senator looks so prosperous since he has come down here, and he has gotten so sleek and fat, that I would not take him for a farmer. [Laughter.]

Mr. JOHNSON of Minnesota. I have to be fat when I run for office in Minnesota. I grow fat when they fight me. [Laughter.]

Mr. HEFLIN. Mr. President, I want to say, in reply to my good friend from Minnesota, that I was reared on a farm. My father was a farmer and a country doctor. I was admitted to the bar and practiced law for about 10 years, and when I was elected to Congress in 1904 I quit the law practice and

have not tried a case since that time. So I probably know now nearly as little law as does the Senator from Minnesota, because it has been so long since I tried a law case. But I have seen some able men in this Chamber and in the other Chamber who were lawyers, and who were good friends to the people. They were men who tried to do what they thought was just and fair to all classes of our people.

I think my record here will show that I have been a friend to the farmer ever since I have been in Congress. I have never tried to fool the farmer, and I do not intend that anybody else shall fool him if I can help it.

I have seen men during my service who would talk one way and look another. I have seen men who were good friends to the farmer when they were out on the hustings, running for office, who would forget the farmer when they were elected. Quoting Thomas Moore, as I have done on another occasion or so—

> Bees on flowers lighting cease their hum,
> And some fellows in office soon grow dumb.

Mr. President, the farmer will have ample opportunity to examine the records of this Congress and see how his interests have been tossed about like a football. The other interests have not been neglected. You took the tax off the big income-tax payers—$90,000,000 a year. That went through in a jiffy. You relieved the profiteers of their taxes—$450,000,000 a year. That is all over and behind us. If you had held those two items of taxes on the list, we could have paid the soldiers, every one of them, a cash bonus and have settled the whole thing, and the soldiers would be satisfied. But you did not do that. We have soldiers now in distress. There are Senators in this body, myself and a number of others, who have contributed to ex-service men in distress walking the streets of the Capital of the Nation, which they saved from overthrow and destruction. Yet they could not be served. You said you did not have the money then.

Your President sent a message telling us not to pass a bonus bill. He even said that it was immoral. He was backed in that position by your leaders, and we could not get any cash for the soldiers.

But you can take $10,000,000 now, with the Senator from Wisconsin [Mr. LENROOT] and his colleague [Mr. LA FOLLETTE] advocating it in the closing hours of this session, and send that over to Germany, when you have men and women walking the streets of your cities in distress to-day, and children who are not getting sufficient food in some of the sweatshops and tenement houses of America.

Mr. JOHNSON of Minnesota. Will the Senator yield?

Mr. HEFLIN. Not just now. What did Mr. Mellon do? There was not any hitch about his proposition. He is the richest man in the world, probably, in ready cash. He is at the head of the fiscal policies of America. He has control of the strong box of a hundred million people. What has he done under this administration? Refunded to himself hundreds of thousands of dollars in taxes which he paid into the Treasury, giving it back to himself, relieving himself of the tax burdens which he ought to bear. That went through without a bobble.

But you can not relieve the laboring man; you can not relieve the shippers of the country, who are crying out for fair and reasonable freight rates. Oh, no. You can not do anything to supply the farmers with adequate credits and currency to carry on their business. Oh, no. But you can hold in office your Mellons, who can by the stroke of their pen take back the taxes which Congress made them pay. You can do that.

Mr. JOHNSON of Minnesota. Will the Senator yield?

Mr. HEFLIN. I yield to the Senator from Minnesota.

Mr. JOHNSON of Minnesota. I agree with a lot the Senator from Alabama says.

Mr. HEFLIN. I was sure the Senator would.

Mr. JOHNSON of Minnesota. But I do not think he should criticize the Senator from Wisconsin for taking up this bill at this time. Senators in this body have had ample time to study this measure. If I remember rightly, it was one of the first measures introduced in the other House, and there was one more measure introduced about the same time that fell by the wayside, and for months this measure, having passed the House with a big majority, has been in the committee here. I appeared before the committee, and many others have done so, and the reason the measure has not been taken up for consideration is that we have been waiting and waiting. As I stated myself in this body a few days ago, as a new man I could not——

Mr. HEFLIN. I can not yield longer. It will take me off the floor. I yield for a question.

Mr. JOHNSON of Minnesota. Pardon me for taking up the Senator's time. I did not intend to make a speech on this matter, but the remarks of the Senator brought me up on my feet, and I will try to get through in a second.

The Senator can not have the excuse that he did not know anything about this bill. The Senator knew the bill was coming, but of course the Senator does not like to see it coming up now in the eleventh hour. I would have liked to see the bill come up a month ago, so that we would have had ample opportunity for discussion.

The Senator from Florida, this able lawyer [Mr. FLETCHER], made the same excuse, and said that we needed to debate it. There are a lot of things in this body that we do not need to debate at all. Of course, that is the way with attorneys, they always like to debate things so long.

Mr. HEFLIN. Mr. President, the Senator interrupted me just as I was operating upon Mr. Mellon—this man who has refunded to himself hundreds of thousands of dollars. Nobody in the administration has criticized him, so far as I know. He is still held in that high place by the President, and I understand the President regards him as the ablest and best member of his Cabinet.

I recall another thing that happened under him. A clerk in his department was given in hand the tax files of Mr. Doheny, and that clerk worked out the proposition by which he refunded to Mr. Doheny several thousand dollars, and that clerk soon retired from his position in the Treasury. He put behind him the small salary he was receiving, and he is now drawing a big salary at the hands of Mr. Doheny, the man he served when working under our flag, sworn to do justice by the American people—showing favors to the oil king of America under the administration of Mr. Mellon and Mr. Coolidge. This man Doheny got back his thousands, and the man who handed it back, working under Mr. Mellon, is now out drawing big money from Mr. Doheny.

Mr. President, one other thing in that connection. Mr. Mellon has averaged, in refunding to the mighty rich of America, $100,000,000 a year since he has been Secretary of the Treasury. No wonder we have not money to pay our soldiers adjusted compensation. No wonder we can not do anything to relieve the stricken farmers of the West—these men and women, proud and upstanding five years ago, the junior Senator from North Dakota tells us, now in want, their farms mortgaged, homes sold, household effects gone, eking out a miserable existence—and your Wall Street sheet proclaiming that you have prosperity under a Republican administration!

It is not so. We might just as well tell the truth about it. Here in the closing hours, when millions of the people in the West are far from being even in a comfortable position and thousands in the South are suffering because of the wicked policies of your party, you come with a $10,000,000 gift to parcel out to Germany, when there is grave doubt as to the existence of any facts to justify it.

I want to repeat this in conclusion: The farmers of Germany are freer from debt and encumbrance of every kind than are the farmers of any other country on the globe. Mr. President, I believe in the doctrine of being just to our own people before we are generous to any other people on earth.

Mr. CURTIS. Mr. President, I ask unanimous consent that we may dispose of a conference report which the Senator from New Mexico [Mr. BURSUM] desires to present and which is very short; that the Senator from Wyoming [Mr. WARREN] may dispose of an appropriation bill to which there are only two amendments; and that we then have a short executive session, and take a recess at the close of the executive session until 8 o'clock to-night.

Mr. DILL. Some of us want to vote on the pending motion to discharge the committee from the further consideration of the joint resolution.

Mr. CURTIS. That can not be voted on before dinner, because the Senator from Wisconsin [Mr. LA FOLLETTE] desires to speak further on it.

Mr. McKELLAR. Mr. President, before I give my consent——

Mr. HEFLIN. We could vote on it now.

Mr. DILL. Yes; we can vote on it now.

Mr. HEFLIN. Let us vote on it now.

SEVERAL SENATORS. Vote! Vote!

Mr. HEFLIN. Let us have a vote.

Mr. JONES of Washington. I think probably we had better not vote now.

Mr. HEFLIN. Let us take no recess, then.

Mr. CURTIS. Mr. President, the Senator from Wisconsin asks me to include in the request that we agree to a vote on the joint resolution before we adjourn to-night.

Mr. LA FOLLETTE. And that when we conclude our session to-night we take an adjournment.

Mr. CURTIS. We had intended to do that.

Mr. McKELLAR. Let us have no misunderstanding about it. We will not take a recess to-night, but when we conclude our business adjourn until 12 o'clock to-morrow.

Mr. CURTIS. We might want to adjourn until 11 o'clock.

Mr. McKELLAR. Very well; make it 11 o'clock.

Mr. CURTIS. I ask unanimous consent that after the disposition of the conference report which the Senator from New Mexico desires to present——

Mr. McKELLAR. Before that is done, and reserving the right to object, as I understand it the Senator from New Mexico is going to submit a conference report in which the Spanish-American War veterans are to be left out. I am unwilling for that report to be agreed to pro forma. I think it ought to be discussed.

I do not believe the Spanish War veterans ought to be left out. I do not think the members of the conference committee should have agreed to any such thing. I do not think the Senate conferees have stood up for what the Senate adopted. The Senate adopted a provision in the bill including the Spanish-American War veterans, and the Senator from New Mexico has come in here with a report agreeing to leave out the Spanish-American War veterans. I do not think we ought to adopt the report with the provision left out, and I am unwilling to give unanimous consent for the consideration of the conference report.

Mr. BURSUM. Mr. President, I would like to be permitted to say a word in reply to the Senator from Tennessee. There is no man in this body any more anxious than I am to give the Spanish-American War veterans an increase of pension.

Mr. McKELLAR. Then the Senator ought not to bring in a report without such a provision.

Mr. BURSUM. Will the Senator kindly let me finish my statement?

Mr. SWANSON. Mr. President, the time is going to be consumed in debate, and I object. Let us proceed with our business.

Mr. ROBINSON. Mr. President, I ask for order in the Chamber.

The PRESIDENT pro tempore. Senators must be in order before any business can be transacted. The Senator from Kansas has not completed his request for unanimous consent, and until that is done there is no debate in order.

Mr. CURTIS. I am perfectly willing to submit the unanimous-consent request leaving out the conference report of the Senator from New Mexico. I am satisfied there will be no objection to the bill of the Senator from Wyoming, and we ought to put it through because there will be only two amendments, and there may be a conference on it.

Mr. McKELLAR. What is the bill?

Mr. CURTIS. It is a bill to apply increased salaries in lieu of the bonus that has been paid for years to those in the field service all over the United States. It is a justifiable measure and ought to go through. I do not think there will be a single vote against it. One amendment is only to correct a mistake. It ought to pass in two minutes.

Mr. SMITH. Let us pass it.

Mr. CURTIS. I submit this request. I ask unanimous consent that we dispose of the appropriation bill in charge of the Senator from Wyoming [Mr. WARREN]; that at the conclusion of that matter we have a short executive session; that at the conclusion of the executive session we take a recess until 8 o'clock to-night; and that we vote upon the motion of the Senator from Wisconsin [Mr. LA FOLLETTE] to discharge the committee from further consideration of the German relief joint resolution before we adjourn to-night.

Mr. McKELLAR. And that when we quit to-night we will adjourn until 11 o'clock to-morrow.

Mr. ROBINSON. Mr. President, since I came into the Chamber a number of Senators have suggested that we might take a vote now on the motion of the Senator from Wisconsin. If that is possible, why can we not take a vote on it now?

Mr. CURTIS. I understand the Senator from Wisconsin wants half an hour to discuss the motion.

Mr. LA FOLLETTE. I feel as if I would like to make a brief talk in favor of the motion. I have not up to the present time. I have listened to three or four hours' discussion mainly against it, and I would like to be permitted an opportunity to reply. It might take half or three-quarters of an hour. It seems to me it would be better to take a recess, if we are going to have dinner, and come back at 8 o'clock. That is the only reason why I made the suggestion.

Mr. HEFLIN. What other measures are going to be considered to-night?

Mr. CURTIS. I thought that to-night we would try to get unanimous consent to clean up the calendar, and perhaps one or two bills that could be taken up on motion.

Mr. FLETCHER. I think that ought to be included in the unanimous-consent agreement.

Mr. CURTIS. We can not include so many matters in such an agreement.

Mr. SWANSON. I do not think we will make any progress by endeavoring to get unanimous consent. We have to dispose of the bill of the Senator from Wyoming, and we could have disposed of it by this time while we have been talking about a unanimous-consent agreement. The best thing to do is to proceed and dispose of his bill and then take a recess.

Mr. JONES of Washington. Mr. President, let me suggest that we agree to take a recess at not later than half past 6 o'clock and dispose of what we can before that time.

Mr. SWANSON. Yes; and be back here at 8 o'clock to-night, and the Senator from Wisconsin can then proceed.

Mr. NORRIS. I would like to suggest to the Senator from Kansas that we take a recess at not later than 6.30, that we reconvene at 8 o'clock, and that we vote upon the motion of the Senator from Wisconsin before we adjourn to-night.

Mr. HEFLIN. I object to that.

The PRESIDENT pro tempore. The Senator from Nebraska has the floor.

Mr. HEFLIN. I can object.

The PRESIDENT pro tempore. The Senator can object, but the Senator from Nebraska has a right to state his request.

Mr. HEFLIN. The Senator had stated it.

Mr. CURTIS. Apparently we might as well go on with the business of the Senate.

Mr. HEFLIN. I do not intend to permit a vote to be had on the motion of the Senator from Wisconsin to-night if I can help it, when there are but few Senators here. Last night after half past 9 there were not 30 Members here. If we are going to pass on the business of the people, a quorum must be present. We can not dispose of the matter to-night. We can discuss it. I do not object to having the Senator from Wisconsin do that, but let us vote on it to-morrow, when we have a full attendance. I am not going to consent to a vote on it to-night.

Mr. CURTIS. Very well. I withdraw my request.

The PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. JONES of Washington. Mr. President, I shall take only a minute or two. I agree with the Senator from Alabama [Mr. HEFLIN] that there would be no hesitation upon the part of the Senate, and I do not think on the part of anyone, to make ample appropriation to meet real distress if the conditions were shown to exist that we felt would warrant it. We never have failed to respond to the cry of distress and suffering at any time.

### CIVILIAN EMPLOYEES OF FIELD SERVICE

Mr. WARREN. Mr. President, from the Committee on Appropriations, I report back favorably, with amendments, the bill (H. R. 9561) making additional appropriations for the fiscal year ending June 30, 1925, to enable the heads of the several departments and independent establishments to adjust the rates of compensation of civilian employees in certain of the field services. I ask unanimous consent for the consideration of the bill.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Wyoming?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The first amendment of the Committee on Appropriations was, on page 16, line 14, after the word "salaries," to strike out "$300" and to insert "$680," and at the beginning of line 15, to strike out "$680" and to insert "$300," so as to read:

Carson City, Nev.: For salaries, $680; for wages, $300; in all, $980.

The amendment was agreed to.

The next amendment was, on page 23, after line 2, to insert:

DEPARTMENT OF COMMERCE—BUREAU OF FISHERIES

For protection of the fisheries of Alaska, including travel, subsistence (or per diem in lieu of subsistence) of employees while on duty in Alaska, hire and maintenance of boats, employment of temporary labor, and all other necessary expenses to carry out the provisions of the act entitled "An act to protect the fisheries of Alaska," approved June 6, 1924, there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $55,000 for the fiscal year 1924, and to remain available until June 30, 1925.

Mr. KING. Mr. President, I ask an explanation regarding the item, and also I should like to know the aggregate amount carried by the bill and added to the burdens of the taxpayers of the country.

Mr. WARREN. In the first place, let me say the bill, altogether, including the amendment, carries a total of $26,302,767.84. The bill covers all the employees of the United States, except those who have been provided for under the classification plan in other bills; in other words, it takes in all the field-service employees everywhere in the United States and its possessions, and also a large portion of the employees even in Washington, including some employees of the various courts. In other words, this covers the bonus of heretofore and perhaps a small percentage more as additional compensation for the employees I have mentioned.

As to the amendments, the first amendment was a transposition of two amounts and not a dollar was added by it. At the end of the bill an appropriation is made of $55,000. That was made necessary because of the bill passed a few days ago in relation to the fisheries of Alaska. The Budget estimate came down this morning. Of course, the fisheries of Alaska require immediate, instant attention, as they are about to start in their season. All of the $26,000,000 except $55,000 is for employees of the United States.

Mr. KING. As I hastily figure in it my head, we have added to the pay rolls of the Government considerably more than $100,000,000 for the coming year.

Mr. WARREN. The Senator will recall that we have been paying a bonus, and this takes the place of the bonus, so there is not the increase that there would seem to be from the figures.

Mr. KING. Of course, aside from the bonus it would be possibly $200,000,000.

Mr. WARREN. Oh, no.

Mr. KING. Above the compensation paid under the old schedule.

Mr. WARREN. It is nearer a 5 per cent net increase than it is 10 per cent.

Mr. KING. I think the Senator is in error in regard to that.

Mr. WARREN. I think not.

Mr. KING. This would add $26,000,000 to the expenditures of the Government.

Mr. LENROOT. No; less the $240 bonus now paid.

Mr. KING. No; that is based upon the schedule of salaries now provided by law.

Mr. WARREN. I take it the Senator does not begrudge it to the employees?

Mr. KING. If I had my way, Mr. President, there would be an adjustment of compensation for the employees of the Government a little different from that which is being prescribed, and it would have some relation to the compensation which is paid in agriculture and in the various vocations of the people of the United States.

Mr. WARREN. However, the Senator will take notice of the fact that the duty of the Committee on Appropriations is merely to appropriate money under the law.

Mr. KING. I am not criticizing the Appropriations Committee. They have strings, if not chains, around their necks which bind them.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 23, to increase the total appropriation from $26,302,767.84 to $26,357,767.84.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

ADDITIONAL REPORTS OF COMMITTEES

Mr. NORBECK, from the Committee on Agriculture and Forestry, to which was referred the resolution (S. Res. 249) authorizing an investigation of the amount of losses sustained by the farmers of the United States on account of governmental fixing of price on wheat during the World War, reported it without amendment and submitted a report thereon, and it was ordered to be referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. HARRELD, from the Committee on Indian Affairs, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 25. An act authorizing a per capita payment of $50 each to the members of the Red Lake Band of Chippewa Indians from the proceeds of the sale of timber and lumber on the Red Lake Reservation (Rept. No. 788);

H. R. 71. An act authorizing the Cowlitz Tribe of Indians, residing in the State of Washington, to submit claims to the Court of Claims (Rept. No. 789);

H. R. 4275. An act authorizing the Ponca Tribe of Indians residing in the States of Oklahoma and Nebraska to submit claims to the Court of Claims (Rept. No. 790);

H. R. 4818. An act to perfect the title of purchasers of Indian lands sold under the provisions of the act of Congress of March 3, 1909 (35 Stat. L. p. 751), and the regulations pursuant thereto as applied to Indians of the Quapaw Agency (Rept. No. 791);

H. R. 7077. An act to amend an act entitled "An act to amend an act entitled 'An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1914,' approved June 30, 1913," approved May 26, 1920 (Rept. No. 792); and

H. R. 7453. An act to amend an act approved March 3, 1909, entitled "An act for the removal of the restrictions on alienation of lands of allottees of the Quapaw Agency, Okla., and the sale of all tribal lands, school, agency, or other buildings on any of the reservations within the jurisdiction of such agency, and for other purposes" (Rept. No. 793).

Mr. NORBECK, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 3459) to encourage and promote the sale and export of agricultural products grown within the United States, reported it with amendments and submitted a report (No. 795) thereon.

Mr. COPELAND, from the Committee on Education and Labor, to which was referred the bill (S. 3278) to establish a council on universities and colleges in the District of Columbia, and for other purposes, reported it without amendment.

Mr. McNARY, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 2424) to reduce the fees for grazing livestock on national forests, reported it with an amendment.

ENROLLED BILLS PRESENTED

Mr. WATSON, from the Committee on Enrolled Bills, reported that on June 5, 1924, that committee presented to the President of the United States enrolled bills of the following titles:

S. 381. An act to amend section 2 of the act entitled "An act to provide for stock-raising homesteads, and for other purposes," approved December 29, 1916 (39 Stats. L. p. 862);

S. 790. An act for the establishment of a Federal industrial institution for women, and for other purposes;

S. 1174. An act authorizing the Secretary of the Interior to investigate and report to Congress the facts in regard to the claims of certain members of the Sioux Nation of Indians for damages occasioned by the destruction of their horses;

S. 1971. An act to authorize the Commissioners of the District of Columbia to accept certain land in the District of Columbia dedicated by Charles C. Glover for park purposes;

S. 2169. An act to amend in certain particulars the national defense act of June 3, 1916, as amended, and for other purposes;

S. 2929. An act granting the consent of Congress to the States of Georgia and Florida, through their respective highway departments, to construct a bridge across the St. Marys River at or near Wilds Landing, Fla.; and

S. 3181. An act to authorize an appropriation to enable the Director of the United States Veterans' Bureau to provide additional hospital facilities.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HARRISON (by request):

A bill (S. 3475) to amend an act entitled "An act for making further and more effectual provision for the national defense, and for other purposes," approved June 3, 1916, and the amendment thereto, approved June 4, 1920, and to create in the War Department a corps to be known as a mortuary corps, and the rank of United States Army mortician, and for other purposes; to the Committee on Military Affairs.

By Mr. JONES of Washington:

A bill (S. 3476) granting an increase of pension to Albert M. Ryan (with accompanying papers); to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 3477) granting an increase of pension to Alice J. Stebbins (with accompanying papers); and

A bill (S. 3478) granting an increase of pension to Julia A. Hemming (with accompanying papers); to the Committee on Pensions.

A bill (S. 3479) for the relief of Wilson Warford (with accompanying papers); and

A bill (S. 3480) for the relief of John Minister (with accompanying papers); to the Committee on Military Affairs.

By Mr. COLT:

A bill (S. 3481) granting an increase of pension to Mary J. Gillmore; to the Committee on Pensions.

By Mr. FESS:

A bill (S. 3482) to regulate interstate commerce in articles made by convict labor; to the Committee on Interstate Commerce.

By Mr. LENROOT:

A bill (S. 3483) for the relief of John H. Birkett; to the Committee on Claims.

HOUSE BILL REFERRED

The bill (H. R. 1468) to increase the salary of the warden of the United States penitentiary of McNeil Island, Wash., was read twice by its title and referred to the Committee on the Judiciary.

INVESTIGATION OF VETERANS' BUREAU

Mr. REED of Pennsylvania submitted the following resolution (S. Res. 253), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the Select Committee on Investigation of the Veterans' Bureau created by Senate Resolution 466, March 2, 1923, be, and hereby is, continued until the conclusion of the Sixty-eighth Congress, with the same powers and authority as were vested in said committee by said resolution of March 2, 1923. The expenses of said committee shall be paid from the contingent fund of the Senate.

Mr. KEYES, subsequently from the Committee to Audit and Control the Contingent Expenses of the Senate, to which was referred the resolution (S. Res. 253) continuing the Select Committee on Investigation of the Veterans' Bureau through the Sixty-eighth Congress, reported it without amendment.

SALARIES IN THE GOVERNMENT PRINTING OFFICE

The PRESIDENT pro tempore laid before the Senate the following message from the House of Representatives:

IN THE HOUSE OF REPRESENTATIVES,
*June 6, 1924.*

*Resolved*, That the House agrees to the amendments of the Senate Nos. 1 to 5, and also to the amendment to the title to the bill (H. R. 7996) entitled "An act to regulate and fix rates of wages for employees of the Government Printing Office."

*Resolved further*, That the House agrees to the amendment of the Senate No. 6 with an amendment as follows:

In lieu of the matter inserted by said amendment insert:

"That employees and officers of the Government Printing Office, unless otherwise herein fixed, shall continue to be paid at the rates of wages, salaries, and compensation (including night rate) now authorized by law until such time as their wages, salaries, and compensation shall be determined as hereinbefore provided."

Mr. MOSES. I move that the Senate agree to the amendment of the House to Senate amendment No. 6.

The motion was agreed to.

BRIDGE ACROSS THE OCONEE RIVER, GA.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 9612) granting the consent of Congress to the State of Georgia, through its highway department, to construct a bridge across the Oconee River, and I ask unanimous consent for its immediate consideration.

There being no objection, the Senate as in Committee of the Whole proceeded to consider the bill, which was read as follows:

*Be it enacted, etc.*, That the consent of Congress is hereby granted to the State of Georgia, through its highway department, and its successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Oconee River at a point suitable to the interests of navigation, near where the line dividing Johnson and Washington Counties touches the waters of the Oconee River on the east side, said bridge connecting one or both of said counties with Wilkinson County on the west side of said river, and being located at or near a point formerly known as Thompson's Ferry, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. The right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ORDER FOR EXECUTIVE SESSION AND RECESS

Mr. CURTIS. I ask unanimous consent that the Senate now go into executive session, and that at the conclusion of the executive session it take a recess until 8 o'clock to-night.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The Senate proceeded to the consideration of executive business. After 15 minutes spent in executive session the doors were reopened; and (at 6 o'clock and 30 minutes p. m.) the Senate took a recess until 8 o'clock p. m.

## EVENING SESSION

The Senate reassembled at 8 o'clock p. m. on the expiration of the recess.

ENROLLED BILL PRESENTED

Mr. WATSON, from the Committee on Enrolled Bills, reported that on June 6, 1924, that committee presented to the President of the United States the enrolled bill (S. 1898) reclassifying the salaries of postmasters and employees of the Postal Service and readjusting their salaries and compensation on an equitable basis, and for other purposes.

ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the Speaker of the House had signed the enrolled bill (S. 1898) reclassifying the salaries of postmasters and employees of the Postal Service and readjusting their salaries and compensation on an equitable basis, and for other purposes, and it was thereupon signed by the President pro tempore.

GOLDEN, COLO., WATER RESERVOIR SITE

Mr. PHIPPS. From the Committee on Public Lands and Surveys I report back favorably without amendment the bill (H. R. 7998) granting public lands to the city of Golden, Colo., to secure a supply of water for municipal and domestic purposes. I ask unanimous consent for its present consideration.

I will state that it merely allows the city of Golden, Colo., to acquire an area of ground of 800 acres for the purpose of a water reservoir for the city. The land had already been reserved to the city of Denver for public-park purposes, but the two cities have come into an agreement so that instead of the city of Denver taking the land the city of Golden takes the same piece for the purpose of a reservoir site.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That for the purpose of securing an adequate supply of water for domestic and municipal purposes for the use of the city of Golden, Colo., there is hereby granted to the said city the lands described as follows: In Clear Creek County, Colo., township 4 south, range 72 west of the sixth principal meridian; northwest quarter of southeast quarter, south half of southwest quarter, section 8; north half of northwest quarter, southwest quarter of northeast quarter, north half of southeast quarter, south half of south half, section 17; southwest quarter of the northeast quarter, section 20, northwest quarter of southeast quarter; southeast quarter of southeast quarter, section 21; south half of north half, southeast quarter, south half of southwest quarter, section 22; north half of north half, southwest quarter of northeast quarter, southeast quarter of northwest quarter, section 27; east half of northwest quarter, section 28; total 1,320 acres, more or less, on condition that the said city shall make payment for such lands at the rate of $1.25 per acre to the receiver of the United States land office at Denver, Colo., within one year after approval of this act: *Provided*, That there shall be reserved to the United States all oil, coal, or other mineral deposits found at any time in the lands, and the right to prospect for, mine, and remove the same: *Provided further*, That the grant herein made is subject to any valid existing rights or easements on said lands, and that upon failure of the city for one year to make use of the lands herein granted, in accordance with the purpose of this act, all rights hereunder shall cease and such lands revert to the United States.

SEC. 2. That the act of Congress approved August 25, 1914 (38 Stat., p. 706), entitled "An act granting public lands to the city and

county of Denver, in the State of Colorado, for public park purposes," is hereby repealed in so far as it authorizes the disposition of any of the lands described in section 1 hereof.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

WORLD COURT

Mr. McKELLAR. Mr. President, a night or two ago the senior Senator from Virginia [Mr. SWANSON] delivered an address by radio on the World Court. It is a very excellent address, and I ask unanimous consent that it may be printed in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The address is as follows:

SPEECH OF SENATOR SWANSON DELIVERED FROM RADIO STATION WRC, JUNE 5, UPON THE WORLD COURT

Lovers of peace for almost a century have sought to establish a world court for the settlement of international differences and the avoidance of war, and thus establish the supremacy of justice and law over force. This country has been foremost in its efforts in this direction. Nothing was accomplished until a few years ago when a committee of noted jurists, appointed for the purpose, under a clause in the League of Nations, prepared a plan which was reported to the league and approved by it for submission to its members for adoption, and to other nations who should approve the statutes creating the court. Upon this committee served Hon. Elihu Root, one of America's most distinguished statesmen and jurists.

Forty-eight nations have given their assent to the statute creating the court. This court has been created, has elected its judges, has been rendering important decisions which have been universally approved, and has settled some dangerous international questions. The court was so well constituted, its decisions so wise, and the advantages accruing to the world on account of it were so manifest, that, in February of last year, President Harding and Secretary Hughes, in a communication to the Senate, advised the Senate to accept the statute creating the court upon certain conditions and reservations.

These conditions were that the United States would assume no legal relation or obligation to the League of Nations; would be permitted to vote equally with any other nation in the council and assembly of the League of Nations in the election of judges; to pay its fair share of the expenses of the court as should be determined by Congress; that the statute creating the court should not be amended without the consent of the United States; and that the United States would be bound by the decisions of the court only in such cases as it would voluntarily submit to the court.

President Harding and Secretary Hughes properly and strongly argued that by these conditions and reservations the United States could obtain all the advantages of the court without being in any way connected with the league. Last December President Coolidge concurred in the recommendations of President Harding and Secretary Hughes.

No effort was made either in the Foreign Relations Committee of the Senate or in the Senate to carry out the recommendations made by these two Presidents and Secretary Hughes until recently, as ranking Democratic member of the Foreign Relations Committee, I had the pleasure of introducing and having referred to that committee a resolution, which was very carefully drawn, to give effect to these recommendations. A short time after the introduction of this resolution, Senator LODGE introduced a resolution calling for a conference of nations and the creation of a new court.

Later Senator PEPPER introduced a plan as a substitute for the Harding-Hughes plan. The Committee on Foreign Relations by vote of 10 to 8 refused to report my resolution to make effective the Harding-Hughes plan. The seven Democratic members of this committee and one Republican member, Senator LENROOT, voted for this plan. The committee directed the Pepper plan be reported to the Senate, where it is now pending for consideration and action. This destroys all possibility at this session of the Senate for favorable action by the United States to give its adherence to the statute creating a world court. It was recognized when the Pepper plan was reported to the Senate that this would be the result.

The issue presented for the Senate to act upon was to join an existing court, which had already been created by 48 nations, and which was functioning well and satisfactorily, or to create a new court.

The Pepper plan, if passed by the Senate, makes it impossible for the United States to become a member of this court. It creates an entirely new method of electing judges which each of the 48 nations must agree to before it can become operative. It asks these nations to abandon a plan which has proven satisfactory to them, and under which a most splendid court has been created, in order to adopt a new, untried plan which is far inferior to the existing method of selecting judges.

It has many amendments to the existing plan, all of which must be concurred in by each of these 48 nations before the Pepper plan can become operative. It is not believed that the consent of all these nations can be obtained, for no reason can be assigned by anyone why they should do so, as no advantages could accrue to them. If the proponents of the Pepper plan earnestly desire to defeat the adherence by the United States to the statute creating this existing World Court, they could not have pursued a more effective course than favorably reporting the Pepper resolution to the Senate. It can not and will not receive a vote of two-thirds in the Senate, and it can not and will not receive the assent of the 48 nations who are members of the present court.

The Pepper plan also has a condition included before the assent of the United States can be given, which condition makes its acceptance by these 48 nations an utter impossibility. Under this condition Canada must consent not to have a representative in the bodies provided in the plan for electing judges of this court, of which she is an assenting member. Australia must consent to waive her right to vote in the election of judges of this court, of which she is a member. So must New Zealand, and also the Irish Free State, which is now a member of the league and will no doubt very soon give assent to the statute creating the court. None of these nations or self-governing colonies will consent to such self-abnegation and deprivation of their existing rights. To endeavor to conduct negotiations to attain this purpose is both absurd and futile.

As the power of the representatives under the Pepper plan is confined entirely to the election of judges and fixing the expenses of the court, it is difficult to understand why its proponent thought that the representative of the Republic of Liberia would be better qualified to elect a good judge than would be the representative of the Irish Free State. He fails to state why the representative of the Republic of Haiti is better qualified to elect a judge than the representative of our cordial neighbor, Canada. He seems to think that the representative of Santo Domingo would be more effective in acquiring a good judge than would be the representative of Australia.

The submission of the Pepper plan to these self-governing colonies and Great Britain could only result in the creation of resentment, engender feelings of ill will, and could be productive of no good. The Senate would make a great mistake in passing the Pepper resolution and thus open up negotiations which would be so harmful and result in the creation of so much ill will.

The claim that the World Court is a creature of the League of Nations is wholy untenable. The only argument cited in advocacy of it is the fact that the judges of the court are elected and their salaries paid by the league. As previously stated, this court is created by a statute or treaty entered into by 48 nations separate and distinct from the covenant of the League of Nations and has nothing to do with it. The court is controlled by the statute creating it and not by any provision in the covenant of the league. The election of judges is held under the provisions of the statute creating the court and not under any provision of the covenant of the league.

The procedure is similar to that under our Federal Constitution which creates three separate and coordinate branches of government—the executive, legislative, and judicial—each independent of the other. The Constitution in providing for the election of judges for our Supreme and Federal courts directs that they shall be appointed by the President with the advice and consent of the Senate. The Constitution uses the President and Senate as instrumentalities or agents for the selection of our Federal judges. This method of electing them has not in any way impaired the independence of our Supreme Court or Federal courts. These courts have repeatedly declared null and void acts of legislation passed by Congress and approved by the President. They have frequently enjoined the executive branch of our Government from executing acts of Congress. The Constitution provides that the salaries of judges and expenses of our courts shall be fixed by Congress, thus using Congress as an instrumentality or agent for this purpose. Yet, the fact that our Federal judiciary have salaries and expenses fixed by Congress has never made the judiciary dependent upon the Congress and, as previously stated, it has frequently declared acts of Congress null and void and enjoined their execution by the Executive.

No one denies that our Supreme Court and entire Federal judiciary, who are elected and paid by the method just named, are a free and independent branch of our Government, and that their independence has not been impaired by such method. In a similar way the statute creating the world court under consideration uses the council and assembly of the League of Nations as agents or instrumentalities for the election of these judges and the payment of expenses without in any way impairing the complete independence of the court. This is clear and can not be disputed.

The proposed Pepper plan with all of its many amendments does everything it possibly can to evince enmity and ill will toward the League of Nations. It is a manifest affront to the 48 nations who have assented to the statute creating the court and who are members

of the league, an institution which they have created and cherish. It is difficult to see how successful negotiations can be conducted with these nations. If the United States never joins the league, it should certainly not insult it and express ill will toward it or endeavor to retard its undertakings promotive of peace and good will among the nations of the world. The proponents of the Pepper plan evidently hate the league more than they desire to join such court.

If the United States does not desire to join this world court, it should say so in a frank, direct, and manly way, and not by indirection seek to injure an institution which is accomplishing so much good for world peace and international settlements. The Pepper plan may be available for political purposes, but it has not the slighest chance of ever being a practical method of obtaining the adherence of the United States to the statute creating the world court.

I thank you.

UPPER MISSISSIPPI WILD LIFE AND FISH REFUGE

Mr. REED of Missouri. Mr. President, I ask unanimous consent that the Committee on Commerce be discharged from the further consideration of the bill (H. R. 4088) to establish the upper Mississippi River wild life and fish refuge. I have talked it over with the chairman of the committee, and he has no objection.

Mr. CURTIS. Let us know what it is first.

The PRESIDENT pro tempore. Is there objection?

Mr. CURTIS. Reserving the right to object, I want to know what it is.

Mr. REED of Missouri. I was going to state it as soon as I had asked consent. The bill passed the House of Representatives to-day. It requires a concurrence of the legislatures of four States before it can become operative. Those legislatures will meet at such times that unless the bill goes through now it is very doubtful whether it could be laid before them in time for their action, and therefore it may mean a postponement of two years. That is the reason for the haste.

Now, as to the character of the bill: It is a bill to create a game and fish reserve along the swamp lands of the Mississippi River, extending from about Davenport, Iowa, up into Wisconsin. It has been worked over by a lot of enthusiasts and has the support of the department and was reported on favorably by the department. It carries an authorized appropriation, but does not carry the appropriation itself.

The situation is that the great breeding places for bass of the country can by this means be preserved at a very nominal expense. It is supported by the game and fish preservation organizations all over the country and has been supported by the unanimous opinion of experts in the Department of Agriculture, who have to do with the game life, and in the Department of Commerce, who have to do with fish life.

Mr. McKELLAR. And it is supported by the State organizations as well.

Mr. REED of Missouri. Yes. I ask unanimous consent that the Committee on Commerce be discharged from the further consideration of the bill.

Mr. JONES of Washington. Mr. President, I desire to make a brief statement with reference to the bill. The bill was introduced in the House and also in the Senate. It was referred to the Committee on Commerce when introduced in the Senate. A short time after that the Committee on Commerce was discharged from its further consideration, and it was referred to the Committee on Agriculture and Forestry. Then, in a few days, the Committee on Agriculture and Forestry was discharged and it was referred back to the Committee on Commerce. The bill would properly go to either committee. It involves matters within the jurisdiction of the Department of Agriculture and the Department of Commerce.

The Committee on Commerce has been very busy. Extensive hearings were had in the House on the measure. The Committee on Commerce gave a brief hearing to the parties when they were here, expecting, of course, to use the hearings that were had before the committee in the House. We thought it was unnecessary to duplicate those hearings. Furthermore, we were very much crowded for time, and it was not possible at the time the delegation was here before the House committee to give them all the time before the Commerce Committee of the Senate that they had before the committee of the House. The Committee on Commerce, as I said, was very busy. We have not had time to take the matter up fully. We thought it was wise, anyhow, as extended hearings were had in the House, to allow the bill to pass the House before it was taken up in our committee.

About two or three weeks ago, or possibly a little longer, after the bill had been reported to the House, we called the measure up in the Committee on Commerce. There was no indication that action would likely be taken in the House during this session. Our committee was either busy with matters of its own or the members were busy on other committees, and so it was decided that the bill probably would not be acted upon at this session. The House, as the Senator from Missouri has said, has passed a bill very much like the measure as originally introduced, although modified in some very material aspects.

I want to make one statement to correct a statement I made to some parties who conferred with me to-day with reference to the matter. I told them that my recollection was that the President had stated, or rather that it was stated in a letter from the Budget that the President had advised the Budget that the bill was in conflict with the fiscal program for the year. I was not exactly right in my idea. I want to correct it in the RECORD. I have here the letter of the Department of Commerce on the bill in which they discuss the measure in two or three closely typewritten pages.

The Department of Agriculture is very enthusiastically in favor of the measure. They say the bill was referred to the Bureau of the Budget. This is the letter from the Director of the Budget:

> I have presented this matter to the President, who has instructed me to advise you that while he is in accord with the purpose of the proposed measure, the provisions contained therein for a direct appropriation of $300,000 for administrative purposes, and a direct appropriation of $3,000,000 for acquisition of land would be in conflict with his financial program for this and the ensuing fiscal year.

That is what I had in mind when I was talking to the parties this afternoon. But the letter goes on to say:

> The President has further instructed me to advise you that should the proposed measure be modified so as to authorize an appropriation of such amounts as may be necessary for administrative purposes and authorize an appropriation not exceeding $2,000,000 for the acquisition of land, it will not be in conflict with his financial program.

The bill as it passed the House has been modified in the particulars to which the President referred. It has not only been modified so as to make it an authorization instead of an appropriation, but the amount of $3,000,000 has been cut in two and made $1,500,000. So that the bill as it passed the House is not in conflict with the President's financial program.

Our committee has not had the opportunity, under the circumstances as I have related, to give careful consideration to the terms of the bill. I desire to say that personally I am in hearty sympathy with the purpose to be accomplished by the measure. I have examined the bill to some extent since it was reported by the House committee. They apparently gave the matter very careful consideration. They made some very important amendments. I desire to say that so far as I am personally concerned I have every confidence in the wisdom of the action of the House after the consideration that I know they have given to the bill.

With this statement—I merely wanted the Senate to have the facts—I desire to say that I have no objection to the discharge of the committee and a consideration of the bill, if the Senate sees fit to do so.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Missouri? The Chair hears none, and the Committee on Commerce is discharged from the further consideration of the bill.

Mr. REED of Missouri. I now ask unanimous consent for the present consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read as follows:

*Be it enacted, etc.*, That this act may be cited as "the upper Mississippi River wild life and fish refuge act."

SEC. 2. The Secretary of Agriculture is authorized and directed to acquire by purchase, gift, or lease, such areas of land, or of land and water, situated between Rock Island, Ill., and Wabasha, Minn., on either side of or upon islands in the Mississippi River which are subject to overflow by such river and which are not used for agricultural purposes, as he determines suitable for the purposes of this act.

SEC. 3. Any such area, when acquired in accordance with the provisions of this act, shall become a part of the upper Mississippi River wild life and fish refuge (hereinafter in this act referred to as the "refuge"). The refuge shall be established and maintained (a) as a refuge and breeding place for migratory birds included in the terms of the convention between the United States and Great Britain for the protection of migratory birds, concluded August 16, 1916, and (b) to such extent as the Secretary of Agriculture may by regulations pre-

scribe, as a refuge and breeding place for other wild birds, game animals, fur-bearing animals, and for the conservation of wild flowers and aquatic plants, and (c) to such extent as the Secretary of Commerce may by regulations prescribe as a refuge and breeding place for fish and other aquatic animal life.

SEC. 4. (a) No such area shall be acquired by the Secretary of Agriculture until the legislature of each State in which is situated any part of the areas to be acquired under this act has consented to the acquisition of such part by the United States for the purposes of this act, and, except in the case of a lease, no payment shall be made by the United States for any such area until title thereto is satisfactory to the Attorney General and is vested in the United States.

(b) The existence of a right of way, easement, or other reservation or exception in respect of such area shall not be a bar to its acquisition (1) if the Secretary of Agriculture determines that any such reservation or exception will in no manner interfere with the use of the area for the purposes of this act, or (2) if in the deed or other conveyance it is stipulated that any reservation or exception in respect of such area, in favor of the person from whom the United States receives title, shall be subject to regulations prescribed under authority of this act.

SEC. 5. Except where it is specifically provided otherwise, the Secretary of Agriculture and the Secretary of Commerce shall jointly prescribe such regulations, exercise such functions, and perform such duties as may be necessary to carry out the purposes of this act.

SEC. 6. No person shall, except in accordance with regulations prescribed by the Secretary of Agriculture in respect of wild birds, game animals, fur-bearing animals, wild flowers, and aquatic plants, or by the Secretary of Commerce in respect of fish and other aequatic animal life—

(a) Enter the refuge for any purpose; or

(b) Disturb, injure, kill, or remove, or attempt to disturb, injure, kill, or remove any wild bird, game animal, fur-bearing animal, fish, or other aquatic animal life on the refuge; or

(c) Remove from the refuge, or injure or destroy thereon any flower, plant, tree, or other natural growth, or the nest or egg of any wild bird; or

(d) Injure or destroy any notice, signboard, fence, building, or other property of the United States thereon.

SEC. 7. Commercial fishing may be conducted in the waters of this refuge under regulation by the Secretary of Commerce.

SEC. 8. (a) Any employee of the Department of Agriculture authorized by the Secretary of Agriculture to enforce the provisions of this act, and any employee of the Department of Commerce so authorized by the Secretary of Commerce (1) shall have power, without warrant, to arrest any person committing in the presence of such employee a violation of this act or of any regulation made pursuant to this act, and to take such person immediately for examination or trial before an officer or court of competent jurisdiction, (2) shall have power to execute any warrant or other process issued by an office or court of competent jurisdiction to enforce the provisions of this act or regulations made pursuant thereo, and (3) shall have authority, with a search warrant issued by an officer or court of competent jurisdiction to make a search in accordance with the terms of such warrant. Any judge of a court established under the laws of the United States, or any United States commissioner may, within his respective jurisdiction, upon proper oath or affirmation showing probable cause, issue warrants in all such cases.

(b) All birds, animals, fish, or parts thereof captured, injured, or killed, and all flowers, plants, trees, and other natural growths, and nests and eggs of birds removed, and all implements or paraphernalia, including guns, fishing equipment, and boats used or attempted to be used contrary to the provisions of this act or any regulations made pursuant thereto, shall, when found by such employee or by any marshal or deputy marshal, be summarily seized by him and placed in the custody of such persons as the Secretary of Agriculture and the Secretary of Commerce may jointly by regulation prescribe.

(c) A report of the seizure shall be made to the United States attorney for the judicial district in which the seizure is made, for forfeiture either (1) upon conviction of the offender under section 11, or (2) by proceedings by libel in rem. Such libel proceedings shall conform as near as may be to civil suits in admiralty, except that either party may demand trial by jury upon any issue of fact when the value in controversy exceeds $20. In case of a jury trial the verdict of the jury shall have the same effect as the finding of the court upon the facts. Libel proceedings shall be at the suit and in the name of the United States. If such forfeiture proceedings are not instituted within a reasonable time, the United States attorney shall give notice thereof, and the custodian shall thereupon release the articles seized.

SEC. 9. (a) The Secretary of Agriculture and the Secretary of Commerce are authorized to make such expenditures for construction, equipment, maintenance, repairs, and improvements, including expenditures for personal services at the seat of government and elsewhere, as may be necessary to execute the functions imposed upon them by this act and as may be provided for by Congress from time to time.

(b) For such expenditures there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $50,000, to be available until expended, $25,000 of such sum to be available for expenditure by the Secretary of Agriculture and $25,000 by the Secretary of Commerce.

SEC. 10. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, and to be available until expended, the sum of $1,500,000, or so much thereof as may be necessary for the acquisition of any areas authorized by this act to be acquired for such refuge and for all necessary expense incident to the acquisition of such areas; but no money shall be available for the acquisition of any area until the Secretary of Agriculture has ascertained that all of the areas to be acquired under this act will be acquired within the amounts appropriated or authorized to be appropriated therefor and at an average price not in excess of $5 per acre, and not in excess of the average selling price, during the years 1921, 1922, and 1923, of comparable lands within the vicinity of such areas.

SEC. 11. Any person who shall violate or fail to comply with any provision of or any regulation made pursuant to this act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not more than $500 or be imprisoned not more than six months, or both.

SEC. 12. As used in this act the term "person" includes an individual, partnership, association, or corporation.

SEC. 13. Nothing in this act shall be construed as exempting any portion of the Mississippi River from the provisions of Federal laws for the improvement, preservation, and protection of navigable waters, nor as authorizing any interference with the operation of the War Department in carrying out any project now or hereafter adopted for the improvement of said river.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. JONES of Washington. I ask unanimous consent to have printed in the RECORD in connection with the bill we have just passed a letter from the Secretary of Agriculture approving the project.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF AGRICULTURE,
*Washington, February 13, 1924.*

Hon. W. L. JONES,
*Chairman Committee on Commerce, United States Senate.*

DEAR SENATOR JONES: I have your request of January 18 for a report on S. 1558, introduced by Senator MCKINLEY on December 20, 1923, known as the "upper Mississippi River wild life and fish refuge act."

I am familiar with the terms of this measure, which has been introduced for the purpose of conserving the wild life, including fishes, of the upper Mississippi Valley.

Owing to the increasing occupation of land areas through the increasing population, it has become correspondingly necessary to set aside certain areas as wild-life refuges in order to conserve our useful wild birds and other animals and fishes. This bill serves such a purpose, and I am in favor of it, believing that its passage will result in creating an urgently needed refuge along the upper Mississippi River, and trust, if money is available, that the bill will become a law.

The waters traversing the bottom lands which it is proposed to purchase under the terms of the bill for the wild-life refuge include the most valuable spawning grounds for black bass in the entire country, and in addition these areas are favorite resting places and feeding grounds for vast numbers of migratory wild fowl during the migration. In addition a very considerable number of migratory wild fowl nest and rear their young there. If migratory wild fowl and wild-fowl hunting in the United States are to be perpetuated, the setting aside of such areas is absolutely essential.

In addition to the protection given migratory birds, both insectivorous and game species, this area, held as a refuge, will continue to supply to the surrounding country a large amount of food in the form of game and fish, in addition to yielding a great annual crop of furs from such fur bearers as muskrats, mink, and others.

The establishment of this refuge will, in addition to the benefits named above, serve to perpetuate natural conditions which aid materially in retarding the run-off of surplus waters at times of flood, and thus materially ease flood conditions in the lower Mississippi. Should the land in this area be reclaimed and diked, the waters of the Mississippi would thereby be confined more closely to the single main channel, with nothing to retard the swift flow into the lower valley, where the danger of breaks in the levees would be dangerously increased.

The migratory-bird treaty with Great Britain and the migratory-bird treaty act passed by Congress place in the Department of Agriculture the responsibility for protecting the migratory insectivorous and game birds which pass between Canada and the United States in their

yearly migrations. Owing to the rapid progress of drainage of water areas throughout the United States, but particularly in the upper Mississippi Valley, which is a great resort for these birds, their future existence is jeopardized. It is obvious that migratory waterfowl can not exist without water areas in which they may live and feed. Such areas are absolutely essential to them during their movements north and south as well as during the breeding and wintering season. The bottom lands of the Mississippi which will be included in this area abound in water areas suitable for these birds, and if perpetuated as a game refuge would insure the maintenance of great numbers of these birds which might otherwise be exterminated.

The four States within which lie the lands included in the proposed refuge have long been noted for the abundance of migratory wild fowl and the excellence of the hunting afforded by them. The enormous yield from wild fowl in this region is well indicated by the fact that the hunters in Minnesota in a single year have reported to the State game warden an aggregate killing of about 1,800,000 ducks. These would have a meat value of nearly $1,500,000 as the yearly income in food value of migratory wild fowl in one of the four States. It is obvious that the perpetuation of a natural asset which yields a return of this character, in addition to the recreational value of hunting to the community on such a great scale, is ample justification for the establishment of a refuge of this character.

The wild-fowl resorts of the upper Mississippi Valley serve as reservoirs from which the surrounding States in all parts of the country are supplied with birds. This has been definitely proved by the taking of birds which had been banded in the Mississippi Valley and have been shot and the bands returned to the Department of Agriculture from many other States, even as far away as California.

Any drainage within the area which would be affected by the passage of this bill would eliminate the value of the property drained as marsh lands, and the area would thus become worthless as homes for wild fowl and fur-bearing animals, and the spawning grounds of fish would be ruined, while the danger of floods in the lower Mississippi would be increased. Certainly the value of this tract of land and water as a wild-life refuge would be far greater to the public than if these lands of doubtful value for agriculture should be drained for that purpose.

The passage of this bill will accomplish many desirable objects. It appears to be a simple, practical, conservation measure of great value, and it has the approval of this department.

Sincerely yours,

HENRY C. WALLACE, *Secretary.*

MARCH 1, 1924.

Referred to the Bureau of the Budget in accordance with Circular No. 49 of that bureau and returned by the Director of the Bureau of the Budget to the Department of Agriculture in a communication dated February 28, as follows:

"I have presented this matter to the President, who has instructed me to advise you that while he is in accord with the purposes of the proposed measure the provisions contained therein for a direct appropriation of $300,000 for administrative purposes and a direct appropriation of $3,000,000 for acquisition of land would be in conflict with his fiscal program for this and the ensuing fiscal year. The President has further instructed me to advise you that should the proposed measure be modified so as to authorize an appropriation of such amount as may be necessary for administrative purposes and authorize an appropriation of not exceeding $3,000,000 for the acquisition of land it will not be in conflict with his financial program."

## EXCHANGE OF LANDS IN WASHINGTON

Mr. JONES of Washington. Mr. President, this afternoon the junior Senator from Washington [Mr. DILL] reported back from the Committee on Public Lands and Surveys the bill (H. R. 5318) to authorize an exchange of lands with the State of Washington. It is, in brief, providing for an exchange of lands between the State of Washington and the United States so that a tract of land adjoining the United States penitentiary on McNeil Island is made available for the purposes of the penitentiary. I ask unanimous consent for the present consideration of the bill.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Washington?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That upon delivery to the Secretary of the Interior by the State of Washington of its properly executed conveyance to the United States of America in fee simple of the following lands in that State: The northwest quarter of the northeast quarter, the northeast quarter of the northwest quarter, the south half of the northwest quarter, the southwest quarter and the northwest quarter of the southeast quarter, all in section 16, township 20 north, range 1 east, Willamette meridian, containing 360 acres, the Secretary of the Interior is authorized to issue in exchange therefor a patent to the State of Washington to the following lands in that State: The north half of the northwest quarter, the east half of the southwest quarter of the northwest quarter, the east half of the northwest quarter of the southwest quarter, all in section 25, township 22 north, range 10 west, Willamette meridian.

SEC. 2. That the lands first described shall, as soon as title thereto is vested in the United States, be under the care and control of the Attorney General of the United States, to be administered by him as a part of the Federal penitentiary on McNeil Island.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

## CONSTRUCTION OF SCHOOLHOUSE IN KETCHIKAN, ALASKA

Mr. WILLIS. Mr. President, there are on the calendar two bills to which I wish to refer. They are Calendar Nos. 697 and 698. They are of very great importance to the schools of Alaska. It will be observed that they are both House bills, and it is desired that action be had in order that construction work may be commenced. The bills have been fully considered by the Committee on Territories and reported by the chairman by unanimous vote of the committee. I ask unanimous consent for the present consideration of Calendar No. 697, House bill 6255.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Ohio?

Mr. ROBINSON. I think there is no valid objection to the request of the Senator from Ohio. I am familiar with the provisions of both bills to which he has referred and think they should both be considered and passed.

Mr. SMOOT. Mr. President, what is before the Senate?

The PRESIDENT pro tempore. A request of the Senator from Ohio for the present consideration of House bill 6255.

Mr. SMOOT. I thought the Senator from Wisconsin [Mr. LA FOLLETTE] was going to speak this evening.

Mr. WILLIS. I asked permission of the Senator from Wisconsin, and he said he was perfectly willing to have the two bills called up provided that they did not lead to any debate. If they do, of course I will withdraw my request.

Mr. ROBINSON. The first bill merely authorizes a city in Alaska to issue bonds for the construction of a school, and the other bill to which the Senator from Ohio has referred expands an already existing organization.

Mr. SMOOT. I have no objection to the bills. I merely wanted to know how we were proceeding.

The PRESIDENT pro tempore. The first bill for which the Senator from Ohio has asked consideration will be stated by title.

The READING CLERK. A bill (H. R. 6255) to amend an act entitled "An act to authorize the incorporated town of Ketchikan, Alaska, to issue its bonds in any sum not to exceed $100,000 for the purpose of constructing a schoolhouse in said town and equipping the same," approved February 7, 1920.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read as follows:

*Be it enacted, etc.*, That section 1 of the act entitled "An act to authorize the incorporated town of Ketchikan, Alaska, to issue bonds in any sum not exceeding $100,000 for the purpose of constructing a schoolhouse in said town and equipping the same," be, and the same is hereby, amended to read as follows:

"SECTION 1. That the incorporated town of Ketchikan, Alaska, is hereby authorized and empowered to issue bonds, in any sum not exceeding $150,000 for the purpose of constructing schoolhouses in said town and equipping the same."

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

## CONSTRUCTION OF SCHOOL BUILDING IN CORDOVA, ALASKA

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 6950) to authorize the incorporated town of Cordova, Alaska, to issue bonds in any sum not exceeding $100,000 for the purpose of constructing and equipping a public-school building in said town of Cordova, which was read as follows.

*Be it enacted, etc.*, That the incorporated town of Cordova, Alaska, is hereby authorized and empowered to issue bonds in any sum not exceeding $100,000 for the purpose of constructing and equipping a public-school building in the town of Cordova, Alaska.

SEC. 2. That before said bonds shall be issued a special election shall be ordered by the common council of the town of Cordova, at which election the question of whether such bonds shall be issued shall be sub-

mitted to the qualified electors of the said town of Cordova whose names appear on the last assessment roll of said town for municipal taxation. Thirty days' notice of such election shall be given by publication thereof in a newspaper printed and published and of general circulation in said town before the day fixed for such election.

SEC. 3. That the registration for such election, the manner of conducting the same, and the canvass of the returns of said election shall be, as near as practicable, in accordance with the requirements of law in general or special elections in said municipality, and said bonds shall be issued only upon condition that a majority of the votes cast at such election in said town shall be in favor of issuing said bonds.

SEC. 4. That the bonds above specified, when authorized to be issued as hereinbefore provided, shall bear interest at a rate to be fixed by the common council of Cordova, not to exceed 7 per cent per annum, payable semiannually, and shall not be sold for less than their par value, with accrued interest, and shall be in denominations not exceeding $500 each, the principal to be due in 15 years from date thereof: *Provided, however,* That the common council of the said town of Cordova may reserve the right to pay off such bonds in their numerical order on such date or dates prior to the expiration of said 15 years and in such a manner or number of said bonds as said common council may deem best. Principal and interest shall be payable in lawful money of the United States of America at the office of the town treasurer or at such bank in the city of New York, in the State of New York, or such place as may be designated by the common council of the town of Cordova, the place of payment to be mentioned in the bonds: *Provided further,* That each and every bond shall have the written signature of the mayor and clerk of the said town of Cordova and also bear the seal of said town.

SEC. 5. That no part of the funds arising from the sale of said bonds shall be used for any purpose other than specified in this act. Said bonds shall be sold only in such amounts as the common council shall direct, and the proceeds thereof shall be disbursed for the purposes hereinbefore mentioned and under the order and direction of said common council from time to time as the same may be required for said purpose.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

CAUSES AND EFFECTS OF DEFLATION OF 1920

Mr. SHIPSTEAD. Mr. President, yesterday morning during the morning hour I introduced Senate Resolution 246 and asked that it be referred to the Committee to Audit and Control the Contingent Expenses of the Senate. The resolution provides for the election of a select committee by the Senate to investigate and to inquire into the causes for the deflation which was inaugurated in 1920 and to report to Congress its findings in order that Congress may take action that will lead to the enactment of legislation that will remedy the present condition of agriculture and business which resulted from the deflation of the currency during the years 1920 and 1921. I have up to the present time been unable to get a report on the resolution from the committee. I think the resolution is of the utmost importance and, in view of the fact that Congress will adjourn to-morrow evening at 7 o'clock, I move that the Committee to Audit and Control the Contingent Expenses of the Senate be discharged from the further consideration of the resolution.

Mr. CURTIS. Mr. President, I rise to a point of order. I understand there is already pending the motion of the Senator from Wisconsin [Mr. LA FOLLETTE]. Is not that so?

Mr. SMOOT. The motion of the Senator from Wisconsin has not as yet been acted upon.

Mr. LA FOLLETTE. My motion is pending.

Mr. CURTIS. I suggest, Mr. President, that the Senator from Minnesota withhold his motion until we can dispose of the pending question and also until the chairman of the Committee to Audit and Control the Contingent Expenses of the Senate shall arrive. The chairman of that committee told me a little while ago that he had not received the resolution submitted by the Senator from Minnesota until this afternoon and he has had no opportunity to call a meeting of his committee in order to consider the resolution.

Mr. SHIPSTEAD. Very well. I have been trying to find the chairman of the committee.

RELIEF OF DISTRESS IN GERMANY

Mr. CURTIS. I ask for the regular order, Mr President.

The PRESIDENT pro tempore. The regular order is the motion of the Senator from Wisconsin [Mr. LA FOLLETTE] to discharge the Committee on Foreign Relations from the consideration of the joint resolution (H. J. Res. 180) for the relief of the distressed and starving women and children of Germany. The question is on that motion.

Mr. JONES of Washington. Mr. President, before the recess this evening I started to address the Senate briefly with reference to the pending motion. As I then said, Congress and the American people will respond to every call of distress which they believe is of such importance as to warrant action by Congress or the people. They have always done so; but response from the Nation or the Government is more to be expected when the conditions of distress result from something like a calamity, from some unexpected catastrophe such as that which occurred in Japan a short time ago, or when distress or suffering are brought on by sudden flood or epidemic. We have always responded in cases of that kind, and we always will, and respond generously, not only to our own people and to sections of our own country but to foreign peoples as well when they are visited by such calamities.

If the German people were suffering from some sudden catastrophe or calamity, there is no doubt about the cheerful and generous response that the people of this country, either through the Government or through private donations, would make. I have seen, Mr. President, no statement or evidence of any acute suffering on the part of the German people, whether children or adults.

Of course, we all know that the Germans passed through a terrible struggle, and yet they were not subjected to the horrors of war like the peoples whose territories were invaded by hostile armies. Their fields were not devastated. Their cities were not razed by hostile shells. The suffering that came to them, of course, came from war, or from what we might term the ordinary consequences of war. I have seen no evidence or proof that they are suffering more from that war than are the people or children of other countries which were involved in it.

As I understand, the Committee on Foreign Relations voted down this joint resolution—that is, they decided not to report it favorably. I do not know what evidence was submitted to them; I do not know upon what facts they based their decision. Their action certainly indicates, at any rate, that there was no overwhelming proof of the suffering of these people or no overwhelming proof, at any rate, of unusual conditions existing, as compared with the conditions that may exist among other peoples and in other countries.

So, Mr. President, from the facts of the situation I do not feel that I would be justified in voting for the passage of the joint resolution at this time. I have no hatred for the German people. I am of German blood not far removed. They have commanded my respect and admiration by their admirable qualities and wonderful achievements. I would have this people and Government aid them in any distress calling for relief without regard to what their Government or their leaders may have done. Their children are innocent of the sins of their fathers and their Government. Nothing that their fathers have done should close our hearts to their distress. No acts of their fathers would lead me to withhold aid to them if the facts justify relief. I do not believe the facts now justify action by the Government as such. Private purses should be open and free. No legal quibbles or refinements will deter me in the future if the facts warrant action by the Government.

I want to call attention to a letter which I received a short time ago from a gentleman, a very responsible man, whom I have known for a great many years. He is not one of the wealthy men to whom my friend, the Senator from Minnesota [Mr. JOHNSON], referred, but he is just one of our plain, ordinary citizens. He made a trip into Germany not very long ago. I saw him on the way over when he called at my office here in Washington City. He was over there for several months. When he came back to this country I did not see him, but I received a letter from him written on the train on his way west. He lives in Tacoma. The letter is dated March 25, 1924, and I should like to read to the Senate what he said. He is an honest, reliable, and trustworthy man, and I am satisfied he gives a statement of the facts as he saw them. Of course he did not see all of the conditions there; that is no doubt true; but he was trying to find out what the conditions are in Germany and what the conditions of the German people are. I wish to read to the Senate and place in the RECORD just what he says:

> I have just returned from Germany, where I witnessed no riots or anything of the sort; neither did I see any bread lines. The ordinary German in a restaurant orders about four times what the writer orders. The restaurants seem to have plenty of good, wholesome food. I said to different Germans, "Show me some of the poor who do not have enough to eat." My hired guide, after much consultation with police officers, led me to plenty of filthy places, where rabbits are raised in the kitchen, and places where pigs are kept in the living room, but at no place could I find children suffering for want of food.
>
> I believe that it is the duty of Congress to be just before it is generous. If anyone needs assistance, it is our American farmer.

There seems to be an organized effort on the part of the German people to make it appear that their country is poor, that children are starving, and that a general state of debilitation is prevalent. From my own personal observation such conditions are nonexistent. I believe that Germany is in better financial condition than any other European participant in the World War.

Mr. McKELLAR. Mr. President, what is the date of that letter?

Mr. JONES of Washington. The date of the letter is March 25, 1924, just a couple of months ago, and it was written en route to Chicago.

Mr. President, as I have said, the writer of this letter is a thoroughly reliable man, honest and truthful, who apparently went over there for the purpose of looking into conditions. I have no reason in the world to doubt that he is stating the conditions as he saw them and as he believes them to be.

In view of these things, of the action of the committee, and of the fact that we see very little, in the newspapers at any rate, of bad conditions—that is, conditions threatening starvation—and as we have no especial appeals coming from the German Government or from those who represent charitable organizations over there, showing to us the direful conditions with which the people are threatened, under those circumstances I do not feel justified in voting to take from the Treasury $10,000,000 for this purpose at this time.

Mr. CARAWAY. Mr. President, before we vote, I should like to call the attention of the Senate that out there in the corridor is a blind or practically blind American soldier. He is blind because he answered the call to arms in 1917 and sacrificed his sight and himself in defending the American flag. The reason I call attention to this is I hold in my hand a letter from the Veterans' Bureau which shows what he and his children are receiving from this Government, in defense of which he became blind and helpless. Incidentally, let me say that he has pending before the Commissioners of the District of Columbia an application to be permitted to sit on the street corner and sell pencils in order to eke out an existence.

Now, I wish to call to the attention of Senators a letter from the officer of the American Government dealing with this American soldier and this American child. Then when Senators vote I wish they would contrast what they do for the children of America with what they do for the children of Germany. If they are satisfied with the result, of course they are answerable to nobody but their conscience and the American people. The letter is addressed to Mr. Richard A. Mayes, Wilson, Okla., and is dated March 24, 1924, from the United States Veterans' Bureau at Dallas, Tex., and it is in reply to a letter written by him:

> Receipt is hereby acknowledged of your communication dated March 12, 1924, addressed to the United States Veterans' Bureau, Washington, D. C., which has been forwarded to this office for attention, together with their reply of March 18, 1924.
>
> The records of this office indicate that you have been informed on numerous occasions that your compensation was decreased on the rating made by the central office board of appeals, and that therefore this office has no further jurisdiction with reference to granting you an increase unless your disability should increase to a greater degree than that for which you are now drawing payment and this office given medical evidence showing same.
>
> Under date of March 15, 1924, your attention was specifically called to the fact that you are suffering from other disabilities which are not connected with your service, which are myopia, operation wounds abdomen, right elbow, appendicitis, chronic and spur, ulcerous process right elbow, and constipation. You were also informed that the amount of $24 which you are now receiving represents 70 per cent of your entire compensation since it has been apportioned for your child.
>
> If you think that an injustice is being done and you are dissatisfied with the amount of compensation you are now receiving, it is suggested that you submit evidence from any attending physician, as referred to above, and upon receipt of same it will be carefully reviewed by the medical section of this office, and you will be advised of the action taken.
>
> By direction—

> S. P. KOHEN,
> *Chief Claims Division.*

Here is a man who was blinded fighting for the American flag, and you give him $24 a month on which he must live, and you ask him to raise his child—the child of an American soldier—on $6 a month. That is all he has. You reward the man who is blinded fighting for the American flag with $24 a month, and his child with $6 a month, and you give to those who blinded him $10,000,000.

If that seems to you the way that American patriotism should be rewarded, why, God bless your souls, you are going to have an opportunity to show it to-night, and everybody will know whether you love the American flag more than you love some other flag. [Applause in the galleries.]

The PRESIDENT pro tempore. It is the duty of the Chair under the rules to warn the occupants of the galleries that no expression of pleasure or displeasure is permitted from the galleries, and if it is repeated the galleries will be cleared.

Mr. STANFIELD. Mr. President, I move that the Senate now proceed to the consideration of Senate bill 3011, Order of Business 479, the civil service retirement pension bill.

Mr. LA FOLLETTE. Mr. President, if the Senator will make his request in such form as not to displace the consideration of the matter which is before the Senate, and with the assurance that it will take but a few moments to dispose of the matter, I shall not object. Otherwise, Mr. President, I must object.

Mr. STANFIELD. If the Senator will yield, I do not wish to displace the motion at present before the Senate, but I wish to say to the Senator from Wisconsin that I believe there are only three or four votes in this body in opposition to the measure I propose shall now come to consideration. There are 300,000 government employees who are very much interested in this bill. It is one of common justice to them. I think it can be considered and disposed of in a very few moments, and I assure the Senator from Wisconsin that I will withdraw it if it can not be so disposed of.

Mr. SMOOT. Mr. President, I will say that if the Senator from Wisconsin does not object I will.

Mr. STANFIELD. I am not asking for unanimous consent. I am moving that the bill be now taken up.

Mr. MOSES. That will displace the pending motion.

Mr. LA FOLLETTE. Which I can not consent to.

The PRESIDENT pro tempore. Objection is made to unanimous consent.

Mr. MOSES. The Senator from Oregon did not ask unanimous consent, Mr. President. As I understand, he has moved to take up the bill, which would displace the pending motion.

The PRESIDENT pro tempore. If the Senator from New Hampshire will just wait a moment, the Chair will put the question. The Senator from Oregon has now moved that the Senate proceed to the consideration of Order of Business 479, being Senate bill 3011, to amend the act entitled "An act for the retirement of employees in the classified civil service, and for other purposes," approved May 22, 1920, and acts in amendment thereof.

Mr. CURTIS. Mr. President, I suggest to the Senator from Oregon that we will have a vote in a few minutes upon the motion of the Senator from Wisconsin; and I hope he will not ask for a vote on this bill now, which would displace the motion before the Senate. It will not take long to dispose of the pending motion.

Mr. SMOOT. I assure the Senator that he will not get a vote on it anyhow. It does not make any difference.

Mr. STANFIELD. Mr. President, I do not like that manner of reply of the Senator from Utah—that we can not get a vote on it.

Mr. SMOOT. I will say that the Senator will not get a vote to displace this matter.

Mr. STANFIELD. I have no desire to displace the motion before the Senate.

Mr. SMOOT. That is what it will do.

Mr. STANFIELD. I will withdraw my motion at this time, then, hoping that I may have the support of the body later on.

The PRESIDENT pro tempore. The Senator from Oregon withdraws his motion. The question is on the motion of the Senator from Wisconsin.

Mr. McKELLAR. Mr. President, I shall occupy just a moment before we vote on this motion.

It distresses me very much not to be able to vote for the benefit of anyone who is suffering or for anyone who may be alleged to be suffering, especially if the sufferers are women and children, wherever they may be and whoever they may be; but I feel that an affirmative vote on this resolution is a vote that I can not cast. Mr. President, it is very easy to dispose of other people's money, much easier to give it away than it is to give away our own; but we are trustees for the American people and ought to be exceedingly careful about our disposition of their money.

Mr. President, I happened to be in Germany last summer. I was there some three or four weeks, and I saw what there was to be seen in that time. It is true that there was at that time considerable suffering in Germany; there were bread lines in

Berlin and in other cities and in the Ruhr—worse in the Ruhr than anywhere else—but, Mr. President, I saw no such unusual condition there as would require this charitable intervention. They have not asked for it, and I am not sure they want it.

I do not think I have ever seen better crops growing than I saw in the country there.

The finest crops of potatoes and grain were growing. I am informed that Germany does not produce enough food for her own needs; in other words, she consumes more than she raises; but I am quite sure that there was no such distressing condition there then as would warrant this very unusual act upon our part. Unquestionably, this is true of the country districts. Their cattle and stock were in good condition. Apparently the country sections were in good condition.

But, Mr. President, assuming that there was distress there, I am quite sure that the conditions in Germany when we saw them last summer were no worse than the conditions in Russia, which we also saw. They were no worse than the conditions in Poland, which we also saw. They were no worse than they were in Latvia and Esthonia and Lithuania. The conditions in none of those countries were good, but there was no suggestion of starvation anywhere. It is true that in all the cities there were bread lines, but the Government was furnishing the people bread or potatoes, and there seemed to be no actual want.

Mr. President, as a boy I was reared in the State of Alabama, and I first recall conditions in the early eighties. I will say in all truth that conditions in Alabama in the eighties were much worse than they were in Germany, in Russia, or in Poland last summer, as I saw them. The condition of children and women in the South in the early eighties was much harder than the condition of the women and children in the countries that I have named last in Europe. No charity was asked for or received by the people of the South then. We probably weathered the storm better that we had no charity bestowed upon us; and I do not believe that I should cast my vote in favor of this joint resolution, as much as I should like to help any people who are suffering.

There is another reason why I can not vote for this joint resolution. I do not believe that the conditions in Germany are so bad as they are in Greece. I do not believe the conditions in Germany are so bad as they are in Armenia; and if we begin this policy of contributing to the peoples of other nations, and start with Germany, why should we end there? If we are going to give the women and children of Germany large sums of money, we should be equally generous to other nations who need it perhaps quite as much, or more.

For these reasons, Mr. President, I am constrained to vote against this joint resolution if it should come up, and to vote against the motion to take it up.

I say, again, that I have no feelings of prejudice against the German people; quite the contrary. I have every sympathy for them. I have no prejudice against them on account of the war. If disaster overtook them, I would willingly help them. I want to see them get back on their feet and prosper; but such gifts as this will not effect the purpose. Conditions as I saw them there with my own eyes do not justify this extraordinary appropriation. I see no reason why private persons should not contribute to them if they so desire; but my position is that we, as trustees of the American people, have no right to make this contribution under the circumstances that have been narrated.

Mr. PITTMAN. Mr. President, I am a member of the Foreign Relations Committee, and I have heard and read the evidence. It is true that there is contradiction in the evidence. Senators may very well form one opinion or another with regard to the suffering of children in Germany. I do not doubt at all that if we should go into any first-class hotel in the United States and ask if there were any suffering children or any suffering women in the United States, we would get a negative answer. There is, however, evidence which satisfies my mind that a great number of little children in Germany are suffering from lack of food.

That is not our fault. It is not our fault when some beastly husband allows his little children to starve to death when there are plenty of opportunities for him to work; but, nevertheless, when the American people see the children of a family starving to death because the husband is a drunkard or a criminal their hearts go out to those little children just the same.

Who is to blame for the starvation of certain children in Germany? Not the American people, certainly. There is nothing that can be laid to their door—not a thing. It is the responsibility, again, of the German Government, but what difference does it make? There is no doubt, from the evidence before us, that there are in Germany to-day men who are immensely wealthy—wealthier, by comparison, than any people in this country—and, on the other hand, there are people there who are more destitute, as far as money is concerned, than any other people in the world.

That is the condition. You say that is Germany's fault. I say to you, I admit it is the German Government's fault. There is no doubt about that. The German Government is now, has been ever since the war—yes, it was before the war at all times—under the domination of the junker, under the domination of groups such as the Stinnes group. There has not been since the war a government in Germany that dared tax the rich of Germany to protect the poor of Germany. That is a fact. It was commented on to-day by those opposing the resolution, who said that the rate of taxation in Germany is the lowest in the world. That is true. It is the proof of what I say to you, that the German Government has not dared tax Stinnes and the great wealth of that country.

What difference does that make? You are told that a lot of little children are starving to death in this country, and if at the same time you are told that it is because the father is a drunkard, do you say "It is the fault of the father, and I will not help those little children?" No man with a heart would use such a miserable excuse.

When the Great War came on in Europe the President of the United States at that time stated that the German people were not to blame; that he had the deepest sympathy for them; that it was their Government's fault. Yet, in my opinion, the German Government was then dominated by the same junker class by which it is dominated to-day. It forced the acts of war which forced the United States into that fight. With all the sympathy we had for individuals of the German people, we acted. I certainly can not be classed as a pro-German. My votes in this body and my speeches in this body are well known. I voted for war. Before we entered the war I voted for arming our ships. I would have voted for a declaration of war at an earlier date than we did vote for it if I had believed that a declaration of war could have been carried.

I am willing to test my conscience on any of these questions. Charity is a deplorable thing. There should not be necessity for charity. Ninety per cent of the necessity for charity in every country comes from inefficiency and discrimination in government. The other 10 per cent comes from various causes such as I have mentioned.

If government did its duty, there would be little necessity for charity in the world. I have always contended that when the inefficiency of government, the prejudice of the governing class, causes starvation and suffering among little children anywhere in the world, it is the duty of government to right that wrong.

You say it is the duty of the individual. The individual contributes out of his pocket to every charitable cause. Yes, and it is the most unfair thing that is ever done. A man walking along the street who takes 50 cents out of his pocket and throws it into the hat for any charity pays a thousand times more than the men who are able to pay, and everyone knows that. There is but one just way on earth of distributing charity, and that is by taxation based on the ability of people to pay. Poverty, distress, misery, suffering, in a country are just as much an incident of government as anything else in it, and when a government allows conditions to exist which bring those things on, it is its solemn duty to do what it can to remedy such conditions.

It is said, look at the suffering around us. I have seen the suffering around us. I know it is here, and if there is a single occasion upon which I have cast my vote against relieving it, then you may charge my conscience on the stand I take now.

I know that the argument was made in this body that if you took care of one charity you could not take care of another charity. It was said, if you do justice to the soldiers, you can not take care of the disabled veterans. Why not? If you take care of one family which is suffering, you can not take care of the other family that is suffering, it is said. Why not? Where is the argument for anything of the kind?

I know the soldiers in this country were split up. They almost convinced the disabled soldiers that if there was a bonus given to the able-bodied soldiers we could not take care of the disabled veterans. They had them fighting among themselves. Is not that true? Undoubtedly it is true. Yet we have passed the bonus bill. It is an inadequate measure. It does not help anybody except the man who is wealthy enough to carry a policy in an insurance company.

I stood on this floor and fought for a cash bonus, to which those men were entitled, and I have fought for it ever since

the war. Because I was fighting for a cash bonus for those able-bodied soldiers does not indicate that I was not willing to take care of the disabled soldiers. I have fought for every raise and every appropriation and every amendment which has been offered on this floor to better the condition of the disabled veterans in this country.

It is not, in my opinion, because we took care of and did justice to the able-bodied soldiers that we have not taken care of the disabled soldiers. It is not my stand that because we take care of the distressed and disabled in one State we are unable to take care of them in another State.

I believe in lending our aid just as far as it is humanly possible to relieve distress and suffering wherever it exists; I do not care whether it is in my family or in your family. I am just as much touched by the emaciated form of some little child lying on the sidewalk who is a stranger to me as I am for the sufferings of another child who might be related to me. It is not the relationship; it is the suffering, it is the misery, it is the agony of little children, that appeal to my sentiment.

That may not be right. Maybe I should appeal to the Constitution. I do not know what the Constitution provides on this. It has never been passed on. I know we have acted this way before. I know one thing, and if it be a crime I am sorry for it being a crime, that the suffering of little children appeals to me. That is all there is to it. I have given all I can give out of my own pocket to all of these causes, and I will continue to give; but that is not the proper way, it is not the fair way, it is not the equitable way to handle the matter.

Germany should take care of her own children. The German Government should compel the Stinnes group to pay back the money they have wrung, through the depreciation of the mark, from the people; they should be compelled to pay it back to the people they are to-day bringing to starvation.

All the people of Germany are not suffering, of course. The Stinnes group are enjoying their great wealth. The agriculturists of Germany are not starving. They have paid off their mortgages with the depreciated mark. The people who are suffering are those who work for their daily wage, and are paid in marks that will not buy anything. Those are the classes of people who are suffering. But what difference does it make whether it is the Government's fault or whose fault it is; what difference does it make to you if you see a starving child on the street yonder what the cause of the starvation is? Why argue what the cause is? As a matter of fact, suffering does exist; it is there. It exists just the same as starvation exists in the family of the drunkard. It is there. There is no reason in arguing the question at all.

Ten million dollars given out to relieve the suffering and misery of little children in Germany or Greece or wherever you please will not hurt this Government one iota. We have nearly one-half of all the gold in the world now under our control. We are the richest country in the world. We are the most powerful in every way. We have less poverty and distress here. We are the happiest of all, and for them to say that the donation of $10,000,000 is going to make us unable to take care of those to whom we owe justice in this country is absurd.

We have taken care of our soldiers partly, and before we get through with it we will take care of them entirely. We have taken care of our disabled veterans in a measly, cowardly way, but before we get through with it we will take care of them entirely, and as far as my vote is concerned, I want all to understand that when I do justice to one man, it is not going to deter me from doing justice to another man, and when I grant charity to a miserable creature here, it is not going to keep me from handing it out there.

I know our brave soldiers who fought to the death the German soldier had no fight against the women and children. They were too brave and gallant for any such thoughts. They know what suffering is and they are the first to hold out a helping hand.

I am going to vote for this motion, as I voted for it in committee.

C. M. COLE

Mr. CAPPER. Mr. President, from the Committee on Claims I report favorably, without amendment, the bill (H. R. 4760) for the relief of the estate of C. M. Cole, of Butler County, Ky., and ask unanimous consent for its immediate consideration.

Mr. ROBINSON. Mr. President——

Mr. ERNST. It is a House bill.

Mr. ROBINSON. I do not think it proper to interrupt the consideration of the matter now before the Senate with claims reported hastily from the committee. I object to the present consideration of this bill, and I shall object to the consideration of other matters, except conference reports, until the pending motion is disposed of.

RELIEF OF DISTRESS IN GERMANY

Mr. REED of Missouri. Mr. President, with the burden of taxation resting upon the American people and the increasing depression in our own country staring me in the face, I have every inclination to refuse to appropriate a single dollar of money that is not absolutely justifiable from every standpoint. But I have heard to-day arguments by eloquent and distinguished Senators which seem to me aside from the question before us.

There is some distress in the agricultural districts of this country. But there has been no appeal for charity. The particular champions of the farmer have sought certain remedial legislation, with reference to the virtues of which there is honest difference of opinion; but the farmers and the people of our cities are not raising the skeleton hands of starvation and asking for a dole to prevent death. If they were, there would be no hesitancy in going into the Federal Treasury to supply immediate necessities.

The question here is whether we will tax the American people less than 10 cents apiece to arrest the march of starvation and death amongst the helpless women and children of a country with which we were recently at war. As was said by the Senator from Nevada, that question ought to be considered by itself and decided upon its own particular merits or demerits.

For my part, as everyone here will bear me witness, I have held to the strictest doctrine of nationalism. I am not an internationalist. I am a nationalist. I put this country above all other countries on earth. I would protect it and defend it and build it until it became so mighty that the assembled nations of the world would not dare challenge any of its rights. I would yield no part of its sovereignty to any tribunal on earth. I would submit its vital interests to but one great court, the high court of the American people.

While I hold to that doctrine, my sympathy for peoples of other countries is not circumscribed by the red line of a map. Neither are my prejudices so great that I can not appreciate the virtues of peoples who happen to have been born under other skies and other flags than mine. There is no greater regret in my heart to-night than that we have abandoned the ancient policies of this country, one of which was that America should forever be the land of hope and refuge for those who suffered the oppressions of governmental tyranny or the despotism of creed or caste. When we closed the doors of this country in the face of God's children who are of our ancestral stock and common blood we wrote a black page in America's history.

America to-day should swing wide her portals to the great races of Europe whose ambitions, hopes, religion, industry, and blood make them our natural brothers and fit them for the high duties of American citizenship. I hesitate to say a harsh thing, but it seems to me that only ignorance denies a stalwart man, endowed by Almighty God with all the qualities we possess, as anxious as we are to work for his own betterment and for the advancement of this race, the right to set his feet upon our soil and build his home beneath our skies. Rather we should say to the Belgian, to the Frenchman, to the inhabitants of Great Britain, to the people of Germany, of Norway, and of Sweden, of Holland, of Denmark—to all the great European races—"We give you generous welcome to our shores if you but come to sustain our institutions and to contribute to the greatness of our national destiny." But we have adopted an opposite policy. We have said to the father of the starving children of Germany, "You can not come. You have the same Creator. You have the same hopes, but you can not come. Stay where you are, in the overpopulated cities and villages of your own land—stay there and starve." We have said to our associates in the war, the Belgians, the sons of Ireland and of Scotland and of England, the same bitter thing, "You can not come. Your hearts may be with us. Your souls may be inspired with the lofty sentiments which thrilled the bosoms and set aflame the blood of the revolutionary fathers, but you can not come. Stay at home and starve."

Nay, more. We have said to them, "If you produce as the result of your labor that which is beautiful, that which is useful, that which will adorn the home or glorify the palace of wealth, that which will keep warmth in the body, though it may be the perfect flower and fruit of superior genius, you can not sell it in the United States of America. We bar you out; we build a wall of prohibitive statutes so high you can

not overleap it and so strong you can not break through it." So we say again, "Though you are willing to work, though you are capable of work, stay at home and strave."

These are the narrow policies to which we have committed ourselves. They are un-American policies. They were not the policies of Washington. They were not within the conception of Jefferson. They do not belong to the heroic age of our country's history, nor to the period of its great industrial development and advancement.

These, however, are questions which it is bootless to discuss here to-night. Having closed the gate, having locked it in the faces of these people, having barred their products, we are now confronted with the question of doling out to them something that may prevent little children from staggering, pale, and emaciated, into untimely graves, of doing something which may arrest the march of disease, and perhaps avoid a ghastly epidemic.

Mr. President, it has been said here that the German people are to blame for the war. The utterances seem to reflect the poison of hate engendered during the war. I deplore the utterance of such sentiments.

Mr. STANFIELD. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Missouri yield to the Senator from Oregon?

Mr. REED of Missouri. I yield for a question.

Mr. STANFIELD. There are just two precepts of which I wish to ask the Senator if he is not conscious. One of those is that self-preservation is the first instinct of human nature, and that is the reason why there is a necessity for us to put up a wall of protection, so far as we are concerned here in America. The other is that charity begins at home. Does not the Senator know that?

Mr. REED of Missouri. Yes; some skinflint at some remote period of time who wanted to keep his own wealth in his own pocket invented the most selfish maxim that has ever fallen from the lips of man—"Charity begins at home." Yes; and it generally stays there.

As to the other question that self-preservation is the first law of nature, I admit that; but between proper self-preservation and the tariff law that despoils 110,000,000 people for the benefit of a few manufacturers there is a gulf as wide as separated Dives in hell from Lazarus reclining upon the bosom of Abraham amidst the groves and streets of paradise—just that much of a gulf.

Mr. STANFIELD. Mr. President——

The PRESIDING OFFICER (Mr. MOSES in the chair). Does the Senator from Missouri yield further to the Senator from Oregon?

Mr. REED of Missouri. I yield.

Mr. STANFIELD. That is our mistake if we permit that protection to be restricted as the Senator from Missouri claims—and I am willing to agree with the Senator from Missouri that it is restricted too much, although I believe that in the great McCumber tariff bill we gave more protection to all the people than they ever knew before, but it is not enough. Yet I want to say to the Senator from Missouri that when he is talking about dispensing charity abroad, he should remember that we have more suffering here in America than, I think, the Members of the Congress are aware of. I think we would do well to look to the welfare of our agricultural element in this country that is suffering, and suffering, I think, perhaps as much as those in Europe are suffering.

Mr. REED of Missouri. I am not going to be led aside to discuss the tariff bill. I mentioned it as one proposition that appealed to me. I want to proceed with my argument, if it can be so dignified. I shall yield the floor in a very few minutes.

I was saying that there seemed to be a tang of bitterness and hate in some of the sentences we have heard dropped. Mr. President, like my friend, the Senator from Nevada, I voted for the war. I signed the round robin certifying a willingness to give the President authority to arm merchant ships, although I well knew that the purpose was to fire upon German submarines the moment they were sighted, and thus really start a war before there was a declaration of war. That purpose was by the friends of the measure admitted upon the floor of the Senate as quite within the possibilities.

I voted for every man, every gun, and every dollar that was appropriated in the war. I would have been willing to have continued the war to this hour if Germany had not laid down her arms. But I am not unmindful of the fact that when Germany did surrender, she surrendered on the 14 points laid down by the President of the United States with the single exception of one reservation which Great Britain made, and that reservation but emphasized the fact that Germany was relying upon the principles enunciated by the President.

But, sir, I do not care to pause to discuss that question. I mention it merely in passing. The fact is, as has been stated, that the German people were under the complete dominance of the most autocratic power, the most complete power probably ever held in all the history of the world, for I question whether the despotisms of the past, tyrannical and bloody as they were, were as well cemented and as thoroughly entrenched as were the Hohenzollerns in Germany. Moreover, the people of Germany had for a half century been taught that their salvation depended upon the maintenance of a great army and that they were surrounded by enemies who were ready to crush and destroy them. Whether that was a true or a false doctrine, it was believed by the people. Accordingly, when the war lords of Germany summoned the people to battle they came; and we must admit they fought courageously.

But now, Mr. President, when the war was over, when the battle flags were furled, when the cannon ceased to reverberate across the plains of France we adopted the principles of peace. It is to that view for a moment that I want to attract your attention.

Some Senator said here to-day, and said truthfully, that this war is over; some Senator said, and said truthfully, that perhaps this is the best investment the American people have ever had an opportunity to make. Recall the events of history and you will realize that the commonest experience is that the enemies to-day are the allies of to-morrow, and that the allies of to-morrow are the enemies of the day after. It is not necessary to cite the historic instances; they have occurred so frequently that, indeed, the rule is, not that the allies of to-day shall be the allies of to-morrow, but rather that the enemies of to-day will be the allies of to-morrow.

Japan was our ally in the late war. In the exercise of an undoubted right we said that the Japanese could not settle this country. Such a right was never before challenged when sought to be exercised by a great and sovereign power. Yet, sirs, there is not one of us but knows that wrapped up in that question is a potential danger for the future. We know it so well that we regard with anxiety every new warship that is launched by Japan and every gun that is wrought in her machine shops and foundries.

We are to-day on perfectly amicable terms with all nations of the world, yet there is no nation with which war seems more remote to-day than did war between the United States and Germany on the 1st day of August, 1914.

The man who would then have stood in this body and proclaimed that within a few months the United States and Germany would be engaged in a death grapple would have been regarded as a lunatic. Yet we found ourselves drawn into the vortex. Our boys were soon upon the bloody fields of France, their bayonets pointing toward the heart of Germany.

Sir, out of this war the one great satisfaction I get is that when it was ended the President of the United States, against the judgment of many men—it is one thing as to which I have always been in harmony with the deceased President—stated that the United States did not want a dollar; she did not want an inch of ground; she only desired that her rights upon sea and land be recognized; she wanted her flag respected; and when that had been achieved she was willing to forego any of the spoils of conflict. So Germany was taught the lesson, and every German of normal mind has registered it, that the United States in entering this war was impelled by no selfish motive; that we were not led on by hatred of the German people; that we did not engage in the struggle for the purpose of enriching ourselves or taking their goods or their chattels from them. Some day, mayhap, in the history of this world, that will be a great asset to the United States; it may be worth more to us than all the land and all the gold that our associates have taken or demanded.

I can imagine in some crisis when Germany may be invited into a struggle against this country and may remember that we did not keep a legacy of hate which they should satisfy with bloody swords and with glistening bayonets, but rather that they may recall that they had met a noble enemy who never stooped to vengeance or stained their escutcheon with hate.

The war is over, the drums have ceased to beat the alarm, the soldiers no longer stand in battle line, peace hovers over the world, Germany's children stand with the lips of want drawn back from the teeth of starvation, and their skeleton hands stretched out for the food that their parents can not give. It seems to me, if we shall give this money to Germany, that

the fathers will tell it to their children and their children will tell it to their children's children, and that in some great conflict of world our kindly charity of to-day may be the salvation of the Republic of America.

Mr. President, I do not advance my argument alone upon that ground; I put it upon the great principle of universal humanity, on the fact that the same sentiment will bring the tears to the eyes of a German mother as to an American mother; that the same passions flame in their souls as in ours, and the same suffering is felt by them as is felt by us. So, while I will not extend to any European power or all the powers of earth a jot of our authority, a single hair's weight of our jurisdiction, or of our majesty as an independent Nation, I am willing to grant them our sympathy and extend them our bounty, that we may bring back joy, life, and love where now are darkness, despair, and death.

Mr. LA FOLLETTE. Mr. President, before the vote is taken upon my motion I desire to offer my testimony, based upon a personal investigation in that country, of the dire need of Germany at this time. The able Senator from Missouri [Mr. REED] has raised the issue above the sordid arguments of the opposition. In comparison with the spirit he has invoked those arguments seem, indeed, mean and unworthy. Under the spell of his exalted eloquence we have all of us, I trust, been purged of the passions and hate engendered by war and set face to face with the great human problem which this resolution presents.

It is to be regretted, Mr. President, that the prejudices and passions of a past war should have been thrust into this debate. We are facing the future. We are looking to the years to come. We must live in a world in which the German people are an enduring and vital part. They are and for generations have been among the world's leaders in the arts and sciences. Prior to the war they had become the very heart of industrial Europe, and as certain as the coming of another day they will again do their part in the world's work and share in its community life.

On March 24, 1924, the House of Representatives adopted by a record vote of 240 to 97 this resolution introduced by Representative FISH, of New York, which appropriates $10,000,000 for the purchase of foodstuffs in the United States and for their transportation and distribution for the relief of distressed and starving women and children of Germany.

The exceptionally large vote for the resolution in the House of Representatives is a measure of the sentiment of the people for the proposition. Both for spiritual and material reasons we might regard this appropriation as an investment rather than a gift.

The pending question before the Senate is upon my motion for the discharge of the Senate Committee on Foreign Relations from further consideration of this resolution and for immediate action upon it by the Senate.

The proposition presented to the Senate, upon which it must pass to-night, is whether in the face of Germany's dreadful need and terrible suffering as shown by the evidence submitted to both the House and Senate committees, we are to carry over the hate of war against the starving women and children of Germany. For every dollar proposed to be appropriated by the pending joint resolution is appropriated for the relief of women and children of Germany who are suffering hunger and starvation.

In listening to the discussion this afternoon we have heard representations made that there is no such thing as widespread starvation and extreme poverty in Germany. Mr. President, it was my sad privilege to visit Germany within the past year. For several weeks I traversed the country. I visited homes, hospitals, schools, factories, and everywhere I saw manifestations of absolute want. In the early morning hours I watched the assembling of bread lines. I saw thousands of people gathering as early as 3 o'clock in the morning, crowding miles of the streets of the cities of Germany, awaiting opportunity to be rationed in order that they might meet the conditions of starvation.

I visited many of the great cities. I remember particularly what I saw in Essen, a manufacturing center of some 600,000 people, where the French had taken possession and where they had denied to the citizens of Essen the use of railroads excepting one single outlying station with a small depot, which could be used for unloading the trainloads of food necessary to supply the people of that great city every day. I visited that station. It had no sidetracks, no platforms, no warehouses for sheltering the milk and other food supplies shipped in day by day and left standing in the sun and rain unsheltered for hours. Think of it, a great city of 600,000 population well provided with railroad yards and stations such as its transportation needs would normally require, but under French military rule not a railroad train permitted to land food anywhere in the municipal limits except in one remote outside station with no sidetracks or other facilities for the delivery of food to the people.

I visited the great railroad yards of Essen, and I saw weeds growing a foot high between the tracks of the railroads whose operation had been suspended by the orders of the French. I visited the hospitals of Essen. Oh, it was appalling. I saw hundreds of infants, months old, who weighed less than when they were born. The milk that should have been used to feed these babies was sitting, not in sheltered places at the station but out on the banks, exposed to the sun, with no facilities for keeping it cool, and it invariably soured before it could be delivered. In this and other cities I saw hundreds and hundreds of babies dying for want of food. I am not exaggerating. I am telling you what I saw with my own eyes. In the hospitals of Berlin, Cologne, and Gelsenkirchen I saw children of all ages in conditions of emaciation that are beyond description, children whose arm and leg bones could be bent like whalebone because of lack of nourishment, with doctors and nurses struggling bravely to save their lives, with little or no milk and on a diet that even the healthiest infant could not digest.

Everywhere I visited in Germany the shortage of food and particularly of milk is alarmingly reflected in the condition of the children. In 1923 the number of seriously undernourished children was nearly 60 per cent and the number mounting daily. Not merely had the number of tuberculosis cases increased startlingly, but the death rate from this cause was manifesting itself even during the very early years of childhood, a condition almost unknown during the war

More than 9,000,000 German men, women, and children were dependent upon charitable relief when I was in Germany last year, and this number has since increased by leaps and bounds.

Even before the war, when German agriculture was more efficient than now, about 15,000,000 of the German people had to be fed with imported foodstuffs. This deficiency was greatly increased by the Versailles treaty, under the terms of which Germany lost the Provinces of Posen and West Prussia, which had furnished their population with food staples and afforded a surplus that took care of approximately 5,000,000 besides.

Since the war German agriculture has declined and become less efficient, owing to improper cultivation during the war, loss of animal fertilizer through decrease in livestock, and lack of capital with which to purchase artificial fertilizers and farm machinery.

This decline in available foodstuffs has resulted in reducing the diet of the population beyond the limit of human endurance. I found that between three-fifths and four-fifths of the workers of Germany were living entirely upon potatoes, with a little bread and almost no fats.

Potatoes are, in fact, the only food within the scanty purchasing power of the common people of Germany. In the Ruhr I saw thousands of women who had been standing in line from 4 o'clock in the morning till noon, awaiting the chance to buy a scanty allowance of potatoes, with hundreds turned away empty handed because the supply was exhausted.

It is argued that there is wealth in Germany. There is wealth in the United States—enormous wealth—but the riches of Wall Street are not donated to relieve the deplorable conditions of the farmers up in the Northwest. The wealth of the Stinneses and the Morgans is very much alike. Human nature is very much the same the world over, sir.

The conditions in Germany are inconceivable, indescribable. In this connection let me read a short extract from the issue of May 28, 1924, of Commerce and Finance. This unbiased financial journal says:

> Spendings of the German profiteers have aroused disbelief in German distress. Out of the labors of the Dawes committee have come some facts more informing of German conditions than the most accurate observations of tourists. Last year's wheat crop was 28.4 per cent below that of 1913; rye, 34.1; all bread grains, 33.4. At the end of 1922 Germany had 11.7 per cent fewer cattle and 35 per cent fewer swine. From January 1 to September 30 last year she slaughtered 57.2 per cent fewer oxen, 48.7 per cent fewer bulls, 29.8 per cent fewer cows, 65.7 per cent fewer swine, and 12 per cent more horses than in the same 1913 period. Meat consumption per capita fell from 43.13 kilos to 26.71 kilos. With less wealth in the country and profiteers absorbing an increasing share of that wealth through currency depreciation, what reason is there for disbelieving in this distress?

Inevitably the food shortage has been complicated by the currency situation. Farmers in self-protection refused to sell their

products for worthless paper marks, and the Government was forced to abandon the system of grain requisition which it undertook, just as the Russian Government was forced to do.

The impoverishment of Germany has reached the point where it seriously affects the grain exports from the United States. In 1913–14 Germany imported 38,205,504 bushels of American wheat, but in 1924 the importation of wheat will be practically nothing. This is of significance to our western farmers who have been hard hit by collapse of the wheat market.

To prevent this slow but certain starvation of the German population living in cities—almost if not quite as bad in its destruction of life as the Russian famine—Germany ought to import and distribute at normal prices 60,000,000 bushels of grain, 150,000 tons of fat, and large quantities of condensed and dried milk.

This is what Germany ought to do. But the German Government has not been able to get credit. She can not muster the resources to save her population from the destroying effect of hunger and undernourishment.

Mr. President, if there remains any doubt as to whether there is starvation and want on a wide scale in Germany growing out of the conditions that followed the war, consider the testimony taken by the House of Representatives. It is not disputed. It stands on the record and the Senate will vote on the basis of that testimony, and if the Senate denies relief to the women and children of Germany who are starving, a record will be made here which has never before been made by the American Senate or the American Congress.

When this very joint resolution was before the House of Representatives by invoking all the hate of war they could muster only 90 votes out of the membership of the House of Representatives of 435 against the joint resolution. It came over here to the Senate Committee on Foreign Relations, and it rested there.

If testimony was taken—and I know that some was taken—it has not been printed. The Senate has not been given an opportunity to see that testimony. The public has not been given an opportunity to see it. We are going to vote to-night upon this proposition on the basis of the evidence before the House of Representatives, for the Committee on Foreign Relations of the Senate has contented itself with retaining within the confines of its committee room the testimony that it took upon this important resolution.

Mr. President what I say here in support of this joint resolution may be discounted because of the fact that I opposed our entry into the war; but, sir, that phase of the world disturbance has passed, and the man at the head of the American troops in Germany, General Allen—who, best of all men in the United States Army, knew the conditions over there—has organized a private committee, and for the better part of a year has gone back and forth over this country appealing to the generosity of the American people to come to the rescue of the starving women and children of Germany. Nobody questions his understanding of international relations. Big, broad, able, fearless, loyal according to all standards, he has not only appealed for private aid but he has appeared before the committees of Congress and asked the Congress of the United States to stand sponsor for the amount proposed to be appropriated by the terms of this resolution.

Speaking of his own knowledge and summarizing the reports of American physicians who have been in Germany, he said:

> Among children of school age the crisis is such that there is lack of breakfast and often of lunch for these children. There is also lack of shoes and stockings, underclothes, and winter coats. * * * Also among these children there is a prevalence of tuberculosis not known to school physicians heretofore. Up to 20 per cent of children applying at 6 years of age for admission to schools have to be sent home as unfit to attend. * * * The weakness of children from hunger is a common cause of fainting, dizziness, headache, and inability to study and inability to pay attention simply because of hunger. The record of collapse cases in the schoolrooms was never before known to be so great as now.
>
> The extent of undernourishment in the schoolroom is best expressed by the fact that practically everywhere there is a discrepancy of almost two years between the age, the height, and the weight of the children in contrast with a normal child. * * * Few, if any, children over 4 years have had milk in the cities since 1914 unless they were sick in hospitals.

It is literally a matter of life and death. A fearful emergency confronts the German people. Hunger and disease are to-day threatening the lives of millions of women and children in that distracted land. The $10,000,000 provided for in the resolution for their relief will save a multitude of lives. Those who might be saved by the passage of this resolution will be dead when we reassemble next December.

There is no question about the need. And this need is scarcely less urgent than that of the Russian famine, to which we gave $20,000,000.

I am interested in the passage of this resolution not only because it will save hundreds of thousands of human lives but because it will, in my opinion, be of the greatest assistance to those who are bravely struggling against great odds to maintain a democratic form of government in Germany. The German Republic was created in good faith and has been maintained with great courage and fortitude under extraordinary difficulties. The forces of democracy, which had the complete confidence of the German people at the end of the war, have lost ground, however, as a result of the harsh and inhuman terms of the Versailles treaty, the unwarranted military occupation of the Ruhr and the Rhineland by France, and the continued economic distress and privation which the masses of the German people have suffered during the past 10 years. It is amazing that any people should have maintained their faith in the instrumentalities of democracy under such appalling conditions, but the recent elections showed great gains by both the monarchists and the communists, who have been working hand in hand to tear down the German Republic in the hope that the chaos thus produced might result in securing power for themselves.

I believe that the passage of this resolution will be of inestimable value in both a moral and material sense in sustaining the forces in Germany which are striving to maintain the German Republic and the institutions of democracy. The highest as well as the most practical conception of our foreign policy, therefore, justifies the immediate passage of this resolution.

During my stay in Germany I was constantly reminded of the sense of isolation and suffering on the part of the people for lack of any expressions of sympathy and understanding on the part of the outside world.

The feeding of German children following the war by the Quakers was almost the only manifestation of good will and fraternal feeling that had come to them. It was of tremendous value. Its lasting influence can not be overestimated.

Just as the efficient aid rendered by the United States to Russia in her frightful time of famine has created a basic sense of amity beyond belief in the hearts of the Russian people so aid to Germany in this time of need will have profound results in healing wounds, restoring friendship and good will, opening markets, and renewing trade.

The adoption of this resolution expressing a desire to help Germany in her great suffering and need will have powerful reaction for good upon our own people. It will diffuse the spirit of forgiveness, harmony, and good will at home as well as abroad.

Putting aside all questions of policy, we are confronted by a simple human question—that of preventing starvation and death. At least 2,000,000 children in Germany are in a most critical condition because of their present lack of proper nourishment, added to the period of many years of privation which has undermined their health and weakened their powers of resistance. These children have been undernourished since the early days of the war. Instead of improving they are steadily growing weaker. The past winter has been the most trying time they have experienced. As a mere matter of charity and good will we should pass this resolution before we adjourn.

Mr. President, the hour is late. I had intended to discuss this question of German relief in a more thorough and satisfactory way. But because of the limited time and pressure of other business I have spoken briefly and hurriedly, without referring to the notes which I had prepared.

I must, however, say one word in conclusion. There have been intimations made in this debate that political motives are back of the effort to secure a vote on this resolution. Any intimation that my attitude toward the war in any way affects my advocacy of this resolution is unjustified. I did not introduce this resolution. I did not bring about the hearings. I have taken a hand in this matter only recently because the condition of my health prevented my doing so earlier. But I think I ought to be acquitted of being influenced by political considerations in moving for a vote on the resolution for the relief for the starving women and children of Germany at this time.

Mr. President, for nearly 40 years, wherever my convictions have led me, I have gone forth, even though alone, to defend those convictions. In peace and in war, with all that it might bring upon my head. I have stood by what I believed to be right, and in pressing for a vote upon this resolution I am simply pursuing the course which I have followed all my life.

The war is five years behind us. Let us set our faces to the new day and accept the conditions which must make for the peace of the world and for the restoration of Germany to her just place in the family of nations. Above all things, as American Senators, as representatives of the chivalry and generous impulse of the people of this country, let us, I appeal to you, refuse to invoke the war spirit against starving women and children. Let us absolve ourselves from all unworthy motives and vote upon the merits of the proposition which is before us here to-night.

I say that the time for the hatred engendered by war ends when the flags are furled, when surrender is made; and that nation which can not be generous to a fallen foe takes a poor, a cheap, and an unworthy place in the history of the world.

It is hardly necessary to discuss here the terms of the treaty under which Germany has reached her present plight. Everyone now knows that the treaty of Versailles violated the terms of the armistice, based upon President Wilson's addresses and the 14 points, in nearly every particular. After Germany had disarmed and put herself at the mercy of the Allies and the German people had established a Republic modeled after our own the wicked Versailles treaty despoiled her of her colonies and her commercial rights, robbed her of her most valuable coal and iron resources, appropriated and apportioned among her trade rivals her shipping, and left her economically bankrupt, with an indemnity unparalleled in history saddled upon the backs of her people. The late Senator Knox, former Secretary of State and former Attorney General, whose wisdom and patriotism and ripened knowledge will not be questioned in this Chamber, spoke the truth when he declared in the United States Senate that this "punic peace" was the cruelest and most inhuman document of recorded history.

Having failed at Versailles to insist upon the honorable fulfillment of our obligations to Germany under the armistice, one of the first things that the United States should do is to hasten to the aid of the destitute millions of the German people.

Stand for a moment with me at Appomattox on April 9, 1865. It is the closing hour of the greatest civil war the world has known—and civil war engenders the bitterest hatred of all war. Contrast the peace of Versailles with the terms under which Lee surrendered his army to the great Union commander. There were Grant and Lee, the greatest military figures of the Civil War. Beaten to the earth, the Southern Confederacy was personified in its gallant captain, Robert E. Lee. What will live in history for Grant, to crown him with the greatest glory, is the terms he made to Lee:

"Take your horses and your mules. Let the starving Confederate soldiers come for their rations to the commissary of the winning troops. Let us have peace."

Those terms will live in history long after the arguments of hatred to which we have listened here are forgotten.

This country is big enough to be magnanimous as well as victorious. It is not necessary to be niggardly or relentless toward a former enemy to be patriotic. We have to live in this world with the German people who are kin to millions of the people of the United States. They represent one of the great powers of Europe, and Europe can never recover industrially and economically until Germany is restored. We can help to restore the international amity which must precede peace and stability by passing the pending resolution.

Mr. ASHURST. Mr. President, much, if not most, of all that deserved to survive and that has come down to us from the feudal times and the days of chivalry was comprehended within its doctrine of philosophy of noblesse oblige; that is, of the victor is required high conduct.

The virtues of defeat with a nation and an individual are fortitude and patience. The virtues of victory are magnanimity, moderation, and restraint.

This doctrine of noblesse oblige should be and is a part of the fundamental faith and genius of the American people.

I ask the Secretary to read from the desk a telegram from the governor of Arizona expressing his views upon this subject.

The PRESIDENT pro tempore. The Secretary will read.

The reading clerk read as follows:

PHOENIX, ARIZ., *June 4, 1924.*

Hon. HENRY F. ASHURST,
*United States Senate, Washington, D. C.:*

Am advised move will be made for relief of starving German women and children. We must realize that if one part of the human body is afflicted the whole body is sick; so, if one nation is sick the rest of the world must be affected. The United States has always been noted for its charity and willingness to come to the aid of people in distress. The women and children of Germany should not be permitted to perish because of the action of the imperial government of that country, even though it may be argued that the present German Government has not fulfilled its duty, that can not justify permitting children to perish. I, therefore respectfully urge that you join in the support of a measure to prevent starvation and suffering among women and children in Germany. In the name of common humanity I urge this, even in the face of the fact that there is distress in some sections of our own country.

GEO. W. P. HUNT, *Governor of Arizona.*

Mr. HEFLIN. Mr. President, the hour is growing late and I will not discuss this question at length. I thought, as the able Senator from Wisconsin [Mr. LA FOLLETTE] was speaking about the things he saw in Germany, how different his experience was from the experiences of the Senator from Georgia [Mr. HARRIS] and the Senator from Tennessee [Mr. MCKELLAR]. I am sure the Senator saw distress and suffering, as he has stated. I can take him into the city of New York this night and show him distress and suffering, or into Boston, or Chicago, or any of the other large cities of this country, and find distress and suffering.

With us it is not a matter of small groups of people in distress. We have millions of people in distress. We have people who, as I said this afternoon, were prosperous and happy in the West five years ago, who have not a dollar now, some of them not one dollar, if their debts were paid, and not a foot of land to their names. Senators, that is a serious situation. Have we the right to run our hands into the Treasury of the United States and take out $10,000,000 to pass across the sea to relieve so-called suffering children of Germany upon the statement we have before us? I do not believe such suffering exists in the German country.

Mr. STANFIELD. Mr. President, will the Senator yield?

Mr. HEFLIN. Just for a question.

Mr. STANFIELD. That is all I wish. The Senator referred to $10,000,000 for the German people. That is what the contribution is to be, he said. I would like to ask the Senator if he has carefully read the joint resolution and if he does not find that it is to take out of America one of the very things that is causing the suffering that there is here in agriculture; that is, to take out some of the exportable surplus? It is to be used to purchase and distribute grains, fats, and milk, products of which they have too much, which is causing the very suffering we have here in America, and the Senator is opposing the joint resolution and endeavoring to prohibit doing away with the surplus products that should be taken out of here. There is no money going out of the country. It is going to relieve the very conditions that the Senator deplores here in America.

Mr. HEFLIN. Is the Senator about to let the cat out of the bag? [Laughter.] If he contends that this is trying to hand out something to the farmers, I say it is a miserable subterfuge. Such a step should not be taken behind the proposition to help the suffering children of Germany. It is beneath the dignity of the Senate to do such a thing as that.

Mr. STANFIELD. I have all the kind sympathy for those poor suffering children over there that the Senator from Nevada so wonderfully pictured to-night. I am in greatest sympathy with the Senator from Wisconsin [Mr. LA FOLLETTE] in all his great kindliness for those people over there. I do not quite agree with the Senator from Missouri, who said that we are a selfish people here. I say that we are properly selfish when we build up a wall around the country to maintain a standard of living. I say that is right.

As I said to the Senator from Missouri when he had the floor, charity begins at home, but I am practical, and I can show the Senator from Alabama, when he speaks of the suffering in this country, that we can do charity for those people and relieve their suffering over there and do ourselves a kindliness. Our American agriculture will be relieved.

Mr. HEFLIN. Well, Mr. President, the Senator has had charges made against him, and I want to inform him that one of the charges being made is that the money we provided for the War Finance Corporation to help the farmers has not reached them, but that men like the Senator borrowed large sums of that money.

Mr. STANFIELD. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield.

Mr. STANFIELD. Did I understand the Senator to say that the Senator from Oregon had borrowed large sums of money or any sum of money from the War Finance Corporation?

Mr. HEFLIN. I say that it is talked about here that the Senator is one of those who did.

Mr. STANFIELD. I want to disabuse the mind of the Senator from Alabama and say to him that the Senator from Oregon never borrowed one dollar from the War Finance Corporation, because he never needed to do it. I will admit that I was zealous to see that the War Finance Corporation loaned money not only to the western agriculturists in the States where they were suffering but more to the Senator's southern interests, where they were suffering in the cotton industry. But the Senator from Oregon did not borrow any of that money because he had credit at his banks where he could borrow money, and the records of the War Finance Corporation show that he never borrowed a dollar, not a dollar.

Mr. HEFLIN. Does not the record show that the company in which the Senator is interested borrowed money from the War Finance Corporation?

Mr. STANFIELD. It does not show anything of the kind. It does show that the Senator from Oregon, through a company that was organized for the purpose of relieving the agricultural interests out there, did put all of his resources back of it, and his company indorsed the paper that loaned money to thirty-odd stockmen and agriculturists there, but the Senator from Oregon never got a dollar of it, not a dollar. I stand proud of the record of what I did, and it cost me a great deal.

Mr. HEFLIN. Did not the War Finance Corporation loan some money to corporations or companies in which the Senator was interested?

Mr. STANFIELD. Not a dollar. I want to qualify that for a moment——

Mr. HEFLIN. I think the Senator had better qualify it.

Mr. STANFIELD. For the money that was loaned the Senator from Oregon indorsed the paper to go to save people that owed him money, and helped them in that way, and, of course, indirectly that would help the Senator from Oregon.

Mr. HEFLIN. That is what I thought. [Manifestations of laughter and applause in the galleries.]

Mr. STANFIELD. It is very unkind and very unfortunate that the Senator from Alabama should have brought up that question at this time. It is very unfair of him to have done so.

Mr. HEFLIN. Not at all. The Senator from Oregon was proper in wanting to qualify that statement. I was under the impression that the Senator obtained some of that money, and by his own confession he admits it.

Mr. STANFIELD. No; the Senator from Oregon does not admit anything of the kind; and it is unfair for the Senator from Alabama to stand there and attempt to attack the Senator from Oregon in such a way as that.

Mr. HEFLIN. I am not attacking the Senator.

Mr. STANFIELD. It is most unkind and most unfair, and I am astounded at the Senator from Alabama, who usually is very fair in the statements that he makes in debate.

Mr. HEFLIN. The Senator from Alabama desires to be fair, but I understood the Senator to say that some of the companies, by giving notes and he indorsing them, got the money to pay him what they owed him.

Mr. STANFIELD. In order that they might save their integrity. I admit a selfish interest to that extent. I do not deny that——

Mr. HEFLIN. Well, that is what I mean.

Mr. STANFIELD. However, Mr. President——

Mr. OWEN. Mr. President, I call the Senator to order. It is a violation of the rule of the Senate to impute to another Senator improper motives.

Mr. HEFLIN. I agree with the Senator from Oklahoma. I must hurry on and finish my remarks.

The PRESIDENT pro tempore. The Senator from Oklahoma makes a point of order which is well taken, and the Senator from Alabama will proceed in order.

Mr. HEFLIN. The Senator from Oklahoma had reference to the Senator from Oregon. The Senator from Oregon is not the only one that is talked of with reference to having borrowed money out of the War Finance Corporation. I have not personally investigated the matter. I do not want to do the Senator any injustice.

Mr. STANFIELD. I hope the Senator does investigate it; and I hope when he does it that he looks over all the borrowers from the Southern States who borrowed out of the War Finance Corporation—not that there was anything wrong in it, but I want to say that the Southern States got more out of it than any other part of the Nation.

Mr. OWEN. Mr. President, I insist upon my point of order.

Mr. HEFLIN. I am not yielding to the Senator, but I want to say that the Southern States never got one-third of what the West got out of the War Finance Corporation.

Mr. STANFIELD. Will the Senator state that again?

Mr. HEFLIN. The Southern States, all of them together, never got one-third of what the Western States got out of the War Finance Corporation.

Mr. GOODING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Idaho?

Mr. HEFLIN. I can not yield.

Mr. GOODING. The Senator from Alabama must remember——

The PRESIDENT pro tempore. The Senator from Idaho is out of order. The Senator from Alabama has not yielded. The Senator from Alabama will proceed in order.

Mr. HEFLIN. That is what I am trying to do.

Mr. GOODING. I want to remind the Senator from Alabama that I offered a resolution here asking the Senate to make an investigation of what money I borrowed from the War Finance Corporation, and it did not make the investigation.

Mr. HEFLIN. I remember that the Senator did that.

Mr. GLASS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Virginia?

Mr. HEFLIN. I yield to the Senator from Virginia for a brief question.

Mr. GLASS. Does the Senator from Idaho say that he borrowed any money from the War Finance Corporation?

Mr. GOODING. I want to say that I was interested in a corporation that did borrow money.

Mr. GLASS. Then I want to say that the Senator did something that a Federal statute especially prohibits and for which it provides a fine of $3,000 against the Senator.

Mr. HEFLIN. Mr. President, I want to finish my remarks.

Mr. GLASS. If the Senator makes that admission, I am going to ask that the committee report out his resolution and proceed with the investigation.

Mr. GOODING. I will be delighted to have the Senator do that.

Mr. GLASS. I shall do it.

Mr. GOODING. I hope the Senator will do so. I want to find out whether I can——

The PRESIDENT pro tempore (rapping for order). Senators will be in order.

Mr. HEFLIN. I am doing my best to pour oil on the troubled waters. [Manifestations of laughter and applause in the galleries.]

The PRESIDENT pro tempore. At the next manifestation of pleasure or displeasure in the galleries the Chair will order the galleries cleared. The Chair desires that this shall be impressed upon the minds of those who occupy the galleries. If there are any more such demonstrations in the galleries, the Chair will direct the Sergeant at Arms to clear the galleries.

Mr. HEFLIN. Oh, Mr. President, I think the occupants of the galleries ought to be permitted to laugh at some of the very amusing things that transpire here.

The PRESIDENT pro tempore. The Senator from Alabama knows that these manifestations are prohibited by the rules of the Senate, and it is the business of the Presiding Officer to enforce the rules of the Senate.

Mr. HEFLIN. I understand that. I meant that they might be permitted to indulge in a low laugh. [Laughter.]

There are many things I am going to investigate between now and the close of the fall campaign. I know about a lot of things of a right interesting nature. When we provide money for the farmers to relieve them in any section of the country it ought to go where it is intended to go, and not to millionaires who are doing big business and who hold high official positions in the Government. We have had the awful scandal of the Attorney General, who was supposed to do that which would bring about justice between man and man, but instead of that he has been accused of granting immunity from prosecution, making money out of his office, growing rich at the head of the Department of Justice, speculating in Sinclair oil stock—a member of the Cabinet of the present Republican administration driven under cloud from office. There has been more scandal in this administration than any one that we have ever had; but I am not going into those things to-night.

As the Senator from Wisconsin was talking to-night about distress in Germany, I thought about an experience I had once in the capital of my State. I was standing on the street corner. I had just been elected to the House. I was talking to three or four gentlemen when old Aunt Mandy came along. She had great big shoes nearly worn out. The heels were gone, and she moved slowly, sliding them along the sidewalk. She walked up to where we were standing, with a tin cup in her hand, and said, "Young marster, will you please give me something?"

I was the only one in the company who did not live there. The others were Montgomery citizens. I took a quarter out and dropped it in her cup. She said, "Thank you, young marster; thank you." One of the gentlemen laughed and said, "Tom, do you know who she is?" I said "No." They said, "That is old Aunt Mandy Jones, who lives around the corner. She is worth $50,000 or $75,000. She owns a two-story business house and other valuable property here." And the laugh was on me.

Mr. President, the German people are among the smartest people on earth. I have no hate in my heart for the German people. I want to see them do well and prosper. But they are smart. They know what will touch the American heart. They know what will appeal to our pity or arouse our sympathy. After Germany had been conquered, after they had said they were going to conquer the world, after the Kaiser had said that he would levy $40,000,000,000 of indemnity against the United States, they said, "We have got to do something now to change the attitude and the feeling over there toward us. We must appear to be starving—not we, but the children, the women and children. They are big-hearted people, those Americans are." So now they have come over here, we are told, with this miserable makeshift of a proposition that crawls and trails into the Senate 8 or 10 hours before final adjournment, and here we are asked to appropriate $10,000,000, to be sent as a gift, when we have distress in the ranks of our boys who are lame and halt and blind because of their fighting against the German Army.

I saw a boy down here the other day in a restaurant, a fine fellow, sitting in a chair, as handsome a young man as I ever saw. He was talking and laughing as though he were not crippled at all. When they finished their meal I saw two young men take hold of him and put him down on some little rollers and they pushed him out. Both of his legs were off at the hip. I looked at him as he went out and I said, "God bless him. He shed his blood and left those limbs on the battle line for me and my country"

Lest we forget.

At the Battle of Chateau Thierry, in July, 1918, there were southern boys and there were northern boys, sons of those who wore the blue and sons of those who wore the gray. They stood side by side on a common battle line in a common cause, representing a united country where the mingled blood of brothers North and South had cemented the sections in the bonds of an everlasting Union, with East and West and North and South all working together for the good of each and each for the good of all. There they were, God bless them, the boys of the South and the boys of the North—the intrepid warriors of old glory.

The night before that awful drive our officers went about among them and said "Boys, we are going to have an awful battle here to-morrow; the Germans are going to attack your line. The Prussian guard is over there, the seasoned warriors of three years of victorious fighting. They have new uniforms and new guns. They are rested and are in the pink of condition. They declare that they will break your line; but you must hold this line; they must not pass." Our boys answered back with feeling, "We will hold it; they shall not pass." Again just before day our officers came down the line and said, "Boys, we do not doubt you in the least; we know what you will do; we know what your forbears did who followed the Starry Cross of the Confederate flag and the Stars and Stripes in the sixties when they were settling forever the question of secession and fixing for all time the status of the Union. We know what you will do; but we want to remind you that back of you is all that we hold dear, home and loved ones and country and its institutions. You must hold this line. They must not pass." Our boys said, "We will hold it; they shall not pass."

Daylight dawned and the drive was on. Bombs were falling from German airplanes; the "big Bertha" was throwing shells 75 miles into Paris; women and children there were fleeing pell-mell, screaming "They are coming! They are coming!" The President of France was making ready to move the seat of government. The dreadful drive was on.

The Prussian Guard charged against the allied line. Bulletins were going in from the rear to Paris. The first one read, "Germans advancing; French slowly retreating; Americans holding." The second bulletin read, "Germans still advancing; French losses heavy; Americans still holding." The third bulletin read, "Americans advancing; German losses tremendous." The fourth bulletin read, "There are no Germans south of the Marne save the wounded and the dead."

Those boys not only held their line; they broke the German line; and when the armistice was signed they were marching toward Berlin through the gates of Sedan. Thank God, they held the line. They stood between us and the overthrow of our Government and the loss of our liberties. They saved the liberty of the world. German autocracy was overturned; military despotism was destroyed; democracy was triumphant; God's cause was marching on.

Lest we forget.

God forbid that we shall ever forget those boys and all that they have done for us.

## MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed the bill (S. 1614) to repeal an act authorizing the construction of bridges across the Great Kanawha River.

The message also announced that the House agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8839) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of such District for the fiscal year ending June 30, 1925, and for other purposes; that the House receded from its disagreement to the amendments of the Senate numbered 2, 18, 34, 64, 83, 89, 90, 117, 118, 119, 120, 123, 140, and 141 to the said bill, and agreed to the same; also that the House receded from its disagreement to the amendments of the Senate numbered 28, 84, 116, 124, and 166, and agreed to the same severally with an amendment, in which it requested the concurrence of the Senate.

## DISTRICT OF COLUMBIA APPROPRIATIONS—CONFERENCE REPORT

Mr. SHIPSTEAD obtained the floor.

Mr. PHIPPS. Mr. President, will the Senator from Minnesota yield to me in order that I may present a conference report?

Mr. SHIPSTEAD. I yield.

Mr. PHIPPS. I ask unanimous consent that I may present the conference report on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 8839) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of such District for the fiscal year ending June 30, 1925, and for other purposes.

The PRESIDENT pro tempore. The conference report is privileged, and will be received.

The conference report is as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8839) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of such District for the fiscal year ending June 30, 1925, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 15, 16, 17, 20, 23, 24, 30, 31, 35, 38, 39, 40, 41, 42, 57, 61, 75, 81, 82, 85, 93, 96, 97, 98, 99, 108, 113, 121, 131, 133, 137, 139, 147, 152, 158, 161, and 162.

That the House recede from its disagreement to the amendments of the Senate numbered 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 19, 21, 22, 25, 26, 29, 32, 33, 36, 37, 43, 44, 45, 46, 47, 48, 49 50, 51, 52, 53, 54, 55, 58, 59, 60, 62, 65, 70, 71, 76, 77, 78, 79, 86 87, 92, 94, 95, 101, 102, 103, 104, 105, 106, 107, 109, 112, 114, 115, 122, 125, 126, 127, 129, 130, 132, 134, 135, 136, 138, 142, 143, 145, 146, 148, 150, 151, 153, 154, 156, 159, 160, 164, 165, and 167; and agree to the same.

Amendment numbered 1: That the Senate recede from its disagreement to the amendment of the House to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows: In lieu of the matter inserted by the amendment of the House insert the following: "any revenue (not including the proportionate share of the United States in any revenue arising as the result of the expenditure of appropriations made for the fiscal year 1924 and prior fiscal years) now required by law to be credited to the District of Columbia and the United States in the same proportion that each contributed to the activity or source from whence such revenue was derived shall be credited wholly to the District of Columbia, and in addition, $9,000,000"; and the House agree to the same.

Amendment numbered 27: That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment, insert the fol-

lowing: "; for the purchase of two automobiles at not to exceed $450 each for the use of the assessor's office, $900; in all, $3,900"; and the Senate agree to the same.

Amendment numbered 56: That the House recede from its disagreement to the amendment of the Senate numbered 56, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$605,650"; and the Senate agree to the same.

Amendment numbered 63: That the House recede from its disagreement to the amendment of the Senate numbered 63, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$925,000"; and the Senate agree to the same.

Amendment numbered 66: That the House recede from its disagreement to the amendment of the Senate numbered 66, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "manner provided by law"; and the Senate agree to the same.

Amendment numbered 67: That the House recede from its disagreement to the amendment of the Senate numbered 67, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$75,000"; and the Senate agree to the same.

Amendment numbered 68: That the House recede from its disagreement to the amendment of the Senate numbered 68, and agree to the same with an amendment as follows: In lieu of the number proposed insert "three"; and the Senate agree to the same.

Amendment numbered 69: That the House recede from its disagreement to the amendment of the Senate numbered 69, and agree to the same with an amendment as follows: In lieu of the number proposed insert "three"; and the Senate agree to the same.

Amendment numbered 72: That the House recede from its disagreement to the amendment of the Senate numbered 72, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "two motor field wagons at not to exceed $650 each, the purchase of one motor field wagon at not to exceed $650, the purchase of four motor trucks at not to exceed $650 each"; and the Senate agree to the same.

Amendment numbered 73: That the House recede from its disagreement to the amendment of the Senate numbered 73, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$350,000"; and the Senate agree to the same.

Amendment numbered 74: That the House recede from its disagreement to the amendment of the Senate numbered 74, and agree to the same with an amendment, as follows: In lieu of the sum proposed insert "$250,000"; and the Senate agree to the same.

Amendment numbered 80: That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "the manner provided by law"; and the Senate agree to the same.

Amendment numbered 88: That the House recede from its disagreement to the amendment of the Senate numbered 88, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$35,000"; and the Senate agree to the same.

Amendment numbered 91: That the House recede from its disagreement to the amendment of the Senate numbered 91, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$53,580"; and the Senate agree to the same.

Amendment numbered 100: That the House recede from its disagreement to the amendment of the Senate numbered 100, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$3,459,740"; and the Senate agree to the same.

Amendment numbered 110: That the House recede from its disagreement to the amendment of the Senate numbered 110, and agree to the same with an amendment as follows: In lieu of the sum of $100,000 named in said amendment insert the sum "$100,000"; and the Senate agree to the same.

Amendment numbered 111: That the House recede from its disagreement to the amendment of the Senate numbered 111, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$206,939"; and the Senate agree to the same.

Amendment numbered 128: That the House recede from its disagreement to the amendment of the Senate numbered 128, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$45,000"; and the Senate agree to the same.

Amendment numbered 144: That the House recede from its disagreement to the amendment of the Senate numbered 144, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "manner provided by law"; and the Senate agree to the same.

Amendment numbered 149: That the House recede from its disagreement to the amendment of the Senate numbered 149, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "in accordance with the revised plan as set forth in Senate Document No. 37, Sixty-eighth Congress, first session, $150,000, of which amount $125,000 shall be available for expenditure below Benning Bridge and not more than $25,000 may be expended above Benning Bridge in the acquirement of necessary land"; and the Senate agree to the same.

Amendment numbered 155: That the House recede from its disagreement to the amendment of the Senate numbered 155, and agree to the same with an amendment as follows: Restore the matter stricken out amended to read as follows: "on its present site in East Potomac Park"; and the Senate agree to the same.

Amendment numbered 157: That the House recede from its disagreement to the amendment of the Senate numbered 157, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$40,000"; and the Senate agree to the same.

Amendment numbered 163: That the House recede from its disagreement to the amendment of the Senate numbered 163, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,500,000"; and the Senate agree to the same.

The committee of conference have not agreed on amendments numbered 2, 18, 28, 34, 64, 83, 84, 89, 90, 116, 117, 118, 119, 120, 123, 124, 140, 141, and 166.

LAWRENCE C. PHIPPS,
W. L. JONES,
L. HEISLER BALL,
E. I. EDWARDS,
*Managers on the part of the Senate.*

C. R. DAVIS,
FRANK H. FUNK,
MARTIN B. MADDEN,
W. A. AYRES,
JOSEPH W. BYRNS,
*Managers on the part of the House.*

Mr. PHIPPS. I ask unanimous consent for the present consideration of the report.

The PRESIDENT pro tempore. Is there objection to the present consideration of the report? The Chair hears none. The question is on agreeing to the report.

Mr. SMOOT. Can the Senator from Colorado briefly state what the items in dispute are?

Mr. PHIPPS. There are really no items left in dispute, as the House has now taken action on the five which were in dispute, and I will make a motion, as soon as the report shall be agreed to, which will cover them so far as the Senate is concerned.

The principal changes in the bill are the following: The Senate had receded as to $1,000,000 of the amount provided for the new water plant. The Senate had provided an appropriation of $2,500,000 for that purpose, but the conferees have agreed upon $1,500,000;

The Senate receded on its amendment to provide for the three park sites, namely, the Patterson tract, the Klingle Valley tract, and the Piney Branch tract, the appropriation amounting to $730,000.

Mr. SMOOT. They went out entirely.

Mr. SIMMONS. They went out entirely.

The conferees disagreed on the item for the junior high school for the east side of the city, but put in an item that will enable the District to purchase a site for $150,000, omitting the estimated expenditure for the building of $450,000.

All of the provisions for paving streets incorporated in the bill by the House were retained in the bill, as were also those which were added by the Senate.

Those were the principal items of disagreement.

Mr. ROBINSON. Mr. President, will the Senator inform the Senate whether the conference report represents a complete agreement?

Mr. PHIPPS. It represents a complete agreement. Upon the adoption of the report I propose to make a further mo-

tion to the effect that the Senate agree to the five amendments which have been made by the House to the Senate amendments, which action is in conformity with the tentative agreement arrived at by the conferees.

Mr. ROBINSON. That will result in the passage of the bill?

Mr. PHIPPS. It will result in the passage of the bill.

Mr. SMOOT. The Senator said that he would move that the Senate agree to five amendments made by the House. He did not mean that, did he?

Mr. PHIPPS. The amendments are merely to make corrections in accordance with the tentative agreement arrived at on the part of the conferees.

Mr. SMOOT. They were amendments of the Senate, were they not?

Mr. PHIPPS. Yes; in one way or another. They are small items. We agreed upon them in conference, but it was necessary for the conferees to carry them back to the House for authorization.

Mr. President, I move the adoption of the report.

The PRESIDENT pro tempore. The question is upon agreeing to the report.

Mr. COPELAND. Mr. President, I should like to ask the Senator from Colorado what happened to the Schick test appropriation?

Mr. PHIPPS. The House conferees were unwilling to accept it. They claimed that there had been no Budget estimate for it. The Senate conferees stood out for that item just as long as they thought there was any possibility of securing agreement on the part of the House conferees.

Mr. President, I renew my motion.

The PRESIDENT pro tempore. The question is on agreeing to the conference report.

Mr. KING. Mr. President, I have been detained——

Mr. SHIPSTEAD. Mr. President, I was not aware that I had yielded the floor.

Mr. KING. I beg the Senator's pardon. I understood the Chair was about to call for a vote upon the conference report.

Mr. SHIPSTEAD. I yielded the floor to the Senator from Colorado [Mr. PHIPPS].

Mr. KING. I wanted to address myself only for a moment to the conference report, or, rather, to make an inquiry.

Mr. SHIPSTEAD. Very well.

Mr. KING. Mr. President, I have been engaged in the hearing of the Mayfield case and have been detained from the floor. I should like to ask the Senator from Colorado what disposition was made of the item dealing with the school for tubercular children? There may have been some inquiry while I was not in the Chamber.

Mr. PHIPPS. The amendment providing for the school was agreed to by the House after very lengthy discussion, from all points of view, in the light of all the evidence we had obtained.

Mr. KING. I think, with due respect to the Senator and to the other conferees, that they have made a very serious mistake in imposing upon the people in the particular section where this school is to be erected what I conceive to be and what they will regard as, if not a menace to their lives, at least a potential evil.

I called attention when the appropriation bill was under consideration to the fact that school-teachers who were familiar with the situation protested against the establishment of a school for tubercular children at the particular place at which this bill provides it shall be located, and very strong and earnest protests were made by a considerable number of people. The Senate knows that in the District are community centers and various civic organizations that are concerned in the affairs of the District, and in numerous meetings held by the citizens of the District referred to protests were registered against the plan provided in this bill. I repeat, Mr. President, that I think it is an injustice to the people of the District.

Mr. PHIPPS. Mr. President——

Mr. KING. Just a moment. I feel sure that if we had had a yea-and-nay vote upon the proposed amendment when the bill was under consideration before it went to conference the action of the committee would not have been sustained.

I regret that at this late hour it seems impossible to challenge the attention of the Senate in a successful way to the policy which is fastened upon the District under this bill and which I conceive to be fraught with much of evil if not of danger to a certain section of the District. I now yield to the Senator from Colorado.

Mr. PHIPPS. In reply to the Senator, I can only say that the conferees faithfully considered this question from all viewpoints, but were unable to find any other section in the city that would be accessible to all of the students who must attend this school, and similar objections would be raised by residents in any neighborhood where it was proposed to locate it.

Mr. KING. Well, Mr. President, the able Senator from Colorado may be entirely satisfied with the examination which he has made for the purpose of finding a suitable location for a school of this character. Of course, no one denies the necessity——

Mr. SHIPSTEAD. Mr. President, I want to be courteous to Senators.

The PRESIDENT pro tempore. The Chair understood that the Senator from Minnesota yielded to the Senator from Colorado.

Mr. SHIPSTEAD. Yes, Mr. President; but not for any extended debate. Senators have always been courteous to me, and I want to be courteous to every Senator.

Mr. KING. Will the Senator permit an interruption? Of course, I am here at the sufferance of some one—whether it is the Chair, or the Senator from Colorado, or the distinguished Senator from Minnesota, I do not know. I presumed that the conference report being before the Senate, it was here without strings or restrictions, and was to be considered, debated if necessary, and voted upon. If the Senator from Minnesota has yielded the floor with the understanding that there was to be no discussion, or rather that the matter was to take but a few moments, then I think the Senator from Colorado should withdraw the conference report for the moment and permit the Senator from Minnesota to conclude his remarks, and then ask for consideration of the conference report.

The PRESIDENT pro tempore. The Chair desires to advise the Senator from Utah that unanimous consent was given for the consideration of the conference report, and it is before the Senate.

Mr. KING. I hope the Senator from Minnesota, then, will not charge me with any discourtesy to him, or that I am impinging upon his prerogatives or his time.

Mr. SHIPSTEAD. I do not.

Mr. PHIPPS. I regret the delay of the speech of the Senator from Minnesota.

Mr. KING. I shall take only a few moments.

As I was observing, the Senator from Colorado doubtless made such investigations as satisfied him of the propriety of the course which he has pursued. It is most remarkable, however, that with his powers of observation and his familiarity with the District and the suburbs of the District, the only place that he could find or that the conferees of the House and the Senate could find for the location of this tubercular school was in the center of what might be denominated a congested portion of the District, having within it and within a short radius of the point where the school will be located more than 50,000 people, with a certainty of a remarkable increase in the immediate future, because it is one of the growing parts of the city.

Moreover, Mr. President, the evidence shows that the place selected by the committee is contiguous to a tubercular hospital, which ought to be removed to some other part of the city, where inmates in the advanced stages of consumption are confined, where, by reason of the proximity of the school to the hospital, the parents of the children will feel that their children already suffering from the incipient disease will have less opportunity for improvement and for final extirpation of the disease from their systems because of possible contact with those in the hospital. I regard it as a most unwise and most unfortunate selection for this tubercular school.

There is another feature that should be taken into consideration: The District owns, as I now recall, substantially 26 acres of valuable land at this point. A portion of this land has been dedicated to the construction of a fine high school. Upon this ground should be located other educational institutions. We all know that the District now is lacking a large number of schoolhouses, both for the primary and the elementary grades as well as for the high schools. If we dissipate—and this is in part a dissipation—this great patrimony by the erection upon it of a $150,000 of $200,000 school for 40 or 50 students, we are destroying property which is reasonably worth more than $1,000,000—that is, the bare ground—and depriving the District of the most important part of the city where it could erect other needed schoolhouses for high schools and for other purposes. So there is a great financial loss to the District, to say nothing of the disadvantages which I have so imperfectly described.

I can only express my profound regret at the action of the conferees, and, speaking for a large number of the people of the District, register their protest against the action of the conferees and register their protest against the action of the Senate if they shall approve by their vote the action of the com-

mittee in reporting back this bill with this provision found therein.

I shall not ask for a record vote. Perhaps at this late hour, in view of the vast amount of debate which we have had and the fact that Senators desire to leave, there would not be the interest manifested in this important subject which it deserves. It is unfortunate that the conferees did not more fully protect the interests of the people of the District of Columbia.

The PRESIDENT pro tempore. The question is on agreeing to the conference report.

The report was agreed to.

The PRESIDENT pro tempore laid before the Senate the following message from the House of Representatives, which was read:

IN THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
*June 6, 1924.*

*Resolved*, That the House recedes from its disagreement to the amendments of the Senate numbered 2, 18, 34, 64, 83, 89, 90, 117, 118, 119, 120, 123, 140, and 141 to the bill (H. R. 8839) entitled "An act making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of such District for the fiscal year ending June 30, 1925, and for other purposes," and concurs therein.

That the House recedes from its disagreement to the amendment of the Senate numbered 28, and concurs therein with an amendment as follows: Strike out of the matter inserted by said amendment the following: "and file reports of same with the Clerk of the House of Representatives and the Secretary of the Senate."

That the House recedes from its disagreement to the amendment of the Senate numbered 84, and concurs therein with an amendment as follows: In lieu of the matter inserted by said amendment insert "$165,570."

That the House recedes from its disagreement to the amendment of the Senate numbered 116, and concurs therein with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "For the purchase of a site in the northeast, somewhere within a distance of approximately a half mile of the Taylor School (located in square 891), $150,000."

That the House recedes from its disagreement to the amendment of the Senate numbered 124, and concurs therein with an amendment as follows: In lieu of the sum proposed insert "$1,242,500."

That the House recedes from its disagreement to the amendment of the Senate numbered 166, and concurs therein with an amendment as follows: In lieu of the sum proposed insert "$125,000."

Mr. PHIPPS. I move that the Senate concur in the amendments of the House to the amendments of the Senate numbered 28, 84, 116, 124, and 166.

The PRESIDENT pro tempore. The Senator from Colorado moves that the Senate concur in the House amendments as stated.

The motion was agreed to.

Mr. PHIPPS. I thank the Senator from Minnesota. I should like to reply to the Senator from Utah, but I shall not further impose upon the Senator's time.

CAUSES AND EFFECT OF DEFLATION OF 1920

Mr. SHIPSTEAD. Mr. President, I send to the desk a motion, which I ask to have read.

The PRESIDENT pro tempore. The Senator from Minnesota tenders a motion, which will be read.

The reading clerk read as follows:

I now enter a motion to discharge the Committee to Audit and Control the Contingent Expenses of the Senate from further consideration of Senate Resolution 246, and ask that under the rule it lie over for one day.

Mr. SMOOT. Mr. President——

The PRESIDENT pro tempore. The Senator from Minnesota has the floor.

Mr. SMOOT. A question of order, Mr. President. The Senate has not yet voted upon the motion of the Senator from Wisconsin.

The PRESIDENT pro tempore. The Chair does not rule upon the effect of what the Senator from Minnesota has tendered.

Mr. SMOOT. But, Mr. President, there is a pending question, and under the rules we can not have two questions submitted at the same time.

The PRESIDENT pro tempore. What is the question raised by the Senator from Utah?

Mr. SMOOT. There is already a question pending before the Senate, and that is the motion submitted by the Senator from Wisconsin. Now the Senator from Minnesota presents another question entirely for the action of the Senate.

Mr. SWANSON. The Senator from Minnesota simply gave a notice.

Mr. NORRIS. Mr. President, that is only a notice. The Senator does not ask to take it up.

Mr. LA FOLLETTE. He simply enters a motion, with a view to taking it up later.

Mr. NORRIS. It shows on its face that it is only a notice.

The PRESIDENT pro tempore. There is no motion made by the Senator from Minnesota.

Mr. SMOOT. I understood he had made a motion.

The PRESIDENT pro tempore. The effect of what the Senator has just presented at the desk will be determined hereafter.

Mr. LA FOLLETTE. I should like to say, if I may be permitted to do so at this time, that I shall not consent to any other measure being taken up until we have a vote upon the pending question.

RELIEF OF DISTRESS IN GERMANY

The Senate resumed the consideration of the motion of Mr. LA FOLLETTE, that the Committee on Foreign Relations be discharged from the consideration of House Joint Resolution 180, for the relief of the distressed and starving women and children of Germany.

The PRESIDENT pro tempore. The question is upon the motion of the Senator from Wisconsin.

Mr. SHIPSTEAD. Mr. President, I want to make just a very few observations concerning the motion that is now before the Senate. Due to the lateness of the hour, I shall be very, very brief; but in view of the spirited debate that has taken place in the Senate upon this subject, I feel impelled to occupy the floor for at least two or three minutes.

We are writing history that the future generations of America shall read, and I am very much concerned in seeing to it that those pages shall be of such a nature that the coming generations shall not read them with regret.

There is one page of American history that I do not like to speak about, and that is the page that was written by the people of the North in their conduct toward and their treatment of the people of the South after the close of the War between the States. If the people of the North at that time had realized that they were writing history, I believe that conduct would have been entirely different.

There was one thing that won my respect in early youth for old Senator Knute Nelson, from Minnesota. While he had fought on the side of the Union against the South, he was big enough, he had a soul big enough, at all times to express sympathy and charity and magnanimity for the people of the South.

I want to say with all due respect to the Senator from Alabama [Mr. HEFLIN] that when he spoke a few minutes ago he reminded me of an old-time Republican politician 30 years ago. When he had no argument he would take out the bloody shirt of the Civil War and abuse the people of the South, raking up the old wounds that were festering in the hearts of the American people. I thank God that that black page of American history is slowly being wiped away; and be it said to the eternal glory of old Senator Nelson, an old Union veteran, that he did his best to his last living day to wipe out that black page of America's history.

I hope that when we come to vote on this resolution we will bear in mind the strength and the glory of America, and that we do not paint another black page on America's history before the old page shall have been washed away.

America is strong enough and big enough, and can afford to be magnanimous to a beaten foe. I shall vote for the resolution.

Mr. DILL. Mr. President, the reference by the Senator from Minnesota [Mr. SHIPSTEAD] to the address of the Senator from Alabama [Mr. HEFLIN] causes me to refer to it also. I remember that the late lamented Speaker of the House of Representatives, Champ Clark, said that the Senator from Alabama was the greatest popular orator in America; and he certainly demonstrated it here to-night. After telling us that he did not want to arouse the spirit of hatred engendered by the war, he proceeded to play the fife and beat the drum and wave the flag as it has not been done by any man in this Chamber since the war closed.

I do not believe that is the spirit which should dominate the Senate at a time when we are considering legislation of this kind. I believe a bigger and a nobler spirit should dominate not only the Senate but the people of this country, and, I hope, of the world.

Those who were in charge of the war told us it was a war to end war, and when the people of the great Republic of

France, which suffered more than all other nations combined, voted at the ballot box to put an end to the oppressive policy of Poincaré and those who were with him, it little behooves the American Senate or Members of it to wave the flags and arouse the spirit of war times.

Something has been said here about the needs of the farmers of this country. I believe the greatest mistake the leaders of both parties in the Senate have made at this session has been the failure to legislate in the interest of the producing classes of this country, but the fact that a parliamentary situation has been created by which I can not vote for legislation in the interest of the farmer will not in any way prevent me from voting in the interest of the children of Germany.

Ah, we all know too well the story of the militarism in Germany and what it did to the world. But in England and in this country and in France, the countries which won, conditions are bad, so bad that we are told we should not vote any money out of our Treasury. If it is bad for the victors, what must it be for the vanquished?

These little children who suffer in Germany are the helpless victims of a great war, most of all of militarism, and if by the appropriations of a few million dollars we can sow the seeds of brotherly love and fellowship between our people and the German people, it may save millions, yes, billions of dollars, and hundreds of thousands and even millions of lives in the years to come.

I, for one, am anxious to try the experiment of voting a little help to the children of Germany, a country which we helped to defeat. I would like to have my country practice a little of the doctrine that was taught by the Master when he said:

> Suffer the little children to come unto Me.

Let it be demonstrated that this Government, through its Congress, subscribes to that doctrine by voting a few million dollars to buy the simplest, plainest foods for these little children of Germany, and at least show our good will and our desire to help them in their hour of trouble and their hour of suffering.

Mr. SWANSON. Mr. President, I am a member of the Committee on Foreign Relations, to which this resolution was referred. I attended all the meetings of that committee. I read all the evidence, and if there is any starvation in Germany, it has not been disclosed. The only thing presented to that committee was undernourishment of children. With butter, fats, milk, and so on, the children could be greatly improved. Germany as a nation is not in a wretched condition. Germany as a nation is better than the nations she overran, where she destroyed buildings and devastated areas.

I would have some patience with the plea for Germany if a plea were made for Serbia, overrun for four years. Every Serbian was compelled to leave his home, having no government, and even the fighting army had to go to Italy and to France and stand up against the Hun. Yet not one word is said here about taking care of the children of that nation in penury, in want, and destitute. Why? Because they have few votes to cast in the coming election.

Distress is greater, poverty is greater, there are no magnates of wealth there, no money of Serbians is deposited in foreign countries; but no voice is raised in this Chamber asking that we give relief to that oppressed and destitute people.

Belgium was overrun for years, devastated, destroyed, the Government overthrown, all kinds of iniquities perpetrated. No money has been paid to restore her fields that were devastated and her industries that were ruined; there is no champion here to tell us of the distress, the want, the misery of our allies in Belgium. Why? Because there is no great volume of voters to record their votes and sympathy in the coming election.

Italy was distressed and overrun; she can not pay her debts and the interest; her country was devastated. Bulgaria, on Germany's side in the war, is more destitute than Germany, harder up than Germany; but no mention is made here of any attempt to relieve the distress in Bulgaria. No effort is made to relieve distress in any of the other countries in Europe in these piteous words of appealing sympathy. The sympathy is all where the vote is.

Take another view of this—and we might just as well be frank about it: It seems to me there is more interest in the votes of Germans in this country than there is in the distress in Germany. Not a foot of German territory had an enemy on it during the entire war. All of her industries were unhurt, not a farm was devastated, not a house hurt, not an enemy invaded her, as happened to France and Belgium and Serbia. All of her industries are in successful operation to-day.

Where is the distress? The very persons who are urging this admit that there is vast wealth in Germany. The Dawes report itself discloses a condition under which they could make payments, under which they could not only pay all the expenses of the Government and relieve the distress but could save three or four hundred thousand dollars a year. That report was made after thorough investigation by Germans, by French, by English, and by Americans. It seems to me very remarkable for Senators to come here with this plea of distress, when there is no starvation, but simply special cases.

Consider for a moment the Greeks and the Armenians. There were people whom we pledged in the fourteen articles of peace that we would take care of and defend. During the war, when we approved the declaration of war, we pledged ourselves to take care of the Armenians. One million of them have been butchered and their homes destroyed. The people were driven out of Armenia and driven out of Turkey, and are homeless to-day in Greece, on her charity; but no voice is raised here urging us to take care of the Armenians, our allies, who entered the war on account of our promise to support and to give them their independence.

It seems to me that we should take care of friends whose penury, whose want, whose distress were brought on by Germany before we proceed to take care of Germany. I have no ill will in this matter. I have no grievance against Germany, except so far as she brought on this war and brought on the distress from which she suffers.

As to there being in Germany cases of distress which that Government can not relieve, if the Government would use its power of taxation on the wealth which is possessed by Germany, and which nobody denies, and which nobody can deny; if Germany would exercise its power of taxation and impose a per capita tax equal to that we have in America to-day—one-half of England's tax, one-half of France's tax, one-half of Belgium's tax—there would not be an item of distress that could not be taken care of from that source.

If Germany were to pay per capita five-eighths of the taxation we pay to-day to meet the interest on our debts, to pay what we pay to our wounded soldiers—five-eighths per capita—she not only could relieve all distress but she could pay what the London conference requires her to pay in reparations. When we speak of charity, I say that there are others whose need for charity should appeal to us more, where our obligation is greater than it is to Germany.

Mr. President, I feel that the people who are urging this relief put the German people in a bad attitude. No German has come here begging. The German Government has not begged. The activity has been on the part of Americans, who are more distressed than is the German Government, than are the German people themselves. It seems to me that they do not explain why they waited for four years. The distress in Germany was greater four years ago than it is now; it was greater three years ago than it is now; it was greater two years ago than it is now; but now, when conditions have improved and have become better, the demand is made. If we are going to relieve distress the world over, let us give relief to the Armenians, give it to the Greeks, give it to the Serbians, give it to the people of Russia, give it to the people of Belgium. There is distress in France; there is distress among our allies equal to any distress in Germany. But if we are going to extend charity, let us extend charity to all at the same time and give no preference. That is fair, that is just, and that is right.

But I am not for going any further in this matter. Five years after the war the time has come for America to make a cessation of this matter, and with kindness, with assistance on our part, let the people know that the time has come for them to work out their own salvation.

I do not believe that this is constitutional. I do not believe that it is wise, and I see no demand from Germany for this. Germany does not come here and tell us that because she has failed to exercise the power of taxation there on her rich men and her wealthy that she asks America to supplement her failure to do her duty by her own people in taxing the wealth there.

The Dawes report shows what? It shows that there is $1,700,000,000 of German capital and money deposited in foreign countries. That amount of money, made by the sale of German marks which were repudiated, and which it was never expected would be redeemed when they were sold, belongs to the German nationals.

I heard the senior Senator from Wisconsin [Mr. LA FOLLETTE] say:

> Shall these people suffer because the Government will not tax the wealthy on the money deposited by its nationals in foreign countries?

Because it will not tax industrialists there, shall America extend its hand of taxation and tax the people of America and send the money to Germany to relieve distress because the German Government, which has money sufficiently at its disposal and under its control, will not relieve its people? That is a principle of government in which I do not believe. I believe it is unwise.

Shall the central Government administer for all the States and all the counties and all the cities because the council of the city or the board of supervisors of the county or the legislature of the State will not use the taxing power to take care of the poor and the indigent people in those communities? That is the theory that would be advanced here on international matters. I do not believe it is wise; I do not believe it is necessary. I have examined and read all the evidence. I saw no evidence of starvation. I saw no evidence of want and penury there that the Government and the people as a nation could not relieve for themselves if they saw proper to do it.

There is another reason why I shall not vote for the joint resolution. There is a controversy in Europe as to whether Germany should or should not pay reparations. It is an issue with France. It is an issue with Belgium. It is an issue with the nations that Germany ruthlessly destroyed and devastated in one of the most heinous and uncalled-for wars that ever afflicted humanity. What will be said? Shall Germany pay reparations when the American Congress is voting that Germany is in such a state of penury and distress and want that she can not even take care of her own starving children? Are we to place ourselves in that attitude in the discussion and debate now pending in world finance with reference to the payment of the reparations between Germany and France? I am not willing by my vote to say that Germany is starving, is in such wretched and helpless condition that she can not relieve her own distress, but that America had to go there to do it. It puts us in a bad attitude in connection with the question of reparations.

We have been generous to Germany. We have demanded no reparations. We have demanded no payments. To-day $1,600,000,000 of taxes are wrung from the American people on account of Germany's outrages. We did not seek to enter the war. We tried to avoid it, but Germany went out on the sea and made it a war zone, a zone 1,200 miles broad, reaching 600 miles west of the Irish coast and extending around the coast of Spain, to the Arctic Circle, and the entire Mediterranean Sea, and served notice on us that if a ship of ours dared to sail those seas, whatever its purpose, even going from a neutral port to a neutral port, that we were outcasts, we were violating their will, and that the ship would be sunk and destroyed. Through that zone which they marked out passed more than three-quarters of all the commerce of the world, and every one of us who were self-respecting men voted when that occurred that we would declare war and maintain the right of our commerce on the seas.

Germany's conduct in that respect brought onto us an annual taxation of $1,600,000,000, and that enormous sum is wrung from the taxpayers of America to pay for an unjust war that we were driven into, and yet I am told that I must vote for a joint resolution that will put the hand of taxation heavily on our people—why? Not for starving children, not for people in penury and want, but because they have in Germany a government so unjust and so nerveless that it dare not tax the wealth of Germany to take care of its own destitute people.

I shall not vote for the joint resolution. I do not believe the American people will approve of anybody voting to tax them because the German Government refuses to tax its own wealth to take care of its own destitute.

Mr. ADAMS. Mr. President, the first day when I came into this Chamber I was led to the rostrum, my hand was raised, and I was required to take an obligation to support and maintain the Constitution of the United States. This question is one which to me involves the sacredness of that particular obligation. I do not believe that for the solution of this question it is necessary to go into elaborate and extended discussion of conditions in Europe. I do not think it is a question of the condition of the German people, of their participation in the war, of the right or wrong of it. The Constitution limits the taxing power of this body to certain specific purposes, and the only basis upon which it is sought to justify this action is the welfare of the United States. Money may be raised for the common defense and for the welfare of the United States, but not for the welfare of Europe. I would be compelled to vote against the joint resolution, whether there were inserted the name of Germany, France, England, Serbia, or any other nation on the face of the globe.

I have no enmity toward Germany. I would that lawful and legitimate means might be found to help her; but I, for one, do not propose, upon the next to the last day, perhaps, of my service in the United States Senate, to be, in my judgment, unfaithful to the obligation I took upon the day when I first came here. I may be wrong in my interpretation of the Constitution. The Senator from New York [Mr. COPELAND] has sought to explain the clause and to bring this particular instance within the general welfare clause. I can not concur in his argument, and I am compelled to abide by the decision of my own conscience on the question. I had hoped to be able to vote with the senior Senator from Wisconsin to bring his joint resolution before the Senate, as I wanted to see that it should have full and fair discussion and consideration, but it seems that such discussion and consideration has been had, and I now see that there will be but one vote upon the question, and, as I do not wish my opinion to be recorded incorrectly, I shall vote against the pending motion.

Mr. LA FOLLETTE. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state the inquiry.

Mr. LA FOLLETTE. Is not the first question to be submitted to the Senate the question whether the committee shall be discharged?

The PRESIDENT pro tempore. That is the only question at the present time.

Mr. LA FOLLETTE. I supposed the pending question to be whether the committee should be discharged from the further consideration of the joint resolution. If that motion prevails, it would bring the joint resolution before the Senate, would it not?

The PRESIDENT pro tempore. Upon that question the Chair reads paragraph 2 of Rule XXVI:

> All reports of committees and motions to discharge a committee from the consideration of the subject, and all subjects from which a committee shall be discharged, shall lie over one day for consideration, unless by unanimous consent the Senate shall otherwise direct.

Mr. LA FOLLETTE. Would the Chair hold, assuming that the motion before the Senate prevailed, that the question as to the passage of the joint resolution could not come up before adjournment to-night?

The PRESIDENT pro tempore. The Chair is so inclined to believe.

Mr. LA FOLLETTE. Mr. President, I wish to say, before the vote is taken, just a word on the pending question. The question before the Senate is, Shall the Senate be repossessed of the joint resolution? The committee having charge of it is but the agent of this body. That committee having voted, as shown by its proceedings, against a favorable consideration of the joint resolution, having acted upon the subject in so far as the committee is capable of action at all upon the subject, I submit that the motion to bring the joint resolution before the Senate for consideration is a motion upon which there ought not to be any division of opinion. The Senate merely is asked to decide by the motion which I have submitted that it will repossess itself of the joint resolution, and then it is within the power of the Senate to act upon it favorably or unfavorably, as it chooses to act.

Therefore I press upon the attention of the Senate the consideration that upon this question there should be no division of opinion; that the Senate should take the joint resolution back into its own hands and, if it is opposed, to affirm the action of the committee, well and good, when it shall come to act upon that question. If not, it will proceed otherwise.

The PRESIDENT pro tempore. The question is upon agreeing to the motion of the Senator from Wisconsin to discharge the Committee on Foreign Relations from the further consideration of the joint resolution.

Mr. LA FOLLETTE. I ask for the yeas and nays.

The yeas and nays were ordered, and the principal clerk proceeded to call the roll.

Mr. JONES of New Mexico (when his name was called). I have a general pair with the Senator from Maine [Mr. FERNALD], who is absent. But I am advised that if he were present he would vote as I intend to vote. I will therefore vote. I vote "nay."

Mr. LODGE (when his name was called). I have a general pair with the Senator from Alabama [Mr. UNDERWOOD]. I am informed, however, that if he were present he would vote as I am about to vote. I will therefore vote. I vote "nay."

Mr. OWEN (when his name was called). I have a pair with the Senator from West Virginia [Mr. ELKINS], who is absent, and I withhold my vote.

Mr. PHIPPS (when his name was called). I have a pair with the junior Senator from North Carolina [Mr. DIAL], but I am informed that if he were present he would vote as I intend to vote. I therefore am at liberty to vote, and vote "nay."

Mr. REED of Missouri (when his name was called). Mr. President, on this question I am paired with the Senator from Tennessee [Mr. SHIELDS]. The Senator from Tennessee is compelled to be absent from the Chamber because of his state of health. If he were present he would vote against the motion to discharge the committee from the further consideration of the resolution, and if I were permitted to vote I should vote in favor of the motion.

The roll call was concluded.

Mr. ERNST. I transfer my pair with the senior Senator from Kentucky [Mr. STANLEY] to the senior Senator from Vermont [Mr. GREENE], and vote "nay."

Mr. GERRY. Mr. President, I desire to announce that the Senator from Maryland [Mr. BRUCE] is paired with the junior Senator from Ohio [Mr. FESS]. If present, the Senator from Maryland would vote "nay," and the Senator from Ohio, if present, would vote "yea."

I also wish to announce that the Senator from Louisiana [Mr. RANSDELL] is unavoidably absent. If present, he would vote "nay."

The result was announced—yeas 23, nays 53, as follows:

YEAS—23

| | | | |
|---|---|---|---|
| Ashurst | Frazier | La Follette | Shipstead |
| Brookhart | Howell | Lenroot | Spencer |
| Copeland | Johnson, Calif. | McNary | Stanfield |
| Cummins | Johnson, Minn. | Norbeck | Walsh, Mont. |
| Dill | Kendrick | Norris | Wheeler |
| Edwards | Ladd | Pittman | |

NAYS—53

| | | | |
|---|---|---|---|
| Adams | Fletcher | Lodge | Simmons |
| Ball | George | McKellar | Smith |
| Bayard | Gerry | McLean | Smoot |
| Brandegee | Glass | Mayfield | Stephens |
| Broussard | Gooding | Moses | Sterling |
| Bursum | Hale | Neely | Swanson |
| Cameron | Harreld | Oddie | Trammell |
| Capper | Harris | Overman | Wadsworth |
| Caraway | Harrison | Pepper | Walsh, Mass. |
| Colt | Heflin | Phipps | Warren |
| Curtis | Jones, N. Mex. | Reed, Pa. | Willis |
| Dale | Jones, Wash. | Robinson | |
| Ernst | Keyes | Sheppard | |
| Ferris | King | Shortridge | |

NOT VOTING—20

| | | | |
|---|---|---|---|
| Borah | Elkins | McKinley | Shields |
| Bruce | Fernald | Owen | Stanley |
| Couzens | Fess | Ralston | Underwood |
| Dial | Greene | Ransdell | Watson |
| Edge | McCormick | Reed, Mo. | Weller |

So the Senate refused to discharge the Committee on Foreign Relations from the further consideration of House Joint Resolution 180.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9429) making appropriations for the legislative branch of the Government for the fiscal year ending June 30, 1925, and for other purposes; that the House receded from its disagreement to the amendments of the Senate Nos. 24 and 25 to the said bill, and agreed to the same; also that the House receded from its disagreement to the amendment of the Senate No. 18, and agreed to the same with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills of the Senate:

S. 2799. An act to provide for quarters, fuel, and light for employees of the Indian field service; and

S. 3324. An act to amend section 5 of the trade-mark act of 1905, as amended, relative to the unauthorized use of portraits.

LEGISLATIVE APPROPRIATIONS

Mr. WARREN. I ask the Chair to lay before the Senate the message from the House of Representatives relative to House bill 9429, the legislative appropriation bill.

The PRESIDENT pro tempore. The Chair lays before the Senate the action of the House of Representatives, which will be read.

The reading clerk read as follows:

IN THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
*June 6, 1924.*

*Resolved*, That the House recedes from its disagreement to the amendments of the Senate Nos. 24 and 25, to the bill (H. R. 9429) making appropriations for the legislative branch of the Government for the fiscal year ending June 30, 1925, and for other purposes, and concurs therein.

That the House recedes from its disagreement to the amendment of the Senate No. 18, and concurs therein with an amendment, as follows:

On page 20 of the bill, line 25, strike out "$9,830" and insert in lieu thereof "$10,190."

Mr. WARREN. I move that the Senate agree to the amendment of the House to the amendment of the Senate No. 18.

The motion was agreed to.

ADDITIONAL BILLS INTRODUCED

Mr. BROOKHART introduced the following bills, which were each read twice by title, and referred to the Committee on Pensions:

A bill (S. 3484) granting an increase of pension to Nelson W. Adams; and

A bill (S. 3485) granting a pension to David T. Brady (with accompanying papers).

AGRICULTURAL RELIEF

Mr. NORBECK submitted an amendment intended to be proposed by him to the bill (H. R. 6817) to provide for the construction of a vessel for the Coast Guard, which was ordered to lie on the table and to be printed.

INVESTIGATION OF CAMPAIGN EXPENDITURES

Mr. ROBINSON submitted the following resolution (S. Res. 255), which was ordered to lie on the table:

*Resolved*, That to aid the Senate in preparing and considering legislation to limit and regulate contributions and expenditures in connection with the election of Federal officers a special committee of five Senators be elected forthwith to investigate and report to the Senate on December 5, 1924, the campaign expenditures made by or on behalf of, or in support of, or in opposition to, any and all candidates for President and Vice President and presidential electors; the names of the persons, firms, or corporations contributing to the said candidate or candidates or their party committee or committees, or any other agency, debts or other liabilities contracted, the amounts contributed, pledged, loaned, or otherwise made available for use, the method of expenditure of said sums, and all the facts in relation thereto not only as to the subscriptions of money and the expenditures thereof, but as to the use of any other means of influence, including the promise of patronage, and all other facts in relation thereto that would not only be of public interest but would aid the Congress in any necessary remedial legislation.

That said committee is hereby empowered to sit and act during the adjournment of Congress at such time and place as it may deem necessary; to require by subpœna, or otherwise, the attendance of witnesses, the producton of books, papers, and documents. The chairman of the committee, or any member thereof, may administer oaths to witnesses. Subpœnas for witnesses shall be issued under the signature of the chairman of the committee. Every person who, having been summoned as a witness by authority of said committee, willfully makes default, or who, having appeared, refuses to answer any question pertinent to the investigation heretofore authorized, shall be held to the penalties provided by section 102 of the Revised Statutes of the United States.

NATIONAL OUTDOOR RECREATION CONFERENCE

Mr. MOSES. Out of order, from the Committee on Printing, I ask unanimous consent to report an original Senate resolution, and ask unanimous consent for its present consideration.

Mr. ROBINSON. Mr. President, will the Senator state what the resolution is?

Mr. MOSES. It relates to a manuscript of the proceedings of the recent national conference on outdoor recreation at which the President made an address, which has come down to me from one of the secretaries of the President, with the request that it be printed as a Senate document.

Mr. ROBINSON. I have no objection to the request.

The PRESIDENT pro tempore. Is there objection to the present consideration of the resolution?

There being no objection, the resolution (S. Res. 254) was read, considered, and agreed to, as follows:

*Resolved*, That the manuscript entitled "Proceedings of National Conference on Outdoor Recreation" be printed as a Senate document.

VETERANS' BUREAU INVESTIGATION

Mr. WALSH of Massachusetts. I submit the third preliminary report of the select committee on investigation of the Veterans' Bureau, which was appointed pursuant to Senate Resolution 466, agreed to March 2, 1923. (Rept. No. 103, p. 3.)

The PRESIDENT pro tempore. The report will be received.

RETIREMENT OF CIVIL-SERVICE EMPLOYEES

Mr. STANFIELD. I move that the Senate now proceed to the consideration of the bill (S. 3011) to amend the act entitled "An act for the retirement of employees in the classified civil service, and for other purposes," approved May 22, 1920, and acts in amendment thereof.

The PRESIDENT pro tempore. The question is on the motion of the Senator from Oregon.

Mr. SMOOT. Mr. President——

Mr. STANFIELD. Mr. President, I shall be content with a very brief consideration of this bill, but I hope at this time to have the opportunity to bring the bill to a vote. I am willing to waive all argument, so far as that is concerned, except for a brief statement as to the purpose of the bill, for I am sure that the Senate is familiar with the terms of the bill.

Mr. SMOOT. Mr. President——

The PRESIDENT pro tempore. The Chair recognizes the Senator from Utah.

Mr. STANFIELD. I have not yielded the floor, Mr. President. I have been on my feet constantly.

Mr. SMOOT. Does the Senator wish to speak on the bill?

Mr. STANFIELD. I have the floor, but I will yield to the Senator from Utah if he wishes me to do so.

The PRESIDENT pro tempore. The Chair recognized the Senator from Oregon to move that the Senate proceed to the consideration of the bill to which he has referred.

Mr. STANFIELD. I have the floor, and I wish to speak to the question.

The PRESIDENT pro tempore. The motion of the Senator is before the Senate for its action.

Mr. SMOOT. Mr. President——

The PRESIDENT pro tempore. The Senate will be in order. The question is on the motion of the Senator from Oregon.

Mr. SMOOT. Mr. President——

The PRESIDENT pro tempore. The Chair has recognized the Senator from Utah, but he does not proceed to debate the question.

Mr. SMOOT. The Senator from Utah thought the Chair was trying to get order in the Chamber. I am not going to proceed, Mr. President, so long as there is so much confusion in the Chamber that Senators can not be heard.

The PRESIDENT pro tempore. The Senate will be in order.

Mr. SMOOT. Mr. President, as I understand the motion of the Senator from Oregon is to take up Order of Business 479.

Mr. STANFIELD. My motion was to consider Senate bill 3011, being Order of Business 479, the civil service retirement bill.

Mr. SMOOT. Mr. President, I ask Senators to turn to their calendar of bills and find Order of Business 479, being Senate bill 3011, a bill to amend an act entitled "An act for retirement of employees in the classified civil service, and for other purposes," approved March 22, 1920, and acts in amendment thereof.

There is no report on the bill. The committee reports a measure here that involves hundreds of millions of dollars in the end, and asks that it shall be considered without a word of explanation by way of a report.

I wish briefly at this time, Mr. President, to call attention to some of the changes made in the existing law and what they involve.

Mr. STANFIELD. Mr. President, will the Senator from Utah yield?

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Oregon?

Mr. SMOOT. Yes; I yield.

Mr. STANFIELD. The Senator refers to this bill as not having been before the Congress and to the lack of a report. I should like to ask the Senator if he is not the one who has blocked the progress of this bill ever since its introduction in the Senate? I should like to ask the Senator from Utah if he has not left word with the whip of the Senate, the Senator from Kansas [Mr. CURTIS], that he should block the consideration of the bill?

Mr. SMOOT. Certainly I have, because I have some regard for the Treasury of the United States. I know it is very popular, particularly this year, to bring in measures here to take a hundred million dollars or two hundred million dollars out of the Treasury of the United States, but I do not believe that if the Senate understood this bill they would ever vote for it. That is why I have been interested in seeing that the bill should not pass at this session of Congress, in the hope, at least, that before imposing such a burden upon the Treasury of the United States some consideration would be given to the measure.

This question has been threshed out on the floor of the Senate for years. This is the old fight over again.

Mr. WILLIS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Ohio?

Mr. SMOOT. Yes.

Mr. WILLIS. Would it disturb the Senator to state what probable annual increase in the expenditures of the Government would be caused by this proposed legislation?

Mr. SMOOT. Mr. President, the maximum annuity under existing law is $720. Under this bill it is $1,200. There is not any doubt that in the end it will cost the Government of the United States between two and three hundred million dollars.

Mr. STANFIELD. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Oregon?

Mr. SMOOT. I do.

Mr. STANFIELD. The Senator does not mean to lead the Senate to believe that this bill will make that difference, does he? Is not the Senator referring to the obligation of the United States already under the act of 1920, that there is a deficiency which over a period of time is going to cost the Government that much, but the Government must meet that eventually? It can not escape it.

I should like to ask the Senator if he has seen the actuary's report on the cost of this bill? If he has not, I should like to hand it to him.

Mr. SMOOT. I have seen the report, I will say to the Senator.

Mr. STANFIELD. I know the Senator has; but the Senator is not giving the actuary's report on the bill.

Mr. SMOOT. I know this bill very well, and I know the original legislation that was proposed here; and there is not any of the old Senators here but that knew when the bill passed in 1920, when the Senator from Ohio and the honorable Senator now presiding here [Mr. CUMMINS] and one or two others of us passed the existing law, modified as it was over a proposition that was even as bad as the present one——

Mr. FLETCHER. Mr. President, may I ask the Senator a question?

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Florida?

Mr. SMOOT. I do.

Mr. FLETCHER. Are we not just wasting time?

Mr. SMOOT. Yes; we are, to-night.

Mr. FLETCHER. This is a Senate bill. It would not be possible to get it through the House even if we should pass it. It seems to me that we are simply wasting time by talking about it when we have a calendar here with 40 or 50 bills on it, and some reports of committees yet to come in and be considered. The Naval Affairs Committee have a report that they want to get considered. We are just taking up time here with a bill when we would get nowhere even if we were to pass it.

Mr. STANFIELD. Mr. President, will the Senator yield?

Mr. SMOOT. Yes; I yield.

Mr. STANFIELD. I wish to say to the Senator that I have had assurances from the chairman of the Civil Service Committee in the House that if we pass this bill here to-night he thinks he can pass it in the House to-morrow. That is the reason why I am pressing the bill.

Mr. FLETCHER. That is a most extraordinary statement in view of the fact that we can not get through the House Senate bills that have been on the calendar for months.

Mr. McKELLAR. Mr. President, does the Senator from Florida say that this bill is not going to be voted on to-night? Is that what I understand the Senator to say? If so, some Senator ought to move to adjourn. I do not see any use in staying here all night.

Mr. FLETCHER. What I said was that even if we did vote on the bill it could not be gotten through the House.

Mr. SMOOT. I will assure the Senator that it will take quite a long time to explain the various features of the bill.

Mr. McKELLAR. I see no reason in the world why we should stay here and let Senators quarrel about something that we are not going to get anywhere with.

The PRESIDENT pro tempore. The Senator from Utah has the floor.

Mr. ROBINSON. Mr. President, if it is perfectly apparent that the bill can not be disposed of to-night—and I take it, from the statements which have been made about me here, that that is the case—I do not see any necessity for longer remaining in session. The Senate has been in session a long time to-day and will be in session for a considerable period to-morrow. I, myself, should be glad to see the bill taken up if

it could be done, but I am informed that that is impossible; so, if the Senator from Utah will yield to me for that purpose, I will make a motion.

Mr. SMOOT. I do not want to lose the floor. I will yield for a motion to adjourn if I do not lose the floor.

Mr. LODGE. Mr. President, there is a bill here that has passed the Senate and the House. There was some misunderstanding about the opportunity of the colleague of the Senator from Utah to speak, and he entered a motion to reconsider with reference to that bill.

Mr. LA FOLLETTE. What bill is it?

Mr. LODGE. The naval bill. If the Senator should withdraw that motion, of course the bill would be out of the way. I see the Senator here now, and I want to ask him if it is not possible to make some arrangement so that that bill can be disposed of as soon as the Senator has spoken.

Mr. KING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Utah yield to his colleague?

Mr. SMOOT. I yield if I do not lose the floor.

Mr. STERLING. Mr. President, will the Senator from Utah yield to me for just a moment?

Mr. SMOOT. Yes; if I do not lose the floor.

Mr. STERLING. The question in my mind was this, and it was suggested by the statement of the Senator from Arkansas [Mr. ROBINSON]: If this matter could be laid before the Senate to-night on a motion, I think the Senator from Oregon [Mr. STANFIELD], who has the bill in charge, would be willing that an adjournment might be taken, and that we might adjourn to such hour to-morrow as will enable us to dispose of this bill.

Mr. SMOOT. I may not have time to-morrow to say all I have to say on this bill before adjournment, if the Senate is going to consider it.

Mr. KING. Mr. President, will my colleague yield?

The PRESIDENT pro tempore. Does the Senator from Utah yield to his colleague?

Mr. SMOOT. I yield to my colleague, as I did before, with the understanding that I do not yield the floor.

Mr. KING. Mr. President, I am trespassing upon the time of the senior Senator from Utah at the instance of the Senator from Massachusetts. I was about to observe that I had stated to the Senator from Maine [Mr. HALE], the chairman of the Committee on Naval Affairs, that I should ask to take up and have considered the motion I have made for the reconsideration of the vote by which the naval appropriation bill was passed. I propose to speak upon that motion at considerable length. When I have concluded what I have to say upon that motion, of course, it will be before the Senate, and they can vote as to whether the motion to reconsider shall prevail or whether it shall be defeated. I am bound to keep faith with the Senator from Maine and seek the earliest opportunity I can to have the Chair recognize me to move to take up the motion which is now upon the table to reconsider the vote by which that bill was passed; and I had risen for the purpose of moving to take up that motion, but the Senator from Oregon, with greater celerity than myself, obtained the floor.

Mr. STERLING. Mr. President, if the senior Senator from Utah will yield, may I ask the junior Senator from Utah, in regard to a motion to reconsider another bill, whether he expects to press that motion or not? I refer to the vocational rehabilitation bill.

Mr. KING. Yes; and I shall take that up to-morrow. I have no desire now to press them, and I have been seeking opportunity all day. Of course I have been in the committee, as the Senator knows, but I have returned frequently to the floor for the purpose of pressing each of those motions, and I am not willing that any motion shall supersede them or that any matter shall be made the unfinished business until those important measures have been presented to the Senate.

Mr. McKELLAR. Mr. President, will the Senator from Utah yield to me for the purpose of making a motion? In view of what the Senator from Utah has said, it is absolutely certain that we are not going to get anywhere with this matter to-night, and I move that the Senate adjourn.

Mr. SMOOT. Mr. President, before the Senator makes that motion——

Mr. McKELLAR. I will withhold it.

Mr. SMOOT. I am perfectly willing to have this bill made the unfinished business before we adjourn ultimately, or to have an agreement made to take it up on a certain day at the next session; but it can not be gotten through the House, and it is perfectly useless to undertake to do it. Congress is to adjourn to-morrow evening at 7 o'clock.

I am perfectly willing to have the bill taken up when we can have a fair chance to consider it, not at the close of the session, when business is crowding and we never know whether we are going to be interrupted for a conference report or not, but when we are fresh and when we can discuss the whole question as to whether or not we want to pass it, and take into consideration the finances of the country at that time. I am willing to do that.

Mr. STANFIELD. Mr. President, will the Senator yield?

Mr. SMOOT. Yes; I yield.

Mr. STANFIELD. I ask unanimous consent to have a statement of the estimated cost of retirement, as given to me by the Actuary of the Treasury Department, Mr. McCoy, and a statement as to the cost of retirement printed in the RECORD.

Mr. ROBINSON. Mr. President, will the Senator from Utah yield to me for the purpose of making a motion to adjourn?

Mr. SMOOT. Yes; I will yield to the Senator for that purpose.

Mr. ROBINSON. I move that the Senate adjourn.

Mr. STANFIELD. Mr. President——

The PRESIDENT pro tempore. The question is upon the motion to adjourn, which is not debatable.

Mr. STANFIELD. Mr. President——

The PRESIDENT pro tempore. Those in favor of the motion to adjourn——

Mr. STANFIELD. Mr. President, I had submitted a request which I think was intended to be put before the motion to adjourn.

The PRESIDENT pro tempore. The motion to adjourn is not debatable.

Mr. STANFIELD. I am not attempting to debate it. I admit that the motion to adjourn is not debatable.

The PRESIDENT pro tempore. Does the Senator from Arkansas withhold his motion?

Mr. ROBINSON. I withhold the motion.

Mr. STANFIELD. I asked unanimous consent that a statement be published in the RECORD; and the question was not put, nor consent secured.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Oregon? The Chair hears no objection.

The matter referred to is as follows:

*Estimated cost of retirement*

[The estimate for S. 3011 is not newly computed but is a fairly close approximation]

| | Normal cost as— | | Deficiency cost as— | | Total cost as— | |
|---|---|---|---|---|---|---|
| | Percentage of pay roll | Annual amounts as of June 30, 1921 | Percentage of pay roll | Annual amounts as of June 30, 1921 | Percentage of pay roll | Annual amounts as of June 30, 1921 |
| Under existing law: | *Per cent* | | *Per cent* | | *Per cent* | |
| Total | 3.82 | $16,505,652 | 2.55 | $11,016,630 | 6.37 | $27,522,282 |
| Payable by employees | 2.50 | 10,788,075 | ------ | ------ | 2.50 | 10,788,075 |
| Payable by Government | 1.32 | 5,717,577 | 2.55 | 11,016,630 | 3.87 | 16,734,207 |
| Under plan proposed by board of actuaries: | | | | | | |
| Total | 5.09 | 21,979,656 | 3.33 | 14,377,017 | 8.42 | 36,348,673 |
| Payable by employees | 2.50 | 10,788,075 | ------ | ------ | 2.50 | 10,788,075 |
| Payable by Government | 2.59 | 11,183,581 | 3.33 | 14,377,017 | 5.92 | 25,560,598 |
| Under the provisions of S. 3011: | | | | | | |
| Total | 5.35 | 23,085,480 | 3.55 | 15,319,066 | 8.90 | 38,405,546 |
| Payable by employees | 3.50 | 15,103,305 | ------ | ------ | 3.50 | 15,103,305 |
| Payable by Government | 1.85 | 7,983,175 | 3.55 | 15,319,066 | 5.40 | 23,302,241 |

NOTE.—The provisions on page 7, section 3, S. 3011, fixing the maximum annuity at 30/45 of the average salary is equivalent to a maximum annuity to the employee of two-thirds of his average salary, so with the 30-year maximum limitation, the 75 per cent limitation becomes surplusage.

COST OF RETIREMENT

In estimating the cost of the Government retiring those incapacitated by age or by physical or mental disability, little attention has been given to the saving to the Government incidental to this retirement. No longer do we see physical wrecks, yes, and even mental wrecks, assisted to their offices and desks by dependent relatives—widowed daughters or daughters-in-law, or by stalwart young negroes. No longer is provision necessary for invalid chairs to bring those unable to walk to their desks, there to doze the livelong day and bother their fellow employees.

Prior to 1920 this was a common sight. These incapacitated employees had given the best years of their life to faithful service. In their old age, with impaired health, energy, and mentality, they found themselves with no resources other than their meager salaries. Often, not only themselves depended upon this salary, but, through misfortune, families of orphan grandchildren, widowed daughters, etc.

Very few Cabinet officers or others in authority were so cold-blooded as to separate these veterans from the service, knowing the result and consequences. Most of these old employees had at one time, through long and efficient service, reached the top of the ladder, so far as their respective offices were concerned. With failing powers, often due to their work, they were demoted, their salary being cut from time to time, until it was reduced from 25 to 50 per cent. Had these unfortunates been marked for efficiency, 50 per cent of them would have received zero marks; another 40 per cent from one-tenth to one-fifth of a perfect mark; and of the remaining, none would have received a good mark.

Under the provisions of the retirement act this practice has been eliminated. It must be confessed, however, that, because of the low retirement annuity as compared with the salaries previously earned by many of the annuitants, together with high prices, many who have even reached the high retirement age of the present law are kept in service, although the Government would be benefited by their retirement. It is possible to make a close estimate of the gain to the Government through the present retirement act—an act which has not as yet cost the Government one penny.

There have been retired 12,785 employees, to whom was granted an average annuity of $551.64. That is, instead of receiving an average of from $1,000 to $1,400 per year in salary, they are receiving $551.64 in annuity from the Government, who borrows the necessary cash from the fund held in trust for those now contributing. That is, the Government saves in salary an average of over $600 a year on every employee retired. Before retirement these employees cost the Government over $15,000,000 per annum. After retirement the cost, as long as they live, is less than one-half of this amount, or about $7,000,000 of borrowed money. It is true that when this $15,000,000 was paid them the Government received in return some three or four million dollars worth of service in return. Again, the mortality among those retired is very great—some 20 per cent of those heretofore retired having died. Let this matter be considered from as cold-blooded and money-grasping point of view as is possible, and under the provisions of pending bills we have the following results: Suppose that the average annuity to be paid is $1,000. This would save the Government directly about $300 a year. But in addition, of this $1,000 annuity the employees normally would themselves contribute some $600, thus saving some $900 to the Government, much more than the value of their services immediately prior to retirement. So normally instead of costing the Government, retirement will be saving it money.

Those now on the retired list will be costing the Government from $200 to $300 less per year than before retirement. Of course, with retirement under the proposed legislation, probably three or four times as many will be retired before being practically worthless to the Government. This would make the average immediate cost to the Government of the retirement of those who have not contributed, or contributed only for a limited time, more than the saving in retirement. This is somewhat in the nature of the original capital invested in a profitable business—a capital that will later earn enormous profits.

The annuities of those to be retired from now until the employees that have entered the service since the enactment of such legislation reach retirement age will cost the Government at the beginning probably about $300 to $400 per year, and this cost will gradually decrease until it will finally be eliminated. That is, for a comparatively short period the Government, because of retirement, will have to pay more than before retirement, this steadily decreasing until the net cost reaches zero. After that time all the contributions on the part of the Government will probably be less than the actual amount of cash saved to it by the retirement system. This is all based upon a contribution on the part of the employee of 3 per cent of his salary.

That is, retirement will weed the service of all the inefficient and enable the employee to devote his undivided efforts to the Government without continually thinking of the future of himself and of his dear ones, his future being guaranteed, and this at no additional cost to the Government. Is this not an attractive cold-blooded business proposition? Throughout the country large employers of men and women are finding it cheaper to have liberal retirement systems than it would be without them. This action is being followed by many States and municipalities, especially as to school-teachers, police, firemen, municipal employees, etc. This all tends to a better Government and a more contented and prosperous people.

There is no charity in it. Not only does it cost nothing, but it actually saves money to the employer. The old and incapacitated give way to the young and energetic, with the result that taxes need not be increased, as there is no increased cost of the Government, while the taxes necessary to support eleemosynary and penal institutions will be reduced.

The United States is always proud of its record of being the first and most generous to help the hungry or the afflicted in all parts of the world—the Armenians, the Greeks, the Russians, the German children, the Japanese. All of which is commendable charity and fills the headlines. On the other hand, this suggested way of helping those, together with their dependents, who have become incapacitated through long service for the United States is not charity and is practically without cost. Therefore why deny it?

From this we plainly see that the cost to the Government, as contained in the reports of the board of actuaries of the various retirement systems, does not take into consideration the saving to the Government through the operation of these systems. It is plainly evident that the annual cost to the Government of its civil service without the present retirement law would be greater than is its present cost, together with the amounts now paid in annuities to retired employees, and this statement of cost will hold good under the present law indefinitely. Whatever is paid in the way of retirement annuities is more than saved in the current payments on account of the civil service. This must be taken into consideration in any cost estimate of retirement.

It is a question whether it would not be more charitable, if the civil service employee can not have a retirement law that will properly take care of the superannuated and disabled, to say nothing of their unfortunate widow and orphan dependents.

## DEPRESSION IN CALF-LEATHER TANNING INDUSTRY

The PRESIDENT pro tempore. The Senator from Arkansas moves that the Senate adjourn.

Mr. COPELAND. Mr. President——

Mr. ROBINSON. Before that question is put, I yield to the Senator from New York.

Mr. COPELAND. Mr. President, I submit a Senate resolution and ask that it be read, and then I shall ask unanimous consent for its immediate consideration.

The PRESIDENT pro tempore. Is there objection to the receipt of the resolution?

Mr. McKELLAR. What is it, Mr. President?

The PRESIDENT pro tempore. The Secretary will state the title of the resolution.

The READING CLERK. A resolution (S. Res. 256) directing the Secretary of Commerce to furnish to the Senate all available facts regarding the depression in the calf-leather tanning industry.

The PRESIDENT pro tempore. Without objection, the resolution will be received. Is there objection to the immediate consideration of the resolution?

There being no objection, the resolution was considered by the Senate and agreed to as follows:

Whereas for a considerable period there has been a tremendous depression throughout the calf-leather tanning industry, a period during which the calf-leather tanners of the United States have shown steady and consistent financial losses, and there has been attendant a decrease in production of from 30 to 70 per cent and general unemployment and consequent want and depression in communities where these tanneries are located: Therefore be it

*Resolved*, That the Secretary of Commerce be, and hereby is, directed to furnish to the Senate as expeditiously as possible, if not incompatible with the public interests, all available facts requested hereinafter:

1. Is the present depression in the calf-leather tanning industry confined to the United States or is it world-wide?

2. To what extent and for how long a period has the present depression in the calf-leather tanning industry of this country been apparent?

3. To what extent has the domestic calf-leather industry been affected by the post-war increases in the importations of calf leather?

4. To what extent has there been an increase in imports of calf leathers from the European countries?

5. Do those countries exporting leather to the United States have a tariff against our calf-leather products?

6. What is the difference in the wages paid calf tannery labor in Europe and that paid in this country?

7. Have the countries of Europe a potential calf-leather production large enough to enable them to dump a substantial portion of their product in this country?

8. Do these European countries require the United States as a market for their calf leathers for aid in their reconstruction problems?

9. To what extent are the calf tanners of Europe able to buy their tanning materials, etc., cheaper than can the calf tanners in the United States?

10. Are the European calf tanners establishing agencies throughout the United States to exploit the sale of their calf leathers?

11. Have European countries during the past year maintained an embargo or export tariff on raw calfskins offered for shipment to the United States?

12. Do certain European countries enable their own calf tanners to buy raw calfskins at lower prices than the tanners of the United States can buy them?

13. Is labor an important factor in the tanning of calf leather?

14. To what extent have the importations of calf leather in the United States from Canada increased in the past three years?

15. Does Canada have a heavy duty on calf leathers shipped there from the United States?

16. To what extent is Canadian labor paid less than the labor in the calf tanneries of the United States?

17. Would a tariff on calf leathers based solely on the differential in labor existing between competing countries be of material assistance in stimulating production and restoring prosperity to this industry?

Mr. ROBINSON. I move that the Senate adjourn.

The motion was agreed to; and (at 11 o'clock and 40 minutes p. m.) the Senate adjourned until to-morrow, Saturday, June 7, 1924, at 12 o'clock meridian.

## NOMINATIONS

*Executive nominations received by the Senate June 6, 1924*

UNITED STATES ATTORNEY

John W. Wilson, of New Mexico, to be United States attorney, district of New Mexico, vice George R. Craig, resigned.

APPOINTMENT IN THE REGULAR ARMY

CAVALRY

*To be Chief of Cavalry, with the rank of major general for a period of four years from date of acceptance, with rank from July 24, 1924*

Brig. Gen. Malin Craig, United States Army, vice Maj. Gen. Willard A. Holbrook, Chief of Cavalry, to be retired by operation of law July 23, 1924.

APPOINTMENT, BY TRANSFER, IN THE REGULAR ARMY

AIR SERVICE

Capt. Ivan Benson Snell, Infantry (detailed in Air Service), with rank from July 1, 1920.

POSTMASTERS

CALIFORNIA

Pearl S. Snider to be postmaster at Fellows, Calif., in place of J. H. Bacon. Incumbent's commission expired June 4, 1924.

CONNECTICUT

George W. Fairgrieve to be postmaster at Bantam, Conn., in place of G. W. Fairgrieve. Incumbent's commission expired June 5, 1924.

GEORGIA

Tilden A. Adkins to be postmaster at Vienna, Ga., in place of T. A. Adkins. Incumbent's commission expired July 28, 1923.

IDAHO

William R. Ogle to be postmaster at Glenns Ferry, Idaho, in place of C. O. Dice, resigned.

ILLINOIS

George E. Carlson to be postmaster at Moline, Ill., in place of C. V. Gould. Incumbent's commission expired March 9, 1924.

Oren V. Grant to be postmaster at Hollywood, Ill., in place of O. V. Grant. Incumbent's commission expired June 5, 1924.

John S. Redshaw to be postmaster at Granville, Ill., in place of J. S. Redshaw, jr. Incumbent's commission expired August 29, 1923.

David A. Howard to be postmaster at Glasford, Ill., in place of J. L. Saylor, deceased.

William Brent to be postmaster at Colchester, Ill., in place of J. F. Bushmeyer. Incumbent's commission expired March 9, 1924.

KANSAS

Enos F. Halbert to be postmaster at Chapman, Kans., in place of T. J. Foley. Incumbent's commission expired June 4, 1924.

KENTUCKY

Samuel H. McMurray to be postmaster at Stearns, Ky., in place of O. H. Marcum, resigned.

LOUISIANA

Cyrus E. Roberts to be postmaster at Merryville, La., in place of C. E. Roberts. Incumbent's commission expired February 24, 1924.

MAINE

Frank P. Freeman to be postmaster at Harrison, Me., in place of J. T. Kneeland. Incumbent's commission expired June 5, 1924.

Henry W. Perry to be postmaster at Fort Fairfield, Me., in place of G. S. Henneberry. Incumbent's commission expired June 5, 1924.

Arthur A. Dinsmore to be postmaster at Dover-Foxcroft, Me., in place of B. B. Anderson. Incumbent's commission expired June 5, 1924.

George H. Williams to be postmaster at Alfred, Me., in place of G. H. Williams. Incumbent's commission expired June 5, 1924.

MARYLAND

George C. Eichelberger to be postmaster at Union Bridge, Md., in place of F. J. Shriner. Incumbent's commission expired June 4, 1924.

MASSACHUSETTS

Edmund Daly to be postmaster at Hingham, Mass., in place of Edmund Daly. Incumbent's commission expired June 4, 1924.

MICHIGAN

Mary M. Smith to be postmaster at Thompsonville, Mich., in place of C. L. Bennett. Incumbent's commission expired June 4, 1924.

Curtis Van Prentice to be postmaster at South Haven, Mich., in place of E. S. Dyckman. Incumbent's commission expired June 4, 1924.

G. Leslie Runner to be postmaster at Shelby, Mich., in place of H. M. Royal. Incumbent's commission expired June 4, 1924.

Clinton E. Aukerman to be postmaster at Montgomery, Mich., in place of Elmer Breiner. Incumbent's commission expired June 4, 1924.

Jacob M. Paul to be postmaster at Eau Claire, Mich., in place of W. L. Ferry. Incumbent's commission expired June 4, 1924.

Charles Plowman to be postmaster at Copemish, Mich., in place of T. T. Fralick. Incumbent's commission expired June 4, 1924.

David E. Cleary to be postmaster at Clawson, Mich., in place of T. P. DeClaire, removed.

NEBRASKA

George A. Ayer to be postmaster at Oxford, Nebr., in place of T. O. Norman. Incumbent's commission expired June 4, 1924.

Herbert L. Wichman to be postmaster at Norfolk, Nebr., in place of B. C. Gentle, removed.

Charles E. Cook to be postmaster at Franklin, Nebr., in place of John Wilson. Incumbent's commission expired June 4, 1924.

Joe G. Crews to be postmaster at Culbertson, Nebr., in place of J. M. Crews. Incumbent's commission expired June 4, 1924.

Archie E. Cates to be postmaster at Beemer, Nebr., in place of H. A. Crosby. Incumbent's commission expired June 4, 1924.

NEVADA

William H. Ayres to be postmaster at Winnemucca, Nev., in place of M. A. Macfarlane. Incumbent's commission expired June 4, 1924.

Arthur H. Keenan to be postmaster at Tonopah, Nev., in place of J. J. McQuillan. Incumbent's commission expired June 4, 1924.

Charles W. Brown to be postmaster at Gardnerville, Nev., in place of C. W. Brown. Incumbent's commission expired June 5, 1924.

NEW HAMPSHIRE

Ralph Berry to be postmaster at Rye Beach, N. H., in place of E. M. P. Fraser, resigned.

NEW JERSEY

Sealah P. Clark to be postmaster at Pitman, N. J., in place of D. S. Pancoast. Incumbent's commission expired June 5, 1924.

Preston Pedrick to be postmaster at Pedricktown, N. J., in place of K. A. Cooney. Incumbent's commission expired June 4, 1924.

Harry W. Mutchler to be postmaster at Rockaway, N. J., in place of William Gerard. Incumbent's commission expired June 5, 1924.

NEW YORK

Henry I. Brenzel to be postmaster at Red Hook, N. Y., in place of Mary Van de Bogart. Incumbent's commission expired May 6, 1924.

NORTH CAROLINA

Thomas L. Green to be postmaster at Waynesville, N. C., in place of F. W. Miller. Incumbent's commission expired June 4, 1924.

OHIO

Grace Fisher to be postmaster at Canal Fulton, Ohio, in place of P. J. Blank. Incumbent's commission expired June 4, 1924.

George H. Sheetz to be postmaster at Bridgeport, Ohio, in place of T. M. Duncan. Incumbent's commission expired June 4, 1924.

OKLAHOMA

Anna H. Figley to be postmaster at Hastings, Okla., in place of Minnie Davis. Incumbent's commission expired May 18, 1924.

John J. Gayman to be postmaster at Chandler, Okla., in place of J. A. McLaughlin. Incumbent's commission expired September 18, 1922.

OREGON

Willis E. Everson to be postmaster at Waldport, Oreg., in place of Aira Head. Incumbent's commission expired February 11, 1924.

Gaylord G. Godfrey to be postmaster at Independence, Oreg., in place of H. S. Wood. Incumbent's commission expired June 4, 1924.

Elbert Smith to be postmaster at Cottage Grove, Oreg., in place of K. B. Veatch. Incumbent's commission expired June 4, 1924.

PENNSYLVANIA

Claude S. Yeager to be postmaster at Orwigsburg, Pa., in place of A. F. Smith. Incumbent's commission expired February 14, 1924.

Enos A. Freed to be postmaster at Souderton, Pa., in place of A. E. Hiltebeitel. Incumbent's commission expired May 28, 1924.

Grant Umberger to be postmaster at Langhorne, Pa., in place of J. A. McGinley. Incumbent's commission expired June 5, 1924.

Clarence G. Young to be postmaster at Bristol, Pa., in place of J. A. McGinley. Incumbent's commission expired June 5, 1924.

## HOUSE OF REPRESENTATIVES

FRIDAY, *June 6, 1924*

The House met at 11 o'clock a. m., and was called to order by the Speaker.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Almighty God, Heavenly Father, come to us in wisdom and in understanding. Keep us in harmony with Thy plans and enable us to get at the very soul of things. In all questions and problems, direct us in our deliberations. Do Thou, dear Lord, help us to carry our manhood to the very highest point of attainment; may it conform to the best that we know. Give range and vision to the thoughts that we think and to the life that we live. May they in all ways be according to Thy will. Be not far away, and continue to create in us the noblest conceptions of life, character, and duty. In the name of Jesus. Amen.

The Journal of the proceedings of yesterday was read and approved.

PENSIONS

Mr. FULLER. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H. R. 6941, with Senate amendments, disagree to all of the Senate amendments, and ask for a conference.

The SPEAKER. The gentleman from Illinois asks unanimous consent to take from the Speaker's table the bill H. R. 6941, with Senate amendments, disagree to all the Senate amendments, and ask for a conference. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 6941) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. CRAMTON. Reserving the right to object, Mr. Speaker, may I ask the gentleman from Illinois if this bill is loaded down with a lot of extraneous matter?

Mr. FULLER. Yes. That is why we are asking to go into conference.

Mr. CRAMTON. There is a lot of extraneous legislation on it?

Mr. FULLER. Yes.

Mr. CRAMTON. Personally, I think the House should indicate that that policy of putting extraneous laws on bills ought not, in its opinion, to be encouraged.

Mr. FULLER. I agree with the gentleman.

The SPEAKER. Is there objection?

There was no objection, and the Speaker announced as the conferees on the part of the House Mr. FULLER, Mr. ELLIOTT, and Mr. COOK.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had passed bills of the following titles, in which the concurrence of the House of Representatives was requested:

S. 147. An act for the relief of Albert Wood;
S. 149. An act for the relief of Almeda Lucas;
S. 336. An act for the relief of Harry Ross Hubbard;
S. 354. An act for the relief of J. H. Toulouse;

S. 1740. An act to provide relief for the victims of the airplane accident at Langin Field;

S. 2035. An act for the relief of Albert O. Tucker;

S. 3319. An act authorizing the extension and operation of the transcontinental airplane mail service to Boston, Mass.;

S. 3464. An act granting the consent of Congress to the States of Georgia and Florida, through their respective highway departments, to construct a bridge across the St. Marys River; and

S. J. Res. 146. Joint Resolution to amend section 13 of the act entitled "An act to provide for the classification of civilian positions within the District of Columbia and the field service."

The message also announced that the Senate had passed with amendments the bill (H. R. 6426) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy and certain soldiers and sailors of wars other than the Civil War and to widows of such soldiers and sailors, in which the concurrence of the House of Representatives was requested.

The message also announced that the Senate had passed with amendments the bill (H. R. 7996) to regulate and fix rates of wages for employees of the Government Printing Office, in which the concurrence of the House of Representatives was requested.

The message also announced that the Senate had passed without amendment bills of the following titles:

H. R. 192. An act to provide for a girls' dormitory at the Fort Lapwai Sanatorium, Lapwai, Idaho;

H. R. 1438. An act for the relief of D. H. MacAdam;

H. R. 2123. An act for the relief of the Thompson-Vache Boat Co., of Bonnots Mill, Mo.;

H. R. 2126. An act for the relief of C. C. Carson;

H. R. 2647. An act for the relief of Lena Garagnon Owens;

S. 412. An act authorizing the President of the United States to appoint Sergt. Alvin C. York as a captain in the United States Army and then place him on the retired list;

S. 513. An act for the relief of Eustacio B. Davison;

S. 893. An act for the relief of John H. Rheinlander;

S. 1707. An act appropriating money to purchase lands for the Clallam Tribe of Indians in the State of Washington, and for other purposes;

H. R. 2821. An act authorizing the erection of a sanitary fireproof hospital at the National Home for Disabled Volunteer Soldiers at Santa Monica, Calif.;

H. R. 4012. An act to reimburse William H. Flagg and others for property destroyed by mail airplane *No. 73*, operated by the Post Office Department;

H. R. 4442. An act to extend the insurance and collect-on-delivery service to third-class mail, and for other purposes;

H. R. 5541. An act for the relief of Herbert Reynolds; and

H. R. 8237. An act for the relief of Bruusgaard Kiosteruds Dampskibs Aktieselskab, a Norwegian corporation of Drammen, Norway.

SENATE BILLS REFERRED

Under clause 2, Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees as indicated below:

S. 3319. An act authorizing the extension and operation of the transcontinental airplane mail service to Boston, Mass.; to the Committee on the Post Office and Post Roads.

S. 147. An act for the relief of Albert Wood; to the Committee on Claims.

S. 149. An act for the relief of Almeda Lucas; to the Committee on Military Affairs.

S. 1740. An act to provide relief for the victims of the airplane accident at Langin Field; to the Committee on Claims.

S. 1707. An act appropriating money to purchase lands for the Clallam Tribe of Indians in the State of Washington, and for other purposes; to the Committee on Indian Affairs.

S. 893. An act for the relief of John H. Rheinlander; to the Committee on Claims.

S. 513. An act for the relief of Eustacio B. Davison; to the Committee on Military Affairs.

S. 412. An act authorizing the President of the United States to appoint Sergt. Alvin C. York as a captain in the United States Army and then place him on the retired list; to the Committee on Military Affairs.

S. 354. An act for the relief of J. H. Toulouse; to the Committee on Claims.

S. 336. An act for the relief of Harry Ross Hubbard; to the Committee on Claims.

S. 149. An act for the relief of Almeda Lucas; to the Committee on Claims.

The message also announced that the Senate had passed the following concurrent resolution:

Senate Consurrent Resolution 3

*Resolved by the Senate (the House of Representatives concurring)*, That the report of the United States Coal Commission relative to the anthracite and bituminous coal industry, with accompanying papers, charts, diagrams, and illustrations (including not to exceed one supplemental volume), be printed as a Senate document, with contents and index, and that 5,000 additional copies shall be for the use of the Senate document room, 100 copies for the use of the Committee on Mines and Mining of the Senate, 3,500 copies for the use of the House document room, and 300 copies for the use of the House Committee on Interstate and Foreign Commerce.

S. 2803. An act to regulate within the District of Columbia the sale of milk, cream, and ice cream, and for other purposes; to the Committee on the District of Columbia.

AMENDMENT OF VETERANS' BUREAU ACT

Mr. JOHNSON of South Dakota. Mr. Speaker, I call up the conference report on the Senate bill 2257, to consolidate, codify, revise, and reenact the laws affecting the establishment of the United States Veterans' Bureau and the administration of the war risk insurance act, as amended, and the vocational rehabilitation act, as amended, and ask for its consideration.

The SPEAKER. The gentleman from South Dakota calls up the conference report on the bill S. 2257.

Mr. JOHNSON of South Dakota. Mr. Speaker, I ask unanimous consent that the statement be read in lieu of the report.

The SPEAKER. The gentleman from South Dakota asks unanimous consent that the statement accompanying the conference report be read in lieu of the report. Is there objection?

There was no objection.

The SPEAKER. The Clerk will read the statement.

The statement was read.

The conference report and statement are as follows:

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2257) to consolidate, codify, revise, and reenact the laws affecting the establishment of the United States Veterans' Bureau and the administration of the war risk insurance act, as amended, and the vocational rehabilitation act, as amended, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House, and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the House amendment insert the following:

"TITLE I.—GENERAL

"SECTION 1. This act may be cited as the 'World War veterans' act, 1924.'

"SEC. 2. When used in this act—

"The term 'bureau' means the United States Veterans' Bureau.

"The term 'director' means the Director of the United States Veterans' Bureau.

"SEC. 3. In Titles II, III, and IV of this act unless the context otherwise requires—

"(1) The term 'child' includes—

"(a) A legitimate child.

"(b) A child legally adopted.

"(c) A stepchild, if a member of the man's household.

"(d) An illegitimate child, but, as to the father only, if acknowledged in writing signed by him, or if he has been judicially ordered or decreed to contribute to such child's support, or has been judicially decreed to be the putative father of such child.

"(2) The term 'grandchild' means a child as above defined of a child as above defined.

"(3) Except as used in section 301 and in section 302, the term 'child' and 'grandchild' are limited to unmarried persons either (a) under 18 years of age, or (b) of any age, if permanently incapable of self-support by reason of mental or physical defect.

"(4) The term 'parent' includes a father, mother, grandfather, grandmother, father through adoption, mother through adoption, stepfather, and stepmother, either of the persons in the service or of the spouse.

"(5) The terms 'father' and 'mother' include stepfathers and stepmothers, fathers and mothers through adoption, and persons who have stood in loco parentis to a member of the military or naval forces at any time prior to his enlistment or induction for a period of not less than one year.

"(6) The terms 'brother' and 'sister' include brothers and sisters of the half blood as well as those of the whole blood, stepbrothers and stepsisters, and brothers and sisters through adoption.

"(7) The terms 'brother' and 'sister' include the children of a person who, for a period of not less than one year, stood in loco parentis to a member of the military or naval forces of the United States at any time prior to his enlistment or induction, or another member of the same household as to whom such person during such period likewise stood in loco parentis.

"(8) The term 'commissioned officer' includes a warrant officer, but includes only an officer in active service in the military or naval forces of the United States.

"(9) The terms 'man' and 'enlisted man' mean a person, whether male or female, and whether enlisted, enrolled, or drafted into active service in the military or naval forces of the United States, and include noncommissioned and petty officers and members of training camps authorized by law.

"(10) The term 'enlistment' includes voluntary enlistment, draft, and enrollment in active service in the military or naval forces of the United States.

"(11) The term 'injury' includes disease.

"(12) The term 'pay' means the pay for service in the United States according to grade and length of service, excluding all allowances.

"(13) The term 'military or naval forces' means the Army, the Navy, the Marine Corps, the Coast Guard, the Naval Reserves, the National Naval Volunteers, and any other branch of the United States service while serving pursuant to law with the Army or the Navy.

"(14) The terms 'World War,' 'during the period of the war,' and 'during the World War,' mean the period beginning April 6, 1917, and ending July 2, 1921.

"(15) The terms 'date of termination of the war' and 'termination of the war,' mean July 2, 1921.

"SEC. 4. There is established an independent bureau under the President to be known as the United States Veterans' Bureau, the director of which shall be appointed by the President by and with the advice and consent of the Senate. The Director of the United States Veterans' Bureau shall receive a salary of $10,000 per annum, payable monthly.

"There shall be included on the technical and administrative staff of the director such staff officers, experts, inspectors, and assistants as the director shall prescribe; and there shall be in the United States Veterans' Bureau such sections and subdivisions thereof as the director shall prescribe. With such exceptions as the President may deem advisable, all employees shall be subject to the civil service law and regulations made thereunder.

"SEC. 5. The director, subject to the general direction of the President, shall administer, execute, and enforce the provisions of this act, and for that purpose shall have full power and authority to make rules and regulations, not inconsistent with the provisions of this act, which are necessary or appropriate to carry out its purposes, and shall decide all questions arising under this act, and all decisions of questions of fact affecting any claimant to the benefits of Titles II, III, or IV of this act shall be conclusive except as otherwise provided herein. All officers and employees of the bureau shall perform such duties as may be assigned them by the director. All official acts performed by such officers or employees specially designated therefor by the director shall have the same force and effect as though performed by the director in person. Wherever under any provision or provisions of the act regulations are directed or authorized to be made, such regulations, unless the context otherwise requires, shall or may be made by the director. The director shall adopt reasonable and proper rules to govern the procedure of the divisions and to regulate and provide for the nature and extent of the proofs and evidence and the method of taking and furnishing the same in order to establish the right to benefits of compensation, insurance, vocational training, or maintenance and support allowance provided for in this act, the forms of application of those claiming to be entitled to such benefits, the methods of making investigations and medical examinations, and the manner and form of adjudications and awards.

"SEC. 6. That the bureau shall have the power, and it shall be its duty, to provide for the placement of rehabilitated persons in suitable or gainful occupations. The director is authorized and directed to utilize, with the approval of the Secretary of Labor, the facilities of the Department of Labor, in so far as may be practicable, in the placement of rehabilitated persons in suitable or gainful occupations.

"SEC. 7. The director shall establish a central office in the District of Columbia, and such regional offices and suboffices, not exceeding 100 in number, within the territory of the United States and its outlying possessions as may be deemed necessary by him and in the best interests of the work committed to the Veterans' Bureau and to carry out the purposes of this act. Such regional offices and suboffices, may, subject to final action by the director in case of an appeal, and under such rules and regulations as may be prescribed by the director, exercise such powers for hearing complaints and for examining, rating, and awarding compensation claims, granting medical, surgical, dental, and hospital care, convalescent care, and necessary and reasonable after care, granting vocational training and all other matters delegated to them, or some of them, by the director as could be performed lawfully under this act by the central office.

"The director may abolish any regional offices or suboffices when in his judgment this may be done without detriment to the administration of this act, and upon such termination all records and supplies pertaining thereto shall be delivered to the central office, or as the director shall otherwise prescribe.

"SEC. 8. That for the purposes of this act the director, and such persons as the director may designate, shall have the power to issue subpœnas for and compel the attendance of witnesses within a radius of 100 miles from the place of hearing, to require the production of books, papers, documents, and other evidence, to administer oaths, and to examine witnesses upon any matter within the jurisdiction of the bureau. In case of disobedience to a subpœna the bureau may invoke the aid of any district court of the United States in requiring the attendance and testimony of witnesses and the production of documentary evidence, and such court, within the jurisdiction of which the inquiry is carried on, may, in case of contumacy or refusal to obey a subpœna issued to any officer, agent, or employee of any corporation or other person, issue an order requiring such corporation or other person to appear before the bureau or to give evidence touching the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof. Any person so required to attend as a witness shall be allowed and paid the same fees and mileage as are paid witnesses in the district courts of the United States.

"For the purpose of this act the director is authorized to detail from time to time clerks or persons employed in the bureau to make examinations into the merits of compensation and insurance claims, whether pending or adjudicated, as he may deem proper, and to aid in the preparation, presentation, or examination of such claims; and any such person so detailed shall have power to administer oaths, take affidavits, and certify to the correctness of the papers and documents pertaining to the administration of this act.

"SEC. 9. In addition to the services of the legal assistants employed by the bureau, the director may require the opinion of the Attorney General on any questions of law arising in the administration of the bureau.

"SEC. 10. The director, subject to the general directions of the President, shall be responsible for the proper examination, medical care, treatment, hospitalization, dispensary, and convalescent care, necessary and reasonable after care, welfare of, nursing, vocational training, and such other services as may be necessary in the carrying out of the provisions of this act, and for that purpose is hereby authorized, at the direction of the President or with the approval of the head of the department concerned, to utilize the now existing or future facilities of the United States Public Health Service, the War Department, the Navy Department, the Interior Department, the National Home for Disabled Volunteer Soldiers, and such other governmental facilities as may be made available for the purposes set forth in this act; and such governmental agencies are hereby authorized to furnish such facilities, including personnel, equipment, medical, surgical, and hospital services and supplies as the director may deem necessary and advisable in carrying out the provisions of this act, in addition to such governmental facilities as are hereby made available.

"When, in the opinion of the director, the facilities and services utilized for the hospitalization, medical care, and treatment for beneficiaries under this act are unsatisfactory, the director shall make arrangements for the further hospitalization, care, and treatment of such beneficiaries by other means.

"In the event that there is not sufficient Government hospital and other facilities for the proper medical care and treatment of beneficiaries under this act, and the director deems it necessary and advisable to secure additional Government facilities, he may, within the limits of appropriations made for carrying out the provisions of this paragraph, and with the approval of the President, improve or extend existing governmental facilities, or acquire additional facilities by purchase or otherwise.

Such new property and structures as may be improved, extended, or acquired shall become part of the permanent equipment of the United States Veterans' Bureau or of some one of the now existing agencies of the Government, including the War Department, Navy Department, Interior Department, Treasury Department, the National Home for Disabled Volunteer Soldiers, in such way as will best serve the present emergency, taking into consideration the future services to be rendered the veterans of the World War, including the beneficiaries under this act.

"In the event Government hospital facilities are insufficient or inadequate the director may contract with State, municipal, or, in exceptional cases, with private hospitals for such medical, surgical, and hospital services and supplies as may be required, and such contracts may be made for a period of not exceeding three years and may be for the use of a ward or other hospital unit or on such other basis as may be in the best interest of the beneficiaries under this act.

"There are hereby permanently transferred to the Veterans' Bureau all hospitals now or formerly under the jurisdiction of the Public Health Service or of the Treasury Department, the operation, management, or control of which have heretofore been transferred by the President to said bureau pursuant to the authority contained in section 9 of the act entitled 'An act to establish a Veterans' Bureau and to improve the facilities and service of such bureau and further to amend and modify the war risk insurance act, approved August 9, 1921.'

"SEC. 11. The director is hereby authorized to make such rules and regulations as may be deemed necessary in order to promote good conduct on the part of persons who are receiving care or treatment in hospitals, homes, or institutions as patients or beneficiaries of said bureau during their stay in such hospitals, homes, institutions, or training centers. Penalties for the breach of such rules and regulations may, with the approval of the director, extend to a forfeiture by the offender of such portion of the compensation payable to him, not exceeding three-fourths of the monthly installment per month for three months, for a breach committed while receiving treatment in such hospital, home, institution, or training center as may be prescribed by such rules and regulations.

"SEC. 12. That the bureau is hereby authorized and empowered to receive, for purposes of benefits provided by Title IV hereof, such gifts and donations from either public or private sources as may be offered unconditionally. All moneys so received as gifts or donations shall be paid into the Treasury of the United States, and shall constitute a permanent fund, to be called the 'Special fund for vocational rehabilitation,' to be used under the direction of the said bureau in connection with the appropriations hereby made or hereafter to be made, to defray the expenses of providing and maintaining courses of vocational rehabilitation; and a full report of all gifts and donations offered and accepted and all disbursements therefrom shall be submitted annually to Congress by the director.

"SEC. 13. All sums heretofore appropriated for use by the Federal Board for Vocational Education as a revolving fund, not exceeding $500,000, may be used by the bureau as a revolving fund for the purpose of making advancement to persons commencing or undergoing training under Title IV hereof, such advancements to bear no interest and to be reimbursed in such installments as may be determined by the director by proper deductions from the monthly maintenance and support allowances allowed by this act.

"SEC. 14. That the director of the United States Veterans' Bureau shall on the first Monday in December of each year file with the Speaker of the House of Representatives and the President of the Senate a full and complete report of all activities of the United States Veterans' Bureau, showing in detail the number of claimants and the amount of compensation paid, the number of veterans of the various wars and expeditions receiving hospitalization and medical treatment, the number of dependents drawing compensation and the amount of such compensation, the number of persons holding and paying for Government life insurance, and a full and itemized statement of all moneys received and disbursed by the director, or any of his agents, for the preceding year.

"SEC. 15. All sums heretofore appropriated for carrying out the provisions of the war risk insurance act and amendments thereto and to carry out the provisions of the act entitled 'An act to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes,' approved June 27, 1918, and amendments thereto, and all sums heretofore appropriated for carrying out the provisions of the act entitled 'An act to establish a veterans' bureau and to improve the facilities and service of such bureau, and further to amend and modify the war risk insurance act,' approved August 9, 1921, and amendments thereto shall, where unexpended, be made available for the bureau and may be expended in such manner as the director deems necessary in carrying out the purposes of this act.

"SEC. 16. All sums heretofore appropriated for the military and naval insurance appropriation and all premiums collected for the yearly renewable term insurance provided by the provisions of Title III deposited and covered into the Treasury to the credit of this appropriation, shall, where unexpended, be made available for the bureau. All premiums that may hereafter be collected for the yearly renewable term insurance provided by the provisions of Title III hereof shall be deposited and covered into the Treasury for the credit of this appropriation. Such sum, including all premium payments, is made available for the payment of the liabilities of the United States incurred under contracts of yearly renewable term insurance made under the provisions of Title III, including such liabilities as shall have been or shall hereafter be reduced to judgment in a district court of the United States or in the Supreme Court of the District of Columbia. Payments from this appropriation shall be made upon and in accordance with the awards by the director.

"SEC. 17. That all premiums paid on account of insurance converted under the provisions of Title III hereof shall be deposited and covered into the Treasury to the credit of the United States Government life insurance fund and shall be available for the payment of losses, dividends, refunds, and other benefits provided for under such insurance, including such liabilities as shall have been or shall hereafter be reduced to judgment in a district court of the United States or in the Supreme Court of the District of Columbia. Payments from this fund shall be made upon and in accordance with awards by the director.

"The bureau is authorized to set aside out of the fund so collected such reserve funds as may be required, under accepted actuarial principles, to meet all liabilities under such insurance; and the Secretary of the Treasury is hereby authorized to invest and reinvest the said United States Government life insurance fund, or any part thereof, in interest-bearing obligations of the United States or bonds of the Federal farm-loan banks and to sell said obligations of the United States or the bonds of the Federal farm-loan banks for the purposes of such fund.

"SEC. 18. That the Comptroller General of the United States is hereby authorized and directed to allow credit in the accounts of the disbursing clerk of the bureau for all payments of insurance installments hereafter made, without verification of the deduction on the pay rolls, of such premiums as may have accrued prior to January 1, 1921, while the insured was in the service.

"SEC. 19. That no claim agent or attorney except the recognized representatives of the American Red Cross, the American Legion, the Disabled American Veterans, and the Veterans of Foreign Wars and such other organizations as shall be approved by the director, shall be recognized in the presentation or adjudication of claims under Titles II, III, and IV, except that in the event of disagreement as to claim under a contract of insurance between the bureau and any beneficiary or beneficiaries thereunder an action on the claim may be brought against the United States either in the Supreme Court of the District of Columbia or in the district court of the United States in and for the district in which such beneficiaries or any one of them resides, and that whenever judgment shall be rendered in an action brought pursuant to this provision, the court, as part of its judgment, shall determine and allow such reasonable attorney's fees, not to exceed 5 per cent of the amount recovered, to be paid by the claimant in behalf of whom such proceedings were instituted to his attorney, said fee to be paid out of the payments to be made to the beneficiary under the judgment rendered at a rate not exceeding one-tenth of each of such payments until paid. All persons having or claiming to have an interest in such insurance may be made parties to said suit, and such as are not inhabitants of or found within the district in which suit is brought, may be brought in by order of the court to be served personally or by publication as the court may direct. The procedure in such suits shall otherwise be the same as that provided for suits in the district courts by the act entitled 'An act providing for the bringing of suits against the United States,' approved March 3, 1887, as amended.

"SEC. 20. That for the purpose of this act the marriage of the claimant to the person on account of whom the claim is

made shall be shown by such testimony as the director may prescribe by regulations.

"SEC. 21. That where any payment under this act is to be made to a minor, other than a person in the military or naval forces of the United States, or to a person mentally incompetent, or under other legal disability adjudged by a court of competent jurisdiction, such payment may be made to the person who is constituted guardian, curator, or conservator by the laws of the State or residence of claimant, or is otherwise legally vested with responsibility or care of the claimant or his estate: *Provided*, That prior to receipt of notice by the bureau that any such person is under such other legal disability adjudged by some court of competent jurisdiction, payment may be made to such person direct: *Provided further*, That for the purpose of payments of benefits under Title II hereof, where no guardian, curator, or conservator of the person under a legal disability has been appointed under the laws of the State or residence of the claimant, the director shall determine the person who is otherwise legally vested with responsibility or care of the claimant or his estate: *And provided further*, That the director, in his discretion, may suspend such payments to any such guardian, curator, conservator, or other person who shall neglect or refuse, after reasonable notice, to render an account to the director from time to time showing the application of such payments for the benefit of such minor or incompetent beneficiary.

"SEC. 22. That the compensation, insurance, and maintenance and support allowance payable under Titles II, III, and IV, respectively, shall not be assignable; shall not be subject to the claims of creditors of any person to whom an award is made under Titles II, III, or IV; and shall be exempt from all taxation: *Provided*, That such compensation, insurance, and maintenance and support allowance shall be subject to any claims which the United States may have under Titles II, III, IV, and V, against the person on whose account the compensation, insurance, or maintenance and support allowance is payable.

"That the provisions of this section shall not be construed to prohibit the assignment by any person to whom converted insurance shall be payable under Title III of such act of his interest in such insurance to any other member of the permitted class of beneficiaries.

"SEC. 23. The discharge or dismissal of any person from the military or naval forces on the ground that he is guilty of mutiny, treason, spying, or any offense involving moral turpitude, or willful and persistent misconduct, of which he has been found guilty by a court-martial, or that he is an enemy alien, conscientious objector, or a deserter, shall terminate any insurance granted on the life of such person under the provisions of Title III and shall bar all rights to any compensation under Title II, or any insurance under Title III, or any maintenance and support allowance under Title IV: *Provided*, That as to converted insurance, the cash surrender value thereof, if any, on the date of such discharge or dismissal shall be paid the insured, if living, and if dead to the designated beneficiary; *Provided further*, That an enemy alien who volunteered or who was drafted into the Army, Navy, or Marine Corps of the United States during the World War, and who was not discharged from the service on his own application or solicitation by reason of his being an enemy alien, and whose service was honest and faithful, shall be entitled to the benefits under Titles II, III, and IV hereof: *Provided further*, That in case any person has been dishonorably discharged from the military or naval forces as a result of a court-martial trial, and it is thereafter established to the satisfaction of the director that at the time of the commission of the offense resulting in such court-martial trial and discharge that such person was insane, such person shall be entitled to the compensation, insurance, and vocational-training benefits under Titles II, III, and IV hereof: *Provided further*, That this section shall be deemed to be in effect as of April 6, 1917, and the director is hereby authorized and directed to make provision by bureau regulation for payment of any insurance claim or adjustment in insurance-premium account of any insurance contract which would not now be affected by this section as amended.

"SEC. 24. That if after induction by the local draft board, or after being called into Federal service as a member of the National Guard, but before being accepted and enrolled for active service, the person died or became disabled as a result of disease contracted or injury suffered in the line of duty and not due to his own willful misconduct involving moral turpitude, or as a result of the aggravation, in the line of duty, and not because of his own willful misconduct involving moral turpitude, of an existing disease or injury, he or those entitled thereto shall receive the benefits of compensation payable under Title II; and any insurance application made by such person after induction by the local draft board but before being accepted and enrolled for active service shall be deemed valid.

"SEC. 25. Any person who between the 6th day of April, 1917, and the 11th day of November, 1918, applied for enlistment or enrollment in the military or naval forces, and who was accepted provisionally and directed or ordered to a camp, post, station, or other place for final acceptance into such service, shall be deemed to have the same status as an inducted man not yet accepted and enrolled for active service during the period while such person was complying with such order or direction, and during such compliance, and until his final acceptance or rejection for enlistment or enrollment into the military or naval forces, shall be entitled to the same benefits under Titles II and III hereof as an inducted man not yet accepted and enrolled for active service.

"SEC. 26. That the amount of the monthly installments of compensation, yearly renewable term insurance, or accrued maintenance and support allowance which has become payable under the provisions of Titles II, III, or IV hereof, but which has not been paid prior to the death of the person entitled to receive the same, may be payable to the personal representatives of such person: *Provided*, That in cases where the estate of the decedent would escheat under the laws of the place of his residence, such installments shall not be paid to the estate of the decedent but shall escheat to the United States and shall be credited to the appropriation from which the original award was made.

"SEC. 27. That all payments of compensation and insurance heretofore made pursuant to a regulation permitting permanent and total disability to be presumed from hospitalization or ratings of less than permanent total disability shall be deemed valid and no recovery thereof shall be made: *Provided*, That nothing herein shall operate to validate insurance not in force on the date an award thereof was approved, except where premiums have been thereafter accepted.

"SEC. 28. There shall be no recovery of payments from any beneficiary who, in the judgment of the director, is without fault on his part, and where, in the judgment of the director, such recovery would defeat the purpose of benefits otherwise authorized or would be against equity and good conscience.

"SEC. 29. The director is authorized, in his discretion, to sell, lease, or exchange surplus equipment, supplies, products, or waste materials belonging to the bureau or any of its plants or institutions; and to lease for a term, not exceeding three years, lands or buildings, or parts or parcels thereof, belonging to the United States and under the control of the bureau. The net proceeds of all such sales, leases, or exchanges shall be covered into the Treasury of the United States as miscellaneous receipts.

"SEC. 30. That all files, records, reports, and other papers and documents pertaining to any claim for the benefits of this act, whether pending or adjudicated, shall be deemed confidential and privileged and no disclosure thereof shall be made except as follows:

"(a) To a claimant or his duly authorized representative, as to matters concerning himself alone, when in the judgment of the director such disclosure would not be injurious to the physical or mental health of the claimant;

"(b) Where required by the process of a United States court to be produced in any suit or proceeding therein pending; or when such production is deemed by the director to be necessary in any suit or proceeding brought under the provisions of this act;

"(c) In all proceedings in the nature of an inquest into the mental competency of a claimant, and in all other judicial proceedings when, in the judgment of the director, such disclosure is deemed necessary and proper;

"(d) The amount of compensation or training allowance of any beneficiary shall be made known to any person who applies for such information.

"Wherever the production of a file, record, report, or other document is required or permitted by this section a certified copy thereof may be produced in lieu of the original, and such certified copy shall be received in evidence with like force and effect as the original.

"SEC. 31. The provisions of this act shall not apply to any conscientious objector who refused to perform military duty or refused to wear the uniform, or to any alien who was discharged from the military or naval forces prior to November 11, 1918, on account of his alienage.

"TITLE II.—COMPENSATION AND TREATMENT

"SEC. 200. For death or disability resulting from personal injury suffered or disease contracted in the military or naval service on or after April 6, 1917, and before July 2, 1921, or for an aggravation or recurrence of a disability existing prior to examination, acceptance, and enrollment for service, when such aggravation was suffered and contracted in, or such recurrence was caused by, the military or naval service on or after April 6, 1917, and before July 2, 1921, by any commissioned officer or enlisted man, or by any member of the Army Nurse Corps (female), or of the Navy Nurse Corps (female) when employed in the active service under the War Department or Navy Department, the United States shall pay to such commissioned officer or enlisted man, member of the Army Nurse Corps (female) or of the Navy Nurse Corps (female), or, in the discretion of the director, separately to his or her dependents, compensation as hereinafter provided; but no compensation shall be paid if the injury, disease, aggravation, or recurrence has been caused by his own willful misconduct: *Provided*, That no person suffering from paralysis, paresis, or blindness, or from constitutional lues requiring hospitalization, as the result of disease, shall be denied compensation while a patient in a Veterans' Bureau hospital by reason of willful misconduct. That for the purposes of this section every such officer, enlisted man, or other member employed in the active service under the War Department or Navy Department who was discharged or who resigned prior to July 2, 1921, and every such officer, enlisted man, or other member employed in the active service under the War Department or Navy Department on or before November 11, 1918, who on or after July 2, 1921, is discharged or resigns, shall be conclusively held and taken to have been in sound condition when examined, accepted, and enrolled for service, except as to defects, disorders, or infirmities made of record in any manner by proper authorities of the United States at the time of, or prior to, inception of active service, to the extent to which any such defect, disorder, or infirmity was so made of record: *Provided*, That an ex-service man who is shown to have or, if deceased, to have had, prior to January 1, 1925, neuropsychiatric disease, an active tuberculous disease, paralysis agitans, encephalitis lethargica, or amoebic dysentery, developing a 10 per cent degree of disability or more in accordance with the provisions of subdivision (4) of section 202 of this act shall be presumed to have acquired his disability in such service between April 6, 1917, and July 2, 1921, or to have suffered an aggravation of a preexisting neuropsychiatric disease, tuberculosis, paralysis agitans, encephalitis lethargica, or amoebic dysentery, in such service between said dates, and said presumption shall be conclusive in cases of active tuberculous disease, but in all other cases said presumption shall be rebuttable by clear and convincing evidence; but nothing in this proviso shall be construed to prevent a claimant from receiving the benefits of compensation and medical care and treatment for a disability due to these diseases of more than 10 per cent degree (in accordance with the provisions of subdivision (4), section 202, of this act) on or subsequent to January 1, 1925, if the facts of the case substantiate his claim.

"SEC. 201. That if death results from injury—

"If the deceased leaves a widow or child, or if he leaves a mother or father either or both dependent upon him for support, the monthly compensation shall be the following amounts:

"(a) If there is a widow but no child, $30.

"(b) If there is a widow and one child, $40, with $6 for each additional child.

"(c) If there is no widow, but one child, $20.

"(d) If there is no widow, but two children, $30.

"(e) If there is no widow, but three children, $40, with $5 for each additional child.

"(f) If there is a dependent mother (or dependent father), $20, or both, $30. The amount payable under this subdivision shall not exceed the difference between the total amount payable to the widow and children and the sum of $75. Such compensation shall be payable whether the dependency of the father or mother, or both, arises before or after the death of the person, but no compensation shall be payable if the dependency arises more than five years after the death of the person.

"(1) If death occur or shall have occurred subsequent to April 6, 1917, and before discharge or resignation from the service, the United States shall pay for burial expenses and the return of body to his home a sum not to exceed $150, as may be fixed by regulation. Where a veteran of any war dies after discharge or resignation from the service and does not leave sufficient assets to meet the expenses of his burial and the transportation of his body, and such expenses are not otherwise provided for, the United States Veterans' Bureau shall pay the following sums: For a flag to drape the casket, and after burial to be given to the next of kin of the deceased, a sum not exceeding $5; also for burial expenses, a sum not exceeding $100, to such person or persons as may be fixed by regulations: *Provided*, That when such person dies while receiving from the bureau compensation or vocational training, the above benefits shall be payable without reference to the indigency of the deceased: *Provided further*, That where such person, while receiving from the bureau medical, surgical, or hospital treatment or vocational training, dies away from home and at the place to which he was ordered by the bureau, or while traveling under orders of the bureau, the above benefits shall be payable without reference to the indigency of the deceased and in addition thereto the actual and necessary cost of the transportation of the body of the person (including preparation of the body) to the place of burial within the continental limits of the United States, and including also, in the discretion of the director, the actual and necessary cost of transportation of an attendant: *And provided further*, That no accrued pension or compensation due at the time of death shall be deducted from the sum allowed.

"(2) The payment of compensation to a widow shall continue until her death or remarriage, and the payment of compensation to a parent shall continue to the death of each parent.

"(3) The payment of compensation to or for a child shall continue until such child reaches the age of 18 years or marries, or if such child be permanently incapable of self-support by reason of mental or physical defect, then during such incapacity.

"(4) Whenever the compensation payable to or for the benefit of any person under the provisions of this section is terminated by the happening of the contingency upon which it is limited, the compensation thereafter for the remaining beneficiary or beneficiaries, if any, shall be the amount which would have been payable to them if they had been the sole original beneficiaries.

"(5) As between the widow and the children not in her custody, and as between children, the amount of compensation shall be apportioned as may be prescribed by regulation.

"(6) The term 'widow' as used in this section shall not include one who shall have married the deceased later than 10 years after the time of injury, and shall include widower whenever his condition is such that if the deceased person were living he would have been dependent upon her for support.

"(7) That this section shall be deemed to be in effect as of April 6, 1917: *Provided, however*, That the receipt of a gratuity, pension, or compensation by widow, or parent, on account of the death of any person shall not bar the payment of compensation on account of the death of any other person: *Provided*, That before compensation under this section shall be paid there shall first be deducted from said sum so as to be paid the amount of any payments made under any other law on account of the death or disability of the same person: *Provided further*, That no changes in rates or compensation made by this act shall be retroactive in effect.

"SEC. 202. That if disability results from the injury—

"(1) If and while the disability is rated as total and temporary, the monthly compensation shall be the following amounts, payable monthly or semimonthly as the director may prescribe:

"(a) If the disabled person has neither wife nor child living, $80.

"(b) If he has a wife but no child living, $90.

"(c) If he has a wife and one child living, $95, and $5 for each additional child.

"(d) If he has no wife and one child living, $90, with $5 for each additional child.

"(e) If he has a mother or father, either or both dependent on him for support, then, in addition to the above amounts, $10 for each parent so dependent.

"(2) If and while the disability is rated as partial and temporary, the monthly compensation shall be a percentage of the compensation that would be payable for his total and temporary disability, equal to the degree of the reduction in earning capacity resulting from the disability, but no compensation shall be payable for a reduction in earning capacity rated at less than 10 per cent.

"That any ex-service man shown to have had a tubercular disease of compensable degree, and who has been hospitalized for a period of one year, and who in the judgment of the director has reached a condition of complete arrest of his disease, and who shall be discharged from further hospitalization,

shall be rated as temporarily totally disabled, and such rating shall not be decreased within a period of six months.

"(3) If and while the disability is rated as total and permanent, the rate of compensation shall be $100 per month: *Provided, however,* That the permanent loss of the use of both feet or both hands, or of both eyes, or of one foot and one hand, or of one foot and one eye, or of one hand and one eye, or the loss of hearing of both ears, or becoming permanently helpless or permanently bedridden, shall be deemed to be total, permanent disability: *Provided further,* That the compensation for the loss of the use of both eyes shall be $150 per month, and that compensation for the loss of the use of both eyes and one or more limbs shall be $200 per month: *Provided further,* That for double, total, permanent disability the rate of compensation shall be $200 per month.

"That any ex-service man shown to have a tuberculous disease of compensable degree, and who has been hospitalized for a period of one year, and who, in the judgment of the director, will not reach a condition of arrest by further hospitalization, and whose discharge from hospitalization will not be prejudicial to the beneficiary or his family, and who is not, in the judgment of the director, feasible for training, shall, upon his request, be discharged from hospitalization and rated as temporarily and totally disabled, said rating to continue for the period of three years: *Provided, however,* That nothing in this subdivision shall deny the beneficiary the right, upon presentation of satisfactory evidence, to be adjudged to be permanently and totally disabled.

"(4) If and while the disability is rated as partial and permanent, the monthly compensation shall be a percentage of the compensation that would be payable for his total and permanent disability equal to the degree of the reduction in earning capacity resulting from the disability, but no compensation shall be payable for a reduction in earning capacity rated at less than 10 per cent.

"A schedule of ratings of reductions in earning capacity from injuries or combinations of injuries shall be adopted and applied by the bureau. Ratings may be as high as 100 per cent. The ratings shall be based, as far as practicable, upon the average impairments of earning capacity resulting from such injuries in civil occupations similar to the occupation of the injured man at the time of enlistment and not upon the impairment in earning capacity in each individual case, so that there shall be no reduction in the rate of compensation for individual success in overcoming the handicap of an injury. The bureau in adopting the schedule of ratings of reduction in earning capacity shall consider the impairment in ability to secure employment which results from such injuries. The bureau shall from time to time readjust this schedule of ratings whenever actual experience shall show that it is unjust to the disabled veteran.

"(5) If the disabled person is so helpless as to be in constant need of a nurse or attendant, such additional sum shall be paid, but not exceeding $50 per month, as the director may deem reasonable.

"(6) In addition to the compensation above provided, the injured person shall be furnished by the United States such reasonable governmental medical, surgical, and hospital services, including payment of court costs and other expenses incident to proceedings heretofore or hereafter taken for commitment of mentally incompetent persons to hospitals for the care and treatment of the insane, and shall be furnished with such supplies, including wheel chairs, artificial limbs, trusses, and similar appliances, as the director may determine to be useful and reasonably necessary, which wheel chairs, artificial limbs, trusses, and similar appliances may be procured by the bureau in such manner, either by purchase or manufacture, as the director may determine to be advantageous and reasonably necessary: *Provided,* That nothing in this act shall be construed to affect the necessary military control over any member of the Military or Naval Establishments before he shall have been discharged from the military or naval service.

"(7) Where any disabled person having neither wife, child, nor dependent parent shall, after July 1, 1924, have been maintained by the bureau for a period or periods amounting to six months in a neuropsychiatric hospital or hospitals, and shall be deemed by the director to be permanently insane, the compensation for such person shall thereafter be $20 per month so long as he shall thereafter be maintained by the bureau in a neuropsychiatric hospital or hospitals; and such compensation may, in the discretion of the director, be paid to the chief officer of said hospital to be used for the benefit of such patient: *Provided, however,* That if such patient shall recover his reason and shall be discharged from such hospital as cured, an additional amount of $60 per month shall be paid to him for each month the rate of compensation was reduced as provided by this subdivision.

"The compensation of any inmate of an asylum or hospital for the insane, or any part thereof, may, in the discretion of the director, be paid to the chief officer of said asylum or hospital to be used for the benefit of such inmate.

"After June 30, 1927, the monthly rate of compensation for all veterans (other than those totally and permanently disabled), who are being maintained by the bureau in a hospital of any description and who are without wife, child, or dependent parent, shall not exceed $40.

"(8) The director shall prescribe by regulation the conditions and limitations whereby all patients or beneficiaries of the bureau who are receiving treatment through the bureau as patients in a hospital may allot any proportion or proportions or any fixed amount or amounts of their monthly compensation for such purposes and for the benefit of such person or persons as they may direct.

"In case such patient has not allotted three-fourths of his monthly compensation, and in case the director shall find that by gross dissipation he is retarding his own progress to recovery, then regulations to be made by the director may provide that (except in the case of neuropsychiatric patients who are within the terms of the first paragraph of subdivision (7) hereof) any unallotted portion of such three-fourths compensation shall be deposited to the patient's credit with the Treasurer of the United States, to accumulate at such rate of interest as the Secretary of the Treasury may determine, but at a rate never less than 3½ per cent per annum; and when such patient shall be discharged by the bureau from hospital care the said deposit and interest shall be paid to such patient, if living; otherwise to any beneficiary or beneficiaries he may have designated, or, if there be no such beneficiary, then to the executor or administrator of the estate of such deceased person: *Provided,* That this paragraph shall not be so construed as to prevent payment by the bureau from the amounts due to the decedent's estate of his funeral expenses, expenses of last illness, board, rent, lodging, or other household expenses for which the decedent is liable, provided a claim therefor is presented by the creditors or by the person or persons who actually paid the same before settlement by the bureau.

"The Secretary of the Treasury is hereby authorized to invest and reinvest the said allotments deposited with him, or any part thereof, in interest-bearing obligations of the United States and to sell the obligations for the purposes of said funds.

"(9) In addition to the care, treatment, and appliances now authorized by law, said bureau also shall provide, without charge therefor, hospital, dental, medical, surgical, and convalescent care and treatment and prosthetic appliances for any member of the military or naval forces of the United States, not dishonorably discharged, disabled by reason of any wound or injury received or disease contracted, or by reason of any aggravation of a preexisting injury or disease, specifically noted at examination for entrance into or employment in the active military or naval service, while in the active military or naval service of the United States on or after April 6, 1917, and before July 2, 1921: *Provided,* That the wound or injury received or disease contracted or aggravation of a preexisting injury or disease, for which such hospital, dental, medical, surgical, and convalescent care and treatment and prosthetic appliances shall be furnished, was incurred in the military or naval service and not caused by his own willful misconduct: *Provided,* That where a beneficiary of the bureau suffers or has suffered an injury or contracted a disease in service entitling him to the benefits of this subdivision, and an emergency develops or has developed requiring immediate treatment or hospitalization on account of such injury or disease, and no bureau facilities are or were then feasibly available and in the judgment of the director delay would be or would have been hazardous, the director is authorized to reimburse such beneficiary the reasonable value of such service received from sources other than the bureau.

"(10) That all hospital facilities under the control and jurisdiction of the bureau shall be available for every honorably discharged veteran of the Spanish-American War, the Philippine insurrection, the Boxer rebellion, or the World War suffering from neuropsychiatric or tubercular ailments and diseases, paralysis agitans, encephalitis lethargica, or amoebic dysentery, or the loss of sight of both eyes regardless whether such ailments or diseases are due to military service or otherwise, including traveling expenses as granted to those receiving compensation and hospitalization under this act. The director is further authorized, so far as he shall find that existing Gov-

ernment facilities permit, to furnish hospitalization and necessary traveling expenses to veterans of any war, military occupation, or military expedition since 1897, not dishonorably discharged, without regard to the nature or origin of their disabilities: *Provided*, That preference to admission to any Govment hospital for hospitalization under the provisions of this subdivision shall be given to those veterans who are financially unable to pay for hospitalization and their necessary traveling expenses.

"(11) The director shall have the same power, and shall be subject to the same limitations, in the sale of surplus or condemned supplies, material, and other personal property as now pertain to the Secretary of War. The director is authorized to make regulations governing the disposal of articles produced by patients of such bureau in the course of their curative treatment, or to allow the patients to sell or to retain such articles.

"(12) Where the disabled person is a patient in a hospital or where for any other reason the disabled person and his wife are not living together, or where the children are not in the custody of the disabled person, the amount of the compensation shall be apportioned as may be prescribed by regulations.

"(13) The term 'wife' as used in this section shall include 'husband' if the husband is dependent upon the wife for support.

"(14) That the bureau is authorized to furnish transportation, also the medical, surgical, and hospital services and the supplies and appliances provided by subdivision (6) hereof, to discharged members of the military or naval forces of those governments which have been associated in war with the United States since April 6, 1917, and come within the provisions of laws of such governments similar to this act, at such rates and under such regulations as the director may prescribe; and the bureau is hereby authorized to utilize the similar services, supplies, and appliances provided for the discharged members of the military and naval forces of those governments which have been associated in war with the United States since April 6, 1917, by the laws of such governments similar to this act, in furnishing the discharged members of the military and naval forces of the United States who live within the territorial limits of such governments and come within the provisions of subdivision (6) hereof, with the services, supplies, and appliances provided for in such subdivision; and any appropriations that have been or may hereafter be made for the purpose of furnishing the services, supplies, and appliances provided for by subdivision (6) hereof are hereby made available for the payment to such governments or their agencies for the services, supplies, and appliances so furnished at such rates and under such regulations as the director may prescribe.

"(15) That any person who is now receiving a gratuity or pension from the United States under existing law shall not receive compensation under this section unless he shall first surrender all claim to further payments of such gratuity or pension, except as provided in subdivision 7 of section 201.

"(16) No compensation hereunder shall be paid for the period during which any such person is being furnished by the bureau a course of vocational rehabilitation and support as authorized in Title IV hereof: *Provided, however*, That in the event any person pursuing a course of vocational rehabilitation is entitled under Title II of this act to compensation in an amount in excess of the payments made to him under Title IV hereof for his support and the support of his dependents, if any, the bureau shall pay monthly to such person such additional amount as may be necessary to equal the total compensation due under Title II hereof.

"(17) That no changes in rates of compensation made by this act shall be retroactive in effect.

"SEC. 203. That every person applying for or in receipt of compensation for disability under the provisions of this title and every person applying for treatment under the provisions of subdivisions (9) or (10) of section 202 hereof, shall, as frequently and at such times and places as may be reasonably required, submit himself to examination by a medical officer of the United States or by a duly qualified physician designated or approved by the director. He may have a duly qualified physician designated and paid by him present to participate in such examination. For all examinations he shall, in the discretion of the director, be paid his reasonable traveling and other expenses and also loss of wages incurred in order to submit to such examination. If he shall neglect or refuse to submit to such examination, or shall in any way obstruct the same, his right to claim compensation under this title shall be suspended until such neglect, refusal, or obstruction ceases. No compensation shall be payable while such neglect, refusal, or obstruction continues, and no compensation shall be payable for the intervening period.

"SEC. 204. Every person in receipt of compensation for disability shall submit to any reasonable medical or surgical treatment furnished by the bureau whenever requested by the bureau; and the consequences of unreasonable refusal to submit to any such treatment shall not be deemed to result from the injury compensated for.

"SEC. 205. Upon its own motion or upon application the bureau may at any time review an award and, in accordance with the facts found upon such review, may end, diminish, or increase the compensation previously awarded, or, if compensation is increased, or if compensation has been refused, reduced, or discontinued, may (subject to the provisions of section 210 hereof) award compensation in proportion to the degree of disability sustained as of the date such degree of disability began, but not earlier than the date of discharge or resignation. Except in cases of fraud participated in by the beneficiary, no reduction in compensation shall be made retroactive, and no reduction or discontinuance of compensation shall be effective until the 1st day of the third calendar month next succeeding that in which such reduction or discontinuance is determined.

"SEC. 206. That no compensation shall be payable for death or disability which does not occur prior to or within one year after discharge or resignation from the service, except as provided in section 200 of this act, and except where there is an official record of the injury during service or at the time of separation from active service, or where within one year from the approval of this act, satisfactory evidence is furnished the bureau to establish that the injury was suffered or aggravated during active service. Where there is official record of injury during service compensation shall be payable in accordance with the provisions of this title, for death or disability whenever occurring, proximately resulting from such injury.

"SEC. 207. That compensation shall not be payable for death in the course of the service until the death be officially recorded in the department under which the person may be serving. No compensation shall be payable for a period during which the man has been reported 'missing' and a family allowance has been paid for him under the provisions of Article II of the act of October 6, 1917.

"SEC. 208. That no compensation shall be payable for death inflicted as a lawful punishment for crime or military offense except when inflicted by the enemy. A dismissal or discharge by sentence of court-martial from the service shall bar and terminate all right to any compensation under the provisions of this title for the period of service from which such discharge is given.

"SEC. 209. That no compensation shall be payable and that (except as provided by subdivision (10) of section 202 hereof) no treatment shall be furnished unless a claim therefor be filed in case of disability within five years after discharge or resignation from the service, or, in case of death during the service, within five years after such death is officially recorded in the department under which he may be serving: *Provided, however*, That where compensation is payable for death or disability occurring after discharge or resignation from the service, claim must be made within five years after such death or the beginning of such disability.

"The time herein provided may be extended by the director not to exceed two years for good cause shown. If at the time that any right accrues to any person under the provisions of this title such person is a minor, or is of unsound mind or physically unable to make a claim, the time herein provided shall not begin to run until such disability ceases.

"SEC. 210. That no compensation shall be payable for any period more than one year prior to the date of claim therefor, nor shall increased compensation be awarded to revert back more than six months prior to the date of claim therefor. Except in case of fraud participated in by the beneficiary, no reduction in compensation shall be made retroactive.

"SEC. 211. Compensation because of disability or death of members of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) shall be in lieu of any compensation for such disability or death under the act entitled 'An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes,' approved September 7, 1916.

"SEC. 212. This act is intended to provide a system for the relief of persons who were disabled, and for the dependents of those who died as a result of disability suffered in the military service of the United States between April 6, 1917, and July 2, 1921. For such disabilities and deaths no other pension laws or laws providing for gratuities or payments in

the event of death in the service shall be applicable: *Provided, however*, That the laws relating to the retirement of persons in the regular military or naval service shall not be considered to be laws providing for pensions, gratuities, or payments within the meaning of this section: *And provided further*, That compensation under this title shall not be paid while the person is in receipt of active service or retirement pay. Titles II and IV of this act shall not be applicable to any disability or resultant death in the service if such disability occurred as a result of service prior to April 6, 1917, or after July 2, 1921.

"SEC. 213. That where any beneficiary of this bureau suffers or has suffered an injury or an aggravation of an existing injury as the result of training, hospitalization, or medical or surgical treatment awarded to him by the director and not the result of his misconduct, and such injury or aggravation of an existing injury results in additional disability to or the death of such beneficiary, the benefits of this title shall be awarded in the same manner as though such disability, aggravation, or death was the result of military service during the World War. The benefits of this section shall be in lieu of the benefits under the act entitled 'An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes,' approved September 7, 1916; and from any payments due hereunder shall be deducted all amounts paid by any person other than United States as damages or compensation for such injury, aggravation, or death: *Provided*, That application be made for such benefits within one year after such injury or aggravation was suffered or such death occurred or after the passage of this act or whichever is the latest date.

"TITLE III.—INSURANCE

"SEC. 300. That in order to give to every commissioned officer and enlisted man and to every member of the Army Nurse Corps (female) and of the Navy Nurse Corps (female) when employed in active service under the War Department or Navy Department protection for themselves and their dependents, the United States, upon application to the bureau and without medical examination, shall grant insurance in such form or forms as is prescribed in section 301 hereof, against the death or total permanent disability of any such person in any multiple of $500, and not less than $1,000 or more than $10,000, upon the payment of the premiums as hereinafter provided. Such insurance must be applied for within 120 days after enlistment or after entrance into or employment in the active service and before discharge or resignation.

"The insurance shall be payable only to a spouse, child, grandchild, parent, brother, sister, uncle, aunt, nephew, niece, brother-in-law or sister-in-law, or to any or all of them, and also during total and permanent disability to the injured person.

"The United States shall bear the expenses of administration and the excess mortality and disability cost resulting from the hazards of war. The premium rates shall be the net rates based upon the American Experience Table of Mortality and interest at 3½ per cent per annum.

"SEC. 301. Not later than July 2, 1928, all term insurance held by persons who were in the military service after April 6, 1917, shall be converted, without medical examination, into such form or forms of insurance as may be prescribed by regulations and as the insured may request. Regulations shall provide for the right to convert into ordinary life, 20-payment life, endowment maturing at age of 62, and into other usual forms of insurance, and shall prescribe the time and method of payment of the premiums thereon, but payments of premiums in advance shall not be required for periods of more than one month each and may be deducted from the pay or deposit of the insured or be otherwise made at his election.

"All term insurance shall cease on July 2, 1926, except when death or total permanent disability shall have occurred before July 2, 1926.

"In case where an insured whose yearly renewable term insurance has matured by reason of total permanent disability is found and declared to be no longer permanently and totally disabled, and where the insured is required under regulations to renew payment of premiums on said term insurance, and where this contingency is extended beyond the period during which said yearly renewable term insurance otherwise must be converted, there shall be given such insured an additional period of two years from the date on which he is required to renew payment of premiums in which to convert said term insurance as hereinbefore provided.

"The bureau may make provision in the contract for converted insurance for optional settlements, to be selected by the insured, whereby such insurance may be made payable either in one sum or in installments for 36 months or more. The bureau may also include in said contract a provision authorizing the beneficiary to elect to receive payment of the insurance in installments for 36 months or more, but only if the insured has not exercised the right of election as hereinbefore provided; and even though the insured may have exercised his right of election, the said contract may authorize the beneficiary to elect to receive such insurance in installments spread over a greater period of time than that selected by the insured.

"SEC. 302. Whenever benefits under United States Government life insurance (converted insurance) become, or have become, payable because of total permanent disability of the insured or because of the death of the insured as a result of disease or injury traceable to the extra hazard of the military or naval service, as such hazard may be determined by the director, the liability shall be borne by the United States, and the director is hereby authorized and directed to transfer from the military and naval insurance appropriation to the United States Government life-insurance fund a sum which, together with the reserve of the policy at the time of maturity by total permanent disability or death, will equal the then value of such benefits. When a person receiving total permanent disability benefits under a United States Government life policy (converted policy), recovers from such disability, and is then entitled to continue a reduced amount of insurance, the director is hereby authorized and directed to transfer to the military and naval insurance appropriation all of the loss reserve to the credit of such policy claim except a sum sufficient to set up the then required reserve on the reduced amount of the insurance that may be continued, which sum shall be retained in the United States Government life-insurance fund for the purpose of such reserve.

"SEC. 303. If no person within the permitted class of beneficiaries survive the insured, or if before the completion of payments the beneficiary or beneficiaries shall die and there be no surviving person within said permitted class, then there shall be paid to the estate of the insured the present value of the monthly installments thereafter payable under the provisions of this title: *Provided*, That in cases where the estate of the insured would escheat under the laws of the place of his residence the insurance shall not be paid to the estate of the insured, but shall escheat to the United States and shall be credited to the United States Government life-insurance fund or the military and naval insurance appropriation, as may be proper. This section shall be deemed to be in effect as of October 6, 1917.

"SEC. 304. In the event that all provisions of the rules and regulations other than the requirements as to the physical condition of the applicant for insurance have been complied with, an application for reinstatement, in whole or in part, of lapsed or canceled yearly renewable term insurance or United States Government life insurance (converted insurance) hereafter made may be approved if made within one year after the passage of this act or within two years after the date of lapse or cancellation: *Provided*, That the applicant's disability (if any) is the result of an injury or disease, or of an aggravation thereof, suffered or contracted in the active military or naval service during the World War: *Provided further*, That the applicant during his lifetime submits proof satisfactory to the director showing the service origin of the disability or aggravation thereof and that the applicant is not totally and permanently disabled. As a condition, however, to the acceptance of an application for the reinstatement of lapsed or canceled yearly renewable term insurance, where the requirements as to the physical condition of the applicant have not been complied with, or, for the reinstatement of United States Government life insurance (converted insurance) in any case, the applicant shall be required to pay all the back monthly premiums which would have become payable if such insurance had not lapsed, together with interest at the rate of 5 per cent per annum, compounded annually, on each premium from the date said premium is due by the terms of the policy: *Provided further*, That no term insurance shall be reinstated after July 2, 1926.

"SEC. 305. Where any person has heretofore allowed his insurance to lapse while suffering from a compensable disability for which compensation was not collected and dies or has died, or becomes or has become permanently and totally disabled and at the time of such death or permanent total disability was or is entitled to compensation remaining uncollected, then and in that event so much of his insurance as said uncollected compensation, computed in all cases at the rate provided by section 302 of the war risk insurance act as amended December 24, 1919, would purchase if applied as premiums when due, shall not be considered as lapsed; and the United States Veterans'

Bureau is hereby authorized and directed to pay to said soldier, or his beneficiaries, as the case may be, the amount of said insurance less the unpaid premiums and interest thereon at 5 per cent per annum compounded annually in installments as provided by law.

"SEC. 306. The bureau is authorized to make provision in accordance with regulations whereby the payment of premiums on yearly renewable term insurance and United States Government life insurance (converted insurance) on the due date thereof may be waived and the insurance may be deemed not to lapse in the cases of the following persons, to wit: (a) Those who are confined in a hospital under said bureau for a compensable disability during the period while they are so confined; (b) those who are rated as temporarily totally disabled by reason of any injury or disease entitling them to compensation during the period of such total disability and while they are so rated; (c) those who, while mentally incompetent and for whom no legal guardian had been or has been appointed, allowed or may allow their insurance to lapse while such rating is effective during the period for which they have been or hereafter may be so rated, or until a guardian has notified the bureau of his qualification, but not later than six months after appointment as guardian, the waiver in such cases to be made without application and retroactive when necessary: *Provided*, That such relief from payment of premiums on yearly renewable term insurance on the due date thereof shall be for full calendar months, beginning with the month in which said confinement to hospital, temporary total disability rating, or in cases of mental incompetents for whom no guardian has been appointed with the month in which such rating or mental incompetency began or begins and ending with that month during the half or major fraction of which the person is confined in hospital is rated as temporarily totally disabled or had or has no legal guardian while rated as mentally incompetent or until a guardian has notified the bureau of his qualification, but not later than six months after appointment as guardian: *Provided further*, That all premiums the payment of which when due is waived as above provided shall bear interest at the rate of 5 per cent per annum, compounded annually from the due date of each premium, and if not paid by the insured shall be deducted from the insurance in any settlement thereunder or when the same matures either because of permanent total disability or death: *And provided further*, That in the event any lien or other indebtedness established by this act exists against any policy of converted insurance in excess of the then cash surrender value thereof at the time of the termination of such policy of converted insurance for any reason other than by death or total permanent disability the director is hereby authorized to transfer and pay from the military or naval insurance appropriation to the United States Government life insurance fund a sum equal to the amount such lien or indebtedness exceeds the then cash surrender value.

"SEC. 307. All such policies of insurance heretofore or hereafter issued shall be incontestable after the insurance has been in force six months from the date of issuance or reinstatement, except for fraud or nonpayment of premiums and subject to the provisions of section 23: *Provided*, That a letter mailed by the bureau to the insured at his last known address informing him of the validity of his insurance shall be deemed a contest within the meaning of this section: *Provided further*, That this section shall be deemed to be in effect as of April 6, 1917.

"TITLE IV

"SEC. 400. That every person who was enlisted, enrolled, drafted, inducted, or appointed in the military or naval forces of the United States, including members of training camps authorized by law, and who has resigned or has been discharged or furloughed therefrom, having a disability incurred, increased, or aggravated after April 6, 1917, and before July 2, 1921, in the military or naval service and not the result of his own willful misconduct, while a member of such forces, or later developing a disability traceable in the opinion of the director to service during said period with such forces, and not the result of his own willful misconduct, and who, in the opinion of the director, is in need of vocational rehabilitation to overcome the handicap of such disability, shall be furnished by the bureau, where vocational rehabilitation is feasible, such course of vocational rehabilitation as the bureau shall prescribe and provide: *Provided*, That nothing in this section shall operate to terminate any course of vocational training heretofore prescribed and actually commenced under the vocational rehabilitation act as originally enacted and subsequently amended where such course was actually commenced prior to the approval of this act.

"SEC. 401. The bureau shall have the power, and it shall be its duty until June 30, 1926, to furnish the persons included in section 400 hereof suitable courses of vocational rehabilitation, to be prescribed and provided by the bureau; and every person electing to follow such a course of vocational rehabilitation shall, while following the same, be paid by the bureau monthly or semimonthly as the director may prescribe such sum as in the judgment of the director is necessary for his maintenance and support and for the maintenance and support of persons depending upon him, if any: *Provided, however*, That in no event shall the sum so paid such person while pursuing such course be more than $80 per month for a single man without dependents, or for a man with dependents $100 per month plus the following family allowances:

"(a) If there is a wife, but no child, $15.

"(b) If there is a wife and one child, $25, with $5 per month additional for each additional child.

"(c) If there is no wife, but one child, $10.

"(d) If there is no wife, but two children, $15, with $5 per month additional for each additional child.

"That the bureau may pay, subject to the conditions and limitations prescribed by this title, to all trainees undergoing training hereunder, residing where the cost of maintenance and support is above the average and comparatively high, in lieu of the monthly payments for maintenance and support prescribed by this title, such sum as in the judgment of the director is necessary for the trainee's maintenance and support and for the maintenance and support of persons dependent upon him, if any: *Provided, however*, That in no event shall the sum so paid such person while pursuing such course be more than $100 per month for a single man without dependents or for a man with dependents $120 per month, plus the several sums prescribed as family allowances under this section: *Provided further*, That payments for the support and maintenance of persons dependent upon any trainee of the bureau as provided herein may, in the discretion of the director, be paid either direct to such dependent or dependents or to the trainee upon whom they are dependent.

"SEC. 402. That until June 30, 1926, the courses of vocational training provided for under this act shall, as far as practicable, and under such conditions as the director may prescribe, be made available without cost for instruction for the benefit of any person who is disabled under circumstances entitling him, after discharge from the military or naval forces of the United States, to compensation under Title II hereof and who is not included in section 400 hereof.

"SEC. 403. That no person who has been declared eligible for training under the provisions of this title, for whom training has been prescribed, and who has been notified by the bureau to begin training, shall be eligible to the benefits of this title in the event of his failure to commence training within a reasonable time after notice has been sent such person by the bureau: *Provided further*, That, except when such failure is due, in the opinion of the director, to physical incapacity, such time shall not be longer than 12 months after notice shall have been given for persons declared eligible and notified to begin training: *And provided further*, That no training shall be furnished to any person under any of the provisions of this title unless such person shall actually commence such training on or before June 30, 1925.

"SEC. 404. The test of rehabilitation shall be employability, to be determined by the director. The allowance for maintenance and support provided by this title shall be payable for two months after the employability of the rehabilitated person is determined, and thereupon all duty and obligation of the United States toward such person with respect to his vocational rehabilitation shall cease and determine.

"SEC. 405. That vocational training provided by this act shall be granted to persons entitled under the provisions of said title only where application therefor has been made on or prior to June 30, 1923.

"SEC. 406. That no vocational training shall be granted or continued to any person whatsoever after June 30, 1926, and no training allowance shall thereafter be paid to any person.

"TITLE V.—PENALTIES

"SEC. 500. That payment to any attorney or agent for such assistance as may be required in the preparation and execution of the necessary papers in any application to the bureau shall not exceed $10 in any one case.

"Any person who shall, directly or indirectly, solicit, contract for, charge, or receive, or who shall attempt to solicit, contract for, charge, or receive, any fee or compensation, except as herein provided, shall be guilty of a misdemeanor, and for each and every offense shall be punishable by a fine of not more than $500 or by imprisonment at hard labor for not more than two years, or by both such fine and imprisonment: *Provided*, That the provisions of this section shall not apply

to professional services required in the prosecution of any action in any court of law.

"SEC. 501. That whoever in any claim for compensation, insurance, or maintenance and support allowance, or in any document required by this act, or by regulation made under this act, makes any sworn statement of a material fact knowing it to be false shall be guilty of perjury and shall be punished by a fine of not more than $5,000 or by imprisonment for not more than two years, or both.

"SEC. 502. That if any person entitled to payment of compensation, or maintenance and support allowance under this act, whose right to such payment under this act ceases upon the happening of any contingency, thereafter fraudulently accepts any such payment, he shall be punished by a fine of not more than $2,000 or by imprisonment for not more than one year, or both.

"SEC. 503. That whoever shall obtain or receive any money, check, compensation, or insurance under Titles II, III, or IV of this act without being entitled thereto, with intent to defraud the United States or any person in the military or naval forces of the United States, shall be punished by a fine of not more than $2,000 or by imprisonment for not more than one year, or both.

"SEC. 504. Any person who shall knowingly make or cause to be made, or conspire, combine, aid, or assist in, agree to, arrange for, or in any wise procure the making or presentation of a false or fraudulent affidavit, declaration, certificate, statement, voucher, or paper or writing purporting to be such, concerning any claim or the approval of any claim for compensation or the payment of any money, for himself or for any other person, under Title II hereof, shall forfeit all rights, claims, and benefits under such Title II, and in addition to any and all other penalties imposed by law shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not more than $1,000 or imprisonment for not more than one year, or by both such fine and imprisonment, for each such offense.

"TITLE VI.—MISCELLANEOUS PROVISIONS

"SEC. 600. The following acts are hereby repealed, subject to the limitations provided in section 602 of this title:

"(1) An act entitled 'An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department,' approved September 2, 1914.

"(2) An act entitled 'An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September 2, 1914,' approved March 3, 1917.

"(3) An act entitled 'An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September 2, 1914,' approved March 3, 1917.

"(4) An act entitled 'An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September 2, 1914, and for other purposes,' approved June 12, 1917.

"(5) An act entitled 'An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September 2, 1914, and for other purposes,' approved October 6, 1917; saving and excepting from repeal sections 313 and 314 of Article III of said act.

"(6) An act entitled 'An act to amend the war risk insurance act,' approved July 11, 1918.

"SEC. 601. That the following acts are hereby repealed. The sections of this codification herein applicable thereto shall be in force in lieu thereof, subject to the limitations contained in this title.

"(1) The war risk insurance act as amended.

"(2) The vocational rehabilitation act as amended.

"(3) The act entitled 'An act to establish a Veterans' Bureau and to improve the facilities and service of such bureau, and, further, to amend and modify the war risk insurance act.'

"SEC. 602. The repeal of the several acts as provided in sections 600 and 601 hereof shall not affect any act done or any right or liability accrued, or any suit commenced before the said repeal, but all such rights and liabilities under said acts shall continue and may be enforced in the same manner as if said repeal had not been made; nor shall said repeal in any manner affect the right to any office or change the term or tenure thereof.

"SEC. 603. All offenses committed and all penalties or forfeiture incurred under any law embraced in this codification prior to said repeal may be prosecuted and punished in the same manner and with the same effect as if said repeal had not been made.

"SEC. 604. All acts of limitation, whether applicable to civil causes and proceedings or to the prosecution of offenses embraced in this codification and covered by said repeal, shall not be affected thereby, but all suits, proceedings, or prosecutions, whether civil or criminal, for causes arising or acts done or committed prior to said repeal, may be commenced and prosecuted within the same time as if said repeal had not been made.

"SEC. 605. That if any clause, section, paragraph, or part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this act but shall be confined in its operation to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment has been rendered."

And the House agree to same.

ROYAL C. JOHNSON,
HOMER P. SNYDER,
A. L. BULWINKLE,
*Managers on the part of the House.*

DAVID A. REED,
REED SMOOT,
DAVID I. WALSH,
*Managers on the part of the Senate.*

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes on the House amendment to S. 2237, to consolidate, codify, revise, and reenact the laws affecting the establishment of the United States Veterans' Bureau and the administration of the war risk insurance act, as amended, and the vocational rehabilitation act, as amended, submit the following written statement explaining matters agreed upon by the conference committee and recommended in the text of the conference report:

The Senate bill provides a veterans' code, and for the codification of all the laws affecting the United States Veterans' Bureau, the administration of the war risk insurance act, as amended, and the vocational rehabilitation act, as amended. The managers on the part of the House accepted this codification with the insertion of many of the provisions of the House amendment.

The managers on the part of the Senate accepted the provision of the House bill providing for the filing with the House and Senate of a yearly report of the activities of the Veterans' Bureau.

The House provisions refusing Veterans' Bureau aid to conscientious objectors and certain classes of aliens were accepted.

The provisions of the House amendment referring to ex-service men suffering from tuberculosis, paresis, blindness, or constitutional lues were accepted with an amendment.

They accepted the presumptive clauses in the House amendment so far as tuberculosis is concerned, but the presumption is made rebuttable in the cases of other diseases enumerated in the House amendment. The presumptive clause carried in the House amendment was six years, in the Senate bill five years; the conference report extends the presumption to January 1, 1925.

The dependency allowance as agreed to by the conferees is $30 per month to widows, $10 per month for the first child, and $6 per month for each additional child. This is an increase of $5 per month for widows and at least $1 per month for each additional child.

The managers on the part of the Senate accepted the House provisions with reference to burial of ex-service men.

The managers on the part of the House accepted the Senate provision providing for the rating of tubercular patients, with the provision that such rating should not be decreased within a period of six months, and such patients should be rated as temporarily totally disabled instead of permanently disabled.

In the cases of men discharged from hospitals in certain tubercular cases where the disease is not arrested the compensation is given for three years on a temporary total instead of a permanent total basis.

An emergency treatment of veterans is authorized when Government facilities are not available.

The Senate accepted the vocational training provision of the House amendment.

The managers on the part of the House receded from the provision of the Senate bill making embezzlement by a guardian a Federal offense, and accepted the Senate amendment authorizing the director to withhold moneys from a guardian who did not make certain required reports to the director of the Veterans' Bureau.

ROYAL C. JOHNSON,
HOMER P. SNYDER,
A. L. BULWINKLE,
*Managers on the part of the House.*

Mr. JOHNSON of South Dakota. Mr. Speaker, the Senate and the House proceeded on entirely different theories in preparing this bill, affecting the Veterans' Bureau and the men who come under the jurisdiction of that bureau. The Senate proceeded on the theory of codifying the law. The House proceeded on the theory of amending the existing law and inserting such provisions as it thought were necessary to take care of men. Therefore when this bill went to conference we had to decide first on the general policy. After considerable debate both policies were accepted, and the first part of this bill is a complete recodification of all the laws affecting the Veterans' Bureau, so that the men who receive compensation or hospitalization and the Members of Congress or anyone else who is interested can pick up this codification and there find all the laws on the subject. We have eliminated many provisions that have been inserted in the law since 1919. Then after this codifying was done practically every liberalizing provision of the House bill was accepted, although some of them were amended. Anyone who desires to refer to Report No. 763 on House bill 8860, and will turn to page 11, will find that many of the provisions of the House bill have been accepted.

Mr. LONGWORTH. This is a complete agreement, is it not?

Mr. JOHNSON of South Dakota. Yes; this is a complete agreement. And I should say at this time that in the way this bill was brought up, wherein we were compelled to strike out all of the provisions of the Senate bill except the enacting clause and insert the House bill, this report will be accepted as it stands or voted down. In other words, it is not subject to amendment.

The first change which we had in the House bill, giving the director authority to delegate some of his work, is accepted. We have made a very drastic change in section 2 of our bill, wherein we have accepted the Senate provision eliminating the Public Health Service from the Veterans' Bureau, and providing that all of its doctors now assigned shall be taken in by the Veterans' Bureau, and we have given the President authority to assign those doctors until such time as the Veterans' Committee of the House and the Senate committee can work out some other plan. In other words, those doctors will be taken over by the Veterans' Bureau.

We have made the files of the Veterans' Bureau confidential. Some Members of the House might think they would not have authority to go into those files; but if there is any patient of the Veterans' Bureau who desires any Member of the House or the Senate or anyone else to go into his case for him, all he has to do is to write a letter conferring that authority.

Mr. NEWTON of Minnesota. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of South Dakota. Yes.

Mr. NEWTON of Minnesota. There are times when it is necessary to look those files over, where you are not in a position to get the written authority of the claimant. A Member of the Congress can not be going down to the office on all of these files, and if he goes down there on a matter it may come up and then he must look up the files. I would like to know if the right would be refused under those circumstances?

Mr. JOHNSON of South Dakota. I think it would be refused, and I think it ought to be refused, unless he can show that he represents the claimant. In other words, you have there the military records of thousands of men. Each military record contains a chapter of some man's life history.

It contains the medical testimony that touches his life during the war and those records should not be open to inspection by everyone. However, I would say to the gentleman that I am absolutely satisfied that no Member of Congress will have any difficulty in securing anything he ought to secure there or any record or paper which any claimant would wish him to secure. I can give the gentleman no greater assurance than that.

Mr. NEWTON of Minnesota. The gentleman does not think that if a Member happens to be at the bureau on a case and it becomes material to look into the evidence on a certain phase of the case that unless he has a power of attorney, or something closely akin to it, that they are going to turn him down and not permit him to check up on that evidence?

Mr. JOHNSON of South Dakota. Would the gentleman like to have me tell him exactly what I think about that?

Mr. NEWTON of Minnesota. I would, because I think that is important in the consideration of this provision.

Mr. JOHNSON of South Dakota. If the gentleman from Minnesota, or any man like him in the House, went down to the Veterans' Bureau and said he was representing a certain soldier, naming him, and was trying to see that his case was considered, I feel sure that the Director of the Veterans' Bureau we have to-day, or any director we shall ever have, would not raise any question, because any Director of the Veterans' Bureau would know that the gentleman from Minnesota was authorized to make the statement. This provision was inserted only to prevent unauthorized persons from the inspection of records.

Mr. NEWTON of Minnesota. That might be all right if we had not had the experience we have had on other matters, where they have been extremely technical. I want to say to the gentleman, and I am sure the gentleman will agree with me, that if it had not been for the fact that a great number of Members of Congress have gone to the bureau, gone over the evidence and pointed out mistakes they have made, there would have been literally thousands of men who would not have had compensation or rehabilitation.

Mr. JOHNSON of South Dakota. I think, Mr. Speaker, the gentleman from Minnesota has stated an absolute fact, considering conditions with which we have both been familiar in our service in Congress since the close of the late war, but I am just as satisfied as that I am standing here that no Member of Congress will be refused this information, and I will say that if it were refused to a Member of Congress who was acting in a legitimate capacity, that the House and the Senate would control this law, and it would not take the committee of which I am chairman more than 35 minutes to report a bill correcting any such situation.

Mr. CHINDBLOM. Will the gentleman yield?

Mr. JOHNSON of South Dakota. Yes.

Mr. CHINDBLOM. Will not the gentleman concur in the opinion that a letter from an ex-service man, or from a member of his family, addressed to a Member of Congress, ought to be considered as authority, even under the provision now proposed?

Mr. JOHNSON of South Dakota. Unless that letter was written by a member of his family for the purpose of interfering in some civil suit; then I would say no.

Mr. CHINDBLOM. Certainly. The gentleman's modification is absolutely correct.

Mr. SNELL. Will the gentleman yield?

Mr. JOHNSON of South Dakota. Yes.

Mr. SNELL. Will the gentleman please explain the change in the rating of tubercular patients, and what the provision is for pay, and so forth, after three years? That seems to be important.

Mr. JOHNSON of South Dakota. I will say to the gentleman that I will come to that in a moment, because that is the only controversial matter.

We have decentralized these offices so that there will be no difference between those offices and regional offices, and that will eliminate much of the red tape.

We have authorized the director of the bureau to secure legal opinions from the Attorney General.

We have taken care—I think, by a very proper amendment—of cases of blindness, of paralysis, of paresis, and men afflicted with constitutional lues, the latter only during the time they are in a hospital, which restricts to some extent the House bill, but the members of the conference committee on the part of the House thought perhaps that was a wise restriction.

We have opened the door for the hospitalization of all service men of all wars, but adopted the House provision giving preference to those men who are financially unable to pay for their own hospitalization.

Mr. HASTINGS. Will the gentleman yield?

Mr. JOHNSON of South Dakota. Yes.

Mr. HASTINGS. But if there are sufficient accommodations all will be accepted?

Mr. JOHNSON of South Dakota. Yes. We are not going to build new hospitals in order to take care of men not disabled in time of war.

Mr. HASTINGS. But if there are sufficient accommodations all will be accepted?

Mr. JOHNSON of South Dakota. Yes. All men will be accepted up to the limit of the accommodations we have.

Mr. HASTINGS. While I am on my feet, as I understand, this presumptive period——

Mr. JOHNSON of South Dakota. As I said to the gentleman from New York [Mr. SNELL], I am coming to that in a moment. We have put in many provisions that are in both the House and Senate bills, of which there was no disagreement, and I shall not discuss them.

There has never been any opposition to those provisions. For instance, overpayments were made to some of the dependents and to some of the men, through no fault of their own. They do not have a dollar in the world; we have collected all we can collect, and we have simply stricken those out and started in anew.

We have given the director the power to make investigations throughout the United States. In the Senate bill there was a provision to authorize the director to empower people to drag people in and administer oaths. The House conferees thought that was a sort of informal grand jury. We have enough grand juries in the United States without permitting the director, whoever he happens to be, to appoint some one to go out, bring men in, administer oaths. The Senate receded, and we have eliminated that.

We have taken care of the National Guard, who were discriminated against as compared with the men who came in under the draft act.

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. JOHNSON of South Dakota. Yes.

Mr. NEWTON of Minnesota. Did they change the House provision in any way in that respect?

Mr. JOHNSON of South Dakota. I do not think so. It is exactly the same provision.

Mr. NEWTON of Minnesota. It will not take care of a situation out in Minnesota which I think in justice should be taken care of.

Mr. JOHNSON of South Dakota. It will not take care of every situation, I know, but we would have been compelled to have gone outside of both bills if we had put in a provision to cover that.

We come now to the matter of the presumptive period. Instead of accepting the Senate provision of a conclusive presumption period of five years or the House provision of six years, we made it practically five years and seven months, so that every man will have until January 1, 1925, to come in under this law.

And I want to say right at this time that we have taken in men where there is no legal testimony in the world will show they contracted some of these diseases in the service, and the rule ought to be laid down right now that this conclusive presumptive period is over with reference to any action of Congress, because a man who does not show he has contracted this disease in time of service by five years and seven months after the war is over can not prove after that time that the diseases have been received in the service.

Mr. SNELL. That means that in the case of any man, up to the 1st day of next January, who has any one of these diseases, there is a presumption that the disease has arisen out of service in the war.

Mr. JOHNSON of South Dakota. Any of the enumerated diseases.

Mr. SNELL. Yes.

Mr. MAPES. It is conclusive, is it not?

Mr. JOHNSON of South Dakota. I will come to that point. It is conclusive with reference to tuberculosis. It is not conclusive with reference to the neuropsychiatric cases and the other cases, and why should it be? A man to-morrow, if we should make this conclusive, might be kicked by a horse and become a neuropsychiatric, and yet, until January 1, 1925, he could show that it came from war service.

Mr. SNELL. That is the point I wanted to bring out.

Mr. JOHNSON of South Dakota. And we have inserted in this bill a provision that upon clear and convincing evidence the Government may rebut that presumption, and that ought to be in the bill. Suppose a man is run over by an automobile to-morrow and becomes a mental case, he should not be able to come in and say he secured his disability in the Argonne. Nobody can successfully argue that side of the case.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. JOHNSON of South Dakota. Yes.

Mr. LAGUARDIA. But the law makes it clear, does it not, that the acceptance of enlistment in the Army is presumption that the man was in good physical condition at that time?

Mr. JOHNSON of South Dakota. Oh, certainly. That naturally goes with this presumption.

Mr. CHINDBLOM. And an aggravation of a latent condition does not bar him from these benefits.

Mr. JOHNSON of South Dakota. No; aggravation is considered as much as the original diseases in this conference report.

Mr. LAGUARDIA. If the gentleman will yield, suppose after January 1, 1925, there is a case of a man who was wounded and the results from that wound cause him to be incapacitated, would he not then be entitled to compensation?

Mr. JOHNSON of South Dakota. Absolutely.

Mr. LAGUARDIA. Only the burden of proof would be upon him.

Mr. JOHNSON of South Dakota. Yes; absolutely.

We come now to features of this report that are rather controversial in the minds of men in reference to these tubercular cases.

The House provision provided that a man who, under certain conditions with active tuberculosis, wanted to get out of the hospital could receive for three years permanent total rating. Under that construction it might very well be possible he could collect his insurance. Every man who has active tuberculosis we want in a hospital. Some of these men who are in the hospitals say they want to get out. As a matter of fact, this committee, consisting of many men of combat units, are insistent upon the belief that these men should be in the hospitals until they are cured.

If under certain conditions they can not be cured and they are allowed to leave the hospital, we have given them a temporary total rating for three years, and that treats the tubercular man just the same as every other man in the United States. They have been trying to get a preference. I am just as sorry for them as I am for any other class of men, but why should we prefer the man with tuberculosis over the man who contracted Bright's disease or diabetes in the Army, and there are many of them? There is another class of men who secured the enactment in the Senate of the so-called Shields amendment, which gave the man who is released from a hospital as cured a permanent rating for three years, and then a permanent rating for life of not less than $50 a month. If you are going to do this for the tubercular patient, you must do it for every other man.

This must have been adopted on two theories—one is that Congress is never going to be in session again and therefore could not enact any legislation affecting disabled men, and the other that a man with tuberculosis can never possibly be cured, although he is discharged from the hospital as cured. The conference committee did not accept either or both of those two theories. This Congress will be in session, this Veterans' Committee will run, and these men are going to be treated with every consideration that can be given them. This bill adds to the burden of the Government $35,000,000 on top of what we are doing now, and I say without hesitation that it will satisfy the disabled men who do not want to be preferred over some other class of service men. I think that answers the question.

Mr. SNYDER. Suppose you state what this does for those men.

Mr. JOHNSON of South Dakota. For those men who have their cases arrested and are cured of tuberculosis, we give them full compensation for six months to start again in life. If a man is discharged from the hospital because he can not be cured, we give him for three years total temporary disability. Now we have taken care of the blind men—raised them from $100 to $150. For the man who has lost an arm or a leg and also blind, we give him $200.

Mr. DYER. Will the gentleman yield?

Mr. JOHNSON of South Dakota. I will.

Mr. DYER. Is there anything in this legislation that changes the authority of the Chief of the Medical Division in charge?

Mr. JOHNSON of South Dakota. It is not changed except as law is codified and liberalized.

Mr. DYER. It is understood that it is the intention of Congress to liberalize it?

Mr. JOHNSON of South Dakota. Absolutely.

Mr. DYER. The man who had been there previously was autocratic and very unreasonable, but he has been transferred and given a very good berth, getting a bigger salary, I think—$6,500, with allowances.

Mr. JOHNSON of South Dakota. It was our intention to liberalize the law. I have no brief for the director, but the director has been so busy coming before our committee and before the Senate investigating committee and the Senate committee considering this bill that I do not see how he has had a chance to draw his breath. After Saturday he will have a chance to go into some other things besides appearing before committees. I hardly know the man, but I think he ought to be given a chance. There is no politics in it.

Mr. DYER. I was not making reference to the director but to the man who had been chief surgeon for years, but he is out now and in another office.

Mr. JOHNSON of South Dakota. I will say to the gentleman that in my opinion the director of the bureau could well consider making drastic changes in the personnel, but he has not had a chance yet to do it. May I add that these matters have been brought to his attention?

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. JOHNSON of South Dakota. I will.

Mr. NEWTON of Minnesota. In relation to the recodification, is there anything in the new bill pertaining to the central board of appeals?

Mr. JOHNSON of South Dakota. Nothing.

Mr. NEWTON of Minnesota. I want to make this observation: It has been my opinion from personal contact with them that they are more intent upon hunting out technicalities whereby they can sustain themselves and sustain the bureau than they are in doing justice to the claimants. I think one of the first things the director ought to do this summer is to make some sort of change in relation to the central board of appeals.

Mr. JOHNSON of South Dakota. I think the director will read the RECORD and consider what changes should be made.

Mr. VESTAL. Will the gentleman yield?

Mr. JOHNSON of South Dakota. I will.

Mr. VESTAL. Take the tubercular patient that is discharged from the hospital with the disease arrested. I understand the bill provides a temporary disability for six months. Suppose six months after his tubercular trouble breaks out and becomes active again?

Mr. JOHNSON of South Dakota. Under this bill there is a specific provision whereby he would be rerated and come back.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. JOHNSON of South Dakota. I yield.

Mr. LAGUARDIA. Is there any provision made in this bill for men who have been rehabilitated to secure employment?

Mr. JOHNSON of South Dakota. No; we give them two months' pay on going out and still pay compensation.

Mr. LAGUARDIA. Along the line of what the gentleman from Minnesota said, does not the gentleman believe that the veterans would receive more sympathetic treatment if they were to come in contact with their "buddies," men who had been in the service, rather than men who did not render any service?

Mr. JOHNSON of South Dakota. I think that is true.

Mr. LAGUARDIA. I have a case in mind, of a legal adviser, a man who never was admitted to the bar, only 30 years of age, not a veteran; and the gentleman can see that he would be antagonistic.

Mr. JOHNSON of South Dakota. I can see how that man ought to be removed and some one else put in his place.

Mr. CHINDBLOM. Will the gentleman yield?

Mr. JOHNSON of South Dakota. I yield for one more question.

Mr. CHINDBLOM. In order to do complete justice I want to dissent from any wholesale criticism of the central board of appeals. I have been turned down, but I think they have been trying to do right.

Mr. JOHNSON of South Dakota. Mr. Speaker, I desire to yield whatever time remains to the gentleman from New York [Mr. SNYDER], a member of the conference committee.

The SPEAKER. The gentleman has 21 minutes remaining.

Mr. SNYDER. Mr. Speaker and gentlemen, it is not my desire or purpose to take more than two or three minutes of your time as I appreciate the necessity of hurrying everything along at this period. I just want to say that the reorganization and the codifying of these laws and modifying the activities of this bureau and taking care of the interests of the men has been a tremendous work and the committee, under the leadership of its distinguished chairman, who is, himself, an ex-service man, has been more assiduously at work during the period than any other committee on which I ever served. We worked with an eye single to one purpose, and that purpose was to treat with full justice every single man or woman who served in any capacity in the Great War, and I believe that upon careful consideration by the Members of this House of the final result of the work and the work of the conferees you will agree that it is a splendid piece of legislation and one that will give entire satisfaction not only to those who are benefited by it but also to the people of this country who are interested in the disabled. At the same time the Treasury of the United States has been carefully protected, and since both sides of the House have dealt with the conference report in detail, I will simply finish my statement by saying that I am proud to have had a part in the making of this legislation, and that I did all that I could do with the ability that I have to bring about this very satisfactory result.

Mr. TILSON. Will the gentleman yield?

Mr. SNYDER. Yes; I yield.

Mr. TILSON. We all agree that everything possible should be done that no worthy veteran should fail to receive not only justice but generosity from this Government in his treatment by the Veterans' Bureau. There is one thing that I would like to ask the gentleman and that is the matter of those few unworthy ones who to the disgrace of their worthy comrades faked the Government and in that particular brought discredit upon their comrades. I desire to ask whether this bill has looked out so far as it can to safeguard not only the interests of the Government, but to safeguard the good name of those men who have worthily served their country?

Mr. SNYDER. I am very pleased the gentleman brought that up because this bill distinctly points out those who are undeserving, particularly those who failed to put on the uniform when called, and disqualifies them from any benefits of this act in any way, shape, or form. That is the very thing in mind I think the gentleman has, to protect the good name and patriotism and loyalty of those who were loyal, and no man, under this act, who failed to do his duty can receive any benefits from its enactment.

Mr. KINDRED. Will the gentleman yield?

Mr. SNYDER. I will yield to the gentleman from New York.

Mr. KINDRED. I want to ask my colleague if the conferees have agreed to give the same privilege to those suffering from neuropsychiatric diseases as they have given to those suffering from tuberculosis? I consider it just as important to give the privilege of making application for compensation within six years from the date of honorable discharge of neuropsychiatric patients as well as tubercular patients.

Mr. SNYDER. I will say to the gentleman that there is a distinction made between tubercular and neuropsychiatric cases. The tubercular patient is conclusively assumed to have contracted his disability in the service or to have had it aggravated since then, and he is enabled to come in under this act up to January 31, 1925. In the case of a neuropsychiatric he must prove the connection of his disability with the service.

Mr. KINDRED. Does the bill contain what I consider a most important and just provision with regard to those who have what is known as luetic infection? Does the bill provide for that?

Mr. SNYDER. To some extent. They must prove their cases the same as the neuropsychiatric, but they are taken into the hospital and treated there and compensated while in the hospital.

Mr. KINDRED. One question more. Is the burden of proof with regard to the nonexistence of this infection on the applicant himself?

Mr. SNYDER. We have reserved the right to the Government in this bill to rebut the testimony.

Mr. KINDRED. I suppose there is nothing else but to take the bill as it is?

Mr. SNYDER. Yes; and it will be perfectly satisfactory to the men.

Mr. WEFALD. Mr. Speaker, will the gentleman yield?

Mr. SNYDER. Yes.

Mr. WEFALD. In that connection, in view of the question asked by the gentleman from Connecticut [Mr. TILSON] and the answer given, does this bill take care of all drafted men?

Mr. SNYDER. Yes; it takes care of all drafted men who qualified and saw service.

Mr. WEFALD. I thank the gentleman.

Mr. CHINDBLOM. Mr. Speaker, will the gentleman yield?

Mr. SNYDER. Yes.

Mr. CHINDBLOM. The gentleman from Connecticut referred to cases where, unfortunately, men sought to defraud the Government by false claims under the act. Of course, there are laws under which anyone doing such a thing can be prosecuted?

Mr. SNYDER. Certainly.

I yield back the balance of my time, Mr. Speaker, and I thank the House.

Mr. JOHNSON of South Dakota. Mr. Speaker, I yield such time as he may desire to the gentleman from Michigan [Mr. CRAMTON].

Mr. CRAMTON. I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER pro tempore. Is there objection to the gentleman's request?

There was no objection.

Mr. CRAMTON. Mr. Speaker, in this connection I think it is proper to call attention of the Nation to what ex-service men are doing in behalf of disabled ex-service men and their dependents. The pending legislation, which is about to go to the President for his signature, means much to disabled men suffering from the results of their service for our country in the World War. It will make less rough the pathway of life for many a veteran. Many times will it enable the United States to assume, as it ought to assume, but in cases where it has not heretofore been legally possible, financial responsibility for hospitalization

and treatment of the wounded and diseased, as well as their maintenance and the maintenance of their dependents. This legislation has had cordial support from the American Legion and other organizations of former service men, and to their diligence in looking out for the interests of their stricken members its passage is in no small part due. It is to be noted, however, that one service organization, the Service Men's Anti-Bonus League, whose propaganda the past year has so reeked with sympathy for the disabled, is declared by the committee in charge of this legislation to have given no attention to this legislation and to have manifested no interest in, and exerted no influence for any legislation pending before Congress for relief of the disabled. But the Legion and other bona fide service organizations, while they have urged the bonus, have labored for more hospitals and better hospitals, and $8,000,000 of authorizations by this Congress have resulted, besides the authority to sell the old marine hospital and site in Detroit and build a new hospital on a more suitable site. They have labored for more equitable relief legislation, and this law results, which means so much. And with the presentation of concrete proposals and well-thought-out legislation for the better care of the disabled they have found Congress always ready to lend an attentive ear to their pleas and to do what ought to be done for the disabled.

The World War left upon our Nation burdens that must be borne, responsibilities that must be met. It was because I had seen the American service man in action, had seen him under fire of the enemy perform without a murmur his fullest responsibility, had seen him in completest generosity of courage lay down his very life for the common good—it was because I had seen such things that I supported the adjusted compensation measure from its first appearance in this House until it became a law. I would not even permit "party regularity" to overcome the regularity of my conscience, which tells me the Nation could do no less than grant that evidence of its appreciation of services beyond price, given without thought of payment. Some one has defined generosity as "a lively sense of favors to be received." That is not a suitable language for a democracy. This democracy will perpetuate itself so long as its people are willing, in war or in peace, to sacrifice freely for the common good. But the freer the spirit of sacrifice the readier the response in emergency, the more appreciative should be the democracy, and the more certain should be the acknowledgment of the service performed.

America's burdens from the World War are therefore to be borne and should be borne cheerfully. Our desire should be to seek out burdens justly to be met rather than to allow unmet obligations to hound our footsteps in the great highway of national life. America will accordingly approve heartily the whole program enacted by this Congress for veteran relief.

Especially notable is the spirit of the service men themselves. Not only are they conspicuous in securing governmental action for protection of the interests of their disabled fellows, but they are assuming many responsibilities themselves, assuming burdens the Government might very well carry, but which they feel can be better met by their own efforts. This is notably true in connection with the care for the orphans of the service men.

The first Children's Billet of the American Legion was formally dedicated at Otter Lake, Lapeer County, in the district I have the honor to represent, Sunday, June 15. The Legion expression of the genesis of this institution, the first of its kind in the United States, is, in the words of Mark McKee, the most active spirit in this movement:

> John Doughboy came back from the war apparently quite well, but really with a touch of gas in his lungs. The girl who had smiled good-by as he marched away was waiting. Soon they were married, and John went back to his job.
>
> That happened thousands of times. All went well until a cluster of tuberculosis germs found their way to that diseased spot in John Doughboy's lungs. And then everything went wrong.
>
> Maybe John died. Maybe he is in a hospital with the war still on in full force so far as he is concerned. In either case there is very likely to be a child or two.
>
> What will the Nation do for these war orphans—surely the most helpless and tragic figures of the whole war?
>
> Will it leave the mother to fight the uneven battle alone? Will it forget the promises of justice and everlasting gratitude which it made John Doughboy as he left for camp?
>
> Will the heroism and sacrifice of the father be repaid by sentencing these children to the dreary routine and semipauperism of an orphanage or "institution"?
>
> The American Legion says no! The Legion summons with it the patriotic and unselfish public in a fight for a better way.

Already this program of practical aid is under way. At Otter Lake, one of Michigan's myriad inland lakes, there has been opened the first unit of the Children's Billet—a home, not an "institution." It is to be a truly and sure-enough home for those boys and girls whose daddies are dead or incapacitated because of what they did in America's greatest war. The site was originally chosen by the Michigan department of the American Legion, which started the work and for a time had it under operation. Then the outstanding merit of this work caught the attention of the National Legion, and it asked Michigan to turn the unit over as the first step in a country-wide program. This has been done, and all the work is now officially under the direction of the national children's welfare committee of the American Legion.

The ideal back of this movement is that the home shall be erected as a living memorial to the men who gave their lives or their soundness of body to their country.

Instead of useless marble or bronze this memorial is to be built of the future hopes and careers of war-orphaned children. It is the obligation of the American people to the men who died or were maimed for them. It is the salute of legionnaires to their comrades who have gone west.

Fortunately for the physical welfare of the children, Otter Lake furnishes every opportunity for happy outdoor play. Food is fresh from the countryside and so economical that the most plentiful and scientific diet is costing not to exceed 35 cents a day. The sleeping accommodations are on an especially designed and constructed porch overlooking the waters and wooded shores of the lake. In these conditions the training of the child in right habits of health is simplicity itself.

The 96-acre farm which surrounds the home has its important economic function. Large parts of it are available for cultivation, and these activities will have an important educational influence. On the farm are cows, horses, pigs, chickens, turkeys, geese, and ducks. On the farm itself a diversity of crops can be raised which will train those children who are interested in farming in a great variety of ways.

The home at Otter Lake is situated on the brow of a hill which directly overlooks the lake itself. Around about are about even portions of arable fields and open woods. About a half mile away are two more spring lakes. The country is all rolling in character and is the highest in altitude in this part of the State. With the 96-acre site now owned in fee there is every opportunity for future expansion.

The present development has been brought about partly by the activities of the legionnaires of Michigan, partly by a substantial appropriation of the Michigan Legislature, and lastly, and probably most important, by the national sponsorship and efforts of the national American Legion.

The future of the Otter Lake home must be based on a realization of the greatness of the task. The number of eligible children is very large. Already the existence of the home has become known and the demand for its benevolent aid is growing far, far beyond the possibilities of the present facilities.

Because of the plan of building small cottages, the expansion can be made gradually and economically without the danger of overbuilding or unwise expenditure.

The fact that all overhead expenditures are absorbed by the Legion itself guarantees that the contributions of donors will go directly to the purposes intended. Building materials and costs in Otter Lake are free from inflation.

Something of the magnitude of the task to which the legionnaires of the seventh district of Michigan so resolutely set themselves and in which the State and National organizations have now joined them is to be glimpsed from this statement of Garland W. Powell, director of the National Americanism Commission:

> Perhaps the greatest immediate need is represented in the problem of the war orphan. There are to-day more than 5,000 war waifs to be cared for, the lonely orphans of the mute glorious dead. Think of it! Innocent victims of war facing the black future of a childhood denied its birthrights of love and interest, standing forlornly in the shadows of an orphans' home, but one step removed from the grim stigma of the almshouse. The American Legion has said that this thing can not be. It has aroused itself to its finest fighting mood to save these children from the drabness of routine in orphan institutions. It has said that every one of these babies shall be found a home, shall receive its heritage of kindness and individual attention. It shall have a chance to develop personality and character and start even in life with more favored children, without the misfortune of being reared in an orphanage, with a fair chance in the race of life.

At the dedication of the Billet Sunday, June 15, 1924, National Commander John R. Quinn was not able to be present, but was represented by F. Ryan Duffy, of Fond du Lac, Wis.,

national first vice president. In his impressive address he said, in part:

Home life is the foundation on which the security of the Nation rests. Seventy-five per cent of the criminals to-day were deprived of home life in their childhood, and we must not let that condition exist for children of ex-service men. The Legion showed what they could do in battle, and now they are putting forth the same spirited effort to make this a real home for children of their buddies. We are proud of the opportunity Michigan has afforded us to share in this wonderful work, and the national organization is indebted to Michigan for showing the solution to this great problem of caring for the children of our unfortunate comrades.

Judge Ernest P. La Jole, of Detroit, youngest member of the circuit bench in Michigan, said, in part:

This is, indeed, a notable pilgrimage to a shrine dedicated to the children of our unfortunate comrades, and the movement challenges the best wishes of all who have the welfare of children at heart. There is nothing more patriotic than this opportunity to help these children and give them a real home environment. They deserve every opportunity that time, attention, and money can provide. Here there is no distinction between class or creed, only the molding of these little lives into true men and women, the building up and maintaining of true citizenship—this all accomplished without a suggestion of institutionalism. In this building we have essentially a shrine built to American childhood.

William Davis, of Washington, D. C., brother of the Secretary of Labor, stated that he had grown up with the Mooseheart institution, where 1,200 orphans are cared for, and predicted that the Legion home at Otter Lake would rival Mooseheart in time. He emphasized the importance of the home life of the child, stating that good children make good citizens, good citizens make a good country, and a good country meant the flag safe for everyone.

Mrs. W. H. Morgan, national chairman of child welfare, American Legion Auxiliary, and department president of Illinois, gave a most enthusiastic talk on good citizenship, and stated that the Children's Billet at Otter Lake was a monument to our soldier dead and proof that we had kept our promise to the departed soldiers and that they were not forgotten.

Mark McKee, chairman of the board of directors of the Billet, presided, and brief speeches were also made by Dr. O. G. Johnson, medical director and manager of the Billet; Joseph Gilles, commander of Larned Post, Detroit; Clarence Myers, of Caro, Mich, treasurer of the Billet; and Doctor Spawr, State commander of the Legion.

The dedication services were concluded with a flag drill by the children of the Billet and the singing of America by all present.

To the task of supplying the sinews of war with which these children will be assured the heritage of their childhood, the American Legion has summoned equally every legionnaire and all Americans who desire to voluntarily assume a share in the easiest of burdens—the care of children. This great work of the Legion is under the national children's welfare committee, whose officers are: Chairman, George A. Withers, Clay Center, Kans.; vice chairman and treasurer, Mark T. McKee, Mount Clemens, Mich.

In The Young Knight, John S. Arkright, the British poet, who wrote The Supreme Sacrifice, says:

> For love of those he leaves behind,
> For all that home and honor mean,
> For the long centuries that have been
> And for the future of mankind—
>
> He lifts the cross, he draws the blade,
> He gives his manhood—scarce begun;
> God shield him till the set of sun
> On this the holiest, last crusade!

And with his passing with the setting sun, the holiest obligation left to us is the care and protection of his children. In the words of Edgar A. Guest, in his For Your Boy and Mine:

> They must be shielded well from woe and kept secure from care,
> And if we could, upon our backs, their burdens we would bear.

Mr. CRAMTON. I yield back the remainder of my time.

Mr. JOHNSON of South Dakota. Mr. Speaker, I yield such time as he may desire to the gentleman from New York [Mr. CULLEN].

Mr. CULLEN. Mr. Speaker, if there is nobody else on our side who wants time on this bill I will say that we are ready to vote on it. I was going to suggest to the gentleman from South Dakota that he might ask the privilege for Members wishing to do so that they may have five days in which to extend their remarks in the RECORD.

Mr. JOHNSON of South Dakota. At the time we secured the passage of this bill I made a request that was granted to the effect that Members should have the privilege of extending their remarks for five legislative days.

Mr. MADDEN. Permission was granted yesterday to everybody to extend their remarks within 10 days.

Mr. JOHNSON of South Dakota. With that understanding, Mr. Speaker, then, I will not make that unanimous-consent request.

The SPEAKER. The question is on agreeing to the conference report.

The conference report was agreed to.

POSTAL SALARY INCREASE

Mr. GRIEST. Mr. Speaker, I call up the conference report on the bill S. 1898, the postal salary bill, and ask for its immediate consideration. I ask unanimous consent that the statement be read in lieu of the report.

The SPEAKER. The gentleman from Pennsylvania calls up the conference report on the bill S. 1898 and asks that the statement be read in lieu of the report. Is there objection?

There was no objection.

[For text of conference report see page 10613, Senate proceedings of June 5, 1924.]

The Clerk read the statement, as follows:

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes on the House amendment to S. 1898 to readjust the compensation of postmasters and reclassify and readjust the salaries and compensation of employees in the Postal Service submit the following written statement explaining matters agreed upon by the conference committee and recommended in the text of the conference report.

The House disagreed to the entire text of the Senate bill and offered its bill as an amendment thereto. The Senate disagreed to the House amendment and voted for a conference. The House agreed to the conference. The conferees, therefore, found the entire subject readjusting the compensation of postmasters and reclassifying and readjusting the salaries and compensation of employees in the Postal Service open, and the bill is now offered with an amendment which strikes out the House amendment and offers in lieu thereof the text printed in the conference report.

CLERK HIRE—THIRD-CLASS POST OFFICES

In the allowance for clerk hire in third-class post offices the Senate recedes from its disagreement to the House amendment and agrees to the same with an amendment striking out the words "exceeded or" where they occur in the proviso giving the Postmaster General authority to modify this allowance, and striking out in the same proviso the numeral "10" before the words "per centum," and inserting in lieu thereof the numeral "25."

This agreement of the conferees makes the clerk hire in third-class post offices statutory, except that the Postmaster General is given discretion to reduce the allowance not more than 25 per cent to meet the varying needs of the service.

ALLOWANCES FOR FOURTH-CLASS POSTMASTERS

The Senate recedes from its disagreement to the amendment of the House.

Under this agreement of the conferees the salaries of fourth-class postmasters are increased approximately 10 per cent.

SALARIES AND ALLOWANCES OF POST-OFFICE INSPECTORS

In section 2, under salaries of post-office inspectors, the House recedes from its amendment providing that inspectors shall be promoted successively to grade 4 at the beginning of the quarter following a year's satisfactory service in the next lower grade. The House also recedes from its amendment striking out the words "and not to exceed 35 per cent of the force to grade 6 for meritorious service after not less than one year's service in grade 5," and also recedes from its amendment adding the following, "and to grade 5 at the beginning of the quarter following a year's meritorious service in grade 4, and not to exceed 35 per cent of the force to grade 6 for specially meritorious service after not less than one year's service in grade 5."

The Senate recedes from its disagreement to the amendment of the House fixing travel allowances of inspectors and supervisory employees of the Railway Mail Service and post offices.

This agreement of the conferees restores this allowance as provided for under existing law and involves no increase.

CLERKS AT DIVISION HEADQUARTERS

The House recedes from its amendment fixing the salary of chief clerk at each division headquarters at $2,900.

This agreement of the conferees restores the Senate provision giving chief clerks at division headquarters $3,000.

The Senate recedes from its disagreement to the amendment of the House providing that carriers in the City Delivery Service may be transferred from post offices at which division headquarters of post-office inspectors are located to the position of clerk in such division headquarters.

CLERKS AND CITY LETTER CARRIERS

The Senate recedes from its disagreement to the House amendment providing that in all special clerk promotions the senior competent employee shall have preference.

The House recedes from its amendment which strikes out of the Senate bill the language "and it is not practicable to employ substitutes," and insert the words "that whenever practicable, in case of emergency or otherwise, a substitute is available, the postmaster is prohibited from employing a regular clerk, special clerk, or letter carrier overtime."

The House recedes from its amendments allowing compensatory time for employment on Sundays and holidays during the Christmas and New Year season under this title and wherever else such provisions or exceptions occur in the bill.

WATCHMEN, MESSENGERS, AND LABORERS

The Senate recedes from its disagreement to the amendment of the House.

Under this agreement of the conferees the salaries of watchmen, messengers, and laborers are fixed at $1,500 for the first grade and $1,600 for the second grade.

MOTOR-VEHICLE SERVICE

The Senate recedes from its disagreement to the amendment of the House fixing the salaries of special mechanics.

This agreement of the conferees fixes salaries of $2,100, $2,200, and $2,300 for special mechanics.

The Senate recedes from its disagreement to the amendment of the House fixing the salaries for garage-men drivers.

This agreement of the conferees fixes the salaries at $1,550 for the first grade and $1,650 for the second grade.

RAILWAY MAIL SERVICE

The Senate recedes from its disagreement to the amendment of the House fixing the salaries of assistant superintendents at large at $3,600.

The House recedes from its amendment providing that postal clerks be divided into six grades, with a salary of $2,700 for grade 6.

This amendment restores the Senate provision dividing postal clerks into seven grades, fixing the salary of grade 6 at $2,600 and grade 7 at $2,700.

LABORERS IN THE RAILWAY MAIL SERVICE

The Senate recedes from its disagreement to the amendment of the House. This fixes the salaries of these laborers as follows:

Grade 1, $1,500.

Grade 2, $1,600.

SUBSTITUTE RAILWAY POSTAL CLERKS

The House recedes from its amendment.

This agreement of the conferees fixes these salaries at $1,850 per annum.

ORIGINAL APPOINTMENTS OF SUBSTITUTE POSTAL CLERKS

The Senate recedes from its disagreement to the House amendment.

This agreement of the conferees fixes the time for promotions following a total satisfactory service of 306 days instead of a year's satisfactory service as provided in the Senate amendment.

TRAVEL ALLOWANCE IN LIEU OF ACTUAL EXPENSES OF RAILWAY POSTAL CLERKS

The House recedes from its amendment which provides for allowance after eight hours from time of beginning initial run.

This agreement of the conferees makes the time 10 hours from the beginning of initial run.

TERMINAL RAILWAY POST OFFICES

The Senate recedes from its disagreement to the amendment of the House.

This agreement of the conferees provides that those terminals having less than 20 employees shall be assigned to class A, and those having 20 or more employees shall be assigned to class B.

The Senate also recedes from its disagreement to the amendment of the House providing that clerks in class A shall be promoted successively to grade 4, and strikes out the words "distributors to grade 4."

The Senate also recedes from its disagreement to the amendment of the House that clerks in class B terminals shall be promoted successively to grade 5 and strikes out the words "distributors to grade 4 and clerks in charge of crews within a tour to grade 5."

The Senate also recedes from its disagreement to the amendment of the House striking out the following paragraph:

"In terminals having more than 75 employees there may be a clerk in charge of the entire terminal of grade 7."

TRANSFER OFFICES

The Senate recedes from its disagreement to the amendment of the House providing that clerks in class A shall be promoted successively to grade 4, and striking out the words "distributors to grade 4"; also inserting, after the word "charge," the words "of tours"; also providing that clerks in class B shall be promoted successively to grade 5, and striking out the words "distributors to grade 4, clerks in charge of crews to grade 5."

CLERKS ASSIGNED TO OFFICE OF DIVISION SUPERINTENDENT OR CHIEF CLERK

The House recedes from its amendment which provides that in the office of division superintendent four clerks shall be promoted to grade 5, and in the office of chief clerk one clerk shall be promoted to grade 5.

This agreement of the conferees changes the word "shall" in both instances to "may."

CREDIT FOR ROAD DUTY

The Senate recedes from its disagreement to the amendment of the House providing that clerks assigned to road duty shall be credited with full time for delay to trains equal to a period of time between scheduled arrival and actual arrival of trains at destination of run.

VILLAGE DELIVERY SERVICE

The Senate recedes from its disagreement to the amendment of the House with an amendment fixing the salaries of carriers at $1,150 to $1,350.

SUBSTITUTE VILLAGE CARRIERS

The Senate recedes from its disagreement to the amendment of the House.

This agreement of the conferees fixes the hourly pay of these employees at 50 cents.

ANNUAL AND SICK LEAVE

The Senate recedes from its disagreement to the amendment of the House with an amendment as follows: Strike out the words "physician's certificate" and insert in this paragraph after the word "illness," the words "in accordance with regulations to be prescribed by the Postmaster General," and strike out the words "and if more than two days, the application therefor shall be accompanied by a."

This agreement of the conferees makes the paragraph read: "That sick leave shall be granted only upon satisfactory evidence of illness in accordance with regulations to be prescribed by the Postmaster General."

NIGHTTIME DIFFERENTIAL

The House recedes from its amendment.

This eliminates the provision for a nighttime differential.

MILITARY CREDIT

The House recedes from its amendment.

This agreement of the conferees restores the existing law.

PUBLICITY OF CONGRESSIONAL ELECTION CAMPAIGN CONTRIBUTIONS AND EXPENDITURES

The Senate recedes from its disagreement to the amendment of the House, with an amendment changing the language of subdivision (c) of section 102 of Title II, defining the term "political committee" by striking out this subdivision and inserting a new subdivision, as follows:

(c) The term "political committee" includes any committee, association, or organization, which accepts contributions or makes expenditures for the purpose of influencing or attempting to influence the election of candidates or presidential and vice presidential electors (1) in two or more States, or (2) whether or not in more than one State if such committee, association, or organization—other than a duly organized State or local committee of a political party—is a branch or subsidiary of a national committee, association, or organization.

W. W. GRIEST,
CALVIN D. PAIGE,
THOS. M. BELL,
*Managers on the part of the House.*

Mr. GRIEST. Mr. Speaker, this is a unanimous report from the conferees. There were about 20 or more points of

difference between the House and Senate bills which the conferees settled very readily, including the elimination——

Mr. NEWTON of Minnesota. Mr. Speaker, it seems to me that on as important a matter as this we should have a quorum present to hear the statement, and I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Minnesota makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and seventy-three Members are present—not a quorum.

Mr. LONGWORTH. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, when the following Members failed to answer to their names:

| | | | |
|---|---|---|---|
| Aldrich | Drewry | Lilly | Reed, W. Va. |
| Anderson | Edmonds | Little | Robsion, Ky. |
| Bankhead | Free | Logan | Rogers, N. H. |
| Barkley | Geran | Lyon | Rosenbloom |
| Beck | Goldsborough | McKenzie | Rouse |
| Bland | Hammer | McKeown | Seger |
| Boies | Haugen | Magee, Pa. | Snyder |
| Britten | Howard, Okla. | Merritt | Spearing |
| Buckley | Hudspeth | Michaelson | Sproul, Kans. |
| Burtness | Hull, Morton D. | Morin | Sullivan |
| Burton | Humphreys | Mudd | Taylor, Tenn. |
| Byrnes, S. C. | Jost | Nelson, Me. | Ward, N. Y. |
| Campbell | Kahn | O'Brien | Ward, N. C. |
| Clark, Fla. | Kent | O'Connor, La. | Weaver |
| Curry | Kincheloe | Paige | Welsh |
| Davis, Minn. | King | Parker | White, Me. |
| Deal | Knutson | Peavey | Wood |
| Dominick | Kunz | Phillips | Woodrum |
| Doughton | Langley | Quayle | Wurzbach |
| Drane | Larson, Minn. | Reed, N. Y. | |

The SPEAKER. Three hundred and fifty-four Members have answered to their names, a quorum.

Mr. LONGWORTH. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The doors were opened.

Mr. GRIEST. Mr. Speaker, as I was about to say, this is a complete and unanimous report on the part of the conferees. There were about twenty or more points of difference between the House bill and the Senate bill, all of which were readily adjusted, including the elimination of the night differential item which, according to the department, would have cost us $12,000,000, and including also the elimination of the so-called Borah amendment and the adoption of the Cable amendment, as directed by the House.

The bill as it now stands, according to the figures of the department, or, rather, based on the figures of the department, is about $64,000,000 as against, according to the estimate of the department, $80,000,000 at the time the bill originally passed the House.

Mr. Speaker, I move the previous question on the adoption of the conference report.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the conference report.

Mr. GARRETT of Tennessee. Mr. Speaker, on that I ask for the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 361, nays 6, not voting 66, as follows:

YEAS—361

| Dominick | Knutson | Rogers, N. H. | |
| Doughton | Kunz | Rosenbloom | |

So the conference report was agreed to.

The Clerk announced the following pairs:

Until further notice:

Mr. Kahn with Mr. Clark of Florida.
Mr. White of Maine with Mr. Byrnes of South Carolina.
Mr. Ward of New York with Mr. Jost.
Mr. Anderson with Mr. Kunz.
Mr. Little with Mr. Lilly.
Mr. Mudd with Mr. Rogers of New Hampshire.
Mr. Cole of Ohio with Mr. Sullivan.
Mr. Mills with Mr. Hammer.
Mr. Welsh with Mr. Doughton.
Mr. Aldrich with Mr. Deal.
Mr. Free with Mr. Hill of Alabama.
Mr. Strong of Kansas with Mr. Spearing.
Mr. Rosenbloom with Mr. Weaver.
Mr. Fairfield with Mr. Drewry.
Mr. Britten with Mr. Dominick.
Mr. Merritt with Mr. Geran.
Mr. Curry with Mr. Howard of Oklahoma.
Mr. Scott with Mr. Bland.
Mr. Edmonds with Mr. Humphreys.
Mr. Beck with Mr. McKeown.
Mr. Campbell with Mr. Rouse.
Mr. Peery with Mr. Kent.
Mr. Burton with Mr. Quayle.
Mr. Knutson with Mr. Howard of Nebraska.
Mr. Magee of Pennsylvania with Mr. Logan.

Mr. Larson of Minnesota with Mr. Drane.
Mr. Snyder with Mr. Hudspeth.
Mr. Wood with Mr. O'Brien.
Mr. Reed of West Virginia with Mr. Lyon.
Mr. Taylor of Tennessee with Mr. Celler.
Mr. Winter with Mr. Woodrum.
Mr. Boles with Mr. Collins.

Mr. CULLEN. Mr. Speaker, the gentlemen from New York, Mr. CELLER, Mr. QUAYLE, and Mr. SULLIVAN, are absent on account of severe illness. Had they been present they would have voted for this bill, but on account of their illness they are unable to be present.

Mr. HOWARD of Nebraska. Mr. Speaker, I desire to vote "yea."

The SPEAKER. Was the gentleman in the Hall and listening when his name was called?

Mr. HOWARD of Nebraska. No; I was stuck in the elevator.

The SPEAKER. The gentleman does not qualify.

Mr. MERRITT. Mr. Speaker, I desire to vote "yea."

The SPEAKER. Was the gentleman present and listening when his name was called?

Mr. MERRITT. No, sir.

The SPEAKER. The gentleman does not qualify.

Mr. WASON. Mr. Speaker, I desire to announce that my colleague, the gentleman from New Hampshire, Mr. ROGERS, if present, would have voted "yea."

The result of the vote was announced as above recorded.

### THE REVENUE BILL

Mr. TREADWAY. Mr. Speaker, I ask that the extension of remarks of the gentleman from Oregon [Mr. HAWLEY] on the revenue act, included in the CONGRESSIONAL RECORD of June 2, be printed as a public document. It contains a great deal of valuable statistical information on the new revenue bill.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. BANKHEAD. Reserving the right to object, what is the subject matter?

Mr. TREADWAY. In reply to the gentleman from Alabama, I would say that the statistical tables prepared by the gentleman from Oregon as to the amount of payments individuals and corporations will make under the new revenue act are carried out in great detail, and it will be a matter of very great convenience to the public to have this information in statistical form and to be able to use the material as a public document.

Mr. BANKHEAD. It has been prepared since the passage of the revenue act?

Mr. TREADWAY. Yes; it is in the RECORD, on page 10153.

Mr. GARRETT of Tennessee. Mr. Speaker, I object.

### REMOVAL OF THE REMAINS OF THE LATE GEORGE MAUGER BURKLIN AND ANTON LERCH BURKLIN

Mr. STALKER. Mr. Speaker, I call up from the Speaker's table the bill (S. 3220) authorizing the health officer of the District of Columbia to issue a permit for the removal of the remains of the late George Mauger Burklin and the remains of the late Anton Lerch Burklin from Glenwood Cemetery, D. C., to Fort Lincoln, Prince Georges County, Md., a similar House bill having been reported by the committee.

The Clerk read the bill, as follows:

*Be it enacted, etc.*, That the health officer of the District of Columbia be, and he is hereby, authorized to issue a permit for the removal of the remains of the late George Mauger Burklin and the remains of the late Anton Lerch Burklin from Glenwood Cemetery, D. C., to Fort Lincoln Cemetery, Prince Georges County, Md. But such permit shall not be issued until there has been filed in the Health Department of the District of Columbia a permit from the proper State authorities at the place where said cemetery is located authorizing the interment there of said remains.

The SPEAKER. The question is on the third reading of the bill.

The bill was ordered to be read a third time, was read the third time, and passed.

A similar House bill was laid on the table.

### EXTENSION OF REMARKS

Mr. HOWARD of Nebraska. Mr. Speaker, I fear that yesterday evening I inadvertently by my haste worked a wrong upon my colleague, the gentleman from Maryland [Mr. HILL]. You will recall that I requested one-half of one minute in which to address the House and I hurried a little, I guess, and at the same time the gentleman from Maryland asked unanimous consent to insert something in the RECORD and no objection was lodged, and yet the RECORD does not show that he was granted permission. I asked that he be granted unanimous consent now.

The SPEAKER. The gentleman from Nebraska asks unanimous consent that the request of the gentleman from Maryland, made yesterday, be granted. Is there objection?

Mr. LAGUARDIA. Mr. Speaker, reserving the right to object, what is it that the gentleman from Nebraska is asking to insert in the RECORD?

Mr. HOWARD of Nebraska. Nothing at all. I inserted mine yesterday. I talked about your friends, Gary and Butler, yesterday.

Mr. LAGUARDIA. Wait a minute. What request has the gentleman just made?

Mr. HOWARD of Nebraska. I just made a request that my inadvertence of yesterday, in my haste, might not work injury to another.

Mr. LAGUARDIA. No friend of mine?

Mr. HOWARD of Nebraska. No.

Mr. BEGG. Mr. Speaker, I shall object unless I know what it is about.

The SPEAKER. As the Chair recalls it was a request to insert a speech of Mr. Butler.

Mr. BEGG. I object.

Mr. HILL of Maryland. Mr. Speaker, I hope the gentleman will withdraw his objection. Yesterday a request was made which resulted in an attack on Doctor Butler's speech, and I said at the time that I would not object if permission was granted to put in the speech. I hope the gentleman will not object.

Mr. BEGG. It was the gentleman's own prerogative to let the attack go in the RECORD on that speech.

Mr. HILL of Maryland. I ask the gentleman to be fair and let me put the speech in the RECORD.

Mr. BEGG. I object.

### REVISION OF RAILROAD RATE STRUCTURE

Mr. HOCH. Mr. Speaker, I move to suspend the rules and pass Senate Joint Resolution 107, a joint resolution declaring agriculture to be the basic industry of the country, and for other purposes.

The Clerk read as follows:

That the Interstate Commerce Commission is authorized and directed to make a thorough investigation of the rate structure of common carriers subject to the interstate commerce act, in order to determine to what extent and in what manner existing rates and charges may be unjust, unreasonable, unjustly discriminatory, or unduly preferential, thereby imposing undue burdens, or giving undue advantage as between the various localities and parts of the country, the various classes of traffic, and the various classes and kinds of commodities, and to make, in accordance with law, such changes, adjustments, and redistribution of rates and charges as may be found necessary to correct any defects so found to exist. In making any such change, adjustment, or redistribution the commission shall give due regard, among other factors, to the general and comparative levels in market value of the various classes and kinds of commodities as indicated over a reasonable period of years, to a natural and proper development of the country as a whole, and to the maintenance of an adequate system of transportation. In the progress of such investigation the commission shall, from time to time, and as expeditiously as possible, make such decisions and orders as it may find to be necessary or appropriate upon the record then made in order to place the rates upon designated classes of traffic upon a just and reasonable basis with relation to other rates. Such investigation shall be conducted with due regard to other investigations or proceedings affecting rate adjustments which may be pending before the commission.

In view of the existing depression in agriculture, a basic industry, the commission is hereby directed to effect with the least practicable delay such reasonable and lawful changes in the rate structure of the country as will promote the freedom of movement by common carriers of the products of agriculture affected by that depression, including livestock, at the lowest possible reasonable and lawful rates compatible with the maintenance of adequate transportation service: *Provided*, That no investigation or proceeding resulting from the adoption of this resolution shall be permitted to delay the decision of cases now pending before the commission involving rates on products of agriculture, and that such cases shall be decided in accordance with this resolution.

Mr. BARKLEY. Mr. Speaker, I demand a second.

Mr. HUDDLESTON. I think, Mr. Speaker, that some one who is opposed to the bill should be recognized to demand a second.

Mr. BARKLEY. I am not very enthusiastic about it. If the gentleman from Alabama wishes to be recognized, I have no objection.

Mr. HUDDLESTON. I am against the bill.

The SPEAKER. The Chair will recognize the gentleman from Alabama to demand a second.

Mr. HOCH. I ask unanimous consent that a second be considered as ordered.

The SPEAKER. The gentleman from Kansas asks unanimous consent that a second be considered as ordered. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Kansas has 20 minutes and the gentleman from Alabama has 20 minutes.

Mr. HOCH. Mr. Speaker and gentlemen of the House, it is manifestly impossible to discuss adequately a subject like this in the time available, and I shall endeavor only to touch rapidly the chief points in this resolution.

This resolution consists of two paragraphs. The first paragraph is identical with House Resolution 141, which I introduced some weeks ago, and which was recently reported favorably from the committee. The second paragraph is matter taken substantially from a portion of the Senate resolution which is here amended by the House and which we have before us. The first part of this resolution proposes a general survey by the Interstate Commerce Commission of the freight structure of the country, and directs that such injustices and inequalities as found existing shall be corrected by the commission. It also directs the commission to take into consideration, among other things, the relation in prices of various classes and kinds of commodities as indicated over a reasonable average of years, and also does one or two other things which I will refer to later.

It has been generally agreed for a number of years, as all of you familiar with the freight structure in this country know, that revision of the freight structure is necessary. The freight structure of this country has grown up rather piecemeal through a great many years, and everyone who has studied the subject agrees that it is not by any means on a scientific basis at this time. It is out of joint.

If I had time, I would like to read you the statements of various people who have studied the subject. Let me refer briefly to one or two statements of that sort. You will recall that two or three years ago we had a joint commission on agricultural inquiry, which made a thorough study and issued a most complete compendium on the subject of transportation. One of their conclusions was as follows:

> The transportation rates on many commodities, more especially the products of agriculture, bear a disproportionate relation to the prices of such commodities; there should be immediate reductions in transportation rates applied to farm products and other basic commodities; greater consideration should be given in the future by public rate-making authorities and by the railroads in making of transportation rates to the relative value of commodities and existing and prospective economic conditions. The pyramided per cent advances in rates which have been authorized by the Interstate Commerce Commission or made by the United States Railroad Administration caused the dislocation of long-standing relationships between rates upon agricultural and industrial products, between competitive enterprises and competitive sections of the country.

The farm organizations have not been alone in the idea that the freight structure of the country needs adjustment. About a year ago the United States Chamber of Commerce appointed a committee to study the subject. Last November it made a full report, and let me quote from it:

> It can not be claimed that the railroad freight-rate structure of the United States has ever been organized on a scientific basis, or that it has ever been systematically revised with the purpose of eliminating disparities. The great economic changes incident to and resulting from the war have created additional disparities resulting from horizontal rate changes, from the dislocation of relative price levels, and from increases in labor costs and terminal expenses which have borne with greater weight on some classes of traffic than on others. This situation renders a readjustment of relative freight rates of great immediate importance.

President Coolidge, in his message to Congress last December, made this statement:

> Competent authorities agree that an entire reorganization of the rate structure for freight is necessary. This should be ordered at once by Congress.

The first paragraph of this resolution is in exact compliance with that recommendation, and proposes not that Congres shall make rates, for obviously Congress can not take upon itself that technical duty, but directs the Interstate Commerce Commission to enter upon a comprehensive study and survey of the freight structure and to remove disparities and inequalities, as far as possible, without injuring adequate transportation service.

I call attention to the fact that in the last few years there have been a number of flat, horizontal increases in the whole freight structure. Just prior to Federal control in the year 1917 there was a flat increase in the eastern territory of 15 per cent, with a few exceptions, which I shall not take time to name. During Federal control in 1918—in July, I believe—there was a flat increase in all freights in this country, without regard to the class or kind of commodity, of 25 per cent. In August, 1920, following Federal control, there were a number of flat, horizontal increases, ranging from 25 per cent in some sections of the country up to 40 per cent in other sections of the country. A moment's thought will show to anyone that flat, horizontal increases of that sort in the freight structure tend to throw the relative rates into dislocation. To make a specific illustration—and I have not time, of course, to give figures—the freight upon a bushel of wheat is a very large item, but the freight upon a highly fabricated article, as, for instance, a pair of shoes, is comparatively small.

When you increase by 15 to 25 or 35 or 40 per cent the whole freight structure, you see that you do something to the bulky commodities which you do not, in like effect at all, do to other articles. The effect of every one of these flat horizontal increases has been to throw into freight-rate structure of the country new disparities and to greatly accentuate the maladjustments which existed prior to that time. It is conceded that these flat horizontal increases were not scientific. If justified at all, the method must be justified on the grounds of expediency and the necessity for quick action.

The first part of this resolution goes to that proposition. It is generally agreed, I think, among students of the subject that the rates upon basic commodities should be adjusted and more favorable rates given.

Because my time is short I pass to the second part of this resolution. The second paragraph of this resolution is taken in substance from the Senate resolution. It makes special reference to agricultural products, including livestock. I want you to notice closely in order that there may be no misapprehension about it. I do not claim that this is any panacea or anything of that sort. It does not direct particular rates upon farm products, although I am firmly convinced that a study will show that those rates in many cases ought to be reduced, but it does call the attention of the Interstate Commerce Commission by the Congress, which has the right to speak to the commission, which is an agency of the Congress, to the great agricultural depression existing in the country and its says to the Interstate Commerce Commission, "We direct that you shall with the least practicable delay make such changes in the freight rates upon farm products, including livestock, as will as far as possible correct any injustices that may be found to exist and promote the freedom of movement of these products." But, as gentlemen will notice by reading the resolution, it does not contemplate that there shall be anything ruthless done; in fact, it specifically provides that it shall not interfere with the maintenance of an adequate transportation service.

The SPEAKER pro tempore. The gentleman has consumed 11 minutes.

Mr. HOCH. Mr. Speaker, I reserve the remainder of my time.

Mr. RAKER. Mr. Speaker, will the gentleman yield for a question?

Mr. HOCH. If it is a short question.

Mr. RAKER. I am very much interested in the transportation of livestock. May I ask the gentleman whether or not this commission has the power to adjust the rates properly now?

Mr. HOCH. Mr. Speaker, I think the commission has the power, but I say that it will be tremendously helpful to have this mandate from the Congress saying to the commission, "We call your special attention to the agricultural depression, and we direct that you shall give all possible consideration to agriculture, including livestock, consistent with the maintenance of an adequate transportation service." [Applause.]

The SPEAKER pro tempore. The gentleman from Alabama [Mr. HUDDLESTON] is recognized for 20 minutes.

Mr. HUDDLESTON. Mr. Speaker, I yield five minutes to the gentleman from Nebraska [Mr. SHALLENBERGER], and pending that I make the point of order that there is no quorum present. I am not willing that we shall discuss a measure of this kind without having somebody here to listen to the discussion.

The SPEAKER pro tempore. The gentleman from Alabama makes the point of order that there is no quorum present. Clearly there is not.

Mr. HOCH. Mr. Speaker, I move a call of the House.

The motion was agreed to.

The SPEAKER pro tempore. The Doorkeeper will close the doors, the Sergeant at Arms will bring in absent Members, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

| | | | |
|---|---|---|---|
| Aldrich | Deal | Kent | Phillips |
| Anderson | Dempsey | Knutson | Quayle |
| Anthony | Dickinson, Mo. | Kunz | Reed, W. Va. |
| Aswell | Dominick | Langley | Rogers, N. H. |
| Beck | Doughton | Larson, Minn. | Rosenbloom |
| Berger | Drane | Lehlbach | Rouse |
| Boies | Drewry | Lilly | Snyder |
| Britten | Fairchild | Little | Spearing |
| Burton | Favrot | Logan | Sproul, Kans. |
| Byrnes, S. C. | Fish | Lozier | Steagall |
| Cable | Fitzgerald | Lyon | Sullivan |
| Campbell | Free | McDuffie | Taylor, Tenn. |
| Celler | Garner | McKeown | Tucker |
| Clark, Fla. | Geran | Madden | Voigt |
| Clarke, N. Y. | Hammer | Magee, Pa. | Ward, N. Y. |
| Cole, Iowa | Hill, Md. | Moore, Ill. | Ward, N. C. |
| Cole, Ohio | Howard, Okla. | Morin | Welsh |
| Collins | Hudspeth | Mudd | White, Me. |
| Corning | Humphreys | O'Brien | Wood |
| Crisp | Jacobstein | O'Connor, N. Y. | Wurzbach |
| Crowther | Johnson, S. Dak. | Parks, Ark. | |
| Curry | Jost | Patterson | |
| Davis, Minn. | Kahn | Peavey | |

The SPEAKER pro tempore (Mr. BEGG). Three hundred and forty-three gentlemen have answered to their names; a quorum is present.

Mr. HOCH. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The SPEAKER pro tempore. The Doorkeeper will open the doors. The gentleman from Nebraska [Mr. SHALLENBERGER] is recognized for five minutes.

Mr. SHALLENBERGER. Mr. Speaker and gentlemen, this resolution came to the Committee on Interstate and Foreign Commerce from the Senate carrying this language:

> That agriculture is hereby declared to be the basic industry of this country; that it is the policy of Congress to promote, encourage, and foster the agricultural industry.

When we consider the frozen face this Congress has shown to agriculture, that language is the very essence of satire.

In the face of what this Congress has done for the farmer, the Interstate and Foreign Commerce Committee, of which I am a member, did not have the courage to come before Congress with this resolution, so they have amended it, as has been stated to you by the gentleman from Kansas. This is the only legislation that is to be given to the country by this Congress in the interest of agriculture. When the farmers of America read and understand this bill they will say, "We asked for bread and they gave us a lemon." I have here a statement from the leader of the majority party [Mr. LONGWORTH] which says:

> While fully realizing the condition of agriculture, and with the most earnest desire to bring relief as far as legislatively possible, we have so far been unable to work out a plan which would command the necessary support.

The leader of the majority in this Congress admits that, so far as this Congress is concerned, agriculture has drawn a blank.

This, then, is all we are going to do for agriculture. This Congress has appropriated $3,000,000,000 of the taxpayers' money. It has handed out big favors for special interests, but it has done nothing for agriculture. So, after taking care of every special interest and every part of the country from Cape Cod to Timbucktoo, except the West, Congress is going to give three cheers for agriculture and adjourn and go home. We have been having hearings in the Committee on Interstate and Foreign Commerce upon the bill which I have been urging action upon, which reduces freight rates materially and repeals section 15a. Those hearings are not yet published. They have brought out some very interesting information concerning the effect upon agriculture of excessive railroad freight charges. The question was asked by myself as to the effect of freight reduction upon agricultural commodities, and Mr. Esch responding stated:

> There was general improvement of conditions throughout the world in 1923.
>
> Mr. SHALLENBERGER. You would have a hard time making the people out in the West believe that.
>
> Mr. ESCH. Except as to agricultural products, and there, Governor, it must be remembered the agricultural products only constitute about 6 per cent in tonnage of the tonnage of the carriers. While it is of great importance to the areas where agricultural tonnage is produced, yet in the aggregate it is only a comparatively small percentage of the total tonnage of the carriers.

On all the railroads in the United States only 6 per cent is agricultural tonnage. Now, look what follows. Mr. HAWES asked the commissioner as to the possibility of the reduction of freight on agricultural commodities as the law now stands. He asked:

> Mr. HAWES. So that if agricultural rates were largely lowered, and carrying out the constitutional provision irrespective of law, the rest of the country would have to bear the lowering of the freight on those commodities.
>
> Mr. ESCH. Well, we feel that it would have to be made good in other ways.
>
> Mr. HAWES. Other commodities would have to pay for the reduction or the Government would have to make a subsidy, one of the two.

If they reduce the freight rates upon agriculture, then as the law is now you have to raise it upon something else. We must repeal section 15a or any reduction to one class of commodities or any region must be paid for by others.

Here Mr. Hardie broke in—

> I have referred to a table which was prepared by the bureau of statistics of the Interstate Commerce Commission, and I find that the proportion of revenue estimated for 1922 for all products of agriculture to the total is 18.33 per cent.

Gentlemen, agriculture pays three times the proportion that it should pay of the entire receipts of the railroads from freight traffic. The statement of the commission shows that one-sixteenth of all the traffic of the railroads pays one-fifth of their returns, and that is what is the matter with agriculture, and that is where agriculture needs relief. Agriculture is not going to get relief by this legislation. This resolution only asks the commission to do the thing it has done, is now doing, and just what it will continue to do in the future under the present law. I want to read you here what Mr. Hardie, director of traffic, said when asked the length of time that would be required to carry out the investigations directed by this bill. He said:

> Mr. HARDIE. My opinion is, it will not be finished in five years if carried out to the final analysis. It will be nearly 10 years, in my opinion.

Gentlemen, we are to have the commission investigating something which they already fully understand, and they are to take 10 years or more to do it and spend millions of dollars of the people's money. Investigations by commissions are for two major purposes, to kill time and spend money. You do not grant them any new power in this bill; you do not give them any authority they do not now have. This legislation is simply a gesture to placate the farmer. There is a way to get relief from the load of excessive freight rates that is breaking the back of the American farmer, and not only relief for agriculture but relief for every industry that suffers because of excessive freight charges. But it is not by investigation by a commission. It is by repeal of the law that authorizes and directs the commission to levy excessive charges upon the country.

On the 8th day of May I filed a petition at the Clerk's desk in the House for the repeal of section 15a of the Esch-Cummins law. Last winter the President of the United States asked the railroads to reduce freight rates upon coal, because the people of the Nation were suffering for coal to keep themselves warm, because they could not afford the price that excessive freight rates compelled them to pay. But the railroads stood like a stone wall against the proposed reduction. Only this week I heard a Member from Virginia on this floor state that the farmers down there had petitioned the Interstate Commerce Commission for a reduction of the freight on lime for agricultural purposes, but instead of reducing it they raised it $25 a car. Now, let me show you how to get results in freight reduction. I am a pure-bred livestock breeder. I have been breeding purebred livestock in the State of Nebraska for many years. I filed a petition on May 8 last asking for a vote on my bill for the repeal of section 15a of the Esch-Cummins law. In exactly 10 days from the time of the signing of that petition by 40 Members of Congress five of the principal railroads in the United States—the Union Pacific, the Chicago, Burlington & Quincy, the Chicago & North Western, the Rock Island, and the Missouri Pacific—controlling 50,000 miles of railroads in the United States, came into the office of the Railroad Commission of the State of Nebraska

and asked them to reduce the freight rates upon purebred livestock in the State of Nebraska 50 per cent; not 10 per cent, not 25 per cent, not 40 per cent, but 50 per cent.

Here is the telegram from the chairman of the Nebraska State Railroad Commission which states that the action was entirely voluntary upon the part of the carriers and that the rate was so low as to be unreasonable:

LINCOLN, NEBR., *May 28, 1924.*

A. C. SHALLENBERGER,
*Member of Congress, Washington, D. C.:*

Reduction on registered livestock voluntary by carriers after several conferences. Rate could not have been ordered as probably lower than reasonable per se. Do not know of similar reduction in other States yet.

THORNE A. BROWNE.

If the President of the United States wants coal rates reduced, if the farmers of Virginia want livestock rates reduced, I suggest they should file a petition for the repeal of the Esch-Cummins Act, or ask their Congressmen to sign the petition which I have already filed for the same purpose at the desk of the Clerk of the House of Representatives.

The farmers of the Nation have been turned down by those in control of this Congress upon every opportunity. The President's only advice to the farmer is to dig himself out of the hole he is in. It is useless to expect any favor for agriculture from this Congress or from this administration. The farmers have learned a lesson and the remedy is easily understood. It is to change the character of leadership of Congress and choose a President who can look westward and north and south, and not always toward New England and the East.

The great toiling masses of the people, who are not often articulate in Washington, must organize to make their influence more powerful in the legislative branch of our Government. They will not then see their petitions refused and their rights ignored. The President has announced a program of tax reduction for the coming campaign. The producers and consumers should also organize and carry on a reduction campaign—reduction of the excessive tariff robbery and reduction of unfair railroad charges. High income taxes do not concern the farmer, since he has no taxable income under present conditions.

If Congress will relieve him of the unfair and excessive burden of high freight rates and high tariffs, the farmer can again confidently look the world in the face, pay his debts, and support his family as Americans should live and do his full part in sustaining the prosperity of the Nation.

Mr. HUDDLESTON. Mr. Speaker, I yield five minutes to the gentleman from Virginia [Mr. MOORE].

The SPEAKER pro tempore. The gentleman from Virginia is recognized for five minutes.

Mr. MOORE of Virginia. Mr. Speaker, two Presidents of the United States have called attention in their annual messages and in their speeches before the people to the need of dealing in some way with the railroad freight-rate problem. They have made certain suggestions which have not received any particular attention so far by Congress. Now we are brought to the consideration of a resolution which, in my judgment, will have no practical value. There never was a more "lame and impotent conclusion" of all that has been done in the way of discussion and in the way of promise in reference to this subject than is embodied in this resolution, and we are compelled, under the rules of this House, which seriously need amendment, to vote the resolution up or down, without any modification, and some modification could be made which would be helpful and might produce results.

A while ago the gentleman from Kansas [Mr. HOCH], the patron of the resolution, told us what it contemplates. He says, first, the proposition is to make a survey of the entire rate structure of the country. It happened that for years I practiced before the Interstate Commerce Commission, and I know that that sort of a survey has been made time and time again.

There are three rate territorial areas in the country, eastern and southern and western, and the adjustments in each have been time and again the subject of the most careful scrutiny by the Interstate Commerce Commission during the last 15 or 20 years. Now, we are to say in a light-hearted sort of way to the commission, "Repeat what you have done; duplicate what you are doing; investigate the entire rate adjustment, and report what you find and what can be accomplished in the line of affording the relief which is desired."

Mr. HOCH. Mr. Speaker, will the gentleman yield?

Mr. MOORE of Virginia. No. I have only five minutes.

How long will it take to do that? It will require perhaps not less than 10 years, and conditions will so change in the 10 years that the final conclusions will probably be valueless. How much will be the expense? If you will consult the Interstate Commerce Commission, you will doubtless find that its docket is so crowded with cases now that an initial appropriation of from $100,000 to $150,000 will be needed, and then appropriations larger still in the future.

The gentleman from Kansas says that under the resolution certain factors will have to be taken into account by the commission in making its survey and in effecting any changes which they think ought to be made. There have been a large number of cases of great importance before the commission not confined to any one section in which the commission has not failed to take into account every one of the factors specified, and thus the question of the factors to be considered is nothing new.

Now, Mr. Speaker, the resolution is a case of "keeping the promise to the ear and breaking it to the hope." And while I intend to vote for it because of the alleged possibilities it contains, I do not want the Republican Party to be credited with taking a course which holds out any probability of relief. I do not intend, so far as I can prevent it, that this eleventh-hour measure shall be considered as much better than a mere gesture—a sort of alibi refuge. [Applause.]

The SPEAKER pro tempore. The time of the gentleman from Virginia has expired.

Mr. TINCHER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kansas? [After a pause.] The Chair hears none.

Mr. TINCHER. Mr. Speaker, I ask for this privilege for the reason that I consider the passage of the Hoch amendment of the utmost importance. The amendment directs the Interstate Commerce Commission to make a certain survey, and then if conditions exist which we think do exist reduce freight rates on agricultural products.

The opposition to the amendment is not very well organized. Our friend from Nebraska [Mr. SHALLENBERGER] and our friend from Virginia [Mr. MOORE] spoke against it, though I think they will vote for it on the theory that it will not accomplish anything, and that they would like to proceed further, but neither of them has pointed out how we could go any further. The gentleman from Alabama [Mr. HUDDLESTON] has spoken in an entirely different vein. He says the rates should not be reduced upon farm products unless they are also reduced on lumber, certain gravel, and thousands of other products. I quote from his speech—

Is it proposed to give the products of the farmer an advantage over the products of the mine?

The gentleman from Alabama was one of the ardent supporters of the Barkley bill, which looked to the raising of the wages of the employees of the common carriers. It is very plain that he does not comprehend the situation in the agricultural section of the country. Another thing in his speech that I desire to quote, "The farmers are asking for relief. They are entitled to relief and I am willing to give them relief, but I am not willing to give them relief at the expense of other people * * *." Then he says the coal miners are in as bad shape as the farmers, that the coal industry is languishing; and, later on, he says the lumber interests are languishing.

This speech is a fair example of the attitude taken by the gentleman from Alabama and his colleagues toward the American farmer. They refuse to recognize, as the vote on farm-relief legislation at this session of Congress disclosed, the fact that the farmers' prices are out of joint with other prices in this country. This bill, if it should result in giving a discriminatory freight rate on the food products of America, as against the unnecessaries of life, would, in my judgment, be meritorious, though it is the contention of us that have worked for the bill from the start that it does not contemplate that. We contend that the freight rates on agricultural products are not in harmony with and are out of line with other rates. At any rate, this bill will authorize and practically direct the reduction of freight rates on agricultural products, and some of us think it is rather inconsistent for the Democratic Party, through their Representatives on this floor, Mr. SHALLENBERGER and Mr. MOORE of Virginia, to argue that it will not accomplish anything, and Mr. HUDDLESTON to argue that it will accomplish too much and is unfair because it does too much for the

farmer. These arguments are about as consistent as the argument of the gentleman from Virginia [Mr. MOORE], who says that he is afraid if we pass this bill it will affect politics. I suppose he thinks the right thing to do would be to deny the farmer any relief for fear he would vote the Republican ticket. I will say, however, that this attitude upon Mr. MOORE's part is consistent with the attitude of the Democratic Party throughout this entire session of Congress, during which they have, by a coalition with those who seldom vote for anything for the farmer, defeated any substantial farm-relief legislation. Hitherto, his excuse has been that he was afraid the legislation was not sound, but I think the expression on the floor today that he is afraid the legislation will help some one politically, has been the real motive behind the efforts to defeat all farm legislation. Some of our friends seem to think the thing to do is to fight all farm-relief legislation and then chide those of us who favored it because it did not pass. The reason we have not passed more substantial farm legislation this session of Congress is that we could not get the votes in the House to pass it.

Personally, I can not appreciate the attitude of the Members of Congress that vote against the legislation and then try to put us in a bad light with the farmer because we did not pass the bills.

Mr. HUDDLESTON. Mr. Speaker, there will be only one more speech on this side. Will the gentleman from Kansas use some of his time?

Mr. HOCH. Mr. Speaker, I yield five minutes to the gentleman from Texas [Mr. RAYBURN].

The SPEAKER pro tempore. The gentleman from Texas is recognized for five minutes.

Mr. RAYBURN. Mr. Speaker and gentlemen of the House, with a great deal of what the gentleman from Nebraska [Mr. SHALLENBERGER] and with a great deal of what the gentleman from Virginia [Mr. MOORE] said I am in agreement. I do not take issue with the gentleman from Virginia or with the gentleman from Nebraska in their saying that there is considerable politics in this resolution. Since the 1st of January I have sought, as a minority member of the Committee on Interstate and Foreign Commerce, to get the committee to go into a general hearing and a general investigation of the controverted provisions of the transportation act of 1920. The committee has not done that, except in the last few days they have taken up an investigation of section 15a, which is not completed. This resolution comes here as one of the recommendations of the present President. It came with the recommendation, as I remember, of his predecessor. Everyone in the country knows, who knows anything about transportation and about the freight rate structure, that it is badly out of joint. When Mr. McAdoo was Director General of Railroads he made a horizontal increase of rates. After the transportation act of 1920 was passed the Interstate Commerce Commission made horizontal increases. Since that time the Interstate Commerce Commission has made a horizontal reduction; and everyone who knows anything about rate structures knows that horizontal increases and horizontal decreases, taking into consideration the great mass of influences that go to make up the rate structure of the country, throw them entirely and almost criminally out of joint.

This resolution directs the Interstate Commerce Commission to do something which some claim they have the power of doing now but which they do not care to undertake without the express direction of Congress to go into the whole rate structure of the country and try in a lawful way to iron out the inequalities that exist in that structure. I think it should be done. I think it is right to the shippers and to all interests of this country that those inequalities be ironed out at as early a date as possible. [Applause.]

Therefore I can not take upon myself the responsibility, and I do not believe my colleagues should take upon themselves the responsibility—simply because they think there is some politics involved in this—of defeating a resolution which I believe will redound to the benefit of all the people of the country. [Applause.]

The livestock interests of this country especially are vitally interested in this legislation. Their national counsel tells me he believes this resolution is the most vital thing this Congress could pass for the great livestock interests of this country.

Some people say this resoluton is a gesture. Maybe it is; but in my opinion it is a gesture in the right and proper direction. It provides:

*Resolved, etc.*, That it is hereby declared to be the true policy in rate making to be pursued by the Interstate Commerce Commission in adjusting freight rates that the conditions which at any given time prevail in our several industries should be considered, in so far as it is legally possible to do so, to the end that commodities may freely move with fair profit to the producer and sold at a reasonable price to the consumer.

It is further declared that agriculture is the basic industry of this country, and that it is the policy of Congress to promote, encourage, and foster that industry, and especially in rate making during the existing depression in agriculture. In furtherance of these policies the Interstate Commerce Commission is hereby directed, with the least practicable delay, to effect such lawful changes in the rate structure of the country as will promote the freedom of movement of common carriers of the products of agriculture, including livestock, at the lowest possible lawful rates compatible with the maintenance of adequate transportation service: *Provided*, That no investigation or proceeding resulting from the adoption of this resolution shall be permitted to delay the decision of cases now pending before the commission involving rates on products of agriculture, and the policy herein stated shall be applied in such determination as soon as possible.

That the Interstate Commerce Commission is authorized and directed to make a thorough investigation of the rate structure of common carriers subject to the interstate commerce act, in order to determine to what extent and in what manner existing rates and charges may be unjust, unreasonable, unjustly discriminatory, or unduly preferential, thereby imposing undue burdens or giving undue advantage as between the various localities and parts of the country, the various classes of traffic, and the various classes and kinds of commodities, and to make, in accordance with law, such changes, adjustments, and redistribution of rates and charges as may be found necessary to correct any defects so found to exist. In making any such change, adjustment, or redistribution the commission shall give due regard, among other factors, to the general and comparative levels in market value of the various classes and kinds of commodities as indicated over a reasonable period of years to a natural and proper development of the country as a whole and to the maintenance of an adequate system of transportation. In the progress of such investigation the commission shall from time to time, and as expeditiously as possible, make such decisions and orders as it may find to be necessary or appropriate upon the record then made in order to place the rates upon designated classes of traffic upon a just and reasonable basis with relation to other rates. Such investigation shall be conducted with due regard to other investigations or proceedings affecting rate adjustments which may be pending before the commission.

In view of the existing depression in agriculture, a basic industry, the commission is hereby directed to effect with the least practicable delay such reasonable and lawful changes in the rate structure of the country as will promote the freedom of movement by common carriers of the products of agriculture affected by that depression, including livestock, at the lowest possible reasonable and lawful rates compatible with the maintenance of adequate transportation service: *Provided*, That no investigation or proceeding resulting from the adoption of this resolution shall be permitted to delay the decision of cases now pending before the commission involving rates on products of agriculture, and that such cases shall be decided in accordance with this resolution.

We have heard talk about depression in agriculture, and that agriculture is carrying too much of the burden of the railroad rates. I believe that agriculture is now bearing more of the freight burden than it should, and when this resolution, as the expression of the Congress of the United States, says to the Interstate Commerce Commission not to violate the law of the land but to set the lowest rates after investigation—taking into consideration all of the proper elements—compatible with an adequate system of transportation upon agricultural products and livestock, I myself am going to vote to pass the resolution. [Applause.]

Mr. HASTINGS. Will the gentleman yield?

Mr. RAYBURN. Yes.

Mr. HASTINGS. The gentleman has long been a member of this committee. Does the gentleman think the Interstate Commerce Commission has that power now?

Mr. RAYBURN. I think the Interstate Commerce Commission has that power now, but does not feel justified in undertaking the vast task without this expression on the part of the Representatives of the people.

Mr. HASTINGS. How long does the gentleman think it will take the Interstate Commerce Commission to make the investigation directed under this resolution?

Mr. RAYBURN. It will take a short time to make a part of it, but probably a long time to make another part of it; but if it is a good thing, time is not an element. If it is a short task,

so much the better; if, on the other hand, it is a long controversy, then we should get at it at once so that it may be completed and the freight payers given all lawful relief at the earliest possible moment.

It is essential to the prosperity of the whole people that they have an adequate transportation system, to the end that products, perishable and otherwise, may move swiftly and safely. It is also vital to the whole people that they pay the lowest possible lawful rates for that service. Freight rates are like tariff taxes in that rates may be set so high that traffic will not move and, therefore, less revenue will be collected than there would be on a lower rate. There is a medium somewhere that is fair to all parties and that rate should be found if possible, and in the passage of this resolution we hope that the Interstate Commerce Commission may, under its direction, build a rate structure that will be fair and reasonable.

Agriculture has in all sections passed through, and in some sections is passing through, a period of great depression. It should be fostered as much as possible, for when the farmer fails we all fail and hard times are upon us. In my humble judgment one of the things that the Congress just adjourned should have done was to have repealed the whole Fordney tariff law. Without, I hope, any demagoguery, I believe that high tariffs are the most unjustifiable and oppressing form of taxation that can be laid on any people. If we are to have commerce with other countries of the world, and it is essential that we should if we are to be prosperous, we can not build around this country a wall that will keep out the surplus goods of other countries, much of which we do not have here, and expect them then to be able to buy our surplus. If our surplus can not be sold abroad, our industries will lag and agriculture especially will languish.

All nations of the world are anxious to trade with us. Especially do nations who owe us money desire to exchange goods with us, but the Republican Party insists upon taking a toll charge from every man or concern the world over who comes to our shores asking the privilege of helping to make us prosperous by taking some of our surplus away. The streams of commerce are very sensitive, and a thing like a toll or tariff will change the whole course of our neighbors' patronage. Nations are like individuals. No merchant can hope that customers will come to his store and purchase his wares if he charges an entrance fee to his place of business.

I am, as was said by one of our great leaders, willing to match the genius of America against the genius of the world, instead of making the humiliating admission that we can not live and compete with the world.

Our industries are no longer "infant." They are strong and able to compete with the world for markets. The present Fordney tariff bill is one not of construction and helpfulness but is one of oppression and destruction, giving an excuse to wring from every consumer in the land a bounty. Instead of opening the markets of the world it closes them. We have ceased to be a debtor nation and have become the great creditor nation of the world. If we are to maintain our position in the world of finance, industry, and agriculture, we must foster trade and commerce as never before. The farmer, upon whom the Republican Party has long depended to uphold it in its high-tariff views, is having his eyes opened to the fact that he has been fooled into believing that the tariff was essential to his prosperity or helpful to him in any way; but, on the other hand, he has found that everything that he buys is laden with tribute for privilege. Granting special privilege always brings corruption.

Much has been said about relief for the farmer, and many wild and demagogic speeches have been made, but nothing has come of them. The real relief that will ever come to the farmers of this country is through the building up of cooperative marketing systems to market his own products at home and for marketing abroad with and by his own agents and not depend on the professional exporter and profiteer and as far as is possible cut the middleman out entirely. No unsafe schemes of price fixing will be of relief but will bring about complex conditions that will be disastrous to the farmer in the long run.

No relief for any section that will be permanent can come from the people or their representatives dividing themselves into "blocs." With a Wall Street bloc, a railroad bloc, a labor bloc, a town bloc, a country bloc, and with a special purpose to serve we will find such trading and trafficking as will bring about corruption and extravagance unspeakable. The representatives of the people should realize that the whole people deserve recognition in legislation, and that when they divide into antagonistic groups the general interest will be forgotten. Elements of jealousy, strife, and discord will run rampant, and no body or group will trust any other body or group. We should make the general good our first and highest purpose; and when justice is in this way distributed no one can suffer and no one justly complain. Let us, if possible, have done with strife and bickerings that divide our people and which can bring nothing but woe to any country whose people do not work together for the common good and the general welfare.

Mr. HUDDLESTON. Mr. Speaker, to the first paragraph of this resolution I offer no objection. The second paragraph is the one which is positively bad.

Beginning with 1917, there was a horizontal increase in railroad rates of 15 per cent, another of 25 per cent in 1918, and another of 25 per cent to 40 per cent on August 26, 1920. Last year there was a horizontal decrease of 10 per cent. So that present rates represent a net horizontal increase of about 65 per cent above rates on January 1, 1917. Such great horizontal increases have thrown rates wholly out of equilibrium and have produced rates relatively much higher on certain commodities than on others. As a practical matter, heavy commodities and commodities which move long distances are being discriminated against in favor of light commodities and short hauls. Assuming that the general level of rates is proper—and this is a violent assumption—great injustice has been worked by the horizontal increases.

With this situation it is entirely proper that there should be an examination and readjustment of the rate structure. If we are to have no general reductions, at least we should have the inequalities and discriminations produced by the horizontal increases ironed out, and for this reason there can be no serious objection to the first paragraph of the resolution.

However, little relief is promised even by the first paragraph. Examination of the rate structure is a matter of years. Possibly 10 years will be consumed with, in the end, little or no general relief. For the present the chief value of the paragraph is to afford the present administration an excuse for having done something for the farmers. Also this gesture will have political value for the Congressmen who perform it.

This paragraph is a mere sop thrown to the agricultural interests. It is the tiny tidbit that Members who represent agricultural constituencies will fondly carry home to show to their farmer friends as an evidence of their efficiency during the past session. They must point to it as the only justification for their existence in Congress.

The second paragraph of the resolution takes on a more sinister aspect. It either means nothing and will serve no purpose beyond the present political campaign, or it constitutes a brazen effort to give a reduction in rates to agricultural interests at the expense of other interests of the country.

If the paragraph means anything, it is a vicious attempt at special interest legislation. It is group legislation run mad. It is a proposal to transport farm produce at less than the cost of the service and to charge to other legitimate interests what the carriers may lose by the reduction.

The second paragraph reads as follows:

> In view of the existing depression in agriculture, a basic industry, the commission is hereby directed to effect with the least practicable delay such reasonable and lawful changes in the rate structure of the country as will promote the freedom of movement by common carriers of the products of agriculture affected by that depression, including livestock, at the lowest possible reasonable and lawful rates compatible with the maintenance of adequate transportation service—

And so forth. It is fundamental that every user of a public utility should pay the cost of the service he receives and a just profit to the utility, and that no man has a right to use a public utility at any other man's expense. It is neither good public policy nor is it sound ethics to allow any man to use a railroad at the expense of some other man.

If this resolution means what its friends must want it to mean, that the farmers are to pay less than the reasonable cost of carrying their products plus a fair profit to the carriers—if it really means that, it means that they seek to impose an additional and unjust burden upon other industries of the country. Such action can not be defended.

Railroad rates are out of joint. They are out of joint upon all heavy commodities which are hauled for long distances and as to which the freight charge represents a substantial part of the cost. That applies to various agricultural products,

and also to coal, to lumber, stone, gravel, and many other products of the mine, of the forest, and of the factory.

In effect, it is proposed by this resolution to take a part of the freight charge off of hay and put it on coal. It proposes to give the products of the farmer an advantage over the products of the mine. Then every Member who holds to that purpose and votes for this resolution is violating the fundamental principles not only of good policy but of fairness and justice to other interests. Every such Member who has a constituency interested in these other products betrays the best interests of his constituents.

If the resolution does not mean that, it does not mean anything. If it means that you can not afford to support it, what are you going to do?

I say that rates are too high; I say that they ought to come down—that they ought to come down to everybody. They are yielding to many of the large representative railroads from 10 to 25 per cent in annual earnings upon every dollar of their common stock.

I base this statement upon figures from the Interstate Commerce Commission. Beginning with the Alabama & Vicksburg, which earned 23.39 per cent, through the Atlantic Coast Line, 18.66 per cent; Big Four, 23.64 per cent; Illinois Central, 14.14 per cent; New York Central, 16.90 per cent; Philadelphia & Reading, 39.80 per cent; to Union Pacific, with 15.19 per cent. These are merely representative roads with representative earnings and are not selected from the table. For instance, the Michigan Central earned 75.66 per cent. I insert the table so that those who are interested may study it at leisure:

*Rate of return earned on common stock, selected Class I roads, 1923*

| Name of road | Par value of common stock | Net income less dividends on preferred stock | Rate of return on common stock (per cent) |
|---|---|---|---|
| Alabama & Vicksburg | $2,100,000 | $491,232 | 23.39 |
| Alabama Great Southern | 7,830,000 | 1,793,813 | 22.91 |

[1] Report for period Aug. 6 to Dec. 31, 1923. No capital stock has been issued

I have some additional figures from the Interstate Commerce Commission. Here is a table which gives in dollars the amount which certain railroads earned in 1923 above 5½ per cent upon the value of their property. The above table shows earnings on common stock. The following shows earnings on all property account, and shows that many of the roads earned large sums in excess of 5½ per cent upon their investment. Here are the figures:

*Excess of net railway operating income over 5½ per cent on investment of Class I roads earning more than 6 per cent*

| Name of road and year | Net railway operating income | 5½ per cent on book value of investment | Excess of net railway operating income over 5½ per cent |

[1] Deficiency.

The Interstate Commerce Commission has decided on 5¾ per cent as the average amount which railroads are entitled to earn on their property investment and have fixed rates intended to yield that average return. If each of these roads should earn that average return, practically all of them would be able to pay dividends of 8 per cent on their common stock, and many of them would pay from 15 to 25 per cent dividends on common stock. This includes roads of which the common stock is almost pure water. The situation is due to the fact that practically all of the real capital of many of these roads is in the form of bonds bearing a low rate of interest, and the roads are able to earn a profit on the borrowed capital in their property account which would yield large dividends on common stock largely water. I include a table from the Interstate Commerce Commission which gives the figures on this point:

*Constructive net income compared with capital stock on the assumption that each road earns 5¾ per cent on investment—Class I roads in total and 25-million-dollar roads individually*

| Name of road | Book value of property investment, including leased lines | 5¾ per cent of property investment | Other income,[1] 1922 | Constructive gross income | Constructive deductions from gross income,[1] 1922 | Constructive net income | Capital stock Dec. 31, 1922 | Rate of constructive return on stock (per cent) |

[1] Excluding items in Net Railway Operating Income.
[2] Debtor.

Rates ought to come down to the farmers and at the same time they ought to come down to the general public. But the Interstate Commerce Commission says they are not too high; that the rate level is proper and what it ought to be. They do not feel it ought to be reduced. They feel that the railroads are only receiving a just return, such as is contemplated by the transportation act. If that is so every dollar that is taken off of one product must be put upon some other product, otherwise the loss will fall on the railroads.

But the Interstate Commerce Commission holds that the loss should not fall on the railroads. Therefore if they take a dollar off of the charge for carrying grain they must put it on something else. The question is whether you gentlemen have yet reached the pass in your desire to do something for the agricultural interests which will lead you to do something directly against the other interests of the country.

The farmers are asking for relief. They are entitled to relief and I am willing to give it to them, but I am not willing to give them relief at the expense of other people who need relief just as badly. The coal industry is languishing; it is in a state of great depression. You gentlemen who have coal miners in your districts have a class of people who are suffering from depression far more than your farmers, as a general rule. The lumber interests and various other interests are also suffering.

Agriculture is not "the" basic industry; it is merely one of a number of basic industries. Any idea that agriculture is the only basic industry is provincial and unenlightened and ought not to find expression by legislation in this body.

The farmers of this country want you to repeal section 15a of the transportation act. They ask that of you; and instead of giving them the bread of that relief, which would be relief to all the people of this country, you give them this stone. It can be given in honesty only if it is believed that this resolution does not mean anything. If it does mean anything, you are robbing the balance of the rate payers of this country in an effort to curry political favor with the dissatisfied farmers. It is well to consider agriculture. It is one of the great interests of this country. It is entitled to consideration by the Congress; but promote it, I beg you, by legitimate and honest means and not by deception and not at the expense of other interests. You can not afford to pick out any one class of people and say, "I will prefer you at the expense of other people equally worthy throughout the country."

Mr. DENISON. Will the gentleman yield?

Mr. HUDDLESTON. I yield to the gentleman.

Mr. DENISON. I would like to ask the gentleman from Alabama if he does not think the reduction in freight rates on the livestock in Nebraska that the gentleman from Nebraska [Mr. SHALLENBERGER] told us about was wrong and imposed a hardship on the rest of the people of the country?

Mr. HUDDLESTON. I am incapable of answering a question of that kind, because the justice of a particular rate is a matter for judicial determination upon all the facts. But I do say that those who vote for this bill are trying to get reductions for agriculture at the expense of the balance of the rate payers of the country and without regard to justice or fairness.

Mr. DENISON. Does not my friend think that the same thing was done with reference to the livestock in that case?

Mr. HUDDLESTON. I say I do not know. I do not know whether the particular rate made was or was not just, but I do say that a reduction intended to promote the interests of a certain section of the people at the expense of others is unjust and unfair. All such reductions should be granted with a view to the general public welfare and justice to all the people. [Applause.]

It is a strange commentary upon this resolution that those who are promoting it have consistently opposed all other railroad legislation. In the main they have opposed farm relief legislation. They prefer shadow to substance, smoke to reality. They have consistently opposed the repeal of section 15a of the transportation act and any general reduction in transportation charges. Generally speaking, they are the prorailroad bloc and have opposed the Howell-Barkley railroad labor bill, the McNary-Haugen bill, the Curtis-Aswell bill, the Norris-Sinclair bill, and other measures for agricultural relief.

And now they are ready to adjourn, having opposed all legislation for the benefit of farmers and laboring classes. Recently there was circulated in the House a pledge to oppose adjournment until action was taken on the Howell-Barkley bill and on farm relief, yet we find that the name of not a single Member who is promoting this Hoch resolution is signed to that pledge. The pledge and the names of those who signed follows:

The undersigned Members of the House of Representatives pledge themselves to oppose adjournment of Congress until final action is taken for the relief of the agricultural situation and upon the Howell-Barkley railroad labor bill:

Edgar Howard, George Huddleston, Scott Wolff, M. C. Allgood, A. H. Gasque, A. C. Shallenberger, Geo. K. Favrot, James O'Connor, Arthur H. Greenwood, Elmer Thomas, Henry Allen Cooper, Edward E. Browne, Frank R. Reid, Charles Russell Davis, O. J. Kvale, Florian Lampert, Henry R. Rathbone, John C. Schafer, Roy O. Woodruff, Samuel E. Cook, J. H. Smithwick, H. B. Steagall, W. F. Stevenson, Percy E. Quin, Ross A. Collins, Everett Kent, John M. Evans, H. S. Ward, Alben W. Barkley, John M. Nelson, J. D. Beck, Hubert H. Peavey, Oscar E. Keller, Fiorello H. LaGuardia, George J. Schneider, James H. Sinclair, Edward Voigt, Knud Wefald, James A. Frear, Edward J. King, Thomas S. Williams, Elton Watkins, Sam B. Hill.

The SPEAKER pro tempore. The time of the gentleman from Alabama has expired. The gentleman from Kansas [Mr. HOCH] is recognized for three minutes.

Mr. HOCH. One can not say much in three minutes. The gentleman from Virginia [Mr. MOORE] says that no such revision as proposed is necessary. If I had time I could quote from rate experts of the country, from all the farm organizations, and from everybody who has made a real study of this subject, saying it is necessary, and the other gentlemen who have followed him have admitted it is necessary. The gentleman also made a reference to the time that would be required. I do not think the gentleman from Nebraska [Mr. SHALLENBERGER] wants to be unfair. The gentleman said the statement was made by Mr. Hardie, director of traffic of the Interstate Commerce Commission, that this investigation might take as much as 10 years. If you will turn over a few pages of the hearing, the gentleman knows very well that he will find and you will find that Mr. Hardie said that in the final survey when you get down to the last detail of its application it might possibly be as much as 10 years, but he also said that under this general survey, in his judgment, you would get substantial results inside of two or three years; and, obviously, before we can make the adjustments we have to make this investigation.

Mr. WATKINS. Will the gentleman yield?

Mr. HOCH. No; I can not yield in three minutes.

Then the gentleman from Alabama [Mr. HUDDLESTON] complains this does not take in all other products. If the gentleman will read paragraph 1 he will see that it does include all classes and kinds of commodities. The main part of this resolution is in paragraph 1. Nobody contends that this can be done at once. I have certainly not contended anything of the sort. But it should be entered upon at once. The second paragraph is an honest direction to the commission, calling attention to the agricultural depression and directing every possible relief, reasonable and lawful, at the earliest practicable date. A large part of these facts are already before the commission. Cases are now pending involving livestock and involving grains and other farm products, and the commission is directed under this resolution to have in mind the direction of Congress upon this proposition in the settlement of such cases.

The gentlemen who say that this will not have any effect except in the far distant future are speaking without familiarity with the facts as they exist, and there is no provision here and no requirement or expectation that any rate which is not compensatory shall be levied. But certainly everyone knows that there are adjustments that should be made, and this resolution provides that within reason and within the law wherever they can possibly find any adjustments that will not work injury to adequate transportation service and are in the interest of agriculture, including livestock, they shall make them; and I understand the only objection so far offered, outside of the objections of the gentleman from Alabama, by anyone here, is that they are afraid that the Republican Party might possibly get a little credit for the passage of this resolution. [Applause.]

The SPEAKER pro tempore. The time of the gentleman from Kansas has expired. All time has expired. The question is, Shall the House suspend the rules and pass the bill?

The question was taken; and on a division (demanded by Mr. HUDDLESTON) there were—ayes 139, noes 8.

So, two-thirds having voted in the affiramtive, the rules were suspended and the bill was passed.

### RATE OF WAGES IN GOVERNMENT PRINTING OFFICE

Mr. KIESS. Mr. Speaker, I call up the bill H. R. 7996, an act to regulate and fix rates of wages for employees in the Government Printing Office, with Senate amendments.

The SPEAKER. The gentleman from Pennsylvania calls up the House bill with Senate amendments, which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 7996) to regulate and fix the rates of wages for employees in the Government Printing Office.

The Senate amendments were read.

Mr. KIESS. Mr. Speaker, I move to concur in Senate amendments 1 to 5, inclusive, and to the title of the bill.

The Senate amendments were agreed to.

Mr. KIESS. Mr. Speaker, I move to concur with Senate amendment No. 6, with an amendment as follows:

In lieu of the matter proposed by the Senate amendment insert the following: "That employees and officers of the Government Printing Office, unless otherwise herein fixed, shall continue to be paid at the rates of wages, salaries, and compensation (including night rate) now authorized by law until such time as their wages, salaries, and compensation shall be determined as hereinbefore provided."

The SPEAKER. The question is on the motion of the gentleman from Pennsylvania.

The motion was agreed to.

PAYMENT OF TUITION OF INDIAN CHILDREN IN PUBLIC SCHOOLS

Mr. SNYDER. Mr. Speaker, I present a conference report on the bill H. R. 4835, an act to pay the tuition of Indian children in public schools.

The conference report was read.

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill H. R. 4835, an act to pay tuition of Indian children in public schools, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendment.

HOMER P. SNYDER,
FREDERICK W. DALLINGER,
CARL HAYDEN,
*Managers on the part of the House.*

J. W. HARRELD,
JOHN B. KENDRICK,
CHARLES CURTIS,
*Managers on the part of the Senate.*

DISTRIBUTION OF WAR TROPHIES

Mr. McKENZIE. Mr. Speaker, I move to suspend the rules and pass the bill S. 1376, commonly known as the Cannon bill.

The SPEAKER. The gentleman from Illinois moves to suspend the rules and pass the bill, which the Clerk will report.

The Clerk read the bill, as follows:

An act (S. 1376) to provide for the equitable distribution of captured war devices and trophies to the States and Territories of the United States and to the District of Columbia

*Be it enacted, etc.*, That the Secretary of War be, and is hereby, authorized and directed to apportion and distribute pro rata among the several States, Territories, and possessions of the United States and the District of Columbia in corresponding ratio as the total number of men serving in the armed forces of the United States, as hereinafter provided, from each State, Territory, or possession of the United States and the District of Columbia bears to the total number of men so serving from all States, Territories, possessions, and the District of Columbia, all guns and howitzers with their respective carriages, machine guns, and other war devices and trophies suitable for distribution and captured by or surrendered to the armed forces of the United States from the armed forces of Germany and allied nations, with the exception of such guns, howitzers, carriages, machine guns, and other war devices and trophies as may be required for experimental purposes, or for actual use by the armed forces of the United States; and the further exception of such of the devices aforementioned as may be required for display in national museums, at national homes for disabled volunteer soldiers, or for monumental purposes in Arlington National Cemetery and in other national cemeteries, national parks, and national monuments wheresoever situated.

SEC. 2. That for the purposes of this act the reports heretofore compiled under the direction of the Secretary of War showing the number of men in the armed forces of the United States accredited to each State, Territory, and possession of the United States, and to the District of Columbia, either by enlistment or by the process of the selective service act, or otherwise drawn into and becoming an integral part of the armed forces of the United States during the period April 7, 1917, to November 11, 1918, and the allotment of war trophies suitable for distribution among the several States, Territories, and possessions, and the District of Columbia, shall serve as the basis of distribution. As soon as practicable after the date upon which this act shall become effective the Secretary of War shall cause the chief executive of each of the several States, Territories, and possessions, and the Commissioners of the District of Columbia to be informed of the character and quantity of war devices and trophies apportioned thereto, and shall invite each such chief executive and the Commissioners of the District of Columbia to designate such material as will be accepted free on board common carrier at the point of storage and to designate the point or points to which the accepted material is to be shipped without expense to the United States, other than that of packing and loading at the point of storage.

SEC. 3. Shipment of the apportionment of each State, Territory, and possession, and the District of Columbia accepted shall be made as soon as practicable after the chief executive, or the commissioners thereof, as the case may require, shall have informed the Secretary of War that such State, Territory, possession, or District will accept and take possession thereof as hereinbefore provided for and will relieve the United States of all responsibility for the safe delivery of the material and of all charges, costs, and expenses whatsoever connected with the transportation thereof: *Provided*, That if the chief executive or the commissioners of any State, Territory, possession, or District, shall not, within one year after notification of the character and quantity of the apportionment, file with the Secretary of War such acceptance and agreement such apportionment, or any part thereof, shall be sold as surplus property as it then is and where it then is, or shall be destroyed—all as the Secretary of War, in his discretion, shall determine; and like action shall be taken in respect of the rejected portion of any apportionment accepted in part only, and war devices and trophies considered by the Secretary of War as unsuitable for distribution.

SEC. 4. That all charges for apportioning, segregating, packing, and loading war trophies and devices for distribution to the designated point or points within each of the several States, Territories, and possessions, and the District of Columbia, as provided for herein, and for transportation to national museums, national homes for disabled volunteer soldiers, national cemeteries, and national parks, and for the disposition of undistributed war devices and trophies shall be paid by the United States Government from an appropriation to be made for that purpose.

SEC. 5. That the Secretary of War be, and he is hereby, authorized to make all rules and regulations to carry this act into effect.

SEC. 6. That to enable the Secretary of War to carry out the provisions of this act there is hereby authorized to be appropriated, out of any money in the United States Treasury not otherwise appropriated, the sum of $39,000, or so much thereof as may be necessary: *Provided*, That none of said sum shall be expended in cleaning, painting, or otherwise reconditioning war devices and trophies prior to shipment.

The SPEAKER. The question is, Will the House suspend the rules and pass the bill?

The question was taken; and two-thirds having voted in favor thereof, the rules were suspended, and the bill was passed.

A similar House bill was laid on the table.

PENSIONS

Mr. ROBSION of Kentucky. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H. R. 6426, and agree to the Senate amendments.

The SPEAKER. The gentleman from Kentucky asks unanimous consent to take from the Speaker's table a bill which the Clerk will report.

The Clerk read as follows:

An act (H. R. 6426) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy and certain soldiers and sailors of wars other than the Civil War and to widows of such soldiers and sailors.

The SPEAKER. Is there objection?

There was no objection.

The Senate amendments were read.

Mr. ROBSION of Kentucky. I ask unanimous consent that the House agree to the Senate amendments.

The Senate amendments were agreed to.

REMISSION OF CUSTOMS DUTIES ON PROPERTY OF THE WAR DEPARTMENT

Mr. GREEN of Iowa. Mr. Speaker, I call up the bill H. R. 9111, a privileged bill, from the Committee on Ways and Means.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

A bill (H. R. 9111) directing the remission of customs duties on certain property of the United States imported by the War Department

*Be it enacted, etc.*, That the Secretary of the Treasury is authorized and directed to remit all unpaid customs duties on material belonging to the United States and heretofore imported into the United States by the War Department.

Mr. GREEN of Iowa. Mr. Speaker, this bill simply pertains to war material which has been brought back from France. The purpose is to avoid a lot of bookkeeping, which would be occasioned by a demand for duties paid by the War Department, and another appropriation to pay the duties.

Mr. WINGO. This is property of the United States being brought in by the War Department?

Mr. GREEN of Iowa. It is property of the United States. It has been brought in by the War Department, and the Treasury contends that the duty shall be paid upon it.

Mr. WINGO. And no individual gets any benefit from this?

Mr. GREEN of Iowa. No.

Mr. WINGO. It is clearly a bookkeeping transaction for the United States?

Mr. GREEN of Iowa. Yes.

Mr. CRISP. Mr. Speaker, will the gentleman yield?

Mr. GREEN of Iowa. Yes.

Mr. CRISP. Mr. Speaker, I rise to corroborate what the chairman of the committee has stated, that this bill is unanimously reported from the Committee on Ways and Means. After the armistice the War Department reshipped into the United States munitions and properties that the United States had in France, and when those goods came into the United States they were liable for customs duties. The customs duties were not paid, but the War Department owes the Treasury the amount of those customs duties. This is simply a matter of bookkeeping. It would be useless for the Government to pay the appropriation out of the War Department and then put it back into the Treasury. It simply settles the account on the books.

Mr. BLANTON. Mr. Speaker, will the gentleman yield?

Mr. GREEN of Iowa. Yes.

Mr. BLANTON. There is a system in the War Department with regard to officers which requires the War Department to move them from one place to another every four years. An officer does not live in any one part of the United States usually more than four years before he has to move. When they get back to this country, they and their families, just like all other human beings, bring back lots of things with them. This has nothing to do with the private belongings of any of these various officers?

Mr. GREEN of Iowa. Nothing whatsoever.

Mr. BLANTON. And it applies only to Government property?

Mr. GREEN of Iowa. Government property.

Mr. BLANTON. That is all I wanted to find out.

Mr. GREEN of Iowa. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill for amendment.

The Clerk again reported the bill.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. GREEN of Iowa, a motion to reconsider the vote by which the bill was passed was ordered to lie on the table.

## MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

A message in writing from the President of the United States, by Mr. Latta, one of his secretaries, who also informed the House of Representatives that the President had approved and signed bills of the following titles:

On June 3:

H. R. 1869. An act for the incorporation of the Grand Army of the Republic;

H. R. 4481. An act authorizing the Secretary of Commerce to exchange land formerly used as a site for the Point of Woods Range Lights, Mich., for other lands in the vicinity;

H. R. 5136. An act for the relief of Eva B. Sharon;

H. R. 8209. An act to create the Inland Waterways Corporation for the purpose of carrying out the mandate and purpose of Congress as expressed in sections 201 and 500 of the transportation act, and for other purposes; and

H. R. 8886. An act providing for sundry matters affecting the Military Establishment.

On June 4:

H. R. 731. An act authorizing the Wichita and affiliated bands of Indians in Oklahoma to submit claims to the Court of Claims;

H. R. 6721. An act to amend the act entitled "An act to fix and regulate the salaries of teachers, school officers, and other employees of the Board of Education of the District of Columbia," approved June 20, 1906, as amended, and for other purposes;

H. R. 1018. An act authorizing the Secretary of the Navy, in his discretion, to deliver to the custody of the Albany Institute and Historical and Art Society of the city of Albany, N. Y., the silver service which was presented to the U. S. cruiser *Albany* by citizens of Albany, N. Y.;

H. R. 3852. An act providing for the final disposition of the affairs of the Eastern Band of Cherokee Indians of North Carolina;

H. R. 5573. An act granting certain public lands to the city of Shreveport, La., for reservoir purposes; and

H. R. 9124. An act authorizing the sale of real property no longer required for military purposes.

On June 5:

H. J. Res. 237. Joint resolution directing the Secretary of the Interior to withhold his approval of the adjustment of the Northern Pacific land grants, and for other purposes;

H. R. 714. An act to amend section 101 of the Judicial Code;

H. R. 3009. An act for the relief of Robert J. Kirk;

H. R. 4445. An act to amend section 115 of the act of March 3, 1911, entitled "An act to codify, revise, and amend the laws relating to the judiciary";

H. R. 7041. An act to amend an act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September 7, 1916;

H. R. 7220. An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1925, and for other purposes;

H. R. 4985. An act to repeal the first proviso of section 4 of an act to establish a national park in the Territory of Hawaii, approved August 1, 1916;

H. R. 5078. An act making appropriations for the Department of the Interior for the fiscal year ending June 30, 1925, and for other purposes; and

H. R. 5478. An act to amend sections 1, 3, and 6 of an act entitled "An act to provide for the promotion of vocational rehabilitation of persons disabled in industry or otherwise and their return to civil employment."

On June 6:

H. J. Res. 194. Joint resolution to print as a House document the proceedings of the national encampments of the Grand Army of the Republic, the United Spanish War Veterans, and the American Legion, for the use of the House and Senate;

H. R. 3143. An act for the relief of Bernice Hutcheson;

H. R. 8143. An act for the protection of the fisheries of Alaska, and for other purposes; and

H. R. 6202. An act to amend sections 11 and 12 of the merchant marine act, 1920.

## MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had passed without amendment bills of the following titles:

H. R. 4526. An act to incorporate the United States Blind Veterans of the World War;

H. R. 3477. An act for the relief of James B. Porter;

H. R. 4816. An act authorizing the Secretary of War to permit the city of Vicksburg, Miss., to construct and maintain water mains on and under the National Cemetery Road at Vicksburg, Miss.;

H. R. 6049. An act for the relief of V. E. Schermerhorn, E. C. Caley, G. W. Campbell, and Philip Hudspeth; and

H. R. 8657. An act to amend section 98 of the Judicial Code, providing for the holding of the United States district court at Shelby, N. C.

The message also announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 2803. An act to regulate within the District of Columbia the sale of milk, cream, and ice cream, and for other purposes.

REGAUGING OF DISTILLED SPIRITS IN BONDED WAREHOUSES

Mr. GREEN of Iowa. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 9138) to authorize the discontinuance of the seven-year regauge of distilled spirits in bonded warehouses, and for other purposes.

The SPEAKER. The Chair can not recognize the gentleman for that purpose at this period. Perhaps he will later.

PROTECTION OF PACIFIC HALIBUT FISHERIES

Mr. GREENE of Massachusetts. Mr. Speaker, I move to suspend the rules and pass the bill (S. 3434) for the protection of the northern Pacific halibut fisheries, which I send to the desk.

The Clerk read the bill, as follows:

*Be it enacted, etc.*—

SECTION 1. Short title: This act may be cited as the northern Pacific halibut act.

SEC. 2. Definition of terms: For the purposes of this act "close season" shall mean the period from the 16th day of November in any year to the 15th day of February in the next following year, both days inclusive, or any other close season hereafter fixed by agreement between the United States and Canada; "territorial waters of the United States" shall mean the waters contiguous to the western coast of the United States and the waters contiguous to the coast of Alaska; "territorial waters of Canada" shall mean the waters contiguous to the western coast of Canada, and "prohibited waters" shall mean the territorial waters of the United States, the territorial waters of Canada, and the high seas, including Bering Sea, extending westerly from the limits of the territorial waters of the United States and Canada.

SEC. 3. Fishing unlawful, when: It shall be unlawful for any person to fish for, or catch, or attempt to catch, any halibut (hippoglossus) at any time during the close season in the Territorial waters of the United States, or for any national or inhabitant of the United States to fish for, or catch, or attempt to catch, any halibut at any time during the close season in prohibited waters. The unintentional catching of halibut, when legally fishing for other species of fish, shall not constitute a violation of this act if such halibut shall be used for food by the crew of the vessel catching the same, or be landed and immediately delivered to any authorized official of the Bureau of Fisheries of the Department of Commerce of the United States or the fishing authorities of the Dominion of Canada. The halibut delivered to any official of the United States pursuant to the provisions of this section shall be sold by the Department of Commerce to the highest bidder for cash and the proceeds therefrom, exclusive of necessary expenses in connection therewith, shall be covered into the Treasury of the United States.

SEC. 4. Unlawful port use; departures: No person, firm, or corporation shall use any port of or place in the United States to furnish, prepare, or outfit any vessel, boat, or other craft intended to be used in violation of this act, nor shall any person permit, or cause to be permitted, any vessel, boat, or other craft intended to be used in violation of this act to depart from any port of or place in the United States.

SEC. 5. Unlawful port entry; possession: It shall be unlawful for any vessel, boat, or other craft having on board any halibut caught contrary to the provisions of this act to enter any port or place in the United States, or for any vessel, boat, or other craft to enter any such port or place while upon or in the prosecution of any voyage during which the vessel, boat, or other craft fished or was used in fishing for halibut in prohibited waters in the close season. It shall be unlawful for any person knowingly to have in his possession any halibut unlawfully caught under the provisions of this act.

SEC. 6. Penalty: Any person violating any of the provisions of this act shall be fined not less than $100 nor more than $1,000 or imprisoned not more than one year, or both.

SEC. 7. Patrols; searches: The President shall cause a patrol of naval or other public vessels designated by him to be maintained in such places and waters as to him shall seem expedient for enforcing this act, and any officer of any vessel engaged in such service, and any other officers designated by the President, may search any vessel, boat, or other craft in the territorial waters of the United States and any vessel, boat, or other craft of the United States on the high seas when suspected of having violated or being about to violate the provisions of this act.

SEC. 8. Canadian vessels and nationals: Every national or inhabitant and every vessel of Canada found violating this act shall be delivered as soon as practicable to an authorized official of Canada at the nearest point to the place of seizure or elsewhere as the officials of the United States seizing the same and the authorized officials of Canada may agree upon, and the witnesses and proof necessary to the prosecution of said persons and vessels of Canada shall be furnished with reasonable promptitude to the authorities of Canada having jurisdiction thereof.

SEC. 9. Seizure and forfeiture: Every vessel, boat, or craft employed in any manner in violating this act shall be seized by any collector, surveyor, inspector, officer of a revenue cutter, or person specified in section 7 hereof; and, except as provided in section 8 thereof, every such vessel, boat, or craft, including its tackle, apparel, furniture, cargo, and stores, shall be forfeited to the United States by proper proceedings in any court of the United States in Alaska, California, Oregon, or Washington.

SEC. 10. Fisheries commission exemption: None of the inhibitions contained in this act shall apply to the International Fisheries Commission when engaged in any scientific investigation.

SEC. 11. Appropriation: There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $15,000 for the fiscal year 1925 for the salaries and expenses of the International Fisheries Commission.

SEC. 12. Duration of act: This act shall take effect immediately and continue in force until the termination of the convention concluded by the United States and Great Britain on March 2, 1924, for the protection of the halibut fishery of the northern Pacific Ocean.

Mr. WINGO. Mr. Speaker, as I understand it this is a unanimous report from the committee in the House and also the committee in the Senate?

Mr. GREENE of Massachusetts. Yes; both the Senate and the House committees.

The SPEAKER. The question is on the motion of the gentleman from Massachusetts to suspend the rules and pass the bill.

The question was taken; and, in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

A similar House bill was ordered to lie on the table.

PERMITTING CERTAIN ALIENS TO REMAIN IN THE UNITED STATES

Mr. JOHNSON of Washington. Mr. Speaker, I move to suspend the rules and pass the House Joint Resolution 283, to permit to remain within the United States certain aliens in excess of quotas fixed under the authority of the immigration act of May 19, 1921, which I send to the desk.

The Clerk read as follows:

*Resolved, etc.*, That aliens who embarked for the United States on or before May 26, 1924, arriving in excess of quotas fixed under authority of the act entitled "An act to limit the immigration of aliens into the United States," approved May 19, 1921, as amended and extended, may, if otherwise admissible and if not subject to deportation for other causes, be permitted to enter and to remain in the United States without regard to the provisions of such act of May 19, 1921, as amended and extended.

The SPEAKER. Is a second demanded?

Mr. BOX. Mr. Speaker, I demand a second.

Mr. JOHNSON of Washington. Mr. Speaker, I ask unanimous consent that a second be considered as ordered.

The SPEAKER. The gentleman from Washington asks unanimous consent that a second be considered as ordered. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Washington is entitled to 20 minutes, and the gentleman from Texas to 20 minutes.

Mr. JOHNSON of Washington rose.

Mr. BLANTON. Mr. Speaker, this is a very important question, and I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Texas makes the point of order that there is no quorum present. Evidently there is not.

Mr. SNELL. Mr. Speaker, I move a call of the House.

The motion was agreed to.

The SPEAKER. The Doorkeeper will close the doors, the Sergeant at Arms will bring in absentees and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

| | | | |
|---|---|---|---|
| Aligood | Dominick | Kent | O'Brien |
| Anderson | Doughton | Kerr | O'Connor, N. Y. |
| Anthony | Dowell | Knutson | Paige |
| Aswell | Doyle | Kunz | Peavey |
| Beck | Drane | Langley | Quayle |
| Bixler | Drewry | Lilly | Rainey |
| Boies | Dyer | Lineberger | Reed, W. Va. |
| Burdick | Fairchild | Little | Rogers, N. H. |
| Burton | Faust | Logan | Rosenbloom |
| Butler | Fredericks | Lyon | Stalker |
| Byrnes, S. C. | Garner | McFadden | Sullivan |
| Cable | Geran | McKenzie | Taylor, Tenn. |
| Campbell | Hammer | McKeown | Tucker |
| Carter | Hardy | McLeod | Vare |
| Celler | Hawes | Madden | Ward, N. Y. |
| Clancy | Hill, Ala. | Magee, Penn. | Ward, N. C. |

| Cole, Ohio | Hull, Tenn. | Miller, Ill. | Winslow |
| Collins | Jones | Moore, Ill. | Wood |
| Curry | Jost | Morin | Young |
| Davey | Kahn | Mudd | |
| Davis, Minn. | Kendall | Nelson, Me. | |

The SPEAKER pro tempore (Mr. TILSON). On this vote 343 Members have answered to their names, a quorum.

Mr. JOHNSON of Washington. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The SPEAKER pro tempore. The Doorkeeper will open the doors.

Mr. JOHNSON of Washington. Mr. Speaker, I yield a half minute to the gentleman from North Carolina [Mr. WEAVER].

Mr. WEAVER. Mr. Speaker, I ask unanimous consent to put in the RECORD a short speech upon the life and character of Hon. Richmond Pearson, formerly a Member of this House.

The SPEAKER pro tempore. The gentleman from North Carolina asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection? [After a pause.] The Chair hears none.

Mr. WEAVER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I desire to have printed in the RECORD an address delivered by Mr. McKinley Pritchard, of Asheville, N. C., on the life and character of Hon. Richmond Pearson.

Mr. Pearson at one time represented in this House the district which I now have the honor to represent. While Mr. Pearson and myself belonged to different political parties, he was for many years an upstanding figure in my State. He was a man of splendid intellectual attainments and vigorously presented the ideas he entertained. He is decendent from one of the greatest chief justices North Carolina has ever had.

After his service in Congress he represented this country in the foreign service, and his death brought sorrow to many of his friends in my State.

The address is as follows:

Richmond Pearson, orator, statesman, and diplomat, died at his home at Richmond Hill, near the city of Asheville, September 12, 1923. He was 71 years old.

Mr. Pearson was born in Yadkin County, N. C., January 26, 1852, the son of the Hon. Richmond Mumford Pearson and Margaret Williams Pearson. His father was a jurist and law teacher continuously for 42 years, and was the chief justice of the Supreme Court of North Carolina from 1858 until his death in 1878.

Speaking of Justice Pearson, the father of the subject of this sketch, some one has said:

> "Chief Justice Pearson brought to the study of the law the energy of a toiler, the investigation of a scientist, and the enthusiasm of a devotee. With him the law was neither a trade nor a business nor an avenue to wealth, but a solemn and dignified profession attended with vast responsibilities and affording unlimited opportunities for good. With his logical mind and fine sense of right he could see no law without reason, nor precedent without justice, and no administration without firmness tempered with mercy. He had unflinching courage, and never applied the law as an instrument of expediency. Neither the storm of passion, the bitterness of party, nor threats of violence could swerve him from the beaten paths of the law. He loved the old masters of the law, studied their works with the passion of youth, followed the law books to their foundation head, and was the foe of radical innovation. He lived with Blackstone and Coke and Littleton, and knew Kent, Marshall, and Story. With him the common law was the decalogue of jurisprudence, and he accepted no amendments not made necessary by the changes of time and condition. His opinions are more than repeated precedents, abstract settlements, and tedious detail; they glow with life, abound with reason, and clothe the law with rich apparel and endow its precepts with soul and spirit. He saw in our courts the hope of the helpless, the resort of the injured, and the shield of the defenseless, and he never permitted their diversion to unworthy purposes."

Such was the character of the father of the subject of this sketch. In his own service to his State and to his country Richmond Pearson lived up to the high mark established before him by his father. His early education was received at Horner's School, at Oxford, N. C., and he subsequently entered Princeton University at the age of 16 years, graduating four years later. He delivered the valedictory address for his class in 1872.

Upon leaving college he returned to North Carolina for two years. He studied law under his father, and in 1874 was licensed to practice law. President Grant appointed him a consul to Verviers and Liege when he was but 23 years of age. In 1875 he paid a brief visit to the United States, and delivered the master's oration at Princeton in that year. He was awarded the Master of Arts degree, the Bachelor of Arts degree having been conferred upon him when he graduated. He returned to Belgium for two more years in the foreign service.

In 1877 Mr. Pearson resigned from the Consular Service and returned to the United States. Later he formed a partnership for the practice of law with John D. Davis, with offices in St. Louis, Mo. Shortly afterwards the death of his father made it necessary for him to return to North Carolina, Mr. Pearson having been named as sole executor of his father's estate. He found it impossible to return to St. Louis, and at this time he definitely gave up the practice of law.

On March 30, 1882, he married Gabrielle Thomas, daughter of James Thomas, jr., of Richmond, Va. This union brought together two of the oldest families of North Carolina and Virginia. Miss Thomas was truly a representative of Virginia's noblest and best womanhood. She possessed those magnificent qualities of heart and mind which stimulated the ambitions of her distinguished husband, and her rare intellectual strength did much to promote the higher aspirations of his life. During the years which followed his marriage Richmond Pearson entered wholeheartedly into politics, and these years were marked by the untiring energy with which he entered public service in his native State. He was elected to the North Carolina General Assembly in 1884 and again in 1886.

Eight years later he was elected to Congress and served three successive terms, carrying the ninth district, which had been Democratic for a number of years, by the largest majority ever given to a Republican. At the time Mr. Pearson made his campaign for Congress it was the custom for the candidates to appear at the different county seats in the district and discuss issues before the people in joint debate. Mr. Pearson was truly a great debater. I have heard many of the older citizens speak of Mr. Pearson's joint debate with his opponent, the late Hon. W. T. Crawford, of Waynesville, N. C., who was nominee of the Democratic Party, and those who remember the joint debates in the old ninth congressional district will never forget Richmond Pearson as the standard bearer of the Republican Party in this section. These debates were the equal, if not surpassing the great debates of the brothers, Alfred and Bob Taylor in East Tennessee. People would travel on horseback and in wagons for miles to hear these forensic contests. These were days when men took their politics seriously, and in a few instances violence was resorted to by the friends of both leaders. But only in a few cases were these giants of the rostrum unable to control and calm their audiences. Notwithstanding the fierceness of these contests, Pearson and Crawford traveled as friends from place to place, stopping at the same hotels, always maintaining cordial relations and good fellowship. We shall not see the like of these men again. Mr. Pearson broke many lances of his adversaries in public debate, yet while fierce and aggressive he stooped to no unworthy methods; he rarely appealed to prejudice and at all times showed that amplitude of fairness to be found in the annals of the statesman's craft.

Mr. Pearson had a marvelous personality and commanding figure; the easy flow of forceful language, which made him well-nigh invincible in joint debate. He was always an honest foeman, despite the fact that in the rough and tumble debate on the hustings he used a sharp sword against his adversaries.

During the time he was a Member of Congress he was one of the leaders of the Republican Party of the State. His counsel was sought not only by the leaders of the party in this State but by the leaders of the party in the Nation. Both Presidents McKinley and Roosevelt regarded Mr. Pearson as one of the ablest men in the Republican Party, and he was an intimate friend of both these great men.

Mr. Pearson's political constituents in the ninth district admired him for his fairness and for his strict attention to his duty as a Congressman. His political opponents, though differing with him on matters of party principles, always spoke of his qualities as a man in the highest terms.

As a Member of Congress he served on the important Committee of Foreign Affairs and on the subcommittee of three which drafted the resolutions authorizing war against Spain.

Recognizing Mr. Pearson's ability as a statesman and his scholarly learning, President Roosevelt in 1901 appointed him United States consul at Genoa, Italy. He was so successful and represented the Government with such merit at this post that a year later the President promoted him and made him minister to Persia. He discharged the duties of this post with such success that President Roosevelt cabled his commendation "for energetic and efficient service," and soon afterwards appointed him envoy extraordinary and minister plenipotentiary to Greece and Montenegro, which post he held for two years. In 1909 he resigned from the Diplomatic Service and returned to the United States and retired from public life. His last years were spent at his home on Richmond Hill.

Miss Majorie Pearson, the charming and talented daughter of Mr. Pearson, is an accomplished linguist, and at present occupies a position of responsibility at Baltimore, Md., where she has resided for about three years.

Mr. Pearson's only son, Thomas Pearson, who is now serving as a member of a commission invited by the Shah of Persia to investigate and adjust the financial conditions in that country, served during the World War with distinction, and was awarded four decorations for bravery while with the American Expeditionary Forces. He served

with the rank of captain, and was at one time an aid-de-camp to Major General Lewis, who commanded the famous Thirtieth Division.

Richmond Pearson ranked as one of North Carolina's foremost citizens. His charm as a man, and his scholarly gifts made natural his several high appointments in the diplomatic service of his country. It is true that while he represented this country abroad as a minister there were few, if any, great international problems to be solved, but his wonderful personality, coupled with his literary attainments and ability, made him equal to any occasion which might have arisen.

As a Member of Congress he was forceful as an orator, and his valuable experience as a consul abroad gave him a splendid preparation to meet his duties as a member of the Foreign Affairs Committee. While a member of this committee he rendered invaluable service to his country during the war with Spain.

During his residence in Asheville he was always a public-spirited citizen, and was ever found among those who advocated good roads and general improvement. A great many of the road and street improvements which are now enjoyed by our citizenship were the result of his untiring efforts in behalf of this section.

While Mr. Pearson was a man of marked literary attainment and legal ability, and while much of his time was given to the service of his people, yet he found the time and the opportunity to engage in many temporal pursuits, and his name is inseparably linked with the material growth and development of this section.

In the death of this distinguished man the State of North Carolina has suffered an irreparable loss, his political party an able defender, the bar of North Carolina an eminent jurist and forceful advocate, and humanity itself one of nature's noblemen.

Mr. HILL of Maryland. Mr. Speaker, I renew the unanimous-consent request made by the gentleman from Nebraska [Mr. HOWARD] on my behalf this morning.

The SPEAKER pro tempore. The gentleman from Maryland asks unanimous consent to extend his remarks in the RECORD——

Mr. SNELL. Mr. Speaker, reserving the right to object, what is the request?

Mr. HILL of Maryland. I renew the request made by Mr. HOWARD of Nebraska this morning to put in Doctor Butler's——

Mr. SNELL and Mr. KING. Mr. Speaker, I object.

Mr. BRIGGS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the Federal highway act passed yesterday.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

Mr. WILSON of Louisiana. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the work of this session of Congress.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

Mr. WILSON of Louisiana. Mr. Speaker, with the adjournment of this session of Congress on June 7, 1924, a record of official service will be left behind about which there is much controversy regarding its accomplishments and failures, its successes and disappointments. It is not possible to accurately judge the work of one session of Congress alone, since at each session corrective and amendatory legislation is necessary to perfect the work of previous sessions.

AGRICULTURE AND AGRICULTURAL CREDITS

One of the chief difficulties in properly estimating accomplishments in national legislation is that the country has been led by propaganda and by Congress itself to look to the National Capital for relief from every kind of adverse condition, regardless of its cause. I believe it will be admitted as a general rule that many of those in public life to-day are too prolific in promises to make a satisfactory record of actual accomplishments, and this applies to political parties, political factions, and legislative blocs. The public is entitled to a square deal; and the first obligation of the public official is to be frank and straightforward with his constituency, even though that course might be disappointing. We have a fair example of this overpromising in the present situation in regard to agriculture and attempted legislation for additional relief, much of which is simply put forward for political purposes to aid in the present campaign. This has come principally from the wheat sections of the central and far West, but the conditions there are not any worse than they have been many times in the cotton sections of the South, and we had to fight it out without Government aid and price fixing.

I wish to state here that Congress has not been unmindful of the great agricultural interests of the country. During my service here I have seen more legislation enacted with the support of Members from all sections of the country in an effort to aid agriculture, to bring better surroundings and more prosperous conditions to the farmer and to those living in rural communities, than was enacted in the previous history of the Government. The intent and purpose has been good, whether the results have been satisfactory or not.

FARM LOAN ACT

The farm loan act, establishing 12 Federal land banks, affording unlimited capital for long-time loans at fair interest rates, was passed for the benefit of the farmer, to give him a banking system suitable to his needs for increased capital for development and to enable him to take advantage of his opportunities. The records show that this system has been a success from a banking standpoint and that loans have been made to farmers aggregating more than $1,000,000,000 and are now being made at the rate of a million dollars a day. This isystem is supervised and its continued success guaranteed by the Government.

In addition to this, a group of intermediate-credit banks has been established with branches in the same districts covered by the Federal land banks, supervised and directed by the same management, the capital stock owned by the Government, and with assured credit possibilities of $660,000,000 to begin with. The Federal land banks serve all the purposes of a long-time loan system, but it was found that a provision for intermediate or short-time credit was necessary. The intermediate-credit banks were established to meet this need of the farmer for loans running from six months to three years. The three-year credits were intended to supply the needs of the livestock industry, while the shorter credit was for meeting the needs of the producers of such agricultural products as grain or cotton. In addition to this the law authorizes the establishment of national agricultural-credit corporations, with a capital stock of $250,000 or more, and which may be incorporated and come under the supervision of the farm banking system and the National Government. These corporations are capable of rendering effective assistance to cooperative marketing associations.

It is admitted everywhere that ample credit of every kind has been made available for agriculture by the action of Congress. There has been some complaint recently that credit has been made too bountiful and easy to secure, and that the result has not been what was contemplated. Even if this was true, it would not be the fault of the legislative branch of the Government, for the successful use of credit depends upon the individual. Credit simply affords an additional opportunity for success, and only adds to the prosperity of an individual or industry when used in a businesslike way. These credit systems have afforded great relief to agriculture and will be a continued success because they serve a legitimate need of that industry and have enabled thousands of farmers to prevent foreclosure on short-time loans as well as to make valuable and needed improvements and to acquire property for future development.

COOPERATIVE MARKETING

The Congress has enacted every statute needed for the success of cooperative marketing organizations, either independent of or in conjunction with State legislation on that subject. Farmers' cooperative marketing organizations have been by special enactment exempted from the operation of the anti-trust laws, so that they can not be held to account under any complaint that might be made on account of their joint effort to hold together for better prices under a charge that they were combinations in restraint of trade. Some of the big interests have termed this class legislation, but they overlook the fact that it is just and proper for men to combine to receive a fair return for the products of their own toil and industry, and that it is necessary when every other business is organized that agriculture should be given the fullest opportunity to protect itself. The results obtained through cooperative marketing associations and farm-bureau federations operating through warehouse system, either State or Federal, will depend upon the completeness and cohesiveness of the organization, good business judgment, and effective management. Agriculture is a business, and it does not help the farmer any to tell him that he is the backbone of the country and its mainstay in time of peace or war if he simply accepts those compliments and fails to act to protect himself. I know of no greater service that the business men and bankers of the South could render than to join with the farm-bureau federations and the various cooperative marketing associations and assist them with business advice and local capital when needed.

I have no sympathy with the doctrine that there should be a line of demarcation between agriculture and other business; that there should be a distinction as to community interests between the towns and cities and the rural sections and the agricultural districts. Congress ought to spend more time advising the farmers how to cooperate with each other as well

as with the business men and bankers than in picturing their isolated, unfortunate condition, and leading them to believe that the business community is out of touch and out of sympathy with the farmer and his problems. On the other hand, the various business interests, banks, and industrial enterprises owe it to themselves to get outside their own circle and into touch with and behind every movement to develop agriculture.

DIVERSIFICATION

In discussing farming as a business, diversification comes in for primary consideration. I feel that this is particularly true in the South and in my own section of Louisiana.

The cotton-boll weevil has produced a condition in which cotton production is too expensive to justify continued cultivation of large areas as heretofore done. For instance, last year the South planted 38,000,000 acres to cotton and produced only about 10,000,000 bales. This is a losing proposition. As a matter of practical business, the South must reach the point where it can produce annually about 12,000,000 bales of cotton on 60 per cent of this acreage and then plant surplus acreage to other crops.

We should not be misled by the propaganda that the world needs fifteen to eighteen million bales of southern cotton yearly, and that if conditions in Europe were normal we could sell that amount at the present price. Even if the world needs that large a production of cotton, the fact remains that it is not able to pay for it, and that the economic conditions of Europe are so disorganized that practical and experienced business men everywhere see no prospect of normal conditions there within the next 20 years.

I take some little personal pride in the work of boll-weevil control, since it has been accepted by the Department of Agriculture that the methods worked out at the Delta Laboratory, at Tallulah, La., in the fifth congressional district, are the most effective yet known. We have been able to increase the appropriations for that work at each succeeding session of Congress, and we look forward to the time when there will be an ample supply of calcium arsenate at prices much lower than at the present time. Cheaper fertilizer, cheaper and more effective methods of boll-weevil control, and intensive cultivation of a smaller acreage must be the slogan of the cotton farmer. In addition to this, crop diversification diminishes the necessity for outside purchases by supplying home needs from the farm, with some surplus to sell, and therefore is a necessary part of farming operations as a business enterprise. Congress can and will assist in providing a cheaper and more abundant supply of fertilizer and in working out even better methods of boll-weevil control, but the system of cultivation and diversification is something that must appeal to the business sense of the farmer and be established by his own initiative and worked out in his own good judgment.

PUBLIC ROADS

Congress has adopted the policy of giving Federal aid in the construction of public highways and is appropriating $75,000,000 annually, which is apportioned among the various States and allotted to the various localities to be joined with the money of the States and the local taxpayers in the building of a system of public highways through every community in the United States. This is legislation of special interest to the rural districts. It is possible to do this under the provision of the Constitution authorizing the Government to maintain rural post roads and to establish an effective rural mail service. We all appreciate the benefits brought to the home of every citizen by the rural mail service, which is gradually being improved from year to year. Through a system of completed public highways there will no longer be isolated communities. When the interstate roads are completed connecting the principal cities and State capitals, and the intercounty roads are finished connecting the various county seats, there will still remain to be worked out the most important part of the system in so far as the farmer is concerned—the lateral connecting links to the main lines, sometimes referred to as the "farm to market" roads. Federal and State assistance with these roads which open up the way for rural communities is, in my judgment, the most important of all. People everywhere contribute in taxes to the establishment of these systems, and it would be unfair and indefensible to fail to provide adequately for that portion of the citizenship who are not fortunate enough to be situated on the main lines.

Another important feature has developed which I believe calls for an enlargement of the Federal program: The local communities have provided the major portion of the funds for the actual road construction and must maintain them when completed. In all the States, and particularly in Louisiana, in order to make the highway system effective many bridges must be constructed across navigable streams. Transportation across a navigable stream is in every sense more than a local matter, and the expense of bridge construction in these cases can not be borne by the local community. Hence, regardless of the amount necessary for that purpose, the Federal Government and each State should make provision for and construct such bridges as rapidly as the highways are completed.

We have established, or aided in the establishment of, three systems of transportation—the railroads, waterways, and public highways. The successful operation of each is a necessary part of the whole and should in every instance be coordinated for the benefit of the public. Our public-road system can not be termed successful upon the ground that it is a public convenience. It must be so constructed and operated as to make returns to the public on the basis of investment by reducing transportation costs. Taxes are not justified for the purpose of luxury and entertainment, but should always be considered as an investment by the public, and a properly coordinated road system will meet this requirement, while a halfway completed system, with unreasonable overhead charges for its operation and maintenance, will finally bankrupt the taxpayer and fail of every legitimate purpose. Our public-road program as presently outlined and undertaken would not have begun without the assistance of the Federal Government and can not be completed without continued assistance on a more ample basis.

FLOOD CONTROL

I am deeply gratified to have been of constructive and effective service to the people of my State and congressional district in securing legislation to protect that great section, as well as other portions of the Mississippi Valley, against destructive floods. Through the assistance of the leaders in the House of Representatives I was placed upon the Committee on Flood Control when it was first created, and have devoted my time, energy, and what ability I possess continually to that work, both while Congress was in or out of session.

With the creation of this committee we separated flood-control work from river and harbor legislation, and very properly so. The controlling of the floods of the Mississippi River and the protection of that great valley is the Nation's most needed and most important internal improvement. The results obtained in the way of legislation have more than justified the course taken by Congress. President Coolidge has just signed the first appropriation authorizing $10,000,000 for the coming fiscal year—the greatest amount ever set aside in one year in the history of the Government for that work. The bill under which this appropriation was made authorizes a like appropriation annually for five more years. It has taken constant work and unremitting watchfulness to save this appropriation, but we have the satisfaction of knowing that the precedent is now established and the prospects are for an easier pathway in the future.

The President has also recently signed a flood-control measure providing for a survey of 20 rivers in 10 States. This means an enlarged program that will bring sympathy and assistance to the central work on the Mississippi. These surveys will take into consideration the question of water storage and reservoir construction and every other method of dealing with stream flow. In connection with this and every survey for navigation we have legislation now pending to authorize surveys and estimates of water-power possibilities. Hydroelectric development seems to be the coming program for the country as a whole, and we should make use now of the Corps of Engineers of the Army, not only to determine questions of navigation and flood control but to point out definitely every source of water power and hydroelectric development and utilization. The country is just waking up to the value of the utilization of hydroelectric power. Reputable engineers estimate that when a complete system is thoroughly developed it will be possible for practically every person in the United States to light and heat his home with electricity for less cost than at the present time, and that the cheaper power made available will reduce the cost of all manufactures from 5 to 10 per cent.

IMMIGRATION

Above and beyond material considerations and legislation relative to public convenience, business, and taxes is the necessity of preserving for future generations in this country the American system of government and American institutions as worked out and established by the fathers of this Republic. I desire to congratulate the President upon coming to the final conclusion that he should stand with the Committee on Immigration and the Congress and approve the most effective and restrictive immigration law ever placed upon the statute books, and yet one which is as fair and humane as it is possible to construct from the American standpoint. It is difficult to understand why the press and many officials of this country

complain because of the exclusion of Japanese and other nationals ineligible for American citizenship. Practically every State in the Union has joined Louisiana in placing a provision either in the constitution of the State or in its statutes prohibiting those ineligible for citizenship from acquiring, owning, or controlling property. Then why should we pollute the stream of American life by having elastic provisions for the admission of such nationals remain longer in our law? I have been on the Committee on Immigration since coming to Congress and have assisted in framing every act restricting immigration since passed, and I am glad to say that we now have what may be a permanent and effective law, one which, if properly administered, will meet the demands of the American people.

TAX REDUCTION

The country has been flooded with more syndicated propaganda on the Federal income-tax legislation during the present session of Congress than was ever known before in relation to any legislative proposition. The final result shows how inaccurate and unreliable is much of the propaganda sent out to the American people on matters in which they are vitally interested and which affect the business program and prosperity of the country.

The program for tax reduction outlined by the Secretary of the Treasury, known as the Mellon plan, was given a line of publicity that established around it a halo of perfection. Letters, telegrams, and resolutions flooded the office of every Member of Congress, appealing for the passage of the Mellon plan without any investigation, study, or the exercise of individual judgment; even whether understood in its details or not, the appeal was to adopt it without modification. Dire calamity was predicted in the event of failure to line up with Mr. Mellon and his program, and even the President of the United States indicated that no other tax plan would be acceptable to him. It is true that the Mellon plan did provide for tax reduction, but the major portion of that reduction was for the benefit of a small number of taxpayers, the exceedingly rich, with incomes of from $100,000 to more than $5,000,000 per year. The Congress, in spite of all this propaganda and outside pressure, worked out a tax-reduction program, which was signed by the President and acquiesced in by Mr. Mellon, giving more relief to the smaller taxpayers. There are more than 6,500,000 income-tax payers in the United States. Under the bill passed by Congress more than 6,000,000 of these will receive greater tax reduction than they would have received under the much-advertised Mellon plan. And it develops that the plan finally adopted by Congress, known as the Democratic plan, will produce $22,000,000 more revenue per annum than the Mellon plan. So we do have tax reduction without the Mellon plan and with relief to a greater number of people.

We were also told by the same propagandists—by Secretary Mellon and the Wall Street Journal—that we could not pass an adjusted compensation act for the veterans of the World War and have any tax reduction at all; and, further, that if this soldiers' relief measure was passed there would be a great demoralization of business, and that Liberty bonds would go down and Treasury certificates would have to be issued at a much higher rate of interest before the Government could borrow money from the public.

Now, what has happened? Congress passed the adjusted compensation act. It was vetoed by the President, but was passed over his veto. We have the soldiers' adjusted compensation act and we have tax reduction, including 25 per cent on last year's taxes, and still have a surplus in the Treasury. Liberty bonds are higher than they have ever been, and the Treasury is borrowing all the money it wants at 2¾ per cent, the lowest rate since the war. It appears to be important to say that public officials and propagandists ought to state the facts. I feel it my duty to say that I have been worried with very little of this propaganda from my own congressional district and appreciate more than I can express messages coming to me saying, "You are our Representative, and we trust you to take care of our interests."

The results just referred to in relation to tax reduction and Government finances establish the fact that the country is on a sound financial basis, that the volume of currency in circulation is ample for all purposes, and that credit is easy and bountiful for all legitimate enterprises. Future progress will depend upon the manner in which we utilize our opportunities by cooperation and constructive effort.

Mr. LEA of California. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the commerce bill, which failed yesterday.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

Mr. LEA of California. Mr. Speaker, much of the criticism of the pending bill is on account of provisions of its original text, which Congress is now not requested to approve, and in lieu of which amendments largely satisfactory to both the Departments of Agriculture and Commerce are substituted. The reasons for the principal criticisms heretofore directed against this bill have been eliminated.

The importance of maintaining and expanding foreign markets for the disposal of our surplus products is so great that it is unfortunate that any committee or departmental controversies should be injected into the consideration of the question by Congress.

Before the World War international trade between the nations of the earth had reached a grand total of over forty billions of dollars. The economic depression through which agriculture has been passing in this country has been primarily due to the lack of a market for its products. For many years to come, if agriculture is to be prosperous, we must be able to dispose of large amounts of farm products in foreign markets. In 1923, 47 per cent of the exports and 61 per cent of the imports of our country were products of agriculture.

Every commercial nation in the world has an organization to promote foreign trade and perform a function similar to that of the foreign service division of the Department of Commerce in this country. No intelligent man can question the necessity or desirability of maintaining and promoting our foreign markets and exchanging our products with other nations. From the beginning of civilization until this hour the progressive, enlightened, and richest nations of the world have been those engaged in commerce and manufacture.

Through the Department of Commerce the United States has established several hundred commercial reporting agencies in foreign countries, cooperating under the Department of State, to promote foreign trade. These agencies report upon present and prospective marketing conditions. They give information concerning competitive conditions. They find and report markets for the surplus products of the factories and farms of America. They furnish information concerning products needed in America. The reports coming in from all over the world are summarized and given to the industries of America. In thousands of cases during any single year the Department of Commerce helps to bring the American producer in contact with the foreign purchaser.

A question as to the relative position of the Department of Commerce and the Department of Agriculture in the promotion of our foreign trade with reference to agricultural products has been discussed here with a rancor that has tended to overshadow the important questions involved.

It has been contended that the Department of Agriculture should have charge of the disposal of our agricultural products in foreign markets, to the exclusion of the Department of Commerce, and that it is so provided by the basic laws creating these departments.

A reading of these basic laws leaves no room for such contention.

Under the act of May 15, 1862, creating the Department of Agriculture, its duties and functions are defined as follows:

> There shall be at the seat of government a Department of Agriculture, the general design and duties of which shall be to acquire and to diffuse among the people of the United States useful information on subjects connected with agriculture in the most general and comprehensive sense of that word, and to procure, propagate, and distribute among the people new and valuable seeds and plants.

Under the act of February 14, 1903, creating the Department of Commerce, it is provided:

> That it shall be the province and duty of said department to foster, promote, and develop the foreign and domestic commerce, the mining, manufacturing, shipping, and fishery industries, the labor interests, and the transportation facilities of the United States.

Manifestly the primary purpose in creating the Department of Agriculture, as manifested by the law and 50 years of practice following the creation of that department, was to promote better agriculture production. The idea of making the Department of Agriculture an organization for trade promotion activities in foreign lands was never in the minds of the authors of the act creating the department.

It is through the diplomatic agencies of the State Department that the commercial reporting agencies of the United States in foreign countries secure a status in such countries that makes their work useful. For business reasons, the Nation demands the coordination of agencies engaged in a common purpose at home. Business and diplomatic reasons as well combine to make it doubly important to have coordination among our foreign reporting commercial agencies.

The act of 1903 made the Department of Commerce the agency "to foster, promote, and develop the foreign * * * commerce" of the United States. To contend that under the law the Department of Commerce should abrogate its functions in promoting the sale of agricultural products in favor of the Department of Agriculture is tantamount to claiming that a cargo of cotton is not "commerce"; that a cargo of wheat is not commerce; or that a cargo of any other farm product is not commerce. Such a contention is manifestly without merit. Such a contention, if put in operation, would deprive the American farmer of the benefit of several hundred agencies reporting through the Department of Commerce who also report for other lines of commerce. To duplicate these agencies by the Department of Agriculture would be as indefensible as it would be absurd.

If there is any man who should be for the coordination of our foreign marketing effort and for strengthening and promoting such purpose, it is the farmer, who most of all our producers needs these foreign markets. The farmers in my State have been greatly aided by the efforts of the Foreign Commerce Department. The strongest farmers' organizations we have are earnestly and heartily in favor of this measure. In fact, the farmers are the most earnest friends of this measure in California.

I recognize there are many instances in which trained representatives of the Agriculture Department should go to foreign countries in search of information advantageous to agriculture. They should go in harmony with and in cooperation with the Department of Commerce, whose particular function is to gather foreign information. The trained representative of the Commerce Department abroad, with his acquaintance and experience that only permanent reporting agencies can have, should be consulted. Such work is semidiplomatic. The ethics of the situation and the prestige of our country should not be jeopardized by uncoordinated efforts.

The status of an American investigator in a foreign country seeking information to promote our trade, not infrequently seeking that information of concerns and from governments with whose industries we are in competition, is a mission requiring tact, experience, and knowledge of the particular country in which the information is sought. A duplication of our efforts by different agencies in foreign countries, as well as lack of tact and coordination of such efforts, has led to humiliating and unfortunate experiences. A representative of a foreign concern that three times in succession acceded to requests for information by separate reporting agencies of the United States, each acting without knowledge of the others, finally threw up his hands and in exasperation said, "How many governments have you in America, anyway?" This bill seeks to establish a coordination of effort that will eliminate such situations in the future.

This bill does not give the Department of Commerce domination over the Department of Agriculture. Such a result is neither necessary nor desirable. This bill does not seek to hamper or handicap the Agriculture Department in securing all information it deems necessary. The bill is framed in the hope and belief that the foreign commerce department will promote unity, economy, harmony, and efficiency in our commercial reporting agencies abroad and more respect from foreign nations with whom we deal.

Mr. LANKFORD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of good and bad in Congress.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

Mr. LANKFORD. Mr. Speaker, recently the Literary Digest carried several statements of prominent people as well as of some notorious people giving their ideas concerning Congress. This publication through the mail has asked Members of Congress to comment on what has been said about Congress, so I have decided to make some observations about the matter here on the floor of Congress. Elbert H. Gary, chairman of the United States Steel Corporation, says, "The worst thing we have is our American Congress." He has the same idea about Congress that a murderer has of a rope. He thinks it is a bad institution. Gary is head of the big steel industry. So far as I know most men engaged in the steel business don't like law-making bodies, neither do they like laws unless they are laws permitting them to steal without let or hindrance. In the past Gary and men of his stripe have by law been helped to steal millions from the poor, and now that there are those in Congress who protest against such thievery he and his cohorts howl like ravening wolves. The fact Gary does not like Congress makes me have more faith in Congress. If like "dumb driven cattle" we were carrying ourselves and our friends to the slaughter for those in the "steal" business Gary would like us. Yes, he would like us like the butcher likes the dumb animal ready for the slaughter. We thank thee, chief of stealers, for not liking us. Thy hatred is a sweet morsel under our tongue, for while we chew thy ill will we get the sweet and glorious satisfaction which comes from the consciousness of striving to serve millions of the common people of our Nation.

Mr. Speaker, it is my prayer that while I am permitted to serve here I may by my every word and act help to prevent the strong from overreaching the weak, the rich from robbing the poor, and the corporate interests from crushing the life out of the common people. This I have tried to do, as God gives me the power to see the right, and I get some satisfaction when men like Gary, of the Steel Corporation, howl. "It is the hit dog that barks." The great line-up is not between Democrats and Republicans but is between the millions of masses as against the millions of classes. It is a contest between labor and capital—between money and folks. May we legislate for those who toil instead of for those who spoil.

I would rather hear "well done" from one sturdy son of toil than have the plaudits of all the modern crooks of oil. Another individual who takes up part of his time criticizing Congress and the laws of the Nation is Nicholas Murray Butler, president of Columbia University. If he had his way many of our best laws would be broken at will by the lawless, and no one would be punished. The trouble with Butler is he has more book learning than he has either morals, common sense, or conscience. If the boys who murdered the Franks boy in Chicago are insane, then Butler is insane. If they are educated and represent our highest standard of citizenship, then Butler does the same. The Chicago boys killed for excitement and money. Butler wants laws which kill or permit the slaughter not only of one innocent child but of millions for the same reasons. If such alleged educators and their students who believe as they do were hanged or deported at once, the country would be much safer.

One of our Nation's greatest dangers is men like Butler, whose teachings produce boys like Leopold and Loeb, without any moral stamina and with every one of their baser impulses cultivated to the limit—with no respect for law and order and with their minds filled with hell's vilest motives. If such are educated, then Butler is an educator. Butler considers himself to be a liberal. Yes; he and his kind are very liberal in their views of crooks, profiteers, murderers, anarchists, and traitors. They believe it is time for their crowd to stand together. Butler is very liberal in his views when it comes to dealing with the crooks in big business and with the profiteers of the Nation.

Rottenness in official life is condoned gladly by Butler provided the rottenness is practiced by his crowd. Yes, Butler is liberal. He is willing that thousands of men, women, and children be crowded into premature graves by crooked profiteers and gamblers of finance in order that the big rich of this Nation may become more powerful. In fact, Butler is so liberal in connection with other people's rights and properties until he wants laws allowing the rich to plunder the poor and would welcome government by a select committee designated by the money interests of the Nation.

Oh, yes; he is so liberal until he has no respect for such things as laws and constitutions. His liberality would approve the sale of all the rights of our people and the lifeblood of our Nation for a mess of pottage for the greedy fingers of the big rich. He puts the jingle of a few pieces of silver ahead of the safety and welfare of our Nation. In olden times men with less traitorous designs were shot or burned at the stake. There is much more danger of our Nation collapsing from rottenness from the inside than there is danger from all the combined armies and navies of the world from the outside. If our Nation is to long endure we must preserve our great institutions, our great principles, and our great men. The children of to-day are the men and women of to-morrow. Those that are now living in a few years will deliver our Government and every activity of our country to those who are now babies. If we lose our children we lose all. God pity us all if such ideas as Butler and his gang are to dominate the womanhood and manhood of the future. Fortunately the Nation in the future, as it has been in the past, will be saved by men and women with lofty, patriotic motives, from the common walks of life, even if they do not have so much so-called education. The truly great peril of our Nation and of our civilization is lack of moral stamina in many of the so-called institutions of higher education. They educate too much along the wrong line. There is too much height and too little foundation. Oh, for more of the old-fashioned, common-sense schools of the days of our

fathers. I believe in giving our boys and girls good educational advantages. I do not believe in book learning being taught, though, while every moral, patriotic, and spiritual virtue is being strangled unto death.

We need more and yet more of the good old schools which always meant so much and did so much for every move for good citizenship and a better country and Nation. We need more of the fathers and mothers who made such schools possible. We need more of the influences of the teachers, patrons, and pupils of such schools. I thank God we still have hundreds of such schools to-day, and while they exist the spark of life in our Nation will never become extinct. It is with pardonable pride that I point to the school which I attended as a boy as one of the schools of our country typifying such a noble standard of citizenship. Only last week the Clinch County News, of Homerville, Ga., carried a most excellent historical sketch of this good old school at Camp Creek, written by Hon. J. O. Rodgers, the excellent county school superintendent of Clinch County, Ga., and I think it well to incorporate here the full article, which is as follows:

HISTORY OF CAMP CREEK SCHOOL, CLINCH COUNTY, 1886 TO 1900, BY SUPT. J. O. RODGERS

Camp Creek School is located on a lot of land, No. 390, in the seventh land district of Clinch County, Ga., 13 miles west of Homerville, on the Homerville-Milltown public road. This school began its existence in the year of 1886 upon the same spot where the schoolhouse now stands. The schoolhouse in that day was a small log hut with stick-and-clay chimney almost all the way across one end of the house. It had one door and two or three windows, wooden shutters, and the cracks between the pine logs were unsealed. The desks for the scholars' use were slabs or very rough planks with straight backboards, constructed in such way that one hour of diligent search for knowledge would make the best of students wish to practice physical-culture drills in the good old-fashioned way.

After two or three terms had been taught in the little log house and the community had outgrown its capacity the good men of that day came together and decided to build a more commodious house, as there were then about 75 pupils seeking admittance. The children walked 4 and 5 miles and some rode horses from a distance of 6 and 8 miles to reach this famous rural school. The word "famous" correctly describes it, as it was really the best country schoool in south Georgia at that time. The third house now stands on the spot, as the second building erected there, after being used for about 20 years, was destroyed by fire. The same pine trees on the campus and the same old well next to the creek may be seen there that our fathers and some of our most substantial citizens saw 40 years ago.

This is the school at which the writer learned his A B C's. This is the school where our present judge of the Alapaha judicial circuit, Hon. R. G. Dickerson, taught his first term of school when quite a young man. It was at this school that Congressman W. C. LANKFORD learned to read and write, and State School Supervisor I. S. Smith received his early education. Scores of other professional and business men, mentioned later in this article, first attended school at Camp Creek, when Robinson's Arithmetic, Harvey's Grammar, and the Blue Back Speller reigned supreme. Webster's Dictionary and the penmanship period played an important part on the daily schedule. The grammar grades consisted of two parts, the primer folks and the advanced classes. It was the pride of all boys and girls to live to that day when they could be put into the big geography. Headmarks was one incentive to good study and the hickory stick was the other.

At the time this school was organized the State paid but very little into the treasury for its public schools. There were no school districts, no trustees, nor no special tax set aside for the operation of the public schools of the county. When a schoolhouse was built, it had to be done by private subscription and by the labor of the patrons in the community. Nevertheless, there happened to be some real men in that community—a part of whom are still here—who were interested in the education of their boys and girls. These men came together and agreed to let the majority rule in every case, hence, they set out to secure the best teachers Georgia, Florida, Virginia, and the Carolinas could furnish, paying the extra amount necessary for the teacher's salary in tuition on the per capita basis. This plan worked admirably and the best teachers the country could afford at that time were brought to Camp Creek.

We attribute largely to the success of the young people who attended this old school the fact that the patrons would have none other than the best teachers for their boys and girls. The teachers so trained the students that they were encouraged to greater efforts to win. They were so admonished to prepare for a greater life of usefulness that the young people went out from the school and completed their education in the best business schools, colleges, and universities in the South. They attended school at the Georgia Normal College and Business Institute, Mercer, Emory, the University of Georgia, and the University of Virginia. The writer points the young people attending Camp Creek School now to the men and women who have gone before them and have become a part of the best citizenship of the State, and suggest that they, too, can do likewise.

Below is given a list of some of the boys who attended school at Camp Creek 25 or 30 years ago, their names, addresses, trades and professions, and the number who are now deceased. Bookkeepers: M. F. Lee, Pensacola, Fla.; W. B. Lankford, Willacoochee, Ga.; Moses Pafford, Waycross, Ga. Merchants: H. L. Lankford, Pearson, Ga.; C. M. Lankford, Tampa, Fla.; J. A. Sirmans, Argyle, Ga.; John Sirmans, Milltown, Ga. Farmers: J. A. Smith, county commissioner, Lanier County, Milltown, Ga.; Allen Mathis, Nashville; William Joyce, Douglas; Lucius Lee, Stockton; H. F. Rodgers, Lake Park; John Colly, Waycross; James Conine, Stockton; Frank Dickerson, Adel; Josiah Smith, Homerville; J. S. Dickerson, Wray; Warren Courson, Nashville; Perry Courson, Stockton; Walter Guess, Stockton; Ezekiel Guess, Pearson; J. R. Sirmans, Stockton; Isaac Fender, Nashville; Winn Johnson, Valdosta; Ben Sirmans, Stockton; J. H. P. Johnson, Ray City, Ga.; J. Levin Pafford, ex-member board of education, Clinch County, Stockton; Adolphus Register, address unknown, Florida. Homerville, vicinity of Camp Creek: John Smith, Jesse Lankford, James Tomlinson, W. J. Tomlinson, E. E. Tomlinson, Jesse Smith, Alonzo Joyce, jr. Stockton: J. W. Joyce, and Lacy Lee.

Miscellaneous: Ocie Fiveash, mechanic, Waycross; Bryant Sirmans, naval stores operator, Florida; William Smith, auto dealer, Pearson; Archie Tomlinson, contractor, Florida; A. A. Brack, traveling salesman, Savannah; Harris Powell, woodsman, Florida; E. L. Grooms, retort business, Vinegar Bend, La.; Bascom Grooms, president electric company, Key West, Fla.; W. R. Dickerson, naval stores operator and ex-representative, Clinch County, Homerville; Willie Anderson (insurance), Birmingham, Ala.; Billie Roberts, World War veteran, Atlanta; Willie Fiveash, barber, Waycross; June Sirmans, address unknown; James Sirmans, teacher, Mayday; Hoke Guess, employee Seaboard Air Line Railway Co., Savannah; Billie Johnson, rural carrier, Daisy, Ga.; Timothy Bennett, machinist, Rocky Mountain, N. C.

Professional and county and State officers: Archie Bennett, F. D., Nashville; Wyley Bennett, F. D., Nashville; Hamp Joyce, minister of the gospel, Ogden, Utah; Lewis Tomlinson, teacher, Waycross; D. O. Tomlinson, teacher, Douglas; C. O. Smith, ordinary, Cook County, Adel; Dr. H. P. Smith, Pearson; Dr. Louis Smith, Milltown; I. S. Smith, State school supervisor, Reidsville, Ga.; P. R. Lee, sheriff, Clinch County, Homerville; T. C. Conine, surveyor, Clinch County, Homerville; J. O. Rodgers, superintendent schools, Clinch County, Homerville; J. P. Tomlinson, superintendent schools, Wheeler County, Alamo, Ga.; Hon. Joe Powell, county official, Lanier County, Milltown, Ga.; Col. J. T. Powell, Brunswick; Col. George W. Lankford, State senator, Lyons, Ga.; Congressman W. C. Lankford, Douglas; Col. M. D. Dickerson, ex-solicitor, Waycross judicial circuit, Douglas; Col. J. C. Smith, Homerville; Judge W. R. Smith, Nashville; Judge R. G. Dickerson, Alapaha judicial circuit, Homerville.

Deceased: Chandler Sirmans, son of the late F. B. Sirmans; Dr. Joe Howell, George Joyce, Bennie Tomlinson, Leon Pafford, J. P. Smith, jr., Ryley Fender, Tuck Sirmans, Tallie Sirmans, Bert Johnson, James Johnson, Johnny Fiveash, Eddie Fiveash, Col. W. T. Dickerson, ex-State senator.

Following the boys is a list of some of the girls who attended school at Camp Creek in the long ago, and whom they married. This has reference to the early period of the school and is only given from memory. The writer perhaps may not recall all of whom mention should be made, and is now making apology if any should be left off. Some of these girls taught school and all of them have acquitted themselves just as creditably as the boys.

Emma Smith married J. T. Dame, Lizzie Smith married Marcus Tomlinson, Mary Smith to Robert Jackson, Cassia Smith to Canton Sirmans, Belle Smith to Pascal Sirmans, Mary Smith to Joe Worley, Fannie Smith to E. J. Stalvey, Sula Dickerson to Jesse Paulk, Rebecca Joyce to Robert Cornelius, Minnie Joyce to James Conine, Lena Rodgers to B. H. Joyce, Lela Rodgers to Bud Corbett, Elizabeth Lankford to Billie Hughes, Lucinda Lankford to Billie Rodgers, Sena Lankford to George Teston, Jemina Lankford to Logan Curry, Daisy Grooms to James R. Sirmans, Flora Grooms to Lewis Tomlinson, Ruby Pafford to Carlie Tomlinson, Tobitha Fiveash to Richard Register, Fannie Roberts to W. L. Lankford, Edna Sirmans to A. K. Sessoms, Nora Fiveash to John Shaw, Kate Joyce to Isaac Hutto, Martha Browning to Martin Browning, Matilda Browning to George Browning, Marian Browning to Humphreys Fender, Elma Roberts to Will Lee, Lucretia Johnson to Jasper Tomlinson, Frankie Johnson to William Brown, Bettie Johnson to J. R. Rowan, Nancy Johnson to John Connell, Kate Johnson to Ivey Harris, Mollie Johnson to J. D. Green, Viney Smith to Walter Guess, Maggie Fiveash to Ed. Corbett, Agnes Joyce to Henry Purvis, Abbie Joyce to Mr. Purvis, Mary Fender to L. C. Griffis, Rosa Fender to C. W. Pittman.

Some of the men who made it possible to have a good school at Camp Creek during the last 14 years of the nineteenth century are given below. One could not do justice in mentioning the old days at

the school without giving the names of those who were the patrons and those who made it possible for the younger set to get out into the world and do what Camp Creek's young people have done. The patrons whom the writer remembers are as follows:

Deceased: F. B. Sirmans, D. J. Smith, General Smith, Billie Howell, Henry Wells, John Browning, Sherod Fender, Jasper Tomlinson, J. J. Brack, Abner Sirmans, William Joyce, sr., Tom Colly, sr., Mrs. Martha Mathis, John Powell, Moses Register, Jesse Lankford, Herschel Smith, Benjamin Smith, J. J. Grooms, Francis Rodgers, John Fiveash, Martin Fender, Crawford Guess, Tom Conine, sr., Frank Brack, Moses Smith, David Johnson, Jack King, P. W. Courson, Isaac Sirmans, John Everitt, John Pafford.

The patrons who still survive are: H. L. Lankford, sr., G. Q. Rodgers, Alonzo Joyce, sr., Bartow Joyce, J. P. Tomlinson, Elias Roberts, W. J. Lee, sr., J. P. Smith, H. H. Guess, D. V. Tomlinson, Billie Fiveash, Moses Pafford, Abraham Bennett, John Tomlinson.

We could not pass from this part of the narrative without referring to the wives of the men enumerated above. They were our mothers, God bless them. The majority of these good women now sleep, but we could never have come this far had they not toiled and loved us as they did. The county school commissioner at that time was Hon. C. H. Smith, deceased.

Below is a list of the teachers who taught at Camp Creek from 1886 to 1900. There is no early record of the teachers in the superintendent's office, these having been destroyed by fire, and are here reproduced from memory. They are given in the order in which they taught, as follows: Marcus Patten, B. B. Chambliss, R. G. Dickerson, W. W. Williams, Professor Clyatt, C. J. Hardee, S. C. Townsend, Prof. Irwin J. S. Ingraham, W. C. Lankford, and M. F. Lee.

From 1900 to the present: C. M. Lankford, H. P. Smith, W. B. Lankford, W. J. Tomlinson, J. P. Tomlinson, M. D. Dickerson (1900), William Smith, James Sirmans, John Powell, J. N. Green, C. M. North, Arthur Register and Martha Cornelius, Mary Dame, Alma Dame, Blannie Davis, Lewis Tomlinson and Dewey Guess, Mary Sirmans and Lillie Lee, Frances Jackson, Mary Ann Cornelius, and Carrie Smith.

It has appeared to the writer that it would be fitting and proper and a great thing to do to erect a monument to education on this site, commemorating the lives and efforts of those who so diligently worked to establish a school in the early days of Clinch County's school activities. It would indeed be a labor of love. The writer is willing, with the help of his constituents, to attempt to erect this monument. Any and all of the boys and girls who attended school at Camp Creek in the long ago, together with teachers and friends, are invited to communicate with the writer relative to beginning a movement for the erection of this monument. It would be the first of its kind to be erected in this section. Let us get together and make it a reality.

Mr. Speaker, in behalf of the boys and girls who attended Camp Creek School, as well as in behalf of their parents and teachers, I wish to thank Supt. J. O. Rodgers for preparing the foregoing most excellent historical sketch. Thanks of all are also due Hon. Flem C. Dame, of Homerville, for carrying the item in his splendid weekly, the Clinch County News.

My good friend Hon. Benjamin T. Allen, of the Pearson Tribune, who is ever alert to make his paper the very best, also intends to carry the Camp Creek School historical sketch in full. The thanks of all those interested in Camp Creek School are also extended to Judge Allen.

I quote from his most excellent paper, the Pearson Tribune, the following:

Prof. J. O. Rodgers, of Homerville, resolved himself into a historian and has written an interesting story of the Camp Creek School of Clinch County. There are so many Atkinson County citizens whose "young ideas" were taught to shoot at Camp Creek and who would be pleased to have a copy of the writing for preservation the Tribune has decided to reproduce it again next week.

Mr. Speaker, Superintendent Rodgers is right. It would be a splendid thing for a monument to be erected at Camp Creek to the fathers and mothers who made that excellent school possible, to the boys and girls who struggled so hard there to prepare themselves for the duties of citizenship, and to the faithful teachers who served so well there. Many who contributed so much to making that school a success have gone on to their reward in the after life. We can not afford to let them be so soon forgotten. They shall not be forgotten. Every word or deed worth while of those of us who are living and who were influenced by those noble people shall be an honor and a living monument to them.

If our Government could only build statues to all the great men and women, living and dead, of our Nation—statues to our noble, sacrificing fathers and mothers—would not this great Nation of ours be a fairyland of most excellent monuments? There would be a statue for every mile of every line of railroad to the men who drive the locomotives, to the men who builded them and keep them in repair, to the men who made the track, to the men who operate the trains, to the men who mined the coal, and the men who made the freight hauled along those highways of steel for the good of humanity. There would be a statue in every shop, in every store, in every office, and wherever men labor for wife and children and loved ones. Monuments would beautify every home, every farm, every school yard, and every churchyard.

If we would honor the truly great, we should honor the fathers and mothers of our land who build our homes, preserve our Nation, and save our civilization.

The greatest women of all times and of every country are our mothers, who are willing at all times to make any sacrifice for their children and their homes. They and theirs have brought about every great reform, have filled every position of trust since the beginning of time, have gained every battle ever won for the right, have caused every joy that humanity has ever felt, have sweetened every smile that ever brightened human countenance, and have made of this earth a heaven. No wonder God built for them and theirs a home—

A house not made with hands, eternal and in the heavens.

So long as we have a citizenship a substantial majority of which is such people as made up Camp Creek community and as still makes up our country sections, this Nation is safe. These good fathers and mothers who earn an honest living and educate their boys and girls are the hope of our Nation. Such as they made our Nation great. They won our liberty and will preserve our country for all time. They are the salt of the earth. The future great men and women of our Nation are now out in the country on the farms earning an honest living. They are attending country schools and later, with money earned by themselves or with funds furnished by honorable country parents, they will attend some good high school or college. Many of the poor boys of the cities will succeed, for despite the corrupting influence of city life, they will push onward and upward. The boys of wealth with higher education pushed on them, with their moral and spiritual natures dwarfed, will, as they are now doing, be the crooks and criminals of the Nation. They may make money, but if so it will not be earned by honorable methods in many cases but will be by profiteering and financial scheming. They may be educated, but if so it will be of a kind which destroys the conscience, dwarfs and kills the soul. Such an education is worse than death. Of course there are exceptions to all rules, and many boys and girls will succeed in spite of the damning influence of wealth, city life, and the present so-called modern educational methods. In the future, as it is now and as it always has been, the boys and girls who seemingly had little or no chance will make an opportunity and climb to the top and will be great men and women in every walk of life and those now of great opportunity will forfeit all their splendid chance and will be the failures and the burdens to the Nation. I have said this much to point out the great danger now existing in the wrong kind of education and training and call attention to the saving influence still existing among the common people in the country school and home. I am not worried much when Nicholas Murray Butler criticizes Congress. In fact I would be alarmed if he liked the men in Congress who stand for law and order and try to legislate for the common folks.

The great pity is there are not more men in Congress who feel that the greatest, most patriotic influence in our Nation is in the common walks of life. They mean all to our Nation; and if we legislate wisely, we must legislate for them and their children. This country is safe as long as the poor boys and girls of the Nation, in spite of adversity, struggle to the top and run the affairs of our country. The right kind of education elevates and prepares one to live and to die; the wrong kind degrades, kills, and destroys, with no preparation for either life or death. The school of adversity educates one to honestly and honorably endure and accomplish. The country, school, church, and home life is the saving influence and power of our country. The city life, especially of the big rich, is the cancerous growth gnawing at the very vitals of our Nation. Let us fight and fight hard for the power that will save. Let us stand and legislate for the boys and girls of the farm and for their fathers and mothers and for all who toil and honorably earn their bread and meat, for such as these made and will for all time save this great country.

Better have men with no education than men with wrong education. It is an awful tragedy which is being enacted in many so-called schools of higher learning, where the henchmen of Satan, acting as college professors, are dragging down the youth of our Nation and striving hard to undermine our

Nation itself. So much for these two objects. Now, what about Congress? Congress makes bad laws, but it also makes good ones. The bad ones make bad men like Gary and Butler rejoice. The good ones make them criticize. Bad men do not like investigations any more than thieves prefer the light and like punishment. Gary and Butler are very much against investigation of official crookedness. They have a fellow feeling for the crooks. They believe in fleecing the public and believe officers should be allowed the same privilege, provided only the public is fleeced and not the profiteers or big interests. The investigations conducted by the Senate have revealed an amazing labyrinth of official rottenness. There is evidently much more. Let it all be uncovered and stopped. Every dollar stolen by officials is paid by the public. The thief who is not trusted but who steals is a prince as compared to the crook who steals that with which he has been intrusted.

We must have a cleaner Government, or we will soon have no Government and a population of slaves.

Mr. Speaker, Congress is bad and Congress is good. It is Democratic and Republican. Congress has Members representing as best they can the laboring man and the farmer, and it has Members intensely loyal to the corporate interests and the big rich. Mr. Speaker, I have been in Congress over five years and I have spent more of my time fighting bad measures than I have helping with good ones. I presume this is true because the Republicans have been in majority all the while. We ought not be forced to take up nearly all our time here minding the crooks, profiteers, and big rich off of the common people like the good shepherd protects the sheep from the wolves. Instead, figuratively speaking, we ought to be feeding the sheep. We ought to be all the while passing good laws when necessary. When I first came to Congress a determined effort was being made to put a heavy tariff on potash and thus increase very much the price of guano, which is so essential to the farmers of my section. This move was finally defeated by the friends of the farmers here. In all tariff and tax legislation the friends of the farmers must ever be present and alert in the fight which is always waged by friends of great wealth to increase the burdens of the farmers and laboring folks. Sometimes the friends of the farmers lose; sometimes we gain. We lost in many particulars in the general tariff bill. We won in many ways in the recent tax act. A signal victory was won when we prevented an increase of tax on cigarettes which would have hurt the new tobacco industry of my section. Repeated efforts have been made to destroy, either directly or indirectly, the Government farm-loan system. We have saved and improved the credits of the farmers. The thing we need worst of all is a ready market for all farm products. We have done very little along this line, and I am so much disappointed in this respect. Most of the victories of the Democrats since I came here have been in the repelling of the attacks of those who are antagonistic to the farmers and the common folks. We have sometimes failed and sometimes we have succeeded. It is a continuous warfare, and it would take volumes to tell the entire story. I will not attempt to tell it now. I believe that the Democrats will win this year, and then I want us to pass some worth-while legislation. The Republicans have failed and now are going to adjourn for fear some good legislation will be forced through in spite of them. The humorist, Will Rogers, the other day said that the reason for the two Houses of Congress was that if a good law passed one the other would see it was good in time to kill it. I sometimes think he is about right.

The truth is the big majority of Members of Congress honestly represent their people. The trouble is there are not enough here representing the common people. Too many represent the corporate interests and the big rich. We need more laws for homes instead of for drones and more legislation for those who toil rather than for those who spoil. We need less business in government if business in government is to be corrupt and we need more government in business if business is to be crooked. Business is heartless, conscienceless, and soulless and ought not to be in government, which on the contrary should be run by honest men and women with business judgment. Business is anxious to not only get into government but wants to put all others out and then run the old ship for the profit of business. Too many in public office believe that while in they should make spoils of the whole country and take it over for them and their political henchmen. We were promised more business in government by one who never dreamed his remarks would be construed into an invitation to business to get into government and take possession and appropriate to the interest of business while in. Business got into government and we have had an era of corruption hitherto unknown.

The granting of patronage to pay political indebtedness is corrupt and vicious. The making of bad laws to get votes is criminal and the act of a traitor. Oh, for some one to clean out the rottenness which so sorely endangers our country. The corruption recently uncovered in official life here, like Banquo's ghost, will not down and should be silenced only by a general clean-up. The American people are anxious for a general house cleaning in official circles and their wants should be gratified. I regret very much Congress is to adjourn with no real constructive legislation for the farmers. The profiteer should be removed from our marketing system. Farm products should be sold directly from producer to consumer under governmental supervision, certainly until the system is fully established. There should be cheaper freight rates and passenger fares. A better rural-credit system should be provided for our farmers, and yet they need a market more than they need credit. A market for all the farmers can produce will make the farmers lenders instead of borrowers of money. There are scores of things which have been done in the name of the farmers and many more are proposed, and yet the one great thing to be accomplished is to by law help the farmers get what they really earn instead of it being taken by those who do not earn it but who are profiteers.

To my mind true legislation is legislation for little children and for their fathers and mothers. "A little child shall lead them." If we let the children lead us we will not go wrong. As Members of Congress our entire service should be consecrated in behalf of the children of the Nation and their fathers and mothers, and our every vote and act should be controlled and directed by the sincere desire to secure more of the good and essential things of life for them and to provide for them now and in the future a better chance, so as to raise up the best possible manhood and womanhood from the boys and girls of our country. If we do this we can not go wrong. There is no higher or more sacred duty of man to man enjoined by Holy Writ or pledged by oath of office than to visit the imprisoned, care for the sick, feed the hungry, clothe the naked, and house the homeless, and he who does these things either directly or by vote in legislative halls follows the instructions of the greatest of all teachers, serves all humanity, helps save a great nation, and truly does the will of the Great Father of us all.

Mr. BANKHEAD. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. BANKHEAD. I understood that yesterday unanimous consent was obtained for all Members to extend their own remarks for 10 days.

The SPEAKER pro tempore. On any subject whatever?

Mr. BANKHEAD. Yes.

The SPEAKER pro tempore. Then these requests are entirely unnecessary.

Mr. JOHNSON of Washington. Mr. Speaker and my colleagues, I presume all who have served in this, the first session of the Sixty-eighth Congress—now soon to adjourn—will agree that it has been a hard and strenuous session. Many of the problems before us have been hard ones. I am sorry to have to come from the Committee on Immigration and Naturalization, as its chairman, to impose one more hard immigration problem upon you. I come, however, with a proper resolution. I have presented a detailed report, and I ask for a two-thirds vote for it. It is a proper, just, and humane and a resolution with a high Christian purpose. It is worthy of the United States Government at a time when we are making a most radical change in our immigration policies.

All Members know that during the three years under which we have had a quota restriction act there have been hardships to the extreme. The department has struggled along as best it could, trying to hold all cases to the exact bounds of the quota law. On July 1 there goes into effect the new restrictive immigration act, which, in my opinion, is much more restrictive than many of us who voted for it realize. It sets a new and limited number for immigrants, and it tightens materially the basic 1917 immigration act and all other immigration laws. It even tightens the Chinese exclusion law—50 per cent, probably. Now, I believe——

Mr. WEFALD. Will the gentleman yield?

Mr. JOHNSON of Washington. I am sorry I can not yield. Now, I believe this Congress, having passed this new restrictive act by a very large vote, will be willing to grant the comparatively small relief necessary to clear the situation to July 1. This situation, my friends, is made largely by these circumstances:

Sometime ago the Federal courts in New York rendered the decision known as the Gottlieb decision. Under that

decision of the court it was held that the wives and children of certain admissible classes of immigrants might follow them, regardless of the quota. That decision was followed by what is known as the Markarian decision, which was to the effect that an alien going out on a temporary visit might return with his wife and children. These courts found the reasons for their decisions on the provision of the Burnett Act of 1917, near the bottom of section 3, which provided for the admission of the wives and children of certain immigrants. Appeals were taken to the Supreme Court, and only a few days ago the Supreme Court held that the exemption of the wives and children ran only to those from the barred zone in Asia; but between the time of the New York court's decision and between the time of the Supreme Court's reversal 8,808 persons were admitted. Now, they were not admitted under bond, but they were admitted under regulations of the Department of Labor.

They were admitted under the regulations of the Department of Labor. They are now in the country. It is questionable whether they could be deported. Certainly it would be a tremendous task to try to pick out 8,800 persons, mostly wives and children, from the homes where they are now domiciled. In addition to those 8,800 persons, there are about 500 at Ellis Island who come in good faith under the Federal court decisions and there are about 500 on the ships. Having gone that far to meet the condition that confronts us, we find that there are in the United States about 2,700 persons largely from what is known as White Russia. They came in last July and August. They are here, scattered everywhere. A large number of them came by the way of Tokyo, and just about the time they got out of that city it was destroyed in the greatest earthquake disaster of modern times. There was no way by which they could be sent back through Tokyo. They are here and they have been here since July or August. I doubt if they could be picked up and deported—certainly not without great difficulty and great expense.

Now, I have stated the case to you exactly. If you will get the report No. 995, on this resolution, you will find the facts stated in detail, and also you will find a letter from the Assistant Secretary of Labor, explaining the administrative details. You will remember that we are going now into new and heavy quota restrictions, with detention on the other side. The total number now here to be relieved is 13,000, of whom 11,000 are already in the country through conditions which could not be controlled. We are not in a position to attempt to deport them, and you will find we are not asking too great an act of grace. When the United States goes into this new policy of nonasylum, with the certainty that these people will not be thrown on our doorstep, it is necessary to take care of these people, a large number of whom are women and children who are here now. [Applause.]

Mr. Speaker, I reserve the remainder of my time.

Mr. BOX. Mr. Speaker, the Members of this House want to know the facts before they vote. I am sure they do. They can not vote intelligently unless they do. This resolution was held back until the rush just before the close of the session. Then it was rushed through the committee with utterly inadequate investigation and consideration. Now it is to be hurried through the House with debate of only 20 minutes on a side. That is a usual manner of doing evil things here and this is an evil thing.

This is the third time that this House has had presented to it propositions to let in groups of many thousands of illegally admitted immigrants under the promise that the law will be enforced from now on. Two House bills passed. This, if passed will make a third. I wonder if the chairman, who always leads these propositions and is loudest in promising, is not embarrassed because of the continual recurrence of such situations, exhibiting the failure of his prophecies and promises. Indeed he is creating the situation by such action as this.

It has been said all over the House that this resolution applies only to women and children. That statement is not true. Read the act; read the resolution, and see if it is. It includes every class of men who left Europe after May 24, 1924.

Mr. VAILE. Oh, no.

Mr. BOX. May 26, perhaps.

Mr. VAILE. People who embarked on or before May 26.

Mr. BOX. Yes; I should have said all of every sex and age who embarked before May 26, 1924. If they could get on a ship on the other side of the sea by May 26, then they are to be admitted now, law or no law. Indeed it may be construed to mean all who started on their journey to the United States by land or sea before that date, which would include many more thousands.

Many of those now here were admitted without the semblance of an excuse. Some were temporarily admitted under an excuse occasioned by illegal rulings of the courts of New York and elsewhere. Representatives of the department and others have discussed these decisions with members of the committee for months, and so far as I have heard none of them believed the decisions were sound or respected them as probably sound. I have heard no lawyer who read these opinions express the opinion that they were sound. There was no foundation for them or reasonable ground for a competent American judge to believe that they were sound. There were evidently desires born of other considerations, the nature of which I will not undertake to state here, but they were unjustified. The effect is that a large number of people were let in illegally. The Supreme Court, as soon as it could review the question at the instance of the Department of Labor, unanimously, I might say indignantly, held that all were illegally admitted.

The Department of Labor had let them in with the express understanding and stipulation that if and when the Supreme Court reversed these decisions they would be sent back. The department now backs down and asks Congress to stultify itself by pretending to validate the illegal action taken in admitting them. This presents a serious peril now. The department has not the ability or is lacking in the nerve and willingness to enforce the law.

The Secretary of Labor actually asked us to so frame this resolution as to admit every European now at foreign ports wanting to come to America. He guessed the number would not exceed 5,000. It is reasonably certain that it is many times greater, as the resolution may include all who had started from anywhere to America.

If you continue this, you will soon not have any law. You have most unsatisfactory enforcement now. I have told you repeatedly since I have been trying to serve on this committee that there are two serious problems involved in our great immigration question: One is the enactment of the law; the other is the enforcement of it. The manner in which this law has failed of enforcement is shameful.

There were some 2,800 of these admitted when there was no quota. They were to be charged to a future quota—a shameless violation of the law. An immigrant who has no pull, or whose family, prospective employer, or friends have none, who offers to come in here one-half minute before the quota for any month is open is sent back. These very gentlemen have so administered this law. These people, however, come in under peculiar influences—financial, political, congressional, or personal. The wrong is aided and abetted by officers who, being charged with the enforcement of the law, seem to think they have a right to disregard it. Or they are so weak that they are compelled to bend before seen or unseen forces too strong for them. Here are some 500 Russians whom General Wood sent in from the Philippines. Russia sent some 2,300 others, all of whom were admitted when there was no quota, to be charged to a future quota, a known violation of the law. The department had itself so ruled many times, and many humble people had been compelled to bow before it. But the steamship companies avoided a heavy fine and other expenses for each one of those so admitted. The shame of it is great.

The American Government has some dignity; at least it ought to have. Its laws ought to mean something. The American people have been concerned about the enactment of immigration laws. They had better be watching the department and Congress to see whether or not the laws are going to be enforced. [Applause.]

This being the third stultifying effort to ratify illegal acts such as the admission of these people, Congress ought to be tired of it. I tell you now that you will have this kind of a story every six months, so long as you are willing to hear it.

Mr. RAKER. Mr. Speaker, will the gentleman yield?

Mr. BOX. Yes.

Mr. RAKER. Did not the Secretary of Labor tell us yesterday that the same rule can be applied to the present law by leaving them in temporarily?

Mr. BOX. I so understand. A shipload somewhere wired the Assistant Secretary of Labor to suspend this last decision of the Supreme Court; and he has as much right to suspend the decision of the Supreme Court already rendered as he has to suspend the law written by Congress as he undertook to do in admitting these people. The Supreme Court merely declared what the law was. The department knew it before and made a gesture toward protecting the country against their illegal

admission by advising them and providing for their deportation until the Supreme Court should speak, but the department is weakening, as it has so often done. I wish I could give you all the facts as fully as I know them and make you see what is involved, as it is. I know that the question of the integrity of these laws is involved. I know to my own full satisfaction that the only way we can get the law enforced is by saying, "When we, the Congress of the United States, wrote this law, we meant it." The department will not be constantly getting itself into trouble if it will stand behind the law as a barrier and say "Whoever atempts to break the law down will find the firmness and power of the United States barring the way." But even the United States can not maintain its safety, dignity, and honor except through the service of public servants who are willing to serve it therein.

How much time have I used, Mr. Speaker?

The SPEAKER pro tempore. The gentleman has used six minutes.

Mr. BOX. I reserve the balance of my time. I wish I had the time to present this matter to you more fully, gentlemen. [Applause.]

Mr. JOHNSON of Washington. Mr. Speaker, I yield three minutes to the gentleman from Illinois [Mr. HOLADAY].

Mr. HOLADAY. Mr. Speaker and gentlemen, I suppose it is known to the House that I have taken about as strong a stand in favor of restriction of immigration as any Member of the House, as strong, perhaps, as the gentleman from Texas [Mr. Box], who has just preceded me and, unless a Jap is in sight, probably as strong as the gentleman from California.

I am not so much interested in this matter by reason of the effect it may have on any foreign nation. The humanitarian principles and incidents involved do not appeal to me so much, but I am interested from the standpoint of our Government and our Bureau of Immigration. I believe that in the interest of the orderly enforcement of our immigration laws in the months and years to come it is a wise policy, from the standpoint of our own Government, to adopt this resolution.

As nearly as can be estimated this will affect about 12,815 persons. Some 9,000 of these 12,815 persons were admitted under decisions of the district courts of New York. The Bureau of Immigration was compelled by the decision of the courts to admit them. They came in legally, as far as the law as then construed by the courts was concerned, and they have scattered out over our Nation. The Supreme Court reversed those decisions and said that their entry was illegal.

The Bureau of Immigration is now confronted with this proposition: They are compelled to go out over this country and seek out one by one those 9,000 aliens. It will be impossible to locate and to deport any great per cent out of that number.

The ones who remain—and, gentlemen, I call this to your particular attention—are in this position: When they come to the hour, if that hour should ever come, when they want to apply for citizenship, their method of entry will become known and they could not be admitted to citizenship; consequently they will never apply, and therefore we shall have in this country some few thousand men who are barred from owning real estate and who are barred from citizenship.

Persons who would be entitled to enter or remain within the United States under the terms of the resolution are:

| | |
|---|---|
| 1. Aliens heretofore admitted under the Gottlieb and Markarian decisions, in number | 8,808 |
| 2. Aliens now applying for admission at Ellis Island, brought to the United States in expectation of admission under the Gottlieb and Markarian decisions, in number, not to exceed | 500 |
| 3. Aliens now en route to the United States, having embarked on or before May 26, 1924, in expectation of admission under the Gottlieb and Markarian decisions, in number, not to exceed | 500 |
| 4. Aliens admitted under the so-called Knox decision, in number | 2,857 |
| 5. Aliens admitted temporarily under bond to relieve cases of extreme hardship, notwithstanding exhaustion of quotas, in number not to exceed | 200 |
| Total probable admissions not to exceed | 13,000 |

I believe it is better for our Government to legalize their entry and permit them to stay. [Applause.]

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. BOX. Mr. Speaker, I yield five minutes to the gentleman from Kansas [Mr. TINCHER].

Mr. TINCHER. Mr. Speaker and gentlemen of the House, as I understand, this resolution, it is claimed, is now necessary by reason of the fact that certain judges in New York construed the immigration law in a way to let in over 9,000 people who are not entitled to admission into the United States under the law, and it is proposed to correct that matter by admitting them. Since that time the case has gone to the Supreme Court, and the Supreme Court has held that they were improperly in the United States.

Here is the proposition that appeals to me: We have been through this immigration fight. I have witnessed the attitude of a great many of the New York Representatives on that proposition. I have read the names of a great many New York judges, and what is the use of having an immigration act if we are going to leave it to New York judges as to who shall come in and then O. K. their coming in? [Applause.]

Mr. VAILE. Will the gentleman yield?

Mr. TINCHER. Yes.

Mr. VAILE. Judge Mack rendered the decision.

Mr. TINCHER. Well, I do not care who he was. Gentlemen, we should pass laws, and if the Supreme Court upholds them we should stand by them. I voted with the administration, with the Executive, when he wanted to extend the humane proposition and not be too abrupt with a certain nation which complains of the immigration law. But the Congress said, or a majority of the Congress said, "We will settle this question forever, and we are going to pass a restrictive immigration law." But within a week a resolution is brought here to nullify that law to the extent of allowing several thousand men to remain in the country who are not entitled to be here. I think it is a serious proposition, and I think we should determine whether we are going to stand by this law or not.

Mr. JOHNSON of Washington. Will the gentleman yield?

Mr. TINCHER. Yes.

Mr. JOHNSON of Washington. Can the gentleman get the situation? Picture brides on the Pacific coast pouring in as fast as extra ships can bring them in until July 1, and on the Atlantic coast wives, whom husbands domiciled here went after, are not permitted to even remain?

Mr. TINCHER. I yielded to the gentleman for a question.

The SPEAKER pro tempore. The time of the gentleman from Kansas has expired.

Mr. JOHNSON of Washington. Mr. Speaker, I yield the gentleman one additional minute, inasmuch as I used his time.

The SPEAKER pro tempore. The gentleman from Kansas is recognized for one additional minute.

Mr. TINCHER. I do not look at this matter as being wholly one of picture brides or women and children, because I have read in the report made by the committee that a large part of the population we are asked to leave in here in violation of our law is made up of white Russians and not women and children at all. I think we want to be just a little bit careful. We were a little headstrong and passed a law which was not in the exact terms desired by the Chief Executive, and, having done that, let us not disturb it within a few days. Let us have a little stamina about ourselves. [Applause.]

Mr. JOHNSON of Washington. Mr. Speaker, I yield three minutes to the gentleman from Georgia [Mr. UPSHAW].

Mr. UPSHAW. Mr. Speaker and gentlemen, the first speech I made on the floor of this House, five years ago, bristled, I might say, with the doctrine of a strict restrictionist. I said in that speech that I believed, because of America's great mission to humanity that no disciple of Prussian autocracy and no exponent of a godless and flagless bolshevism ought to be allowed to set foot on American soil for 1,000 years. I have not changed my convictions, but in favoring this bill [applause] I want to say that I have surrendered not one inch or atom of my loyalty to the doctrine which I supported in voting for the recent immigration bill. One consideration that fortifies me in my position is the fact that the Secretary of Labor told me to-day that he felt that every sense of mercy and humanity should allow these unfortunate people to stay in America; and I have great faith in the clear head and big heart of that God-fearing man, James J. Davis.

It has just been brought out by the chairman of this committee that practically every element of those who are to be admitted were either brought in under the idea that they had a right to come and thus locate among their families and friends or they are segments of unfortunates who have been banished from their countries under distressing conditions that try both body and soul.

Mr. RAKER. Will the gentleman yield?

Mr. UPSHAW. Pardon me, but I can not in this short time.

Mr. RAKER. That is a broad statement that the gentleman has made.

Mr. UPSHAW. I want to be right and the gentleman can correct me in his own time.

Mr. RAKER. The Assistant Secretary of Labor said that over half of these were men and that they were admitted illegally.

Mr. UPSHAW. Mr. Speaker, do not take this out of my time, and I say that in all good humor. But this is the thing I want to emphasize: It is within the province and the business of this House to make legal the clearing of the slate before the strict new law shall become operative.

I am not willing for us to begin the operation of that law with our hands recking with harshness of spirit and hardness of deeds to those who are now happily situated with their loved ones after a long and desolate separation. [Applause.]

I am not willing for the news to go out that many of these people who came here under such unhappy conditions, with nowhere now to go—with hunger and perhaps death awaiting them if they were deported—I am not willing, I say, that we shall go to these thousands of homes and tear them out with a spirit that would seem cruel forevermore. The great, big heart of America can afford to be generous before it begins to be so exclusive. These unfortunate people should not be held responsible for the mistakes of American judges. [Applause.]

Mr. BOYLAN. Will the gentleman yield?

Mr. UPSHAW. As a strict constructionist and as a restrictionist, but above all, wanting America to show the spirit of great, big-hearted humanitarianism, I favor the admission of these people. [Applause.]

I yield to the gentleman from New York if my time has not expired.

The SPEAKER pro tempore. The time of the gentleman from Georgia has expired.

Mr. BOX. Mr. Speaker, I yield five minutes to the gentleman from California [Mr. RAKER]. [Applause.]

Mr. RAKER. Mr. Speaker and gentlemen of the House, there is not a particle of question of sympathy in this bill. Every one of these men and women was admitted illegally. Every lawyer on the floor of the House knows that when the district court decided this case, and while it was on appeal, and until finally decided by the Supreme Court, the decision of the lower court was not to be followed by anyone, and no one could be admitted under that decision. The Commissioner of Immigration admitted this before the Committee on Immigration yesterday, and it had to be admitted because that is the law beyond all question.

They stated they admitted them and wrote out the order with the understanding they would be deported if the Supreme Court should reverse the decision of the lower court. If this was not the law, let me call your attention to what could be done. One thousand or 5,000 immigrants can land at Ellis Island to-morrow, or when our new law is in effect, and the district judge can admit one on habeas corpus, and then his decision would be a law for the other 5,000 to come in without any question, although the next minute an appeal is taken from his decision.

The Secretary of Labor admitted that under the new law and under the act of 1917 he has the same right to admit temporarily those who come to our shores, so that if you apply this rule and pass this resolution, 1,000 or 5,000 or 10,000 can come in in July or August or September by the Secretary waiving the right and letting them in temporarily and then coming to Congress to get relief.

Let me call your attention to another fact. For every one of these men who landed on the shores of America the steamship company could have been fined $1,000, and it was the duty of the department to fine them $1,000 for bringing them here, and to fine them for maintenance and upkeep while they were in the United States, and third, to fine them the cost of returning them to Europe.

No one knows how many there are. It was estimated at 13,000, and the commissioner could not tell how many the number might be.

With the great steamship companies on the job, with their many friends and solicitors, they pursuaded and secured the admission temporarily of these people so that they could be relieved of the $1,000 fine and of the fine for maintenance and upkeep while these people were here and of the fine which would equal the cost of returning them.

The department had to admit that every one of these men would have to come in under a writ of habeas corpus had they enforced the law. There never was a more unjust proposition presented to a Congress that believes in enforcement of our law, by deliberately and intentionally allowing these people to come in and then because there are a few women involved to say that they should all be admitted.

I want to repeat again that the same thing would apply under the new law whenever there is enough influence and whenever they can get a circuit court or a district court to admit one under habeas corpus. They can then let them in by the thousand or even tens of thousands, as they have done in this instance. Do we want to start out with the administration of this law in that way?

As to those that come from Russia, there is no evidence and no one knows but practically all of them were men trying to land in the United States contrary to the law.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. BOX. I yield to the gentleman two minutes more.

Mr. RAKER. Gentlemen, the Commissioner General of Immigration told the Committee on Immigration yesterday that every steamship company, both in the United States and abroad, published and advertised for these people to come, saying that they would land them in the United States. He read a cablegram from the center of Italy from the Commissioner of Immigration asking if they could bring these people in, and before they ever started from their homes they were advised they could not do it; but notwithstanding that while the Italian Government had refused to give passports to these people during the last year, they gave them these passports, and the steamship company advised them to come, their friends advised them to come, and told them they would see that they landed in the United States. They are here, and now the Congress is asked to give the steamship companies another opportunity to break down our immigration laws, another opportunity to beat the will of the American people, another opportunity for these governments who said they were going to send their people here and would do it whether we allowed it or not to carry out their will, and for that purpose we are asked to pass this kind of a resolution.

The Supreme Court in deciding this case and reversing the decision of the lower court said it was too plain for argument or discussion that the decision of the lower court was wrong; but one judgment on a writ of habeas corpus let all these people in on behalf of the steamship company, and another similar writ after the act just passed goes into operation, with a steamship company having a thousand of these people, will operate in the same way, and they can all enter the United States. [Applause.]

This bill is so broad and loosely drawn that no one can tell what it means. It will permit all those to enter the United States who embarked for this country at any time prior to May 26, 1924. This may run into many, many thousands. It could easily reach 500,000. The word "embarked" does not necessarily mean those who got on board of a ship before May 26, 1924. It could and does mean any alien who started for the United States from any part of Europe. It means to set out, as in some cause or direction—make a start or beginning. So everyone who started or made a beginning to come to the United States at any time before May 26, 1924, could enter this country. This number is too large to even estimate. Again, it would admit every sailor on the high seas. There are about a million of these. They could all say they embarked or started for the United States. Again, every illegal entry is now made legal if this resolution should become a law. No more deportations for illegal entry in excess of the quota law. All cases pending in which final action has not been had in the courts would fail and the parties permitted to remain in the country. This resolution should never have been brought before the House; it should not pass. The flood gates will be thrown open. The only thing the alien will have to prove is that he started at some time prior to May 26, 1924, to go to the United States.

Mr. BOX. I yield to the gentleman from Oregon [Mr. WATKINS].

Mr. WATKINS. Mr. Speaker, it will indeed be a pleasant sensation to me if the occasion ever comes wherein Members of this body will speak of benefits ensuing to America instead of those to be conferred on aliens.

This resolution is not rooted in good faith for as it is written it legalizes the unlawful and surreptitious entry of every alien who embarked for or even entered the United States prior to May 26, 1924, from quota countries; hundreds of thousands here now illegally can remain if this resolution is enacted into law.

The suggestion was made to limit the resolution to the 13,000 specified in the report and only to those who entered under the Gottlieb and Markarian decisions, but the sponsors expect and want this to apply to thousands in addition to those specified in said report.

Furthermore, lack of good faith is evidenced by their failure to apply those already here under the two decisions on the future quota, for they desire to play politics and pander to

the foreign bloc and not relieve humanity as they would have you believe.

Mr. SABATH rose.

Mr. SCHAFER. Mr. Speaker, will the gentleman yield?

Mr. WATKINS. No; I can not; my time is too brief.

We will have the same condition confronting us next December, for then you will be asked to approve the result of another un-American decision and allow thousands of others to enter and to remain who will have entered with malice aforethought and under the same kind of criminal conspiracy. This is nothing more nor less than dirty politics; in fact, a desire to secure the vote of the foreign born is the prime and paramount reason for this piece of misleading legislation. [Applause.]

Mr. JOHNSON of Washington. Mr. Speaker, I want the Members to hear this and I want it to go into the RECORD. The intent of this bill as to the forms of relief has been written out in detail, and if the present text is not clear, I shall see that it is made so. The resolution is intended to provide for relief as follows:

1. Those heretofore admitted in excess of the quota and charged to the quota of later months.

That applies to the white Russians and a few others.

2. Aliens heretofore admitted under construction of the act of May, 1921, the construction required by court decision.

Mr. BOX. What is the gentleman reading from—the law?

Mr. JOHNSON of Washington. I am reading from my analysis of this matter:

3. Aliens arriving in the United States after May 26 and before July 1, who departed for the United States on or before May 26, 1924, believing in good faith that they would be admitted.

4. Those heretofore admissible admitted under bond to relieve extreme hardship. There are only 200 of those.

Mr. Speaker, this is an act of equity, of justice, of humanity, of mercy and Christianity. It is fair. It is right. The people of the United States are a Christian people and they will thank you for this act of grace. [Applause.] Mr. Speaker, I yield two minutes to the gentleman from North Carolina [Mr. POU].

Mr. POU. Mr. Speaker, this question is more largely a question of deportation than it is a question of immigration. [Applause.] Almost all of these people are here in the United States now. They came here in good faith. They came here in response to a construction of the law by the courts of the land. No gentleman can stand on this floor and consistently claim that they are to blame. For my part, I can not vote to send these people back. I do not believe it is right; I do not believe this House desires to do anything of the kind. [Applause.]

Mr. HILL of Maryland. Mr. Speaker and Members of the House of Representatives, the bill which was introduced by Representative SABATH and which has been favorably reported by the chairman of the Committee on Immigration, the gentleman from Washington [Mr. JOHNSON] is a just and humanitarian measure. This resolution permits to remain within the United States certain aliens in excess of quotas fixed under the immigration act of May 19, 1921. A little over 8,000 persons were admitted under certain decision of courts afterwards held invalid. They are now in the United States. Nearly 3,000 were admitted under the so-called Knox decision, afterwards reversed. They are now in the United States. There are several hundred others who come in under this bill. These people are mostly the wives and children of persons who are already in the United States.

If you do not pass this bill you must deport these people. Whether or not you voted for the recent immigration bill, I beg of you to vote for this pending measure, which has the support of the Department of Labor as well as of the Immigration Committee.
